My favorite loriat is made of plaited cord—not twisted, for this when wet unravels—about the same as good strong window cord, forty-five feet long. I fasten one end to the bit, hold it up as I would a halter strap, and allow the other end to drag a trail after me. When I see game close I jump off my horse, stand or sit upon the tope, and thus secure my horse at a moment's notice. When I have time I use a picket pin. This should be made of steel and forned like the old-fashience bayonet, not round, as in hard ground it is very difficult to drive the latter, whereas a three-cornered one cuts its way and is soon home. Have a swivel attachment on top, that prevents the lariat from becoming twisted or snarled. Keep the pin fastened by a steel snap, on the mounting side; this is the most convenient and secure mode of carrying it, and the quickest to get it off.

A field glass is a good contrivance. A single barrel will answer all purposes, is cheapen, lighter and will stand many more hard knocks than the opera glass style or lorgette. This can be carried in the belt in a leather case on left side (carry knife on right), and should not be over six inches long when closed.

(carry knife on right), and should not be over six inches long when closed.

A compass is a grand, good thing if you understand it, and know where you want to go, but unless you do it doesn't amount to much, for it is always a greater aggravation to be lost with a compass than without one. I always carry one; one that opens like a double-case hunting watch is the best; and sometimes have been lost, compass and all. There is nothing more easily leading to this than to follow a wounded animal; you forget everything but the game you pursue, and when it is getting late and thoughts of camp steal gently o'er each the area of all you have lost everything but they are you have not greatly the property of the company of the care the care when the care you have lost everything but they are recombined.

animal; you forget everything but the game you pursue, and when it is getting late and thoughts of camp steal gently o'er you, then you find you have lost everything but your appetite. For this emergency I always carry salt and matches in my saidle lage; and if I have some near I can at least have some supper, and a smoke, which goes better than fasting till I strike camp, whenever that may be.

I have killed as many as eight antelope in one day, and could frequently have killed more, but I never shot at game that feould not utilize, as that I consider the most unsports manifice thing a man can do. I have beard of men killing as high as sivily in one day, and I dare say it is dono occasionally by men who hunt for pelts on the Missouri and Upper Yellowstone. I have seen bands of over 800 and sometimes, five or six such bands in one day.

My experience goes to prove that an antelope can carry as much lead as any animal of its weight I know of; therefore, use straight powder, and lots of it, at least innet grains; and, above all, ect close and use nothing but hollow pointed or explosive bullets, never smaller than 45, weighing 300 grains. One word more about clothes. For keeping out the cold in winter I know of nothing that comes up to the dog skin leather shooting jacket, sold by Wm. Reed & Sons, of Boston. They are in every particular the best garment made for use in cold weather, and cannot be too highly recommended, but for summer and fall work the canvas will do well enough. Nexport Barracks, Ky. Newport Barracks, Ky.

THE JAMESTOWN'S THANKSGIVING PROCLAMATION

#### BY THE LIEUTENANT-GOVERNOR.

DESERTED by State, thrown over by Church. By all of our countrymen left in the lurch ; Banished far to the North for no sins of our own, Our prospects uncertain, our hopes overthrown, With the days all too short, the nights long and drear, Praying but to depart, for it's hard to stay here. While feasting and thanking go on through the nation, The day comes to us, but with no proclamation. We therefore resolve, while patters the rain down, That a crying injustice is done to the Jamestown, And, to give our complaints a firmer foundation, We send to the world this, our first proclamation: For the crop of the season we thank as we oughter; Our tanks are well filled with delicious rain water : The loss of the heavens to us is a gain. Our larders are stored with the sports of the chase. venison grease oozes out from each face, And horns, tail and hoofs may shortly appear, So we gratitude offer for plenty of deer. The shores and the mud flats their treasures have poured. And with various sea dainties our lockers are stored. On mussels and scallops we dine without qualms, And we gratitude offer for elegant clams. We have teal, snipe and plover and Canada geese, And plenty of mallards at two bits a piece. We've a cook that can dish up crow, raven or owl, So we offer our thanks for the stock of wild fowl. The deep sends us codfish and halibut, too; The latter so large that one feeds the whole crew. We have sea bass and salmon as much as we wish, And we offer our thanks for abundance of fish. We are thankful for mountains and rivers and trees, For lively southeasters with gyrating breeze; For rain-storms and had-storms and plenty of enow, And occasional earthquakes which follow the blow For volcanoes and glaciers and scenery grand, And for long nights of darkness which hide the wet land; For our hops at the Castle and the girls we there meet, For our hops at the cashs and the gurs we there in The farrest in Sitks, and to us it is sweet To learn to talk Russian, and say, "Yah hibulu,"\* "Posolulia meenia,"; and—well, that will do. For our clothing, worn out to the ultimate thread; For our gold lace all tarnished and skins bard and red For the gloomy days ended, for bright ones to come, When the steamer shall bring in the word to go home. Then we'll have our thanksgiving and our thanks, too, sincere,

And with joy we will shout, for its tough to stay here Silka, 1879, 1890 | 1991 | 1882?

"I love, + Give me a kiss

## Matural History.

OUR WATERFOWL.

Friigning

THE Sea Ducks present many differences in structure from their fresh water cousins and constitute a subfamily of the Anatida. One of the most obvious distinctions is the constant presence in this group of a lobe or flap of skin depending from the hind toe which is never seen in the Anatida, so that the two groups may always be distinguished by an inspection of the feet. In habits the two subfamilies differ widely, although there are not wanting species of each which approach in their mode of life, that of the other. The Sea Ducks, as their name implies, are maritime in their distribution, though by no means exclusively so, yet many of them retire to fresh water lakes or streams for the purpose of There are others like the Eider duck for instance, that even during the breeding season remain on the salt water, and are only found occasionally during the migrations on our rivers and lakes. All the Fuligulina dive for their food, and thus are enabled to feed in deep water where the Analina, which have not this habit could not get a living. Those species which confine themselves to the sea feel almost exclusively on shellfish and are, therefore, very little esteemed for food, the flesh being rank and fishy. On the other hand, species which pass a considerable portion of the year on our inland waters are excellent eating, and some of them are the most sought after of all our ducks. Such are the Canvasback, the Redhead, the Broadbill and others. The legs in this group are placed farther behind than in the Anatina, and its members are thus less at home on dry land than are the fresh water ducks, while, on the other hand, the power of swimming and diving is increased. It is from the l'uliguline that much of the eider down of commerce is taken. The eider duck of course furnishes a portion of this, but other genera such as *Harelda* and *Ædemia* supply a down which, for all practical purposes, is just about as valuable. The genus Fuligula, which is sometimes farther divided into the subgenera Fulix and Aythya, contains some of the most important of our Sea Ducks.

Fuligula marila. Greater Scaup Duck, Big Blackhead, Broadbill, Bluebill, Raft Duck, Flocking Fowl.

Male, head neck and fore part of body black, the former with green and purple reflections; below white; sides and fore back darker, waved with black; speculum, white; lower back, tail and wing tips dull black; bill blue, feet darker. The female has the face white, and the black of the male generally replaced by brownish. Length about twenty inches.

The broadbill, or blackhead, is an abundant species found almost everywhere throughout the country. It is extremely abundant during the late fall, winter and early spring along the Atlantic coast, and is everywhere sought after. In the interior it is plenty from the last of September up to the advent of cold weather, and under the name of scaup or blue bill is known to all Western gunners. We have found it very numerous between the Missouri River and the Rocky Mountains, and equally so during the winter in California.

The flesh of this species is excellent.

On the Atlantic Coast broadbills are killed principally from batteries, or when flying across points, though in winter they are sometimes sculled up to during the night, when the discharge of two barrels into the thick flock will sometimes kill and cripple forty or fifty birds. They come well to decoys and furnish excellent sport.

Lesser Scaup Duck, Little Blackhead, Fuligula affinis. River Broadbill.

Exactly similar in coloration to the foregoing, but smaller. Length about sixteen inches.

This species, long a doubtful one, and by many authors considered identical with *F. marila*, seems to be a perfectly distinct form. We have never found any difficulty in distinguishing the two when in the flesh, though it must be acknowledged that size is the principal if not the only character which separates them. Dr. Coues says: "There appears which separates them. Dr. Coues says: "There appears to be something different in their range, the F. affinis being the more Southerly. Not that it does not in the breeding season reach as high latitudes as the other, but that its autumnal movement is pushed to the West Indies and Central America, where the true F. marila is not recorded as occurring."

The little Broadbill is not uncommon on the Atlantic Coast, but appears to be most abundant in the interior. We have seen them in great numbers on the Upper Missouri, and have found them breeding in Alkaline lakes in the mountains They are shot by the same methods as broadof Wyoming.

Fuligula collaris. Ring-necked duck; Tufted Duck. Male, head puffy, head, neck, except a chestnut ring around it; breast, back wings and tail, black; chin and under parts. white; speculum, gray; waved with black. with a spring plumage, a white ring near tip, feet bluish. Fe-male, head and brownish; face, throat and ring about the eye whitish. Length about eighteen inches.

The tufted duck is not very abundant along the Atlantic coast, although every year a few are killed. They associate freely with the broadbills, from which, however, the males may be distinguished a gun shot away by the puffy crest may be distinguished a gun shot away by the puffy crest a taint which they erect when suspicious and just before taking cayed!

wing. On our Western waters they appear to be much more abundant. Many breed in the marshes of Illinois, though, no doubt, by far the greater number proceed the high latitudes for the purpose of reproduction.

Fuligula ferina americana. Red Head, Pochard. Male with head puffy; head and upper neck rich chestnut, lower neck, breast and upper tail coverts black, belly white, speculum gray; back and sides gray, thickly waved with black; iris yellow; bill rather short and wide like that of the broadbill, crossed by a black band near the tip; feet as in the preced-The female has the black and chestnut of the male replaced by dark brown, and the waving on back and sides less Length about twenty inches

The red head of North America differs from the European bird so slightly that it is classed by ornithologists as merely a variety of that species. Its range includes almost the whole of the United States, and it is especially abundant along the Atlantic scaboard and in the Western States. West of the Mississippi it appears to be less abundant, although we have taken it during the migrations in the Rocky Mountains and in California. There seems to be no record of this species breeding within our borders.

The flesh of the redhead fully equals in excellence that of the canvas back when the two species have fed on the same grounds, and we fail to see any reason for the very strong bias in favor of the last named bird. We would defy the most accomplished gourmand to tell one from the other when they appear on the table. The red head is shot by the same methods employed to bring to bag the black head.

Fuligula vallisneria. Canvas-back Duck. Male, head and neck dark chestnut, the former washed on chin and about the base of the bill with blackish brown, neck and breast black: otherwise as in Fuligula ferina americana, except that the black wavings on back and sides are much narrower and fainter, so that the general cast of the plumage is very palenearly white, in fact; iris red, bill longer than head and narrow, the nostrils in the middle, black. Feet dark. Female colored much as in the preceding species, but always to be known by the bill and head.

A question very frequently asked is, What is the difference between a red head and a canvas back? but we feel sure that no one who has ever had the distinguishing characters of the two once pointed out to him would ever have any trouble in separating them. Setting aside the differences of color, which in the males mark the two species unmistakably, the shape of the head and bill are so unlike as to be perfectly characteristic. The head and bill of the red head resemble very closely in shape that of the ring-necked duck. The out. line from the tip of the bill to the crown of the head is quite deeply concave. The bill itself is shorter than the head and is comparatively wide. The profile of the canvas back on the other hand is but very slightly concave; the bill is very narrow and decidedly longer than the head, and has the nostrils in the middle instead of, as in the red head, in the basal half. The color of the eye is another distinguishing character, as is that of the back.

The canvas back is well known throughout the eastern half of North America, but is less abundant west of the Missouri River. It has been found, however, breeding at Turtle Mountains and in the Rockies by Dr. Coues and others. It is abundant in California in winter, where it associates more or less freely with mallard, broadbills and red heads. perhaps held in more esteem as a food bird on the Atlantic coast than anywhere else in the country.

[TO BE CONTINUED.]

#### THE SENSES OF BIRDS.

THE SENSES OF BIRDS.

LyER since reading an account of the experiments of the veteran Audubon regarding the senses that guide the vulture to its food I had taken it for granted that sight was the sole agent used by this or other flesh-eating birds; and my own observations had strengthened me in the belief. An incident that occurred a few days since, however, has convinced me that one bird at least has a set of olfactories even more delicately fashioned than his optics, though his eye is little less than a telescope in power. A horse belonging to a neighbor died one night last week, and the following morning the body was dragged to some distance and left uninterred. About noon of the same day I noticed a company of perhaps twenty crows, flying low, heading directly for the carcass. Arrived at the spot where the object of their search lay, they circled about a few times in the air, and then, oblivious to the fact that all over the land distant relatives of theirs were being served at Thanksgiving dinners, they gathered round the carcass and banqueted right royally. This morning I visited the scene of the feast. The birds had, I found, torn a hole through the hide of the ab lonen and devoured a portion of the viscera. I was surprised to see that the carcass lay in a shallow creek bed, from which the land rose gradually, but to a considerable height, in the direction from which the crows had been seen to come. The nearest woods, and the ones from which the carcass to them. With the aid of a stick and a ruler I made a rough eatled to me that at such a distance the bird or birds must have been at a vast height if sight discovered the carcass to them. With the aid of a stick and a ruler I made a rough calculation, and satisfied myself that even at a distance of only two miles the body of the horse could not be seen at much less than 1,000 feet above the eartily surface. Of course, crows sometimes second to this height. I noce saw one pursue a hawk directly upward till both birds were almost lost to view; but this was

A few weeks ago, while in Southwestern Minnesota, I re-collect noticing an instance of this same bird's acuteness of collect noticing an instance of this same bird's acuteness of perception, which was probably no less remarkable than that just narrated. On the open prairie, many miles from any timber, a crow was seen by the hody of a grouse which lay upon the snow. As usual he had commenced his meal by picking out the eyes of the "chicken." Crows were by no means abundant (at this season, at any rate) in the vicinity where this individual was seen; in fact, I saw only one other while in the State. It would be useless to attempt to surmise how far this bird may have seen or scented the frozen grouse. The latter doubtless perished during the recent unprecedented October storm, as did quait, coots and, I am told, even ducks. told, even ducks.

precedented October storm, as did quail, coots and, I am told, even ducks.

If the senses of the crow are wonderfully acute, those of the hawk are no less so. It is to be questioned whethersome of these, as the harriers, may not be aided in finding their prey by the sense of smell, and I am inclined to think that the ear guides them to many a fine meal. Who that has hunted waterfowl has not, after firing into a flock of ducks, seen a hawk hurrying toward the spot, evidently attracted by the report, and intent on securing a bird at the expense of the sportsman? A popular notion attributes to the larger game birds a sense of smell so delicate as to warm them of the approach of man or any other enemy at a distance, provided they have the wind in their favor. I am inclined to think that this opinion is not well founded, but certainly no birds are possessed of better eyes and ears than the geese and cranes. The superior height of the latter gives them a wide range of vision, and they are, porhaps, the most unapproachable of all our birds. Every one who has paid any attention to the subject must have noticed that the shyness of birds is somewhat in proportion to their size. This is largely, unapproachable of all our birds. Every one who has paid any attention to the subject must have noticed that the shyress of birds is somewhat in proportion to their size. This is largely, no doubt, the result of experience or of inherited "instinct," those birds that have been long persecuted by man having learned to fear his presence, but partly I think, more especially in the case of the very smallest species, to defective vision. I have known small birds to be killed by flying against buildings, which of course they must have seen, but not until it was too late to alter their course. And I have seen a kinglet taken with the hand, to the great surprise and fright of the bird itself. I would by no means be understood as saying that any hird cannot distinguish a house or a man as such, at a considerable or even a great distance; the fact that they sometimes fail to do so is doubless owing to a too close attention to business (insect catching) and to a lack of observation. The eye of the small bird is as well adapted to the work it has to perform as is that of the larger one; but it may be called "near-sighted"—it is not a telescope, but a microscope, and as such it is all that its possessor could desire. Observe a small flycatcher seated on a dead limb in the shady woods, or awarbler or kinglet darting about among the branches of an oak or elm; then see him dart here and there, pursuing in zig-zag course, and with marvellous rapidity, insects os small that we can scarcely detect their presence, and we cannot but observe that its eye is wonderfully acute. Contrast this tiny bead with the long-ranged optics of the crow! Truly, Dame Nature has adapted everything to the place which it is destined to occupy.

"Homo" has some interesting notes on this subject in his letter published elsewhere.

"Homo" has some interesting notes on this subject in his letter published elsewhere.

Habits of Snakes—Taunton, Mass., Oct.—As I was walking along the brook about 150 yards below my fish pond, I saw a pair of water snakes fastened together. The female was two and one-half feet long and the male about two. The former, being the stronger of the two, dragged the male up stream, tail foremost at alively rate. I killed them and pulled them apart, but was obliged to exert considerable force—at least ten pounds—to do it. Now it will be nine months before snakes lay their eggs. Will some naturalist explain?

C. B.

High Culture.

STRIPED BASS WANTED

WE are permitted to publish the following letter from VV one of the California Fish Commission to Professor Baird. The fish wanted are the striped bass or rockfish, Roccus lineatus, the fish not to exceed six inches in length. Will those of our readers who know where they can be obtained in quantity please communicate the facts to Prof. Baird, as he requests:

will those of our readers who anow where hey can oe ontained in quantity please communicate the facts to Prof. Bard, as he requests:

Hon. Spencer F. Baird, U. S. Commissioner Fish and Fisheries:

Shithsonian Institution, Washington, D. C.

Dear Sir—I have from unavoidable causes been compelled until now to defer addressing you upon the subject of transporting to and acclimating in our waters the "striped base" of your coast.

I have long had the impression that the great Bay of San Francisco together with the bays of "San Pablo" and "Suisan" connecting with it and the number of creeks running into them, affording a variety of qualities and conditions regarding temperature and saline properties together with feeding material, would be well adapted to the propagation and growth of the "striped base."

Having this in view I last year opened a correspondence with Mr. Livingston Stone upon the subject of attempting the transfer of some small fish at the time of the bringing on of the lobsters. Many difficulties presented themselves in the matter of obtaining the small fry of the stripped base, which resulted in my suggesting to Mr. Stone the probability of obtaining in the extreme head-waters of the "Navesine" of Sirvesbury River in New Jersey. Mr. Stone succeeded in obtaining a small number at the place designed by mean, with his usual skill, brought them safely to this coast and deposited them at the head of the Straits of Carquinez, the unning point of the fresh and salt water.

Some six or seven months after the time of placing in the water I heard that one of eight inches in length had been taken in the bay of Montercy, which is about one hundred miles south of this and is an open roadsted on the Pacific Ocean. All of the circumstances were of so doubtful a character that I gave the rumor but little attention, until about the first of July, cieven months after the planting of the young fry—at the time about one and a half inches in length—in the straits of Carquinez, there was brought in one a very handsome st

and the flavor fully up to the best specimens of the fish at the East. The exceedingly rapid growth, indicating the adaptability of the waters of this bay to this development, together with the immense amount of shrimps which abound in this bay as furnishing abundant food have, I must acknowledge, infused me with almost an enthusiasm to have this valuable fish brought here in sufficient numbers to insure the breeding of them. I have heard of some experiments having been made in breeding them artificially. If that can be done we might, of course, bring them out as easily and in as great numbers as we now do shad, and my object in now writing you, is to ascertain the probability of such an effort being successful.

If it cannot be done our only course must be to colarge upon and extend the avairable of the course of th and the flavor fully up to the best specimens of the fish at the

being successful.

If it cannot be done our only course must be to enlarge upon and extend the experiment of his year. The small fry can be obtained in the fresh-water heads of the Navesink, the Rartina, the Pas-sie, the Harkensack and in fact all of those small rivers which flow from the New Jersey coast into the Atlantic and the bays emptying into it. Will you be so kind as to give the matter some thought and let us have the benefit of it? The shad are a success, and we feel satisfied that so soon as they shall have reached such numbers as to insure contact we shall breed them in abundance.

With another respect I remain, yours truly.

With much respect I remain, yours truly, S. R. Targot

SEMERATION Chairman California Fish Commission.

#### SOME SINGULAR SALMON

DOMESTON OF CANADA Piscioulteral Establishment, Newcastle, Oct. 30.

Dear Sir-I desire to acknowledge, with many thanks, the receipt of some fifty thousand California salmon eggs. They arrived here in first-class condition and are now all hatched out. I also notice with much pleasure the arrival at

the receipt of some fifty thousand California salmon eggs. They arrived here in first-class condition and are now all batched out. I also notice with much pleasure the arrival at New York and shipment to Europe of a very large lot of these ova, all of which were reported to be in very time condition. This success in your efforts in connection with fish culture, while it must be very graifying to yourself, is likewise pleasing to myself, and no doubt to all others engaged in the industry of artificial itsi culture.

I have to record a most peculiar circumstance by relation to our Ontario salmon this autumn. I speak more particularly of those which have come into my stream here. The same falling off in numbers is felt here as has been the case in all the rivers and streams on the Atlantic coast. My reports received from the several officers in clarge show a wonderful falling off. At the Saguenay, where formerly our requisite supply of some 300 parent salmon were easily obtained in a few weeks in June and July, only some seventy-five could be captured during the whole season. On the Restingouche, the most famous salmon river we have, only some 600,000 salmon ova could be gathered, whereas in former years no difficulty was experienced in getting one and a hult to two millions. At the Miramichi and Holifax nurseries the result is not yet known; no reports have as yet come in, but I fear a similar failing off will take place there as well. In connection with the reduced numbers of salmon at this hatchery, strange to say, only three males have yet been found in the stream; all that have yet been captured or have entered the reception house are immensely large females. We have enough of these on band of present to give us 250,000 eggs, but we have not, nor can we find in the whole stream, a single male this to impregnate these eggs with, should we strip them. What we shall do puzzles me very much; add to this the fact that the season is about over for lish to enter the stream. To-day I went down the creek with one of m

Iwent down the creek with one of my men and caught some eighteen magnificent female fish on the beds in the open stream, in broad daylight, but could not hind one male. This has been the case since the first entrance of the saltuon this fall. There are any amount of beds; in fact, on many of the gravel beds the bottom of the creek is literally plowed up with the workings of these salmon. Another peculiarity is that not a single grilse has been seen, with the exception of one California grilse taken last night. In the fall of 1878 salr on of both sexes and grilse were very numerous—quite equal to the olden times, some thirty-five or forty years ago. In 1879 they fell off very largely in numbers, and this scason they are very much reduced from last year, with the peculiarity of all being large females and no grilse. I mention these circumstances for your information, and they will no doubt appear to you as being very extraordinary. I can hardly vedure to ask you for a cause, or even the theory of a cause, for this peculiarity with my fish. My only hopes are that when Professor Hind hears of it he, with his love in relation to salmon (particularly the biennial and summerspawning ones), will no doubt incubate some theory why and how these phenomena have occurred.

I am also getting puzzled in mind about your California salmon: they are also turning a cold shoulder to me. The record, this season of 1880, is as follows: In April last my son eaught a very beautifully formed one in the stream here while fishing for some suckers. It was about three pounds in weight; I have him yet. He has been kept in a small tank of spring water along with some frout, but we have never seen him ent anything yet; he is looking a little thin just now. One small trap net was set out in the lake this season nearly opposite my stream, and during my absence the fishermen reported that about a half a dozen California were thin entire the water steps were the most miserable specimens of fish 1 ever saw. Judging from what have read of the quina

for carp. The water to any extent can be supplied from the main creek; the ponds cover some three acres or more, ranging from two to four feetdeep. Should I succeed in getting a few carp I would sink wells some eight or ten feet deep in them in which the carp could sleep during the extreme cold in whiter. The water gets pretty warm in them in summer,

and a good deal of vegetable matter is produced in them, which I think would be well adapted for the growth of these fish. I have raised the gold-fish, or golden carp, in one of them somewhat successfully. Being desirous of trying the German carp I shall feel greatly indebted to you if I could get a few pairs through your kind instrumentality. Again apologizing for this long letter, I am yours, very obediently. Banter, Willou.

Professor S. F. Bahin.

U. S. Commissioner, Fish and Fisheries.
P. S.—If you would like a specimen of our Outario salmon in the gravid state. I shall be greatly pleased to forward one or more to you. I can only promise you two females, from the causes mentioned herein. Should you also like to have of the lacerated, emaciated specimens of "Canadian Cali-nas," I will send it also.

S. W.

In connection with the foregoing letter, which we have been kindly permitted to publish, we think it proper to state that while at Berlin, attending the International Exhibition, we met Mr. Phillipe Gauckler, Ingenieur en Chef du Dept. des Vinges, who practices fish culture at Epinal, France, who said that his experience had proved that dry impregnation produces an excess of females, while wet, or theuse of water, always brought a preponderance of males. We have no opinion to express on this point, and commend it to the consideration of Mr. Wilmot and other fish breeders.

THE PENNSYLVANIA COMMISSION -- We learn that the forthcoming report of the Fish Co. mission of Pennsylvania will be the first ever published in the State. It is pleasant to note the progress made not only in fish culture but also in ichthyological lore, which has been taken up by the fish culturist as a necessary adjunct to his profession. port will contain a description of Pennsylvania fishes by Prof. E. D. Cope, with forty illustrations. The culture of black bass has been so successful that Commissioner Hewit is of the opinion that enough have been caught this season alone to exceed all the amount of all moneys appropriated by the State for fish culture, even if the fish were sold at five cents per pound. They have been introduced into many streams whose united length is estimated at 1,500 miles. sioner Reeder was unable to attend the last meeting by reason of having received a painful stroke from the limb of a tree while hunting.

Shad Hardhing and Cair—Aquadale Ponds, Wenonch, N. J., Doe, 4.—Having been absent from home a large por-tion of the time for more than two months past, and when at home either overwhelmed with correspondence or sick, I home either overwhelmed with correspondence or sick, I have not had an opportunity to even take the wrappersoft many of my newspapers, and a hige pile has accumulated. To-day I have been reading up eight different numbers of Forkar and Stylkar and the communication of Mr. Livingston Sione continuing the statements and all. In the issue for October 7 I notice the communication of Mr. Livingston Sione continuing the statement of Mr. Stoft Green in reply to a previous article of mine concerning the first hatching of shed at Holyoke. Mr. Stone doubtless saw, soon after the hast date, myreply to Mr. Green's inquiry, showing how I obtained my information. Although this comes late, I improve the first opportunity to amounce my faith in the statements of Messrs, Green and Although this comes late. I improve the first opportunity to amounce my faith in the statements of Messas. Green and Stone. Referring to Mr. Green's experience I can sympathize with him, for in my own persistent labor of love in connection with fish-culture I have encountered the same boorsish opposition, ridicule and malignant cussedness in the way of pecuniary damage to my property, and this by comparatively intelligent Ignoranus-ss. I have for a month or more past been very busy distributing the Government carp in Southern New Jersey and Eastern Pennsylvania. Quite a number of parties have engaged to lay out a comprehensive system of carp ponds and are making arrangements to engage extensively in the new industry. Before many years system of the peans and a diament and a diagram of the gage extensively in the new industry. Before many years the farmers of his region will think as much of their carp as they now do of their chickens or pigs, and well they may for there is more money to the acre in carp-culture than in either chickens, pigs or other live stock. MILTON P. PEIROE.

Hatenino Ecos—Biddeford, Me., Dec. 3.—In your issue of Nov. 25 I notice that Prof. Baird is ready to distribute salmon eggs from Bucksport. If I knew the mudus operandi of treating these eggs I would like to avail myself of the opportunity to place some in the Sago River this season, as there is little doubt but that we shall have a fishway constructed at the falls here the coming summer. Can you give me through your valuable journal some instructions in the above matter, and say where they should be placed in the river, whether above or below the falls.

Figure of Hairses.

The eggs should be placed in hatching troughs, and kept from enemies until they hatch, say from ten to lifty days, according to their development and the temperature. They should then be kept thirty to fifty days longer until the um bilicus is absorbed and they begin to take food. If you have no troughs or experience you had better apply to the Fish Commissioners of your State, Mr. E. M. Stillwell, Bangor and Mr. Everett Smith, Portland, or to Mr. Chas. G. Atkins, Assistant U. S. Fish Commissioner, Bucksport, who may batch them for you

PROTECT SPAWNING LOBSTEES—New Bedford, Mass.—Your article on lobsters in a late issue induces me to give some hints on the subject, which to me seem more to the point than the eatching of small ones. The reason above all others for the scarcity of lobsters is the catching of females during the spawning season. Thave often when looking at a female lobster loaded with eggs wondered how many they would count. Whoever has counted the number of shot (No. 8, for instance) in a common charge can form some estimate of the number of eggs in a lobster of three pounds or more during the spawning season—tens and tens of thousands. It seems as though all the spawn carrying lobsters find their way into the pots—it may be to hide from their enemies. I have seen brought in by one boat trending pots as many as three bundred females loaded with spawn—three million of eggs! Many of the largest lobsters I have seen have been females with spawn—these are all counted and all go to market. What a wise law! to allow the killing of the mother fish and forbid

the destruction of those under ten and one half inches. One day's fishing of one boat will under these circumstances destroy more lobsters than all the boats on the Atlantic coast in a whole season catching small lobsters. When the catching of female lobsters with spawn is prohibited then the nail is hit on the head, and not lift then. All the most intelligent lobster fishermen I have met express the same opinion, and I think every one will see the reason. I spend three months of every summer among the lobster fishermen, where thousands are caught every day, and I know whereof I speak. Some curious facts in relation to the movements of lobsters are noticed at Noman's Land. They are taken having plugs used only on the coast of Maine, others from other points remote. Some seem to remain in one locality, and in midsummer school lobsters appear. When the water is clear they have been seen by the thousands, all coming from the east-ward and moving with as much order as an army. Hoping ward and moving with as much order as an army. Hoping have been seen by the thousands, all coming from the east-ward and noving with as much order as an army. Hoping this may call the attention of all interested in the subject, and that the FOREST AND STREAM may add another baned to its crown for benefiting the community is the wish of a sub-scriber from its first number.

CABL ON THE TABLE—The Centreville, Md., Observer says:
"Last week Mr. Richard Holliday, desiring to taste the flavor of carp, drew from his pond two fish, one 10½ inches long and weighing one pound fourteen onnees, and the other 10½ inches long and weighing one pound eleven onnees, and invited Hon. James T. Earle, Dr. John C. Earle, Richard T. Earle and Samuel T. Earle to take breakfast with him. After giving the new lish a fair trial they all promoneed them equal to almost any and superior to many of our saltwater pish, having more of the flavor of the mullet or sucker flab, and equal to rock or perch. These rish were obtained from Fish Commissioner Hughlett, just about one year from the day the breakfast was given. They were then only about two inches long, and have made their great growth since that time."

Figh Columns in Miorioan.—A correspondent informs us that on account of storms and cold weather there has been a short crop of whitelish eggs, in Michigan, and that instead of the forty millions which the commissioners were prepared to take they were only able to gather something less than five millions. There were hopes, however, that if the weather improved a considerable addition could be made to this

EATING NEGLECTED FISHES

Pensacola, Fla., Nov. 26.

Editor Forest and Stream :

I have read your editorial on "Neglected Fishes," in the issue of the 18th, with satisfaction, and am glad to see the matter brought before the public by so popular a paper as the

Issue of the public by so papages of the public by so papages of the public by so papages of the public by so papages of the p

Since it is about as circly or card strate and such fish as blue-tish, sheepshead, mullet, etc., instead of skate, sharks, etc., it is rather choice than necessity that influences them to eat

The European fishermen, holding to the habits and man-The European Issiermen, boilding to the habits and manners of their own country, are doubtless the cause of this, to the majority of American minds, peculiar taste. By association with them the natives of the coast have learned to add to their variety of fish-food and have also become aware of dainties which they once did not know of.

Therefore it is not strange that we find kinds of fish in quite common use on the Gulf coast that are thrown away on the York A therete coars which wish he will be a supported by the coast of the coast that are thrown away on the York A therete coars which wish he will be a supported by the coast of the

Therefore it is not strange that we make so fish in quite common use on the Gulf coast that are thrown away on the North Atlantic coast and which might, as suggested in your article, be utilized as cheap food for the poor. Since becoming interested in this matter I have not confined my curiosity to noting what others have done in the way of discovering new forms of fish-food, but have myself tried still more novel dishes and generally with good results.

During the winter of '73-'80 I was on a long cruise along the Florida coast with partly the object of securing as many strange specimens of fish as possible. In actiching these many of the common kinds were taken, which, as fresh meals were not always procurable, made up many a good meal. Partly for change and curiosity and partly for the value of the knowledge in giving their histories. I had cooked quite a number of fishes that are not often eaten anywhere, as lar as I know. Shore people were sometimes invited on hoard our vessel to dine, and it was very anusing to watch their astonished faces when catfish or equally despicable fishes were placed before them.

vessel to dine, and it was very amusing to watch their aston-lished faces when catifish or equally despicable fishes were placed before them.

On one occasion, while going from Ocklokony Bay to St. Marks, I laid out to feast the pilot on dainties of this sort. The cook brought in first a stew or chowder of minnows, very nicely prepared, which the pilot declined, but finally followed my example in eating heartily of. Fried bill fish and two or three other musual forms were next presented, received with suspicion and then accepted and pronounced good; but when the cook was told to bring on the sturgeon eggs (farina pudding in discuise) the poor fellow willed, and thanking me, said that bread and molasses was good enough for his desert. It can be imagined that strange stories were told about us by the pilot on his arrival home.

Fearing that what I have to say will be classed among the fishy of the fish stories, I will endeavor not to drop off into anecdote, as Silas Wegg is said to have dropped from prose to poetry, and will briefly mention some of the "Neglected Fishes" that I know to be unworthy of such neglect. Prominent among these are the rays and skates, the pectorals or wings of which are the chief parts to be utilized. These when nicely fried or broiled are really superior fish food, resembling somewhat the fiesh of the Southern flounder. At Spring and summer months when they can be caught, and seem to sell quite readily. Young individuals of the various species of sharks are also very palatable, cooked in any way that other fishes of their size are. I have been unable so far to discover anything rank or distasterial about the small sharks that live near the shore.

Salt water catifish, which are excessively abundant on this consider, quite as edible as the red-fish or channel bass, al-

though they are not to be so easily prepared for cooking. Their flesh needs to be cooked longer than the most of salt water fishes, and is especially good in chowders. The skipjack or lady-fish, a xoomberexceide of the South, is a very common fish and is seldom eaten because of its soft flesh and fine hones, yet it is excellent fried when fresh. The creoles of this vicinity occasionally eat them. The toadfish (Batracha tau), resembling somewhat the sculpin of the North, has very palatable flesh, which can be used to best advantage in chowders. A sea variety, recently described as Batracha tau, subop, partus, Goode and Bean, is considered a great delicacy among the French of New Orleans.

Gare, or bill fish (Belonides), are very numerous on the southern coasts of this country, yet are not eaten in many places. I attribute the prejudice against them to their form and the color of their bones, which are of a greenish hue, for there can be no cause for dislike to their flesh, which is firm and sweet and can be very easily prepared for use. All whom I have known to test their edible qualities have spoken highly of them.

I have known to test their edible qualities have spoken highly of them.

The sand-divers, gownarde (Triglida), and the yellow-tail (Elogatts pinnubius), are very fair food lishes, and are invariably thrown away in this country as valueless. The last mentioned is eaten in many places in Cuba, and at Havana appears in the market uncooked, and upon the streets cooked and all ready to be served to customers.

Many of the countless number of female fish commonly called minnows make agreeable and nutritious food when cooked in certain ways, and as they can be caught easily and in large quantities would sell cheaply. The Spaniards and Italians are very found of these minnows cooked in soups or stews. Of this class I have tested with good results two or three kinds, chiefly Ghirostoma peoinsular, Goode and Beang silver sides or finn, C. ragrans, Fandulus prondis, Baird and Girard, and Cyprincdron excited the Lac.

Among other uncommon dishes I have noted the use of the cowdish (Ostrucion quanticorna), as baked in its bony covering. Some species of Titrodontida, puffers or blow-fish and the squid.

This last is have commonly used than the other, and is

and the squid.

This last is more commonly used than the other, and is highly esteemed by the fishermen of the Northern and Western Gulf coasts as cooked in soups. There are instances among these people where squids and shrimps are eaten raw even while yet alive, but is by no means a common practice. If those of the readers of your valuable paper who are favorably situated or spend some of their time on yachting and camping excursions would interest themselves in this matter and test the eilible qualities of some of the usightly fishes that they are in the habit of throwing away, I will venture to predict that they will be pleased oftener than disappointed with the result.

#### THE DEATH TRAP IN SHINNECOCK BAY.

NEW YORK, December 7, 1880.

Editor Forest and Stream: I have read with great interest your articles on "The Death Trap in Shinnecock Bay." Mr. Lane, referred to in the article in your paper of November 11, is mistaken in saying the law giving power to the commissioners to locate an indet was passed in 1830. The law was passed in 1877 (see Session Laws of 1877, hap. 362). The following is a copy, cerbatim, of this law, taken from the Session Laws of 1877:

serbatim, of this law, taken from the Session Laws of 1877:
[Copy.] Laws or 1877, Charriza 352.

An Act to empowe the Board of Supervisors of Soffolk County to appoint three commissioners to locate: in the troon the Atlantic Ocean to the Shinnecock Bay in said county.

SECTION 1. The Board of Supervisors of the County of Suffolk see hereby authorized and empowered to appoint three commissioners to serve without compensation whose duty it shall be, within one year after the passage of this act, to locate as unite between the waters of the Atlantic Ocean and Shinnecock Law, in the said County of Suffolk, and the said three commissioners to appear any to them seem best for the interests of the people residing on or near said Shinnecock Bay, and to prevent or problish the opening of any other indet or inlets at any other point or points on said bay.

§ 2. Said commissioners shall hold office until their successors shall have been appointed, and shall be subject to removal at the pleasure of said Board of Supervisors.

§ 3. Any person or persons who shall own or aid in opening any inlet or inlets between the Atlantic Ocean and Shinnecock Bay, countary to the authority of the commissioners hereby superined, shall be deemed to be guilty of a misdements.

This is an important matter, and I have lately given it

is any person or persons who shall own or aid in opening any inlet or inlets between the Atlantic Ocean and Shinnececk Bay, countary to the authority of the commissioners hereby appointed, shall be deemed to be guilty of a mi-demensor.

This is an important matter, and I have lately given it some attention, having recently been at Goodground and witnessed the evils mentioned in your articles. There has been no amendment to this law, and I can find no other law relating to this hulet passed since that year 1877.

The commissioners have, as I have been informed, "relecated" the inlet at a point east of the former location. This agriculture is the commissioners have, as I have been informed, "relecated" the inlet at a point east of the former location. This agriculture is the commissioners have, as I have been informed, "relecated" the inlet at a point east of the former location. This agriculture is the commissioners where the inlet at the "relocation" will not run more than a tew weeks; that it will certainly close in a short time, and then the head of water which has accumulated in the bay sufficient to open another inlet. It is complained also that no steps will be taken by the commissioners to open the inlet at the "relocation" until spring, and that the result of all this will be that the bay will be unled as a sporting resort. It seems to me, on reading the law, that the remely for all this is simple and is in the hands of any of the residents who possess public spirit enough to carry it out.

First. This so-called "relocation" is entirely outside the authority of the commissioners. By section 1 of the law of 1377 it is made the duty of the commissioners, within one year after the passage of the act, to locate he inlet. This is the only authority given them to locate an inlet. The 'didented have a some and the section of the people residing on or near Shinnecock Bay." They decided that the westerly point, as soon as they had done so were "functus officio" as far as locating the interests of the people resid

to locate canne to such each.

Second. As it was almost the unanimous opinion of the residents near the Bay with whom I conversed that this westerly point was the only proper point for an inlet, the only point was the only proper point for an inlet, the only point where one would remain open any length of time,

it seems to me the remedy for the present trouble to be in reopening the inlet at the spot where it was originally located by the commissioners—the only legal location ever made. There are many men ready and willing at once to go to work without compensation and dig out the inlet at the old location, but are deterred by fear of punishment under the 3d section of the law should they so io. This, section provides that any person who shall open or aid in opening any inlet or inlets contrary to the authority of the commissioners shall be deemed guilty of a misdemeanor. It seems to me such fears are groundless. The commissioners have "located" the inlet at the western point, they having authority to prohibit openings only "at other points," all subsequent "relocations" being without authority and void, they have no right or authority to prohibit or authority to prohibit or authority to prohibit or authority to prohibit or authority to prohibit an opening at the point of original location. If the residents wish to save their bay as a shooting resort, let them some day this month go in a body to the westerly point, the point of original location, and diguitant interest.

#### RANGE OF THE CATFISH.

AS a further evidence that the statement of Dr. E. Sterling, of Cleveland, Of, who is usually very careful and accurate in his assertions, in Forest and Steram of November 11th, Vol. 15, page 287, that "the extreme Northern range of the catlish is, you may be certain, about Lake Erie" is not correct, I wish to present to your readers the following factor.

range of the catish is, you may be certain, about Lake Erie is not correct, I wish to present to your readers the following facts:

My boyhood days were spent on my father's farm in Niagara County, New York, on the shore of Lake Ontario. And I used to frequently spend the pleasant summer evenings in fishing for eels and buildheads from the beach. Sometimes I would set my rod by fastening the butt in drift wood, or otherwise, leaving the binted hook in the lake over night, and generally had the whole line tied into a close knot with an eel in intimate proximity as the result. But one morning, when I reached the lake, I found my rod with the rip nearly in the water, and could see what to my boyish eyes appeared to be a whale, but which proved to be only a catifish =probably Amburas nigricians; although, of course, I cannot recollect, if I had known then, the specific characteristics well enough to be certain. It weighed 9½ pouncs, which nade me high hook among the beys as long as I lived there. The flesh was white, solid, flaky, excellent.

Both the hook and line were of small size for cels, neither of which would have held him for a minute had it not been for the closificity of the rod, which was set so as to give when it must, and take when it could. Another illustration of the fact that the rod should always kill the fish.

Otrot.

Grand Rapids, Mich.

Grand Rapids, Mich

In a recent issue of your paper, Dr. Sterling says: "The extreme Northern limit of the cathish is, you may be certain, about Lake Eric." During the past summer I took a number of them in Lake Rosseau, Ontario, and in the Magnetawan River. Both these localities are considerably north of Lake

December 7, 1880.

Is IT THE POLE FLOTNER?—The Belfast, Me., Journal mentions a strange fish which should be sent to Prof. Baird for identification. It says: "Mr. Collins has at his fish market in this city, a specimen of flounder entirely different from what are usually captured in our waters. For two years, late in the fall, this flounder has made its appearance in our harbor and taken the hook quite readily. "Mr. Collins says that they are the deep sea or Arctic flounder. The fish run very large, weighing on an average one pound each. Another difference is that the deep sea flounder is now filled with spawn, while the instore variety do not spawn until spring. The deep sea flounder is caught off the coast in traps, or flyers, as the fishermen call them. These traps are made something like a lobster trap in which fish food is placed to tempt them inside. When once within the pound of the trap the lish is secured and is hauled in by the fishermen. They are a very excelent pan fish." Is IT THE POLE FLOTNDER?-The Belfast, Me., Journal

LUTJANUS BLACKFORDIL.-In speaking of the immense numbers of this fish which have within a few years occupied a prominent place in our sea-board markets the New Orie Denocrat, savs:

a prominent place in our sea-board markets the New Orleans Denocrat, says:

By a visit to our principal markets yesterday we learned that during the past week there was an enormous importation into this city of that highly-prized luxury and valuable article of food, the red-snapper. The supply of this isha along the whole coast is inexhaustile. The red-snapper grounds are estimated to extend 900 miles. It is only a question of labor what mount can no eaught. They are found in countless myriads at all seasons. In a certain depth of water, say from fifty to eighty feet. They are caught with lines having a number of books, which are eagerly seized by the fish. It is pretty hard work to draw up these lines with such a number of these heavy fish attached to them. Wind-lasses are frequently used to draw then up. In a very few hours the wells of the suncks are filled with them. To prevent their floating, and keep them slive until the port is reached, it is necessary to redure their bulk by compressing the large access of air accumulated in their long passage from a great depth of water in which they are brought to the surface. This isdone by a small incision just below the gills, which operate as a vent through which the air scapes until the fish is reduced to its natural size, so that it sinks and keeps alive and healthy. It was through this pingle suggestion that the red-snapper became a great commercial fish. Previously it was found difficult to bring them to market fresh. Now they can be caught in far greater abundance than any other fish. There is a large feet and a large number of meu employed in this fishery. As the value and cheapness of the red-snapper begins to be generally appreciated throughout the West, this industry will be greatly increased. With enterprise and abor and clean transportation, we believe that in time this business will equal in its proportions and extent the cod and mackered fisheries of Massachustets. The abundance of the red-snapper in the Gulf is equal, if not superior, to that of the

The Marketmen are now receiving large quantities of game, both large and small. The largest portion is received from the following States: Kentucky, Massachusetts, Virginia, Maryland, New York, Iowa, Nebraska, Missouri and the Red River region.

## Game Bag and Gun.

The man who thinks that he can afford to pay the farmer's boy more for quail than the boy is paid by the baggage-masters is invited to send his address to this office

#### DISCUSSING THE GAME LAW

DISCUSSING THE GAME LAW.

THE regular monthly meeting of the Long Island Sportsmer's Association was held at the Royal Arcanium Room, Music Hall, Brooklyn, Dec. 10, President Chappell in the chair. Mr. Abel Crook reported that he had gone before the Supervisors of Queens County to address them on the subject of making a law in Queens County similar to the one now in force in Uster County, which would prohibit the killing or shipping of all wild game for market excepting wild fowl. This created considerable discussion, a portion of the members thinking that such a law would make enemies of the farmers. Judge Lot said that a large majority of the farmers of Queens County were in favor of just such a law. It was finally decided toask the supervisors of Queens County to enact it. The Coney Island Rod and Gun Club, Capt. W. L. B. Steers, President, with eighty members, was then elected by ucclaimation to the association. Captain Steers thanked the association, and said that the members of the club were more expert with the rod than with the gun, but there were a few good shots among them. Judge Lot remarked that as the President of the Concy Island Rod and Gun Club was some on the rod he night have a chance to meet Seth Green and give him a proper "steer."

a chance to meet Seth Green and give him a proper "steer." Captain Steers was then elected a member of the committee

Island foot and cont clint was some on the root ac linguit have a chance to meet beth Green and give him a proper "steer." Captain Steers was then elected a member of the committee on fish and game.

It was decided that the president should call a special meeting of the executive committee to appoint sub-committees. Mr. Crook made a motion, that was carried, to the effect that the association should apply to the Legislature for a charter of coporation, which would give them the power to elect constables, to employ detectives, to purchase game and fish for breeding purposes, to punish trespassing to furnish licences to shoot, and constituting each member of the association a game constable.

The prize committee reported progress, and were granted permission to increase their number if they saw fit. Mr. Nicholas Pike was then requested to address the meeting. Mr. Pike read the following paper:

"Members of the Long Island Association.—For the past year I have exerted myself as much as possible in gaining information from competent persons relative to our existing game laws. From my own observations also I am convinced that alterations and additions should be made to them to prevent the wholesale destruction now going on, not only of our game, but of our song birds, which at the rate it is now progressing must end in their extirmination. Below I append the changes I would recommend in our game laws.

"Relative to the shooting of wild ducks and gesse.—The use of floating batteries, machines or other devices whereby the gunner is concealed, or shooting therefrom: use of decoys or construction of how houses at distance from the shore of more than twenty roots should be a misdemeanor of Long Island. Sailing for them, or shooting from sailing or steam vessels or structures attached to the same, should be made misdemeanor of Long Island. Sailing for them, or shooting from sailing or steam vesselsor structures attached to the same, should be made misdemeanor of Long Island. Sailing for them, or shooting from sailing or s

shore of nove than twenty rods should be a misdemean of Long Island. Sailing for them, or shooting from sailing or steam reseals or structures attached to the same, should be made misdemeanors with added penalties throughout the State.

"The reason for which I recommend hattery shooting to be discontinued is this: There are many persons in the Great South, Peconic and Shinnecock Bays who gun for a living, and gun incessantly from daylight till dark, and often far into the night through the whole season. Now it is well known to sportsmen that if ducks and geose are constantly disturbed at night or early morning while on their feeding grounds they will eventually desert the place. The late Governor Dix once told me that it was his opinion that buttery shooting was quite destroying the sport, as ducks were yearly becoming scarcer and leaving their accustomed haunts. The law as it now stands for killing these birds between sunset and daylight, with or without a lantern, is all right. "Curlews, godwits, willets, sandpipers, singe and all birds commonly known under the name of snipe.—A stringent law should be passed prolibiting the shooting of these birds except between the 1st of August and the 1st of January. Spring shooting should certainly be forbidden.

"Quall.—A law should be passed preventing the shooting of qual on Long Island for the next three years. They have become so scarce of late years that there are comparatively few left. I am informed by sportsmen that trapping, robbing of nests and shooting out of season are rapidly externinating of nests and shooting out of season are rapidly externinating of nests and shooting out of season are rapidly externinating of nests and shooting out of season are rapidly externinating of nests and shooting out of season are rapidly externinating of nests and shooting out of season are rapidly externinating of nests and shooting out of season are rapidly externinating of nests and shooting of the nest have prevently there is no a season of the nest of the should have no e

basket carried by a small boy nearly two hundred small birds, including two woodcock that I am sure were sitting birds, the result of a day's shoot by four or five larger boys. Once I met a man, evidently a foreigner recently arrived, who knew nothing of our laws or language, with a bunch of seventy-two wood-thrushes from his morning's work. As I traverse the woods of Long Island they are now to me painfully silent. A few years ago the woods resounded with the song of birds as they flitted from tree to tree, and their nests were in every bush. The sween notes of the chat, the pretty warblings of that little ventriloquist, the mocking wren, and the song of the melodious wood-thrush are now only heard occasionally.

"For the destruction or robbing nests of wild birds.—The present haw is a good one, with the exception that it is not

"For the destruction or robbing nests of wild birds.—The present law is a good one, with the exception that it is not stringent enough. I would make the penalty \$10 instead of \$5, with imprisonment; and for robbing the nests of any song birds, partridge, quall, woodcock, rail, black and other ducks, excepting for scientific purposes, I would make the fine for the second offense \$25, with imprisonment in the county jail for three months and not more than six months, according to the enormity of the offense. My reason for re-commending a heavier fine for robbing nests is this: The present fine of \$55 is not enough to intimidate the thief nor even the wealther would be whose father may the first of the execution. present fine of \$5 is not enough to infinidate the third nor even the small boy whose father paysthe fine. For example, a man was arrested for robbing birds nests in the woods of Jannaica. He was fined live dollars and I heard he said that five dollars was only five out of the thirtyhe could make out of the sale of his day's plunder which he had concealed. Out of more than fifty nests watched by members of the society for the protection of song birds only four remained undisturbed, and of these two were robbed of the young birds by these Vandals before they were fledged.

"Trapping or feeding birds with prepared grain for the purpose of destruction.—Any person using traps or sances of any kind for the capture of any wild birds, or using grain soaked in alcohol or any other stupefying drug for the purpose of capturing them, shall be guilty of a misdemeanor and fined \$10 for the first offense and \$50 with imprisonment for not less than three or more than six months in the county

pose of capturing them, shall be guilty of a misdemeanor and fined \$10 for the first offense and \$50 with imprisonment for not less than three or more than six months in the county jail for the second. I am convinced that this part of your game laws should have the most serious attention, as not one person in a thousand has the remotest idea of the extent to which the above is carried on. Hundreds of birds are trapped and captured yearly. I have destroyed double the number of traps this year, 1880, than I did in 1870, and have picked up birds in a stupefied state I had taken for dead. This proved two things—vix., that trapping is on the increase, and that the present law is a dead letter, as there is no one to enforce it.

""Game protectors.—There should be appointed three more protectors, one each for Kings, Queens and Suffolk countles. Their term of office and pay should be the same as those now given to the eight protectors now in office; but the Governor should appoint them through the recommendation of a committee appointed by the prosidents of the State and Long Island Associations for the Protection of Pish and Game.

""" "License.—There should be a law passed to prevent any person from hunting with a gan or fowling piece in the three above named countles, unless they have a certificate issued by the Supervisors of the county. This certificate should give a detailed description of the person to whom it is issued, always to be carried when out hunting, and be shown to the protector when asked to do so. Non-presentation of the certificate is hold

by the Supervisors of the county. This certificate should give a detailed description of the person to whom it is issued, always to be carried when out hunting, and be shown to the protector when asked to do so. Non-presentation of the certificate will make him liable to arrest. The price charged for the certificate should be SiQ, and all moneys so collected should be handed over to the County Treasurer for the benefit of the county. The importance of this law is recognized in every civilized county except this. The passage of such a law together with the appointment of protectors strikes at the root of the difficulty, and without it all other laws will be (in my opinion) a dead letter. The in-postest person, the cheapness of powder and shot, and the freedom extended to every one to roan our forests and destroy everything that comes to hand, are great inducements to continue this nunderous work, and will, if unchecked, in a few years destroy all our song birds and many of the game birds of our beautiful island. Now the most important part of the laws thus recommended if passed would be the appointment of protectors, or game constables, and licenses to shoot. I should strongly recommend that these officers be appointed and governed by the State laws now in force rather than in any other way. By being appointed by the Governor it gives them more efficient authority than they would have if appointed otherwise, as they would be acknowledged and paid by the State. Now, if a law should be considered a local affair, and appropriations for the passed allowing the Long Island Society to appoint, it would be considered a local affair, and appropriations for the passed allowing the Long Island society to appoint, it would be considered a local affair, and appropriations for the passed allowing the Long Island Society to appoint, it would be roposed such as Irecommended it would pass undoubtedly, and the Presidents of the State and Long Island Association would have the power in their hands. The President of the President

The Game Law Committee of the Long Island Sportsmen' The Game Law Committee of the Long Island Sportsmen's Association net last Saturday evening, Capt. W. L. B. Steers in the chair. Several letters were read and discussed. The suggestions of Mr. F. S. Wager, of Rome, N. Y., respecting shieteway dams was adopted. Mr. John N. Babcock, of Syracuse, wrote. "In perfecting the game laws for next season permit me to suggest that in the eight line in section 23 as amended May 31, 1886, there he added after the word tributaries, 'nor

May 31, 1880, there he added after the word tributaries, "nor in Sencea, Oncida or Oswego rivers or their tributaries,"
That is the way the original bill was drawn, for I drew it myself, and those three rivers were inadvertently left out. Also have added in same section 23, after word 'minnows' in 16th line, 'in any other manner.' I would also call your attention to the last claim of section 23 in which is stated that all nets, etc., etc., are declared contraband, and may be all nets, etc., etc., are declared contraband, and may be destroyed without liability to persons so finding and de-

"That right to destroy is a mooted question so far as I can learn, and has never been judicially decided. If a person can so destroy such nets, etc., under such circumstances and not be legally liable, it is a first-rate clause; if they cannot, it ought to be expunged and save trouble. Our Ounondaga County Fishing Club have a suit now pending on that very question, on account of our game constable." The suggestions in this letter were also adopted.

Mr. Hasbronck, of Elenville, wrote as follows:

"I wish to call your attention to section 25 as to fouling waters. That section as it now stands is an utter nullity. If possible it should be amended so as to be operative. Our brethern in several of the Western States and Territories are in advance of us in this matter; also, I believe, in Canada, where it is nade a misdemensor and a penalty inflicted as well. Tanneries are compelled to run their leachings in sink holes, where gradual absorbtion will take place, or in the neighborhood of cities and villages into vats, where the valuable liquid manure may be utilized for fertilizing purposes, for which it is admirably adapted and would be a source of profit to the tanner. In the case of saw mills they are compelled to burn their slab and dust, or otherwise dispose of such waste, but not run it off into the stream, destroying the fish and the spawning beds. The lower part of a line large stream in this vicinity has been utterly ruined by a large trannery exceted upon it a few years ago and now in active operation. Last spring when they first let off their leachings at the time the fish were ascending the boys in the neighborhood picked up baskerfuls of fine fish, and the rout in former years, and would be again if the tannery could be interdiced from discharging its leachings into the stream. The same may be said with equal truth of another tannery near by on the Upper Rondout, one of the finest natural trout streams in the State. The stream was rapidly filling up with trout. 

Now a net with a one-inelt mesh can be made to measure two inches, but if made to measure two inches square, they cannot do that. Mr. Chappel then showed a collection of six fish. A yellow perch which would weigh 2 lbs, and one that would not weigh half an onnee were shown, both of which were caught in the same net. He also showed several different varieties in the same way. He said what is sold for whitebait in our markets is anothing more or less than the fry of all kinds of fish, and also that it was of no use to plant fish until this was stopped. It was decided to adopt the following: That no net or sieve should be used in Coney Island Creek, or in Gravesend Bay, within one mile of the mouth of said creek, excepting between the first of October and the first of April, and then the mesh must be four inches square. After a discussion on the size of fish allowed to be and the first of April, and then the mesh must be four inches square. After a discussion on the size of fish allowed to be sold the meeting adjourned to meet at the Fountain Gun Club rooms on Saturday, the 18th inst. If any section of the State wishes to be heard from in regard to the game laws it is requested to write as soon as possible, as the next will probably be the last meeting of the committee.

#### OUR PHILADELPHIA LETTER.

THE admirable articles on the wild fowl of our country which appear in Forest and Sterram, especially the column on the marsh, upland, or fresh-water ducks, reminds your correspondent of the acute sense of smell they have as compared with the sea ducks. This is particularly noticeable in decoying for geese and brant, when stools representing the black duck are also set out, but always in such a position that the latter approaching the decoy may not eatch the wind of the sportsman. Every duck approaching the decoys and crossing the line of wind from the beat or blind, no matter how deceptive it is, will at once "jump" or "climb" skyward the moment his exquisite securing powers delects the hidden shooter. This I have noticed is not she case with the sea ducks, nor does the goose or brant appear to thus discover the blind, for they approach the decoy in every direction, oftentimes in the line of wind, without being to thus discover the blind, for they approach the decoy in overy direction, oftentimes in the line of wind, without being alarmed. The mallard, black duck, pintail, baldpate, or widgeon and teal, of the list of "marsh ducks," all act in this manner, and it has struck me that this acute sense of smeel is a characteristic of all ducks which, as a rule, are not deep divers in feeding and secure their food mainly in shoal water, where it can be obtained from the bottom without deep divers in feeding and seem their foot manny in swatcr, where it can be obtained from the bottom without submerging their bodies. The deep divers, of which would mention the canvas-back, red-head and black-hea have never acted 90 in my experience, and may it not that the rule holds good in the entire list of both classes, as

that the rule holds good in the entire list of both classes, and that the marsh ducks possess the acuter sense of smell and the deep divers the less sensitive olfactory powers.

Mr. Charles Whitman, in a letter to your correspondent, in describing his Pedigree, Domuth's Kato setter dog, tells me is fully as handsome as the sire, considerably larger, and possesses dark points, which the father did not. Certainly this would make him a finer show dog, but we question if there ever existed a dog with a more beautiful coat and feather than Pedigree, to say nothing about his immense depth of chest.

depth of chest.

In speaking of his kennel Mr. Whitman states he intends disposing of all his setters, a Petrel-Count Dick, bitch, and a Druid-Cubas blich, and devote his time entirely to his black pointers, which he likes better and better every day. "They have remarkable noses and are the most tractable in training of any dogs I ever saw. Stonehenge spoke so very highly of the black pointer and of their rarity that I turned to them, and am much pleased with my decision. They are no parlor dogs, but are stout in limb and body, heavily muscled, and show quality all over, with thick, glossy coats. The first qualis the bitch (six monthsold) ever scented she pointed and stayed there while I killed several of them."

Mr. Whitman refers to the criticisms published on his calling his pointers "Spanish blacks," and asks my opinion on the subject and remarks, "I have the breeder of the strain in England as authority." We have never heard of such a breed the subject and shadow.

England as authority." We have never heard of such as conformation of pointers, but do know black pointer puppies show themore pointers, but do know black pointer puppies show them. of pointers, but do know black pointer puppies show themselves in many litters, and we cannot see but that by continued choice in breeding black to black for many generations,
this color, if it may be called a color, might become the characteristic one of the strain. This breeding to color is noticeable in Mr. Theo. Morford's setters, and we find his dogs invariably orange and white (seldom freekled) with dark nose
and eyes; and here let me state that even in the potigrees of
Mr. M's dogs there appears the name of Philis, a black and
tan setter bitch, but away back. We mention this to show
how this gentleman's continued sticking to the orange and
white and dark nose and eyes in choice of sire and dam has
finally overcome the showing of any other color in his litters.

white and dark nose and eyes in choice of sire and dain has finally overcome the showing of any other color in his litters. Sone say there may crop out a black and tan. There never has yet, at least within the past five years, to the writer knowledge. Will Mr. Morford inform us?

But to return to the name of Mr. Whitman's pointers, "Spanish black." We do not know that the breeder intends by thus calling them to show they are of the old Spanish blood, and he errs here if such is his intention, for the color of this old breed was liver and liver and white, and even in Spain the strain as it once existed is never seen, having heen modernized and refined by the lighter and specific pointer. Several of the late works on dogs mention noted breeds of black pointers as purely English, and without weishing to die-

modernized and refined by the lighter and speedict pointer.

Several of the late works on dogs mention noted breeds of black pointers as purely English, and without wishing to dictate in any manner, we think Mr. Whitman should give to his new importation the name of their breeder and await the result of the union of the dog and bitch he has purchased in the first litter. We trust he may find the purples all black. We doubt it, however, but would be pleased to find that he has or will succeed in establishing a breed of pointers that will inwaitably "throw true to color." Shade of coat is no criterion to go by as regards superiority in the field; however, it is merely fancy, and as the old saying tells us "a good horse may be of any color." And now turning from the dogs to game again, what a trying winter the poor qualitas in prospect. You have taken up a capital subject to ventilate Messrs. Editors, that of their protection, etc., and you correspondent particularly noted the reply to your call for the opinions of sportsmen in last week's issue of Forest Any Steak. I refer to the article signed by "a member" of the West Jersey Game Protection Association. Such matter from the pen of so able a gentleman as the author proves himself to be cannot fail to do great good, and he should be earnestly requested to further from the should be earnestly requested to further from the should be a gentleman as the author proves himself to be cannot fail to do great good, and he should be earnestly requested to further from the should be a gentleman as the author proves himself to be cannot fail to do great good, and he should be agreed to the first throws the should be a gentleman as the author proves himself to be cannot fail to do great good, and he should be agreed good.

himself to be cannot fail to do great good, and he should be earnestly requested to furnish frequent letters. Hono.

In last week's issue "Homo" was made by the types to speak of the sale of vaccine by the "pint," whereas he wrote "points." Vaccine is ordinarily obtained in one of three forms, viz. (1.) the dried crush; (2.) quills charged on convex surface with lymph; (3.) ivory points.

In the same article, for "albatus" read "albatus," and for "hyperforus" read "hyperboreus."

#### PENNSYLVANIA GROUSE-SHOOTING.

OT since the opening of the Columbia and Port Deposit

National has sport been as good as this year in southern Lancaster County. The opening of the road through that hitherto inaccessible region of Southern Pennsylvania was the signal for a rush of the sportsuen of Philadelphia, Wilmington and Baltimore in such numbers as in a few years to almost clear that once famous game section of every game bird that chooses that romantic section for its habitat. The time was when the sportsman of Luncaster cherished with no small degree of pride the fact that on the rugged hills on the banks of the Susquehanna that prince of game birds, ruffed grouse, was always to be found; and as we write we can recall the chagrin of many a city sportsman, who, under the care of the hospitable Mulhelmedre or grain Hopple, tramped for days to bag one, but whose nerves were unstrung at each successive rise and whose shots were as often sent after the echo of the whirt-r as after the hurrying bird. We never can forget the quiet, pointed humor of the man first named above, that was so searching and provoking over one's failures as to cause the subject to persever from day to day, until, worn out by sheer fatigue, he abandoned the getting of one trophy until the following season, when, ten to one, the same thing was again repeated.

Muhlenberg, known fair and wide among genuine lovers of field sport, is gone; but the memory of his interest in all that was noble in ouddoor recreation has a deep hold upon the affections of the present generation of sportsmen in this vicinity, where he was best known and most appreciated.

Knowing that the woodland covering the hills bordering on the Pequa—a stream emptying into the Susquehanna through a deep, wild cut in the range of hills following the river—was comparatively free from the inroads of gumers during the seasons of 1878 and 1870, we visited it, more for the purpose of seeing what could be found than in the expectancy of flording anything. The result shows what is possible if the birds in a country can only be left for a short time to replenish them

birds in a council to the second in this second in the second in the second in the second in the found a dozen grouse. Getting out early in the morning for partridge, the dogs found a covey near the edge of a thickly wooled hill, which, on being flushed, flew to the cover. Following them, and finding the dog on a point just inside the wood, but beneath the thickest of green briars, to the throwing in of a stone four grouse got up simultaneously. This was too much for the writer, though used to the sound of their call-beat and noise of rapid flight since childhood. They got away while we forgot the gun in our hands, but the sight in ad sound fired our blood, no and more partridges for us that day. To call out the dog, to

rapid flight since childhood. They got away while we forgot the gun in our hands, but the sight and sound fired our blood, no and more partridges for us that day. To call out the dog, to pat, praise and encourage her was the first thing; then to move on cautiously, following the thickest of growths in the roughest of ravines, with dog always in sight and well in hand.

We were about giving up after a long and tiresome tramp away beyond the mid-day hour, when to the whistle for the everobedient dog we received no response. After a hurried look she was found up the hillside on a rigid point in almost clear ground, but no bird in sight. Following carefully, and with hope of seeing a bird at every step, imagine our disease tee the dog move slowly onward, but soon go down fat and close, and the next instant two grouse go whirring away. By this time, having regained composure and knowing what was coming, both loads were sent after them, but only one bird secured. This was enough. There were birds on the hills, and we would have them. The dog, always good on partridges, and always loved, surpassed anything we ever saw and suddenly acquired an inestimable value in our sight. No dinner, no thought of fatigue and we went on and on till dark with varying success. dark with varying success.

The next day found us at dawn far up toward the top of the rugged, wooded hills. We feared the dog would show being tired from the tramp of the day before, but no. One, unseen, gets up wild, and from now until dark the dog gives a succession of surprises in her capacity. Night comes and never met so tired, so satisfied, so triumphant, so boastful a gunner as me in counting out fifteen grouse as the result of two days' work from sun to sun. No one with any less good dog could secure the same result.

Feeling that the success of this hunt was entirely due to the comparative rest the birds have had for two years we record this to encourage the efforts of game associations to preserve the game in the country under their control, satisfied that districts now without a partridge or grouse will soon again afford plenty of sport for the outlay of time and money in the rigid enforcement of the game laws.

Briskshot.

#### GEORGIA SHOOTING RESORTS.

A Sthe eason has come when the question with many Northern sportsmen is, where good game sections are to be found, I will say a few words concerning this part of Georgia. I notice one of your correspondents is inclined to think that some at least of your correspondents have "axes to grind" when they call attention to localities particularly favored in the way of game. I can say most positively that this is not true, so far at least as I am concerned.

In the matter of climate this section leaves but little to be desired. We are below the snow level—I might almost say below the frost line. We have had only one light frost this winter, and the atmospheric conditions are certainly peculiarly suited to those suffering from lung troubles, the country being almost entirely covered with a heavy growth of pines.

We have fairly good railroad facilities. Of course the traveler will fail to find the luxurious appointments of the great trunk lines North, but a not too fastidious person can and will be satisfied.

traveier will fail to find the luxurous appointments of the great trunk lines North, but a not too fastidious person can and will be satisfied.

Lest some doubting Thomas may think I am overdrawing I will put it very mild while I speak of the game to be found in this favored section. Quali are to be found in great abundance everywhere, a good shot will find no difficulty in bringing forty or fifty to bag in a day's shoot, and a man who hunts for the bag alone can do even better than this. In some localities, indeed wherever they find food and suitable feeding grounds, snipe are plentiful enough to afford good sport. By this I mean a sportsmen can Kill twenty-fue to thirty in a day. A few miles in any direction from any point will give the sportsman superb duck shooting, and if the sportsman will leave the line of railroad a few miles he can have quait, snipe and duck shooting all on the same ground. A few deer are to be found, and wild turkeys are fairly plenty.

Accommodations, price of same, etc., of course vary. The high-toned sportsman can find those suited to his tastes, and the man who will be satisfied with good, clean, comfortable quarters and food can be suited as well.

The better class of our people will gladly welcome as friends and companions in the ield all gentlemen who will deport for all who may come, and I will for the love I hear the guild of sportsmen cheerfully aid and properly introduce all who care to avail themselves of my service.

To those who desire more specific information I will be happy to communicate by mail.

ALBERT WINTED.

Catro, Thomas County, Ga., Dec. 6.

#### THE INTRODUCTION OF GAME BIRDS.

WHILE noticing with interest the laudable efforts of

THE INTRODUCTION OF GAME BIRDS.

WHILE noticing with interest the laudable efforts of gamelemen sportsmen and game protective associations throughout the Eastern and Middle states for the introduction and propagation of migratory qualt, the thought has often presented itself, Could not their efforts be better directed, and with a much fairer degree of success, toward the introduction of that noble gaine bird the pinnated grouse, or prairie chickon? In the one case it is a bare experiment, dependent for its success upon whether they will migrate and return; while in the other, it is almost an assured success. The rigors of our winters' deep snows and consequent scarcity of food is almost certain destruction to our qualietither native or imported, while the hardiness of the pinnated grouse, coupled with its habit of taking to timber in the coldest weather, adapts it to the extremes of climater, as well as our own ruffed grouse, or "pheasant." That it is singularly fitted to withstand our severe winters is amply proven by the vast numbers found in Wisconsin and Minnesota, where their winters exceed ours both in duration and severity.

While I fear we must admit that the introduction of migratory quali has not met with that success for which it was hoped, yet it is a "step in the right direction," and I trust will lead to like experiments with both the pinnated grouse and California quali. As to their game qualities and the pleasure of bagging the one or the other there can be no comparison. Every sportsman who has shot ruffed grouse and our native quali knows with what additional pleasure he exhibits the spoils of his day's sport if among a goodly number of them he can also count two or three brace of Boncae and believe to dogs, would be secarcely less difficult to kill (as they would take to timber on being flushed), and when bagged but little interior to its lesser coustin. Our diversified landscape of hills and valleys, barren mountains and cultivated fields would afford immunity from extremes of temperature as

Sullivan County—Eldred, Dec. 5.—Monday, November 22, I hunted deer alone and killed a fine buck. He weighed 156 pounds. On Thursday of the same week I hunted again with a companion. In the morning I drove two fine bucks over the stand before George got there; and in the afternoon started and drove another 200-pounder to George and he shot him dead. On Monday I hunted with two gentlemen from Hancock, Mr. Kelsey and James M. Wheeler. Mr. Wheeler shot a fine doe before 8 o'clock. Tucsday, George Dualay and I hunted again and started ten deer, but did not kill any. It needs six men to hunt them here, but the senson is at an end for this year. Partridge, rabbits and hares have not been more plenty for several years.

#### HE WILL MAKE AN AFFIDAVIT.

Editor Forest and Stream :

Editor Forest and Stream:

Some weeks ago I saw a controversy in your paper about trapped quail on Long Island. I know the letter-writer in yours of the 11th stated the truth, while the indignation of the Long Island Game Association, as expressed in your number of the 18th, appears to me rather uncalled for, at least in the face of my experience. For the benefit of the association I will state the facts and points.

On returning from the field trials Friday last on the early train, I think is was about 9 o'clock—really overlooked name of station—the newsboy offered me a dozen quali, which he told me the bagagae-master told him to self. I examined them carefully and they were trapped birds. The boy claimed famourance of everything. All he knew was to sell his birds. Now I have no interest in Long Island, never pulled a trigger there nor expect to: but if my brother sportsmen of the Long Island Association want me they can call upon me at No. 43 New street, New York. I will make any affidavit they want. I further give them these points: (1.) It is unlawful under our State laws to sell trapped quail. (2.) It is against the rules of the Long Island Railway for the baggage masters to carry anything except checked trunks—everything else must be carried by Westcott's Express. (3.) The Urion News boy acts contrary to rules by pedding for the baggage-master instead of his employers.

Now the proper things are to complain at the Vaiion News Company, and commence suit against the baggage-master and boy on the through train. Send a detective on the train for a few mornings and he will corroborate every word Isay. Before closing I confess I can't understand why this illegal bluckstering can be allowed. If that had happened in my county I would have stopped it long ago. There need be no complaint about an anonynous communication this time.

Guymard, Orange County, N. Y.

Guymard, Orange County, N. Y.

#### WILD GEESE AT SILVER LAKE.

WILD GEESE AT SILVER LAKE.

Bosron, Dec. 6, 1890.

The writer had the good fortune to be present at and take part in some shooting at wild geese considered very remarkable, and which might be thought of sufficient interest to be made known. The locality was Silver bake, Mass., where so many regatas have taken place. The stand where the birds were shot at is on the west side, near the grand stand for viewing the ruces, and called Widgeon Point. The shooting was on Thursday last, Dec. 2.

Ten geese swam up off the stand, and all were shot, only one of which had to be shot over from the boat which went out to recover the birds. This was about sunrise. About 10:30 A. M. a large flock, twenty-one in number, were seen flying over, well up in the air, and by stirring up the live decoys noise enough was made to turn them back, and they lith the south end of the lake. After staying there some time they rose, and after wheeling several times within shot of the stand they went down in the water in a cove, almost within shooting distance, then swam up toward the beach in front of where seven of us were waiting, hardly daring to move for fear of scaring them away. When they were directly in front of us, swimming well together, the word was given, "Get ready! Are you ready? Fire!" and the contents of seven guans poured into them, only two or three made the least attempt to start, and they were shot at once, and the whole number, twenty-one, lay dead. The most remarkable part was that not one of them required shooting over from the beat.

This is said to be the most remarkable shot at geese from a stand ever known in be made in the county (Plymouth). I would also add that out of four bunches of geese decoyed to this stand—viz., eight, six, ten and twenty-one, forty-five in all—not or escaped.

SOUTHERN FLORIDA—Lufquatte. Ind., Dec. 9.—In your last number of Forder and Stream you speak of a party of gentlemen who intend visiting Southern Florida and wall endeavor to by sailing down the Kissimee River and through Lake Okeechobee reach the Caloosaharchee River and eventually Charlotte flarbor and the Gulf. Have been through this section of Florida, and shall await with interest the report of this party. Will you kindly give me the names of the members of the expedition? The old boat "Forest and Stream" was secured by our leader, Mr. Ingram Fletcher, of Indianapolis, at the time it was abandoned by your exploring party at Pt. Bassenger, and used by us several years in our trips through the Kissimee country, and do not think it possible to pass from Okeechobee to the Gulf by boat at ordinary stage of water without making some long portages. Three years ago, after heavy rains and when Southern Florida was partially submerged, Messrs. Driggs and Peise (the former from Michigan and the latter residing near Pt. Bassenger) made the trip by boat. The old "Forest and Stream" was an excellent boat and well adapted for exploring in the shallow lakes of Florida. She now lies a wreck on one of the islands in Lake Tahepekaliza.

E. A. E.

Weights of Ruffed Grouse—Hornellsville, N. Y., Dec. 5.—I have just written to your correspondent not to send his plume to "Ruffed Grouse" or Chas. F. Kent, but the plume or a collar to my cocker Fannie, for last Thursday, Dec. 2, she caught the king of all grouse ever seen here. It weighed, after being carried all day and bleeding considerable, thirty-two and one-half maces, so, you see, she is fairly entitled to the plume. The bird was weighed on two different scales, and hundreds came in to see it. It measured over eighteen inches from end of beak to end of tail. It was a cock.

J. Otts Fellows.

Hills of Singanore, Md., Dec. 6.—I notice in last issue of Foresta and Streem at the accorrespondent awards the plume of honor to Chas. F. Kent, of Moniteello, New York, and to "Ruffed Grouse," of Ashifield, Mass., for killing a ruffed grouse that weighed one pound and thirteen ounces. If your correspondent will take the trouble to refer to "Frank Schley's American Partridge and Pheasant Shooting," on page 180, he will there find recorded that the average weight of the American ruffed grouse is one pound six to thirteen ounces. To give credit as far as I know this is the only work in the United States that gives the weight of this wild, hardy North American game bird. So, according to this valuable and estimable book, and authority's good teachings, for a sportsman to kill a ruffed grouse that will weigh one pound and thirteen ounces it is not outside of the general Hills of Singanore, Md., Dec. 6 .- I notice in last issue of

limits of occurrences, but it is otherwise. It is more like the regular, every day run of things. HARRY WOODLAND.

regular, every day run of things. HARRY WOODLAND.

THEY KNOW THE SEASON—Bloomshury, Hunterdon Co.,
N. J., Dec. 6.—The month of November is past and we
have done but very little shooting. Quail are not so plenty
as they were thought to be during the summer. We could
often find full coveys and many of them, but with Nov. 1,
they disappeared and about Jan. 1 will again put in an appearance. Last fall I knew where there was a covey of
twenty-four large birds, and hunted them every week, but
never found them. I knew no one else had found them, and
was confident that none had been shot. On Jan. 4 the whole
flock passed across the road and ran along without fear of beding molested. Grouse are in fair numbers, although few have
heen shot. Rabbits are pleatly. Woodcook very scarce.
We had very dry weather during July and August, or I think
would have seen a few at least. About a dozen have been
shot in this vicinity since Nov. 1.

The Hen Island Club—Theoton, Mass., Dec. 7.—The following is the score made by the Hen Island Club, located at Scaddings Pond, Tawnton, Mass. The club were fortunate in bringing within shooting distance all the gees that struck the pond, thirty-eight in number, and captured at different times 6, 7, 2, 4, 6 and 6—total 31. The pond froze up Nov. 20, and the last six geese were decoyed to the ice forty-six yards from the stand and shot where they lit, a Coit 12-gange gnu killing one clean at that distance. The club use fourteen geese decoys. Ducks this season have been scarce and hard to decoy. Total of river ducks, 61; seafowl, 72. The club sill remain at the stand waiting for stray flocks of geese, and pass the time in fishing and gunning in the woods.

ning in the woods.

Georgia—Elberton, Dec. 10.—Drs. Oliver and Hafer, of our town, went out hunting a few days ago and bagged 60 partridges. We have several fine shots who bag from 50 to 100 in one day. Ducks, geese, fish and rabbits are plentiful. Deer, foxes and "coons" are scarce. Willie Snow, one of my friends, caught last spring three eathsh, respectively 26, 26 and 37 inches in length, and the three weighed 24 bis. We killed about the same time a bird of the fish-hawk tribe that measured 7t. from tip to tip. His bill was 6 in, in length, 1 in, in width, and his longest tail feather was 20 in. Can you tell me what its name is in your next paper?

Van description is inputificiant.

Your description is insufficient.

Onto—Franklin, Dec. 2.—Quail and rabbit shooting now in full blast. Snow is going off and it will be good hunting for a while. Some very good bags have been nade. A few pheasants have been bagged within a mile of town. A friend showed me a very large spine bird this morning. They are the first killed in this county for some years. Mr. Win. Van Horn killed three turkeys and twenty pheasants in Darkt County last week. A very fine deer was received to-day by Mr. James Barklow from the wilds of Michigan as a present. It weighed 100 pounds and pulled 80 pounds with hide off. It excited the curiosity of the people very much, being very rare game in this guich.

rare game in this guich. C. A. M.

CONNECTICUT—Madison, Conn., Dec. 6.—Have been much interested in reading editorial in paper November 25 in relation to farmers on Long Island. The same arguments will apply here as elsewhere. If I can get time and some relaxation from professional cases I intend to give you some items in relation to sporting natters in this vicinity, for if some measures of prevention are not soon taken game here will soon become extinct, as pot hunters and trappers have full swing here. Please answer the following query: Who makes the best glass-ball trap, and at what cost? and oblige D. M. W

Texas—Indianolia, Nov. 30.—For the past two weeks the weaklate has been so wet and cold and everything so full of water that shoots all the fowl have left here. I hear, however, that up in the Post Oak country (there being an unusually heavy mast this season) the ducks are in countless numbers. I hope, however, to have better news if we can have some dry weather. Fine fishing, large quantities of sheepshead being caught.

G. A.

A Big Buok.—East Saginave, Nov. 29—I have just returned from a five weeks' hunt. Grayling fishing good. Deer hunting good; five hounds to every deer; so much for the gentleman sportsman. Killed one buck weighing 247 lbs., and a number of smaller bucks. If you can oversize that I know where there is one that will weigh over 300 lbs. I will try and get him next time.

Pennsylvania—Cooperstown, Dec. 6.—I returned home from a two weeks' hunt in Forest County last week, but cannot boast of success. Mr. J. E. Wenk, editor of the Forest Republican, killed within a few miles of Tionesta a very fine five prouged buck which weighted near two hundred pounds. Very few deer killed in that vicinity this fall, owing to the scarcity of snow. I did not see a deer.

WRIGHT OF SQUIRRELS.—I have taken the trouble to carefully weigh all the gray and black squirrels I have shot this fall, and find the average as follows: Gray, 1lb., 100z; black, 1lb., 140z. This is net weight, soon after being killed. It seems to me that squirrels here are larger than I ever found them elsewhere. Will some one else please give average weight? Last week I shot three mallard ducks that averaged 3 the seach.

New York—Hornellsville, Dec. 5.—Chas. Margeson and three friends returned from a month's hunt in Michigan with seventeen deer. They have enough jerked meat to last a year, and antlers enough to stock a museum. Geo. Humphrey shot a fine deer here the 20th ult. John Penvell and Frank Morris shot the best bag of ruffed grouse of the season on the 14th ult., eighteen, with thirty shells.

J. O. F.

Ruode Island—Newport, Dec. 9.—There is nothing to report in fishing, and but very little shooting has been done here the last two weeks. Birds very scarce. Mr. Chase and Mr. Anthony each shot a wild goose. They were lone birds, none others having been seen for some time.

X. Y. Z.

THE views of Mr. Pike respecting the game law are worthy of a careful reading.

The Forest and Stream's exposition of "Dittmar sporting powder" will be sent upon application.

#### THE CHASE: ITS HISTORY AND LAWS

BY THE LORD CHIEF ACCTICE OF ENGLAND

#### [Continued from page 375.]

[Continued from page 375.]

A N account is given by Henophon of the natureand habits of the hare, which even a naturalist might study with advantage, and in the course of which the author appears to be worked up to an enthusiastic admiration of the creature, the destruction of which is the very subject of his work. "So charming an animal is it that no one who sees it either tracked, found, followed, or caught, but must lose all thought of all else he cares for." Elaborate directions are given for the construction and use of the different nets, and for the breeding, choice and training of the hounds, which he divides into two sorts, one of which he asseribes to a cross between the dog and the fox, and of which he speaks with contempt; the other, which he calle the Castor hound—as being the breed with which Castor hinself used to hunt—and of which a detailed description is given—probably the Spartan or Cretan broad, which would seem to have been of the same or a very similar species.

hannel, which would seen to have been of the same or a very similar species.

Xenophon next treats of stag hunting, for which he recommends the employment of Indian hounds, as being large, strong, swift and high-couraged, and so best suited for work. But he proposes to pursue the sport in a way which we should deem highly unsportsaman-like. He recommends the use of a footsmare—a sort of wooden trup, the construction of which it is not very easy to understand or explain, but which the Exyrdians appear to have used centuries before, and which Sir Gardner Wilkinson tells us the Arabs use to this day; to this contrivance a noose is to be attached. When complete, the trap is to be placed in the track of the deer, below the surface of the ground, and carefully covered over with earth and leave, so that, stepping on it, the foot of the deer may be caught, and the animal, unable to disagnage it, may be compelled to drag the wooden log after it. Coming afterward with his dogs and finding the trap gone, the hunter is to follow the track it will have left on the stones and ground, and with the aid of his hounds will soon come up with the deer, which, its progress being thus impeded, will fall an easy prey. Not but what, if it proves to be a stag. Xenophon advises that it should be approached with caution, as the animal can strike furiously both with horns and feet. It should hererfore be killed from a distance with darts and javelins.

vises that it should be approached with caution, as the animal can strike furiously both with horns and feet. It should therefore be killed from a distance with darts and javelins. It is remarkable that Xenophon makes no mention of the use of the bow. Nor in treating of hare-hunting does he speak of the throw-sick which, as we know from other sources, the Greek hunter used with effect to knock over the

use of the bow. Nor in treating of hare-hunting does he speak of the throw-sick which, as we know from other sources, the Greck hunter used with effect to knock over the hare when he could get within reach of her.

The third form of hunting treated of by our author is that of the wild boar, which, as described by him, was of a formidable nature, and the preparations for which required to be of a corresponding character. The nets must be of greater strength. The heads of the javelins used by the hunter must be broad, and slarp as razors, the shafts must be of hard wood. The spears should have an iron head, five palms long, strongly guarded by cross-bars. And the prudent advice is given not to hunt alone, but always in company. The hounds should be, not of a common sort, but Indian, Locrain, Cretan or Spartan. A Spartan hound, these hounds having apparently heen remarkable for keen seen, is to be first employed to find the boar, the rest being carefully kept back. Generally speaking, when foundly a single hound, the boar, Xenoplon tells us, does not condexcead to rise from his lair. The hunters are then to take advantage of this to spread the nets around him; having done which they are to set the hounds on him, but, if possible, at sufficient intervals to allow him to pass between them, so that he may not kill or injure more hounds than can be helped, the object being to get thin entangled in the nets, in executing which the hunters are to assist by shouting and throwing darts and sones at him. When he is well entangled in the net, one of the boidest and most skillful of the hunters is to attack him with his boar-spear—an operation, however, which requires great dexterily and care. The blow is to be struck with the right hand, while the spear is supported by the left. But in this dangerous sport hunters, as well as hounds, sometimes perished. Woe bettick the hunter if the boar, by turning his lead, should succeed in averting the stroke, and should knock the spear out of the hunter's hand. Great and imminent is th

many to treath. The wind soy, being without thisks, will always, under such circumstances, endeavor to trample on the prostrate hunter. The peril can only be averted by some brother sportsman coming to the rescue and attacking the beast with his spear, and so diverling its fury from the fallen man. But this must be done with caution, lest the spear thrust at the boar should injure the man whom it is intended to protect. Many hunters as well as hounds, Kenophon tells us, found their death in this perilous amusement. Lions and other beasts of prey were destroyed, Xenophon proceeds to tell us, as they could not well be hunted in these mountainous districts owning to the roughness of the country, by means of aconite, as poison, mixed with the food they liked, and placed near the water or other places they were in the habit of frequenting. Sometimes they were caught in pitfalls, a she-goat being tied to the spot over which the beast had to pass, to attract him by her ories. Sometimes the animals, coming down into the open country by night, were then surrounded by men and horses, and taken, not without danger to the hunters.

without danger to the hunters. Xenophon concludes his interesting treaties by an eloquent but somewhat exaggerated eulogy of hunting. According to him, the chase is lie source of health to the mind as well as the body. It makes men strong, hardy, active, fit for labor, manly, bold, courageous; it prepares and fits them for war and for their country's service; it diverts them from mischievous and demoralizing habits and pursuits, and, giving a healthy tone to the mind, tends to make men virtuous and happy.—The Nineteenth Century.

#### SHOOTING MATCHES.

VINCENTOWN, N. J., Dec. 1 .- The Coaxen Glass Ball Club of this place held their monthly shoot for badge here to-day. Card's rotary trap, 18 yards, weather cold, stormy and disagreeable; 10 balls each; score as follows: W. S. Hilliard, 7; J. W. Haines, 5; H. E. Haines, 5; R. H. Lick, 3; S. S. Butterworth, 4; Capt. Haines, 8; F. S. Hilliard, 6. Capt. Haines won badge.

RHINEBECE, N. Y., Dec. 8 —In a match between a gentleman of Rhinebeck and a member of the Rhinebeck Club, the latter to

broak 24 balls out of 25 from a Card revolving trap, 19 vards rise. 6 balls from three notches and seven from last notch. won to-day by breaking 25 balls straight. P. J. M.

NEWTOWN, L. I., Dec. 10,-The third monthly contest of the Adultion Gun Club for the club-badge, took place yesterday. The cold accounts for the score not being up to the mark. Eight members participated in the match, who shot at ten balls each sprung from rotary trap, twenty-one yards rise : ties were shot off at three extra balls each

In shooting off the tie between the two highest conte

James Heming won the badge. H. HUNTER.

FOUNTAIN GUN CLUB .- At the last monthly match of the Foun ain Gun Club the meters shot off the postponed ties of their Thanksgiving match, the contestants appearing being Messrs. Cherry at 25 yards and Schworer at 29 yards. The score was: Rchworer, 15; Cherry, 12. For the badge shoot, 7 birds each, 22 contestants. Harry Miller had provided a fair lot of birds, some good drivers rising from the traps occasionally. Among the hall dozen contestants who killed six birds each was Madison, the gunmaker, who, unluckily, had a hard bird on the sixth shot which fell dead out of bounds. Madison shot at thirty yards rise. the close of the shoot at the seven birds it was found that there were four ties, the score being as follows :

ing was from five traps at handicap rise. ALGONOUM GUN CLUB. Dec. 6 .- Semi-monthly shoot for a gold indge, 20 balls, 3 traps, 18 yards rise :

badge, 20 balls

CANINE OPINIONS

HEARD IN THE STILLY NIGHT.

T was night. The Eastern Field Trials were over. The great "go-as-you-please" for judges and reporters was at an end, and quiet reigned supreme. The sound of Tom Aldrich's voice pleading for "just one more twenty-five cent bid" was no longer heard in the land. The room was deserted, and only the empty bottles and a floor strewn with cigar stumps spoke that all but one that was human had at last sought a bed of rest. As I yawned and stretched out my arms, disturbing the clouds of stale tobacco smoke that hung heavily over where the battle had so furiously raged, I felt more like conquered than conqueror and made up my mind that before donning my ulster and slipping in between the chilly sheets, a turn in the lane would do me good. sooner thought than done, and the frosty road soon gave back the echoes of my square-heel-and-toe. I had just got under full swing, discussing the problem of how many meals of scallops a single man could make before going to Heaven, when a strange murmuring sound brought me to a stand-still. A queer mumbling sound as if it came from human voices hidden in some crypt beneath the earth. A moment later I heard the word "Judges" spoken distinctly in half a dozen dialects, and then a howl went up that drew my attention to the barn where the dogs were kept.

"Great Lucifer," I said, "can it be possible that even the dogs have fallen to sitting up and talking the matter over?" That there was anything strange in the dogs having acquired the power of speech did not for one moment occur to me, for incessantly during one week I had heard such wonderful stories narrated of the intelligence of each individual dog that I was fully prepared for anything that might happen as far as canines were concerned. My hat, therefore, did not poise on the ends of my luxuriant locks, but the burning of my left ear warned me that some one was talking about me. Now, although curiosity is generally summed up among the long list of virtues belonging exclusively to women, yet I have known just as many men who have had a sneaking desire to know what was going on. So, silently, I crept up to the barn and applied the heated organ of hearing to a crack, just in time to catch the words of Iron Duke, who for the time seemed to have the floor:

"You see, it ain't a square deal. I've been spiled in gittin' ready for these 'ere darn trials. They'll spile any good dog. The judges, did you say, Glad.? Well, that caps it.
No more trials on my plate. When a feller gits in two heats
to be downed by a duffer like Glen. That sifts it down. I know it all. It was a set up job and fixed beforehand. I'm done, bust up, when I ought to be a winner."

"A winner?" says Gladstone, "you'd be a healthy winner A winner: says charsone, Join to be a hearing winner with me and Whit. alongside. It would take a right smart lot to get away with us. I don't reckon we came East to lose. A winner? Well I s-h-o-u-l-d s-m-i-l-e. Wouldn't

we, Peep?"
"He! he! so we would, Pa," tittered Peep o' Day.

"Ear me hout," said a gruff voice I knew at once as com-

ing from Croxteth, "it h'aint smellers I'm talkin' 'bout, but hivorys; did you see the swell chew the burds? That's what I calls too bad, 'though he be from same country and kind of related loike. I 'olds no such blarsted swell no pal o' mine. Hits hall rot for 'im to 'ave a place; and, Lass, you 'ere me tell you straight."

'That's too most awfully unkind to scold poor dear Sensa tion so," says Lass, "and alwough he is no kin of mine he is so charmingly picturesque.

"By joye," chimed in the champion pointer, with a vawn. "By jove, yes; on the bench I am called 'handsome Sensation,' but here I am called 'bloody Don.' With a few exceptions this crowd is quite too low for me. I don't mix with these kind of fellows at home, you know. In fact, if 1 met them in the street I wouldn't even wag my tail '

"Picturesque be blowed," growled Croxteth.

"Any crow bait that has knobs long his back loike bell handles to a tiniment house," says Raleigh. "He thinks he's a masher," says Trim.

Here a very feeble voice was heard saying, in a squeeky tone, "That's so," which I recognized as coming from Jennie II.

"Thim jidges," says Spy, "hain't got no appreciation. made the best pint of all of yer. I sthruck a schent right through old Juke, and thin they wint and pinalized me. And thim rephorters! Oh! begorrah, what a gang. That Gladstone man with the bow-legs, which he says he got from ridin' to hounds too much when he was young, and that young Jersey rhuster with the red beard, the slaughters. Why don't yer say somethin', Nat? Smut and you have a right to squeal."

"It's money that talks down our way," says little Nat, and if we had 'em there it would be a different racket. They'd ought to see little Smut and me on ruffed grouse; it would make them sick. We ain't over-much on style, but we make up in nose. It sin't style that finds birds, it's nose, and when we come to a point it ain't no blue-blood point, with the tail wiggle, wiggle, wiggle, but we stiffen out our tails stiff and solid, as much as to say, 'Boys, come up and have a shot; we've got 'em' "-

"And you bet that's the way to point," says Grouse Dale, a Down Easter, too.
"Law!" says Isabella, of whom no one had taken any no-

tice, "don't he talk sweet."

"He is the boss talker," says Glen, "and he ought to protest against this foul and most unnatural outrage."
"Indeed he should," said pretty little Bessie, "itis a burn-

ing shame, because Nat and Smut are small, that they should be sat on."

"Shake," says Nat to Glen: and shake they did.

PEN PARAGRAPH.

#### "MY EXPERIENCE WITH SETTERS."

TOR a long time I have been waiting for some practical sportsman to tell, through the papers, his and the general experience with setters as bird dogs, going into the details, which in this are so important, and leaving the glittering generalities to those who have in them an interest in not descending to particularize—or who do not know enough about it to do so—feeling confident that his experience would coincide with mine and save me the trouble of telling my

story.

To begin with, I would say that I shoot only for pleasure, To begin with, I would say that I shoot only for pleasure, and breed dogs only for sport and because I love them, never having sold a dog in my life. From my earliest recollection I have been fam far with bird dogs. Long before I could carry a gun have I, day after day, ridden behind my uncles, who were ardent sportsuen and fine shots, and held their horses when the dogs would stand, while they shot the birds; and from the time that I was considered old enough to be trusted with a gun I have been the owner of a bird dog and spent a part of each fall in pursuit of quail, or partridge as we in Virginia call them.

When I can first remember, my uncles had a breed of liver.

we in Virginia call them. When I can first remember, my uncles had a breed of liver and white pointers—descended from stock imported by the Randolphs of Cumberland and the Hopers of Buckingham—large, strong dogs, with grand heads and long muzzles and hair as short as the modern breed, but coarse and harder to the touch, which were infinitely superior to any dogs I have ever seen. They were remarkably first and capable of hunting every day for weeks; but the most remarkable thing about them, and the all-important thing in a bird dog, was nose, which enabled them to hunt always for the body seent, never stooping to foot or pottering in the least; and they never false-pointed or falled to exactly locate their lirls. Most of them were taught to tree squirreds, and so inherent was the disposition to hunt with head up, and for the body scent, in them, that they would run through the woods at full speed and stop instantly, throw up their heads and bark without ever putting their noses to the ground or regarding the squirrel's track in the least, but smelling the animal itself in the tree. We managed to keep this breed more or less pure until since the war, and in 1871 Puccame the owner of the last of the blood in this country, a bitch some eight or nine years old, but showing even at that age all the Arracteristics of the breed, including retrieving, for which they were also noted, for with them a dead or wounded bird was never lost. Not knowing where to find a mate for her I lost the stock. When I can first remember, my uncles had a breed of liver teristics of the real, with them a dead or wounded bird was never lost. Not knowing where to find a mate for her I lost the stock. About this time, from reading the sporting papers and dog books the rage which was sweeping over England and this country, and nothing would do for me but a high-bred setter. Just then I met in the cars a gentleman from New Jersey returning from a shooting trip up the James River valley, who was equipped with a fine breech-loader and brace of slashing setters, and full of all the new kinks in the sporting world. From him I purchased a cross-bred Gordon and Irish setter. "Dom' was a red dog, very handsome and large. He was fast enough, but had no nose and pottered and false pointed inveterately, and was worn out at five years old. From what I could learn from the sporting authorities, I concluded that the fault was in the cross of the two breeds, and the thing was to get it perfectly from Irish

or Gordon—the English was not thought much of, as Youatt had said that the English sportsmen had crossed their setters with the pointer, but the Irish had kept theirs pure—and as I always ride and hunt over a great deal of ground and the Irish were said to be perfect, save being too fast, I settled down on a pure red Irish, which I got after much correspondence with the dog men, a dog of the most approved form and color, and as blue a pedigree as an Irish dog ever hal—Plunket and IRofus, Colleen and Carrie, Milner's Jack, Fitz-simmon's Ruby, Hutchinson's Bob, etc. I got him in February at four months old, and never did a fellow look forward more impatiently for the time to come for me to try my canine treasure. On the very first, day I took to the field with him and a little pointer bitch of the old blood which a friend had managed to get for me in Buckingham, hardly six months old, while the Irishman was full fifteen; and to my utter chaggin she beat him in style, speed, nose and everything, from the beginning, all hollow. She never false points—he does it constantly; she never potters—he always does. When she points you can always kick the bird up in front of her nose; when he points they are more likely to fly up from anywhere else than the direction indicated. Besides these two pedigreed setters, I have owned many natives and used a good many blue and nalves belonging to others, and what I have said of them is true of them all. It seems as natural to them to false point, potter and point in the wrong direction as to cat; and I must say that I have never in my life seen a long-haired dog that was even a second-rate bird dog. I know nothing of the Laverack or Llewellin setters but what I read and hear of what is claimed for them. telm setters but what I read and hear of what is claimed for them. They are fine dogs and entirely different from other setters, and, being long-haired, ought to be superior to the pointer in rough countries and cold climates. I am now the owner of a pure Llewellin bitch, just six months old, which is exceedingly promising. I shall give herevery chance, and if she turns out like the others, I have owned my last shaggy dog.

Sourn Side. dog. December 1, 1880.

#### A HANDLER'S PROTEST

PROVIDENCE, R. I., Dec. 6.

Editor Forest and Stream:

Editor Forest and Stream:

After a tedious journey of two nights and a forced stay in New York during a rainy Sunday, I, with my two dogs, arrived home from what the New York Harald calls the most successful field trials ever held in this country. And now, after having been robbled by the baggage-master of two dollars to pay freight on the two dogs (when I had not an ounce of baggage bessites), and having been wronged out of both honor and prizes at the late field trials, I feel as if I could shoot the mar who ever sent me a notice of another dog show of any description; and I wish to say to the Eastern Field Trials Club that if they allow those prizes to go where they were awarded by the persons who acted as judges I cannot see how they can expect to have many entries at their third annual trials in 1881.

My object in writing this letter is to defend the true sportsman and lover of dogs from the judgment given at their late trials, and if I cannot show good cause why the dogs who were awarded the prizes should not have them then I am willing to forever after hold my peace and never wish the privilege of showing at any other dog show, either bench or field. But If I can, and the chain is not respected by them, then I propose to work as hard against them as I have heretofore worked for them—and I can claim the honor of showing at least ten during their various trials.

My first complaint is against the judgment in the twelfth (12th) heat in the All-aged Sinkes, between the dogs Gladstone and Nat. I claim that Nat (my dog) beat him in every particular where the good qualities of a dog should be considered. My dog did not show quite so fringy a tail or the amount of speed in making buck jumps over brush and briar as did the dog Gladstone, but put the two dogs down on open ground and Nat would out-speed him from morning till night. But the judges were against me and meant that I should not win, no matter how well my dogs did, as I can prove by men who were told it by the judges. I consider the dog Gladstone nothin The whole heat was a mass of tricks by Gladstone's handler. These statements I have made can be proved by members of the club. I have positive proof that one of the judges told a blue-blood man (who was too honorable to keep it a secret) that he would not let such looking dogs as mine win, as they were nothing more or less than spaniels, and it was wrong to let them beat dogs who had been well bred and brought large prices—this after they had promised the handlers to let only the best dog win. If this is a sample of the best field trials this country ever saw, Heaven defend me from the worst.

Yours very respectfully,

T. M. Aldinger, Handler Smut and Nat.

- --

A Close Shave for Lincoln.—On last Wednesday (December 1), while Captain Joseph H. Dew was hunting near the railroad with Lincoln and some of his puppies, they found a covey of birds right by the Irack. Hearing a train approaching, Mr. Dew took the puppies away, and calling Lincoln off his point cash him off in a corn field. Seeing bind dash into the field in an opposite direction at a gait which flings furnows to rearward and which has led him to victory in the hottest of contests, Capt. Dew paid no more attention to him, and had his hands full keeping the puppies from going back to the birds. Happening to glance back, however, to his construction has been back, was standing as staunch as a rock, with his hind feet on the track. His whistle went to his lips

and a long shrill note was sounded, but the rumbling of the train prevented Lincoln from hearing, and he stood as rigid as if grind eath were not braring down on him at the rate of thirty miles an hour. Again and again Capi, Dew sounded his call which the old dog had never refused to obey, but to no purpose; he had to stand and see the smoking, snorting engine rushing on the dog of his heart, hearing what seemed to be inevitable death, and the old fellow never moved until the cow-catcher hurled him torn and bleeding from the track. Fortunately he was not killed nor were any bones broken, but the flesh was cut to the bone on his hind leg and numerous other flesh cuts of less consequence were distributed over his body. Capt, Dew brought him to town where Dr. Pillow and a long shrill note was sounded, but the rumbling of the ous other nest cuts of less concequence were transmit about his body. Capt. Dew brought him to town where Dr. Pillow sewed up his wounds and the old fellow laid his head on his master's knee and never moved, but moaned pitifully while the operation was being performed. Score Lincoln an even hundred for staunchness.—"The Cottembia (Tenn.) Sentine!."

LARGENY OF A Dog—Perth, Ont., Dec. 8.—In your issue of the 14th October, page 204, speaking of dog poisoning, you state that a man can be convicted of malicious injury to a dog. Of this there is no doubt, but you also say that a conviction cannot be had for the larceny of a dog on account of its peculiar habits. Now I should be sorry, if this is not the case, that your readers should be misled, as there are numbers of people who fancy that they can shoot or steal a dog when they please, particularly if it happens to be on their land at the time.

Now there is no statute in Canada which allows a dog-stealer to go free, and therefore the common law of England governs, and as that law no more excepts a dog than a sheep, we may safely conclude that dog-stealing is punishable just as other stealing is. Neither is there any statute, as I believe, in the United States excluding the dog, and if not then the same rule will hold as in Canada. There is this to be said, however, that on account of the peculiar roving habits of the dog and his proportisity to follow any one who careesses LARGENY OF A Dog-Perth, Ont., Dec. 8.-

said, nowever, that on account of the peculiar roving mains of the dog and his propensity to follow any one who caresses him, it may be difficult to prove larceny, but it is simply a question of proof, not of liability. In the Toronto Mad, under police court items, which under the new regime are very spicy reading, appears a case in point. A man was there brought up for stealing a dog, but proved that the animal was in the habit of following him, and got off on that ground

only.

The Great Age of Layerages—Waterbury, Corn., Nor. 29—In looking over the pedigrees of the famous Layerage setters, Countess, Pairy, Nellie and Pride of the Border, I have been astonished to find the great age of the dogs, when bred from the shortest line of descent, from the original pair in 1825 to Fairy in 1872, shows only five generations, giving an average age to the dogs, when bred from, of 9.2-5 years. The longest line shows but eight generations, or an average of 5½ years. It seems rather strange that these dogs should not only breed, but actually produce their best progeny at such an advanced age; since it must be supposed that the best were kept to breed from. Laverack's letter, from Vero Shaw's account of the setter, published in your issue of November 25, and explaining the liver color in the breed, may account for some of the gaps which these long lived generations now fill. The wonderful pedigrees of the Laverack setters have long puzzled me, and I should like to know how they are regarded, generally, by setter-breeders. There can be no question about the high standing of the dogs, and the wonderful vitality of the breed shown in its crosses.

J. F.

Acciant for Sensation—Richmond, Dre. 12.—Editor Forest, and Stream: Bravo for Sensation! From the day I first saw him until this moment I never hesitated in pronouncing him naturally the finest specimen of English pointer in America. As a sire he has got more fine pups than any in America. I never saw him in the field, but I knew what he was capable of. I have a son of his, presented to me by our lamented friend Colburn, name Tom (Sensation ex-Colburn's Belle) and he is as good a dog as ever I want to see. All he lacks is work. I had I,000 birds killed over him last fall. Ite was very soft when he began, but improves with every hunt. Crossed upon the hardier breeds of native pointers the pups are perfect. I have maintained and still maintain that Sensation stands to-day as the finest pointer doe in rs the pups are perfect. I have maintained and still main-ain that Sensation stands to-day as the finest pointer dog in

Reply to Mr. Bloodgood's Challenge.—New York, Dec. 12.—Editor Forest and Stream: In answer to the chal-lenge issued to the owners of Sensation and Gladstone, which lengo issued to the owners of Sensation and Gladstone, which lass reached the Westminster Kennel Club through the columns of a paper of Dec. 10, we wish to say that although we should be gratified to afford Mr. Bloodgood the satisfaction he desires as far as the match between Sensation and Smut is concerned, yet the matter seems to us at present impracticable. The dog is now at the kennels at Babylon and his services as a stud dog are constantly in demand. Moreover, the season is now so far advanced, closing ast idoes on the 18th day of January, that it would be impossible to procure the services or the dog's handler, who is now at Spring field, Mass., and give to him such additional work as would fit him for the proposed match. Next year, if Mr. Bloodgood cares to repeat his challenge in season, we may be able to secommodate hum. Rour, C. Connell, Sec. W. K. C.

A GOOD DOG STORY—Pt. Rowan, Canada, Dev. 5.—At the last sitting of the Dominion Court, held at Walsinghan, Ontario, a case came up for hearing for damages laid at twenty-five dollars, which plaintiff claimed from defendent for shootfive dollars, which plaintiff claimed from defendant for shooting his dog. The lawyer for the plaintiff made a very eloquent address to the jury on the good qualities of the dog and dilated heavily on the value of dogs in general. A very well-bred setter imprened to be lying just behind the Judge, and when the advocate was the height of his eloquence the setter, roused from his apparent slumber and under the pretence of several control head, during the form with the processing the processing the second control of the control of the processing the second control of the control of the processing the p ter, roused from his apparent summer and under the presence of scratching his head, thumped the floor with his knee joint in quick and rapid succession. His honor turned partly around to the baillift, saying, "No applause in contr." This impromptu bon mod from the Judge brought down the house and entirely nonplussed the lawyer for the plajnitiffs.

Gyp and the Fly.—Let me tell a story of the reasoning power of dogs. Some years since I had a small black and tan terrier named Gyp. She had been taught many tricks, such as sneezing, rolling over, etc., etc., for performing which she was often rewarded, and whenever she wanted anything particularly she would go through her list of tricks and by this means usually succeeded in obtaining the desired object. One day Gyp was on an ottoman near a window; and

began to kill the fles on the glass. She killed all but one, which walked up above her reach. After vainly trying for some time to get it, she sat down and reflected for a moment, and then sneczed to it two or three times, looking up at the fly in the meantime most beseechingly; this not proving effectual, she tried rolling over to induce it come down. I regret to say that the fly did not yield to her allurements.

-Mr. Isaac Yearsley, Jr., is shooting at Ridgeway, N. C., having with him Dashing Lion, Roxey Boy, Countess and Bessie. Mr. Yearsley has disposed of Little Lady to a party in the West.

J. C. HIGGINS' DASHING MONARCH

#### DASHING MONARCH.

DASHING MONARCH is owned by Mr. John C. Higgins, of Delaware City, Delaware, and is a powerful young white and black setter dog. He was whelped August 25, 1878, and was bred by Mr. R. Llewellin Purcell Llewellin at Ormsby Hall, Lincolnshire, England His sire, Dash II., was the most noted field trial winner in England. His dam, Countess Moll, she being by the celebrated Dan out of the equally celebrated Countess. Dashing Monarch thus combines the blood of the greatest dogs yet produced. was imported last November a year, and arrived here on December 5, 1879. In the field Monarch has just shown what stuff he is made of, as winner of second in the All-aged stakes, and he has before him a grand future both in the field and on the bench. Considering that he has had but two months work in his life, he is a most excellent dog. The picture of Monarch is a grand one, and we had the pleasure of submitting it to Mr. Higgins, who regards it a "a speaking likeness."

Gladstone, the winner of first, is a son of Mr. Higgins' Petrel, a noted champion Laverack, so that, directly or indirectly, both first and second prizes in the All-aged stakes fall to the honor of Mr. Higgins' kennel. Besides other noted dogs Mr. Higgins owns Fairy II., the last exportation of Mr. Laverack to America. She is the dam of Mr. Snellenburg's Thunder, a dog which has done exceedingly well at this year's field trials at Lancaster, Pa.

EASTERN FIELD TRIALS .- We take great pleasure in presenting to our readers this week very excellent portraits of two of the winners at the late Eastern Field Trial Meeting. We have certainly spared neither trouble nor expense to give correct likenesses, and in order to do this we secure t the best artistic talent. The sketches were made by Mr. E. Forbes, of this city, who has for years given his entire attention to the illustration of live stock. Both of the pictures, therefore, have been taken from the animals themselves, not from photographs or paintings, and each dog was given a careful stand or sitting.

By an unfortunate mischance the plate from which our picture of Champion Gladstone, winner at Robins' Island was to have been printed, was ruined just before going to We are, therefore, obliged to wait until next week before giving a portrait of that celebrated dog.

In our next number, also, we will publish the portraits of Mr. Max Wenzel's Chief and the Westminster Kennel Club's Sensation

NOVA SCOTIA KENNEL CLUB.—The inaugural meeting of this association was held at Halifax, N. S., on December 1, when a Constitution and By-Laws were adopted. The comrnittee reported that His Honor the Lieut. Governor had consented to become the patron of the club, and that His Worship the Mayor had accepted the position of President. It was decided to hold a dog show in the last week in Fobruary. In our next issue we will give full particulars.

Dr. WM. JARVIS and Mr. Benj. F. Clark, returned last week from McKenzie, Tenn., where they have been enjoying fair quail shooting since the Vincennes trials. Norcen, Dr. Jarvis' last importation, is said to be as good as she looks, and took to her work most kindly.

#### WHAT IS A COCKER?

CORTLAND, N. Y., Dec. 5.

Editor Forest and Stream:

As an admirer and breeder, on a small scale, of cockers, I am interested in the formation of a club and giving to breeders an admitted standard of excellence, that all owners and purchasers can then judge for themselves the merits of their

As for myself, I would like to approach as near a sensible standard by careful breeding, mating, etc., as is possible. If I am not now upon the right track I will go back and take a new start, as I have made a choice of this variety and feel at a loss how to know the points to breed to that will make my dogs desirable and give them the greatest advantage at a bench show. It seems to me the cocker should be bred to a standard that will not sacrifice him in any respects as a field dog. Make the disqualitying weight of cockers such that good, strong, eligible dogs in all other respects would not be thrown out by being a trille over size.

I wish to conform to the cocker size and weight in breeding, but for an all-day's hunt in the thick cover and over fallen timbers the small toy dogs will not fill the bill. Pardon me if I am trespassing. I claim only to be an amateur, but being a lover of the cocker spaniel I have my ideal, likemany others. As for myself, I would like to approach as near a

others.

I only hope a standard will be made by a corps of men that are both fearless and unselfish, not allowing their own or friends' favorite strains of cockers to have an undue influence upon them in making this standard. It seems to me that a fair way to begin this is for all breeders of experience and those who have taken pains to make this variety a study to furnish the committee a description of the cocker spaniel, as they understand it to be.

Mio.

your paper have all got some good points, but the soundest and best and most business like is from your Ann Arbor cor-respondent "Senex;" his idea exactly covera the case, and in this way of selecting a committee over the case, and in this way of selecting a committee over the case, and in The articles which have appeared from time to time in The articles which have appeared from time to time in your paper have all got some good points, but the soundest and best and most business like is from your Ann Arbor correspondent "Senex," his idea exactly covers the case, and in this way of selecting a committee no one individual can feel aggrieved, and I will heelfully donate one tollar to defray expenses. Laiso like the suggestion of "Shamrock," Chicago, Ill., with respect to the \$50 prize, and I will freelly contribute to such prize. But, "Shamrock;" in regard to weight I don't agree with you. Fray what is a field or springer spaniel fa dog weighing 40 lbs. is to be called a cocker? I have seen cockers and field spaniels both on the bench and in the field in England, Wales, Scotland and Ireland, and have seen a field spaniel that weighed over 45 lbs. Just look at the weight of winning cockers at bench shows both in England and America. I think you will find them under 30 lbs. McKoon admits and I concede that a cocker is to all intents and purposes a small field spaniel, but yet a cocker proper has a far better coat, a brighter color, finer hair, more siky in texture and a far handsomer head than the field or springer spaniel. And I think it is generally understood by cocker breeders that all those finer traits, such as color, size, shape, eyes, ears, legs and general make up, come from the King Charles, so that properly speaking a cocker is not a small field spaniel, bred and shot over spaniels for over twenty years, and I have yet to see the dog at say 40 lbs. that can do any more work or any better than one at 25 lbs., all other things equal, such as health, breaking, etc., with the single exception of duck retrieving; and for woodcock and ruffed grouse shooting in thickly matted covert, the smaller dog has a decided advantage. As for speed they are all fast enough, and are up to be too much so, at least this is my experience. And now, Mr. Editor, let us have the committee proposed by "Senex" elected, and I would suggest to such committee to take Stoneh

Franklin, N. Y.

In your issue of Dec. 2 you give quite a number of letters In your issue of Dec. 2 you gave quite a number of letters on this subject, all of which refer to me more or less directly and some of which call for an answer. Mr. McKoon has a a good deal to say (as usual), and I would like to see exactly what there is that is to the purpose.

Modern cockers have been "an established by whon ?—by Mr. McKoon I presume who has a little way of denying.

Modern cockers have been "an established breed for be-reen fifteen and twenty years." Established by whom?—by r. McKoon, I presume, who has a little way of denying ery dog the name of "modern cocker" unless bred by mself. Well! he is welcome to the name, for simply spaniel "will do me as well. "Would it not be absurd to restrict a cocker to a certain eight when they are better to were in eight as the property of the state of the

"Would it not be absurd to restrict a cocker to a certain weight, when they are better to vary in size as they do at present?" Now Mr. McKoon is getting off the track, for exactly what we propose to do is to let them vary in size more than they do at present, for as it is, a dog of thirty pounds or over stands no chance against one of twenty-four or twenty-five. Is any pointer penalized for his size? Do not pointers weigh anywhere from thirty-five or even thirty pounds up to seventy and eighty, and in one instance (if I am correctly informed) 130 pounds? And are not pointers divided into two classes, large and small? I will venture to say that there is no breed in which there is more latitude as to size more than the cocker, or field spaniel, for the very reason that Mr. McKoon states, viz., that dilferent parts of the country need different sized dogs.

Mr. McKoon states, viz., that different parts of the country need different sized dogs.

What we mean by its not being necessary for a man to own or breed cockers to be eligible for our club, is that many admirers and judges of cockers do not happen to own speci-mens, as is the case with "M. B.," though I hear that be in-

ds getting some.

Recause I do not happen to own any setters is that any Because I do not happen to own any setters is that any reason that I should be debarred from a club having their improvement for an object, or that I should not be a good judge of the breed? Things would come to a pretty pass if overy judge at a show should be obliged to own specimens of each eed he undertakes to judge! Many thanks to Mr. McKoon for his kind opinion of the

Many thanks to Mr. McKoon for his kind opinion of the "highly respected and enthusiastic young man." My youth does not prevent me from knowing a little about dogs, for "age does not always bring wisdom"—more's the pity.

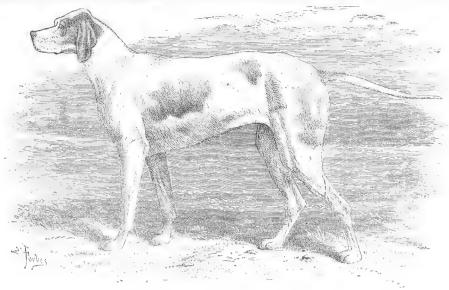

Now, in his next statement, "Such a club as this is intended to work to the advantage of certain parties," I beg to flatly contradict him. With the exception of Mr. McKoon (who knows which side his bread is buttered on too well) every breeder, owner and exhibitor of cockers will reap equal advantages in having competent judges, a clearer idea of what is a cocker and better divided and larger prizes given by the club. by the club.

Mr. McKoon insinuates that my dogs are not cockers by Mr. McKoon insinuates that my dogs are not cockers by the following sentence: "But his experience is very limited in relation to cockers, and he has only bred a few spaniels of any kind in the short time he has given any bred of spaniels his attention." The only cocker I have, I suppose, is Madcap (black), by Dom out of Birck Bees; Dom by McKoon's Captain out of his Caper. Well: if Shell, Doetor, Cora, Flirt II., Black Bees, Beauty and others are not cockers I am content to call them simply spaniels, or, if you like, field spaniels, but this I know, that they fetch higher prices and have won more prizes (those that have been exhibited), under competent judges, than any one strain of spaniels in America.

America.

Mr. McKron again insinuates that Cors got more than her deserts at the last New York show. As sho was an undeveloped puppy, just one day too old for the puppy class (had the show been held on the original date), perhaps she did, but the judge said she was worth the other thirteen bitches put together, and there were two if not three of the McKoon

I suppose that the only competent man to establish a I suppose that the only competent man to establish a "competentrule"—who can reckon on the "co-operation of all cocker breeders in the U. S.," the great "I am" of the cocker world—is Mr. McKoon himself. Perhaps so, but if he does not choose to join our club there is still a small chance of its surviving, notwithstanding the overwhelming obstacle of his opposition. I am sure "all cocker broeders"

D. S. GREGORY, Jr.'s, BELLE.

in the U.S." await with the greatest anxiety his "few lines on the breeding, rearing and breaking of cockers," but I doubt if they will convey the amount of "pleasure and benefit" which he seems to anticipate
I have to thank "Shamrock" for his letter, which is such a contrast in its liberality and pertinency to the preceding one, and will gladly put the "Lachine Kennel" down for a like amount toward a special prize, though that comes more properly within the province of the club.

To "Sence" I will say that the only reason for my accepting the secretaryship pro tem, was in order that interested people might send me their names so that a list could be made of those to whom to send just such circulars as he suggests. How else are we to know to whom to send them? And FOREST AND STREAM is doing quite enough in giving us space without their going to the trouble (which I am willing to undertake) of compiling such a list.

I am much obliged to Mr. Fellows for his letter, and what he says is to the point.

I am much obliged to Mr. Fellows for his letter, and what he says is to the point.

To "M. B." also thanks are due for the letter from his friend, which is more exact (according to my humble opinion) than anything I have seen yet.

To "Cocker" I would say that we do not and did not intend to call a meeting now, but wished to get things in running order before the next New York show, during which show it would be best to hold the first annual meeting, as there would be more cocker men collected then than at any other time.

I find that I have got into this "cocker standard" business much more deeply than I intended, and will be better pleased to be in future referred to not by my name, but by my nom de plune, which I suppose is well enough known, of Bitzabeth, N. J.

Franklin, N. Y., Dec. 4

Editor Forest and Stream :

Franklin, N. Y., Dec. 4.

Have just read the several interesting letters in last issue of Forest and Stream:

Have just read the several interesting letters in last issue of Forest and Stream on the cocker question, which is so agitating the minds of the bench show class of cocker men at present. It seems to me as if "Senex," from Ann Arbor, has suggested a mode that appears the most feasible of any as yet presented to get at the matter, and in an easy, correct and satisfactory manner both to the breedters and those directly interested and to the breed testle, and should no better way be presented very soon I think it would meet with the approbation of all breeders and enerstly interested ones for the welfare of this breed. I do not say all intending exhibitors, however, as it never would be settled to their satisfaction it is evident. But should it meet with the approval of such breeders as F. F. Pitcher, Chas. Aden, C. B. Cummings, J. H. Whitman, Burr Hollis, Fred. Hoe, George D. Macdougal and others who look the matter calmly in the face and for the best interest of the breed and its future welfare, it will certainly meet with the approval of myself as well, provided, of course, that Forest and Stream faces into line with such assistance as is necessary to properly facilitate it; the expense of which I can assure you will be cheerfully canceled by the cocker men whose shoulders are at the wheel in this matter. Such circulars should need to be sent out, I should think, through the several sportsmen's journals of the land in order to reach all interested ones in the United States, and the committee of three chosen to make the standard should call through the sportsmen's journals for the land in order to reach all interested ones in the United States, and the committee of three chosen to make the standard should call through the sportsmen's journals for the land in order to reach all interested ones in the United States, and the committee of three chosen to make the standard should call through the sportsmen's

A Fine Mastiff.—Mr. D. A. Smieton, Cranford, N. J., has just returned from England by the steamer Circassia of the Anchor Line, which arrived in this port last week. Mr. Smieton brought with him a very handsome young mastiff, Zulu, by Champion Colonel, out of Diana; commended at the late Dundee Show. Zulu has a remarkably short head, and, in this respect, is a great improvement on most of the dogs that are benched in this country. The Dundee Show was declared by the judges to have an unusually fine class of mastiffs this year,

#### BELLE.

BELLE is owned by D. S. Gregory, Jr., of this city, and B is a very handsome, clean-cut lemon and white pointer puppy of eleven months. She is by Sensation, out of Mr. Luke W. White's Champion Grace; she by Match out of A full pedigree of the sire and dam of Grace cannot be given at this time, but a letter from her owner, Mr. White, may prove interesting: "I have just written to the owners of Match and Nell for full pedigrees of both dogs. I think it will take time to get them, as the breeder of Match lives in England. About seven years ago I went to live at Plymouth, Conn. I saw then for the first time Match, a large handsome lemon and white pointer dog, with a head something like Sensation's. Mr. Oliver Bryant, the owner, let me shoot over him. He was a grand field dog, head up, fine nose and I spoke to Mr. Wm. Morton, the then owner of a black and white ticked bitch known as Ferm's Nell. She was bred in Litchfield, Conn., from imported stock. was famous in that part of the country for field qualities. The cross was agreed upon and my little Grace was the choice of the litter. I knew Grace would breed well to Sensation on account of his grand head." Belle cannot be too highly spoken of as a field dog. She is one of the best we have ever seen of her age. She easily secured the first prize in the Nursery stakes, and in the Puppy stakes fourth prize.

#### THE RUSSIAN SETTER.

[Reprinted from advance sheets of Vero Shaw's "Book of the Dog, furnished to the Forest and Stream by the author, through Cassell, Petter, Galpin & Co., publishers, No. 596 Broadway New York.]

A NY book professing to refer to sporting dogs would, we think, be incomplete if no reference were made by the author to the Russian Setter. This breed of dog is unquestionably rarely met with in these islands, but some years ago his appearance made a considerable stir among all followers of the gun. It is certain, too, that his services were in some quarters called upon to improve the English Setter, and therefore, in spite of the dog's rartly in his pure state, it is desirable that he should be treated of in a chapter by himself, though necessarily the remarks concerning him will be very brief.

T. Joseph Lang, writing to the Sporting Review in 1841, dating from No. 7 Haymarket, thus alludes to the Rus-

Art. Joseph Lang, writing to the Spotrong Review in 1841, and dating from No. 7 Haymarket, thus alludes to the Russian Setter:

"In the season of 1839 I was asked for a week's shooting into Somersetshire by an old friend, whose science in everything connected with sporting in stricture. Then, for the first time for many years, I had my English setters beaten hollow. His breed was from pure Russian setters crossed by an English setter dog, which some years ago made a sensation in the sporting world from his extraordinary performances. . . . Although I could not but remark the excellence of my friend's dogs, yet it struck me, as I had shot over my own old favorite setter (who had himself beat many good ones, and had never before been beaten) for eight years, that his nose could not have been right, for the Russians got three points to his one. I therefore peoived to try some others against them the next season, and having heard a gentleman, well-known as an excellent judge, speak of a brace of extraordinary young dogs he had seen in the Yorkshire moors, with his recommendation I purchased them. I shot to them in August last, and their beauty and style of performance were spoken of in terms of high praise by a correspondent to a sporting paper. In September I took them into Somersetshire, fully anticipating that I should give the Russians the go-by, but I was again disappointed. I found from the wide ranging of my dogs, and the noise consequent upon their going so fast through the stubbles and turnips (particularly in the middle of the day when the sun was powerful and there was but little seent) that they constantly put up their birds out of distance, or, if they did get a point, that the geneave would rarely lie till we could get it. The Russians, on the contrary, being much closer rangers, quara

tering their ground steadily, heads and tails up, and possessing perfection of nose in extreme heat, wet or cold, enabled us to bag double the head of game that mine did. Nor did they lose one solitary wounded bird; whereas, with my own dogs I lost six brace the first two days of partridge shooting, most or them in standing com.

they lose one solitary wounded bird; whereas, with my own dogs I lost six brace the first two days of partridge shooting, most or them in standing com.

"My friend having met with a severe accident while hunting last season, I determined to go to Scotland for the next three years. Seeing that my dogs were well calculated for grouse shooting, as they had been broken and shot to on the moors, and being aware of my anxiety to possess his breed of Russians, he very kindly offered to exchange them for mine, with a promise that I would reserve a pair of Russian puppies for him. . . Since then I have hunted them in company of several dogs of high character, but nothing that I have yet seen could equal them. If not taken out for six months they are perfectly steady, which is a quality rarely to be net with. . . I contend that for all kinds of shooting there is nothing equal to the Russian, or half-bred Russian setter, in nose, suggestry, and every other necessary qualification that a dog ought to possess."

Mr. William Lort, to whom we applied for information concerning the breed, writes in reply about the Russian setter:

concerning the breed, writes in reply about the Aussian Cetter:

"Roughly speaking, in appearance this dog is rather like a big 'warm' Bedlington terrior. There are two varieties of the breed, and curiously enough they are distinguished from each other by the difference in their color. The dark colored ones are deep liver and are curly coated. The light colored, ones are fawn, with sometimes white toes and white on chest; sometimes the white extends back some fifty years, and the last specimen I owned of it—a light-colored one—I gave away to a friend who would not take a hundred points for it.

gave away to a friend who would not take a hundred pounds for it.

"Their" noses never seem to be effected by a change of climate; hence their value in my eyes. I have worked them in September's sun and in January's snow, and they were equally good. They were some of the best dogs I ever had, and never varied; and under exceptional cases as regards the weather, we always had the Russians out. The only fault I found with them was the difficulty in getting now blood, for those we had showed evidences of scientific breeding, and a strict adherance to type. The fact that they were successfully crossed, to my knowledge, with English setters, satisfies me that they are really setters and not an allied breed. I may add that they are excellent water-dogs."

When a breed is so highly recommended by such sportsmen as the above, it seems marvellous that it has not been encouraged in a country like our own, which has been the nursery of sport for years. We cannot, therefore, express too strongly our conviction that the introduction of a dip of Russian blood would improve the working capacities of our English setters. At all events, the experiment is well worth repeating, and wo trust that Mr. Lort, or some other gentleman equally looked up to in the canine world, will set the example, and try to still further improve our breed of settors. Unquestionably, the appearance of our dogs would suffer at first, but few sportsmen wuld regret the loss of good looks if an increase of working capacity was gained.

A scale of points is quite out of the question in treating of a breed of which so very little is known, and for a description of the Russian Setter we must take refuge under the agist of Mr. William Lort.

IMPORTED BILL BITCH.—The steamer City of Richmond, which has just arrived in this port, had on board a very excellent bull bitch, consigned to Mr. E. B. Goldsmith, the well-known forwarding agent, of 58 Wall street, this city. The bitch was imported by Mr. R. M. Livingston, of Rye Beach, N. H., and selected by Dr. Gordon Stables for him. Of the bitch a very nice one. Her only fault is that she carries herears rather high, so that a sire must be selected that has small ears. She has a splendid skull, good stop and nice mouth. The bitch arrived safely and is now on her way to her owner.

A CHURCH FAIR AND A RAFFLE—Trenton, N. J., Dec. 4.—I send you the result of a contest for my Newfound-land dog Duke, held at a church fair in this city. The con-test was between two prominent fire companies, and excite-lment ran very high up to last evening, when it was decided,

Mr. McCabe, of Eagle Fire Co., receiving 4,712 votes. Mr. Michigan Color of Sage Fife Co., 4,137 votes, a total of 8,849 at five Megil, of America Co., 4,137 votes, a total of 8,849 at five cents per vote, \$442.45. Netting the fair over \$400. Duke is sixteen months old, coal black, and weighs 115 lbs. He is the same dog I wrote you about some time ago. E. C. Wilson.

Mr. Fay's Dogs.—Before going to Vincennes we received from Mr. F. B. Fay, of Boston, Mass., three photograps of crayon drawings of his super's dogs Coin, Judith and Desdemona; and prepared a notice for publication which was mislaid, and did not appear as it should have done. We, therefore, at this late day express our thanks to Mr. Fay and wish him all luck with his splendid strain of dogs which the excellent pictures so well portray.

SMUT AND NAT.—Mr. Horace S. Bloodgood, of Providence, R. I., has kindly forwarded to us photographs of the little setters Smut and Nat, the former a pure black bitch, belonging to Mr. Newton Earle, of Providence, and the latter a black and white dog, the property of Mr. Bloodgood. These dogs did such excellent work at the late Eastern Field Trials that it is with pleasure we add their pictures to our collection of favories.

-Mr. T. E. Smith has left Stockholm, N. J., and gone to —Mr. T. E. Smith has left Stockholm, N. J., and gone to reside at Ridgway, North Carolina. Mr. Smith intends devoring his time entirely to training, and will take a limited number of dogs in addition to those already on hand, which are Mr. J. H. Crossman's (New York city) setters, Rock and Glen; Mr. E. Leverich's (New York city) setters, Phil and Vengeance; M. M. R. Dennis' (Newark, N. J.) setter, Don. Major F. Taylor's (Fort Adams) pointer, Thornton, and Mr. G: R: Gearhardt's (Danville, Ph.) setter, Dash:

Mr. Moone's La Gev and Courtess Bang.—From Mr. A. H. Moore, of Philadelphia, we have two artistic pictures by Schreiber & Sons, Philadelphia, of his small pointers ha Guy and Countess Bang. The dog La Guy is a superbanimal, fiver and white, by Bang out of Juno, and Countess Bang one of the finest bitches of ber class we have ever seen, liver and white, by Bang out of Bella. Later on Countess Bang is to be bred to Mr. Moore's liver and white ficked Donald (9,018 E. K. C. S. B.), winner of first, St. Louis, 1880.

THE "GRAPPIO" ON THE FIELD TRIALS.—The issue of December 8 of the Dally Graphic contained eight excellent sketches by Mr. Steel of the trials at Robin's Island. The drawing of the "Jadges dropping to wing" is very funny indeed, and is an exact representation of the scene when Mr. Bassiord circled on a bird. The position of the dogs should be seen to be appreciated.

Mr. Johnston's Bonnie.—We have received from Mr. Elliott Johnston, 96 West Thirty-fifth street, New York, an excellent photograph, by Rockwood, of his collie bitch Bonnie, who is out of Mr. Downey's Lassic (Second N. Y., 1880) by Mr. Watts' Roy (First K. Y., 1879).

Dog Lost.—Mr. Peter MeGill, of Brooklyn, N. Y., lost his Irish setter puppy at Plainfield, N. J., a few days ago. The puppy's name is Ned, all red in color, with hazel eyes, and inclined to be cross and snappish. A liberal reward will be naid for his return to his owner

ENGLISH FOX HUNTING.—Mr. James Galway, J. P., breeder of Lord Largan's tamons greyhound Master McGrath, died in his eighty-second year in Ireland a formight ago. Master McGrath was the winner of the Waterloo Cup on three oc-

#### KENNEL MANAGEMENT.

13 C. C., Bochester, N. Y .- Allow me through your columns to inform myself as to the treatment of my little black and tan terrier. He is small, nine months old, and is troubled with costiveness, and most of the time has a very offensive breath. To-day he had a fit.

I gave him a quarter of an ordinary two-gram podophyllum pill, I gave min's quince of an outsity to organ possibilities put in secons no better. Are the had breath and the fits the result of worms or of bad digestion? What food or course of diet shall be have, and what madden? Any information you will give I shall be thenkind for. I rely on your journal for advice. Ans. Feed no near for a time, and mix green vegetables with his food. Give him a small terspoonful of suphur once a day for five or six days, and then a dose of old it not sit right.

14 A CONSTANT READER. I bought a short time ago, from Messrs. Lincom & Hellysr, the red Irish setter Arlington, and I wish to keep his continue and shining as it is now, if possible. I take good care of him and give him a good place to sleep, and brush him and cond him every day. But I thought perhaps the food had senething to do with keeping his cost nice looking. What I want to know is, what will keep a dog's cost nice and glossy all the time? If you will answer the above I will consider it a great favor. Ans. Keep your dog in health by exercise, a clean bed and good sound tood. Give him table scraps and te twice a day. The brushing and combing are all right, and washing is necessary at times, but be careful to have him well dried that he Imbbing his jacket with a chamois leather does not take cold, will increase the gloss. There are also artificial means for con-ditioning a dog, but we cannot specify them here. Read Vero Shaw's "Book of the Dog," Part II. It treats the subject of pre-paring dogs for exhibition thoroughly.

15 W., Phila. -I have a setter, now about five years old and in perfect health, which has recently become deaf. I noticed during a Western shooting trip in Sept. that he did not obey the whistle quickly and attributed it to inattention, as he had been formerly yeary obedient, and I am afraid he was punished several times for what was really no fault of his. After his return in October he had an attack of cenker in the ear, for which he was treated some reeks and is now quite well. Is not this deatness at so early an age incommon? Can you suggest any treatment that would do may good? He is a very valuable animal and very good in the any goods. The is a very variance among and very good in the field, and I am sorry to lose his services. I may add that his desimest is slight. And, The deathers is the result of the canker. Possibly, as it is slight, the bearing may be improved by carefully syringing the car two or three times a week with tepid water, and then dropping in four or five drops of olive oil.

16 F. H. W., Saratoga Springs, N. Y. --My hound, six years old, has been lame from rheumatism about a month. The joint of his hind leg is quite enlarged. What is the best course of treatment?

Have rubbed it with "Mingay's Embrocation" for some time without any decided result. The swelling about the joint increa and decreases perceptibly. Ans. Give as much Rochelle salts, two or three times a day, as the dog will bear without purging him.

17 C. L. T., Gilbertsville, N. Y.-My Irish setter dog, three years old, sneezes a great deal, and secons to have some stoppage in his noso. These symptoms have continued with more or less severity for about two years. There is no discharge, and his seent is unimpaired, as far as I was able to judge by his good working in the field. Will you please let me know what to do? Ans. The successing indicates some irritation within the nose, and, of course, nothing but a personal examination can satisfactorily determine the cause. As there is no discharge it is not the result of discase.

18 A. T., Boston, Mass -- Five weeks ago a man sending me a 18 A. T., Boston, Mass.—Pive weeks ago a man, sending me a pung bitch, wrote me that he thought she was coming in season. Just three weeks ago I roceived her. She was bleeding a little then, as though just coming on, and has been the same ever since. Pays no attention to the dog nor the dog to her. It must be some chronic disease, I should think. Is there anything I can do? Ams. She should be examined by a competent surgeon. There is some local disease

19 W. W. B., North Woburn, Mass,-The sores which you describe your dog having between the toes are one of the varieties of the disease called mange. Feed no meat, and give, with cooling diet, four drops of Fowler's solution of arsenic twice a day in food for ten days. Apply the following cintment to the screetwice a day, and, if necessary, tie cloths about the feet afflicted. Omtment: Powdered bi-carbonate of notash, one ounce: powdered white vitriol, one quarter ounce; sub-sulphur, two ounces lard, eight ounces; mix and rub well into the skin.

20 L. C. F. L., Chicago, Ill.-Will you give me all information regarding my greyhound spring, sold for the benefit of the Irish re-hef fund, March 21, 1880, and was bought at Mr. Barker's sale by Mr. F. J. Englehardt? Ans. Spring was winner of Centennial medal at Philadelphia, 1876. In the Centennial bench show he was entered as follows: "40, P. Kelly, Brooklyn, N. Y.: Spring, light brown, 3 years, by Flash, out of Nelly." He was entered in a class of six—"Greyhounds over two years." The show was held a class of are—"Greyhounds over two years." The show was held in Philadelphia, Sept. 1 to 8. Col. Skimner was the judge of the class. Col. Skimner's address is P. O. Box 522, Cincinnati, Ohio. On May 2, 1877, Mr. H. W. Livingston, No. 139 West Forty-second street, New York city, bought for 85 a greyhound from a man whom he met leading the dog in Broadway. The dog was called "Charlic" by the seller, who explained as a reason for selling that be had no place to keep him. Mr. Livingston entered Charlie at the Boston Show, 1878 (5 entries in class), and won second with him. At Beltimore, same year, he won second (5 entries in class) and a H. C. at New York same year (23 entries in class), and in 1879 again H. C. at New York (15 entries in class). Mr. Kelly then turned up (his initials being P. T., not P.,) and claimed that the dog had been lost by him two years previous. On proving ownership Mr. Livingston at once returned the dog to Mr Kelly.
This was the dog Spring of whom you inquire. Send postage
stamps to Mr. Livingston, and he will be pleased to send you certificates and ribbons received at the four shows.

21. J. W. H. A friend of mine has a small terrier. He is very lame and has been so for some time. His feet are very much swolen and in spots are entirely raw. They are principally swolen around the unils and seem, to stop, very much as he as constantly biting them. Will you please tell me the nature of the disease, and what to do for it. Ans. The dog has the mange. See answer No. 20, this column to W. W. B., and give two drops of Fowler's solution of arsenic instead of four.

#### CURRENT DOG STORIES

#### XIX.

A Beach street family are the owners of two dogs—a large one and a small one—that occasionally go on excursions through the country. A few weeks ago the little dog was missed. The big dog appeared to be uneasy, and one of the members of the family noticed that after being fed he invariably carried all the larger bones away. No one gave the matter any attention until Monday afternoon, when two young ladies who had been in Sampson's woods gathering Autumn leaves incidently remarked that they saw a little black dog lying along the fence as though sick and at the point of death. The utterance was overheard by the little grir whose dog was lost, and she at once concluded that the vamel canine was her property. On Tuesday morning she proceeded to the spot described by the young ladies. The large dog led the way, barking and wagging his tail. Arriving at the woods she discovered her pet, almost famished, and tied to a huge stone with a chain, evidently the work of some mischievous boys. The half starved dog was so weak that it could not stand. It was surrounded by the bones that had been carried to it by its large and faithful companion, and they were as clean of meat as shough they had been bedded. Itself the big dog not carried foot to the little one it would probably lava died of starvation. — Poststorn Chronicale.

On Fridey, a soaring eagle, twenting in his pride of might, turned his far-seeing eye from gazing at the sun upon the quiet yard of Watter Dourin. A flock of fat geese invited his sight and tempted his taste. The glance was father to the thought—and down he pointed. The father was a fast of the pointed his father to the thought—and down he pointed. The father was a fast of the property of the pr

Although continual-ored the excle maintained the fight and clung to his victim.

But soon another enemy appeared—an enemy more terrible than an army of geese—a built terrier dog—little, but full of right. It wasn't fair; and the dog had no natural beligerout rights in a combat between bruts, but he came with a bound, and the engle had no time to sattle questions of military children; so he three the combat between the combat between the came with a bound, and the engle state of the combat terminal than the combat the captain of the combat terminal than the combat the captain

But his retreat was slow and full of difficulty—for he had fifteen pounds of bull terrier swinging behind him. He reached the yard fence. With one desperate effort he sought to scale it. He reached the topmost round. He hore a weight he could not further earry. There they stood, victor and vanquashed. Then it was that Miss Martha Brothers, the true hero of the tight, came to the front and won the palm of victory. Seizing a rail, with one fed I swoop she came down with a crash upon the eagle's head, and left him prestrate, struggling in the agonise of idealt; the victim of a combination too powerful to be resisted. Mas, poor eagle! He measured nine feet between the tips of his outstretched wings.—Elizabeth City Economist.

Elizabeth City Economist.

XXI.

The owners of the faithful hound are a man and wife, each sixty years of age. He was born deaf and dumb, and she became deaf when is able to hold extended talks with a the sign language, and she is able to hold extended talks with a the sign language, and watching closely the movements of their lips. She also somehow manages to answer callers inquiries. They have a per to git hat is an essential element in their domestic life. As neither of the old people can hear, the dog becomes, by its superior instinct, the means of communication. When the door-bell rings, it will go up to its mistress and pull her dreas, then run before her toward the door. The dog has learned to know the time of the arrival of the millimate who have the superior similar to some of its million and who serves them, and can distinguish the sound of its million and was the way of six he had been a superior six and the superior six and superior

#### THE MIGRATION OF FISHES

#### By Dr. FRIEDRICH HEINCKE.

(Translated and abridged from Die Natur in Popular Science Monthly
for Becoming.)

THE periodical migrations of birds, grand as is the scale on which they are performed and litted as they are to excite astonishment, are insignificant compared with those which are made by the fishes of the sea. A faint illustration of the stupendous character of these movements is given off which are made by the fishes of the sea. A faint illustration of the stupendous character of these movements is given off the west coast of Norway at the opening of the fishing season in the spring, when one, looking out over the sea in quiet weather, will be witness of a stirring spectacle. The surface of the water as far as the eye can reach glistens in diversified colors; the flords and bays are alive with silvery streaks playing in constant movement. The agitation is caused by the schools of herring, which are so closely packed that a boat cannot pass through them, an oar may be made to stand up among them, and they may be dipped up in buckets or caught with the hand by the thousand. The enemies of the herring also come with them—the mackerel, the sharks and the dolphins entivening the scene with their graceful movements, with great flocks of gulls. The sprit also appear in great multitudes on the coasts of the North Sea, and the plichards on the coasts of France and Spain and the southwestern coasts of Great Britain in such immense schools that millions of them have been taken with a single draught of a large net. of a large net.

The lish of the family of the Gadide regularly visit the

northern seas in incumerable hosts. The codifish come be-tween January and March to the shallow bays of the Loffoden islands and the banks of Newfoundland, where their fishery gives employment to more than ten thousand wessels and and about one hundred and fifty thousand fishermen.

islands and the banks of Newfoundland, where their fishery gives employment to more than ten thousand vessels and and about one hundred and fifty thousand fishermen.

Codfish and berring belong entirely to the sea. Many other fish wander from the sea into the rivers. The sturgeon and the white-fish go from the Caspian Sea to the Volga to spawn in such numbers that, before the fishery became so destructive to them as it is, the children on the shore could scoop them up with their hands. Still more remarkable are the schools of fish of the salmon family that resort to the great rivers of Siberia after the breaking up of the ice.

The resort of the fish to the same place is repeated every year with a wonderful regularity. The appearance of the herring in Norway varies at most no, more tan fourteen days. The energy of the notvements is remarkable. The salmon, traveling from the sea to its spawning-places, surmounts considerable difficulties, heaping up to the tops of falls several feet high, and repeating its jumps if it fails at first, till it succeeds. Leis are able to ascend waterfalls forty to fifty feet high, and it has been asserted that they have been known to climb the falls of the Khine at Scatfhausen; and since the sturces have been put down they have been able to pass the six falls of the Trodhatta, which have together a height of a hundred feet.

Fish travel to very considerable distances in these journeys. Brehm estimates that the salmon of Oid and frish travel about 7,000 kilometres 4,840 miles) a year up and down the stream; and salmon and sturgeon of Oid and frish travel about 7,000 kilometres (4,840 miles) a year up and down the stream; and salmon and sturgeon of Oid and frish travel about 7,000 kilometres (6) to 18; miles) a year up and down the stream; and salmon and sturgeon of Oid and frish travel about 7,000 kilometres (6) to 18; miles) a year up and down the stream; and salmon and sturgeon of Oid and frish travel to the sea. Salmon may occupy six or eight months in going up the stream and acc

facult, of localization bespeaks a higher degree of intelligeace than we have been accustomed to ascribe to fish.

The theories that have been advanced to account for these migrations have failed to give a fully satisfactory explanation of them. The nigrations as a whole may be considered under two heads, of which the first and most important comprises the journeys to the places of spawning. The most notable instances of such excursions are those of the salmon tribe, and of the sturgeon, languages, eels and tunnies. The proper home of all these fish, except the teniny make yearly considerable journeys up the rivers to find places suited for the development of their spawn. Such places are, for the sturgeons, about the middle of the course of the river, in shallow, sandy spots; for the salmon kind, among the fill near the sources, or in the fountain-streams themselves, where the water runs in a lively current over a stony or gravely belt. The lampreys ascend about as far as the sturgeons. Their young, which are very different in appearance from the parents, may be found in great numbers in nearly all the still brooks and ditches of the middle parts of the river-courses. Their young, which are very different may be some form the same to the sea to spawn. Its journeys take place some time before the fish are ready to spawn, an abode in the sea seeming to be essential to the ripening of the ova—a property which makes the study of the procreative functions

of this fish more difficult. The tunny lives exclusively in the sea, but goes to the coasts of the Mediterranean, particular-ly to Sicily and Sardinia, to spawn. The sea graylings as-cend the rivers of Spain and France in such numbers that the water seems covered with them.

The journeys of the fish in returning from their spawning.

the water seems covered with them. The journeys of the fish in returning from their spawning-places after spawning are seldom performed in masses, but individually and in small groups. The fish, which went up fat and in fine condition and flavor, are exhausted, lean and weak. Not much is known of the migrations of other fish than the salmon during these journeys, for the fishermen pay little attention to them and they therefore seldom come under the observation of science.

Next in order of the migrations are those of the young brood from their spiwning-places. The young herring do not as a rule remain longer than four or five months where they are hatched. They then go down to the sea while the young eeis go from the sea up to the rivers about the same time. The young herring are observed with great difficulty, for it requires a skilled eye to perceive their minute, transparent bodies in water that is in any degree disturbed; but in perfectly still water the schools may be seen moving to and fro like tine fleeks of cloud. The salmon remain a full year in the mountain-streams, and do not go down to the sea till they have become a vigorous, greedy fish or about a flager's length.

till they have become a vigorous, greedy fish of about a finger's length.

Journeys in search of food are not periodical or regular, file the previous migrations, or are only incidentally so. The most important of them and the nearest to being periodicare the visits of the coddict to Newfoundhald and the Loffoden Islands, concerning which it is as yet not certain whether they may not be connected with purposes of reproduction. Schools of other smaller fishes appear along with the codical state of the periodical character of the control of the form of the prevalency fish which follow the other fish in their spawning-purpose multiple partials of the periodical character of those fourneys; the fish that pursue the herring follow them into the furthermost corners of the bays to which they resort.

The autumnal visits of macketel to the Gulf of Kiel are of particular internost corners of the bays to which they resort. The autumnal visits of macketel to the Gulf of Kiel are of particular internost corners of the bays to which they resort attracted attention since 1624, when they were described by Schonevelde, on account of the peculiar character of the food that attracts the fish. The Gulf of Kiel is visited in August and September by great numbers of the Medusa aurita, which fill its waters, perform their reproductive duties, and perish on its shores, leaving hardly a trace of their watery fishes on its shores, leaving hardly a trace of their watery fishes periodical characteristic particular to the control of the periodical characteristic particular to the control of the periodical characteristic particular to the productive duties, and perish on its shores, leaving hardly a trace of the she of these that the underverlitume of the which lead an irregular, vagabond life is not inconsiderable. Foremost among them are the sharks in protected by him, and gets a share of the spoil. Other formidable fish, unsocial in their habits, being scattered over the ocean, are less ancessible to science. When more than the usual nu

coast instead of leaving its eggs in the deep sea? Why does the salmon leave the ocean and go away up to the sources of the rivers? Experience gained in the artificial propagation of fish has partly helped to answer these questions. One of the salmon leave the ocean and go away up to the sources of the rivers? Experience gained in the artificial propagation of fish has partly helped to answer these questions. One of the most essential requisites to a good hatch of the eggs is a plentiful supply and free circulation of air. Hence it is necessary for the eggs to be laid in well-ventilated waters. This is impossible if they are spawned in deep water, where they will sink away below the reach of atmospheric movements. They must be deposited in waters that are disturbed to the bottom. Such waters are the shallows near the shore, where the herring lay their eggs, and the living streams, which are the resorts of the salmon and sturgeon. The fish, impelled at spawning-time to go in the direction of the most air, keep on till they find it in the places best suited for breeding. Different species of fish require different amounts of oxygen, the same as different animals do. The salmon and trout need much, and for it seek those waters which have the liveliest motion—mountain-streams. The opinion that these waters are more favorable to the development of the eggs because they are fresh is based on erroneous premises. Many of the species that commonly go to fresh waters also lay their eggs in said waters, and even salmon sometimes lay them in the sea. Salt water really appears, from the most recent researches, to contain—other conditions being the same-more air than fresh. The same cause which impels the salmon to ascend to the lively, fully aerated streams of the mountains attracts other fishes from the bottoms of still-water ponds to the wind disturbed waters of the bays. Those fresh-water fishes that do not wander away, go to the well-aired spots in their neighborhood to spawn—to the shore-waters, the wet meadows, or the junctions of rivers, or to the tributary streams of the lakes in which they at the water, and the ele from the bottoms of still-water ponds to the wind disturbed waters of the water, or to the tributary streams of the lakes in which they t

## Archery.

PRIVATE PRACTICE CLUB.

OCTOBER SCORES.

THE short days and wintry winds have driven most of our members to the shorter ranges, though a few notable exceptions appear with records showing patient practice at the York Round in its entirety. While there can be no question that it is best to give the greater time to the long ranges, the secretary, from his own experience, can readily understand how difficult such shooting is when the ground is covered with snow, the wind harsh and strong, and the mercury crouching in the bulb of the thermometer. In the month of October but little of such severe weather was ex-perienced, but at the time this is being written it would require a Such shooting is not only very trying to the shooter, but the havon made among his bestarrows is financially appalling. In the second score at the 100 yards, shot by the writer in November, he was rewarded with four fine new arrows broken to pieces. In shooting the first score in the snow on one afternoon he lost an arrow unde the snow. He then cleared the snow entirely away from the vicin ity of his targets. The following night being very cold the ground was hard frozen, and the arrows, striking upon the exposed surface, rebounded as if from a solid stone floor, whipping the nocks against the ground as they rose, and breaking the stile short off. To the fletcher such practice is very interesting, but the average archer broods over his mangled shafts with unutterable disgust

At sixty yards, the number of arrows missing the target being greatly decreased, the danger of breakage is correspondingly di-minished. For this reason, and the further fact that a score can ministed. For this reason, and the further fact that a score can be so much more quickly shot at the shorter range, our practice will be greater at this range during the winter than its value merits. Some of the better performances of the members for the month descree more extended notice than can here be given, the secretary having only space to call attention to a few of the more remarkable achievements. The leading score at the 100-yards range was obtained by Mr. Will, II. Thomson with 46-220, fol-lowed by Mr. Maurice Thompson with 35-153, by Mr. Frank H. Walworth with 35-133, by Mr. De Graff with 29-131, and by Prof. Willard with 29-123.

At the 60-yards range records of great excellence were made, Mr. Maurico Thompson heading the list with 42-208, closely fol-lowed by Mr. Parm, S. De Graff with the fine score of 194 from 38 hits. Mr Will. H. Thompson obtained 42-188, Jlr. Willard 33-167. and 36-166, Mr. Walworth 36-162, and Dr. Weston 32-146. At 60 yards some extraordinary work was done. In some of the earlier reports of the doings of the club the secretary called attention to the fact as something extraordinary that several members had passed 120 points at this range! To note the scores exceeding that number in this month's record would be a tedious task. Indeed, taking 140 points as the minimum of notice, we find that Mr. Walworth exceeded the limit five times with scores of 24-154, 24-152, 23-149, 24-146 and 24-140. Mr. Will. H. Thompson obtained three scores of 24-146, 23-149 and 24-152; Mr. Maurice Thompson 23-147 and 24-156; Dr. Weston a score of 23-153, and Mr. Hyatt a score of 24-144, while nearly fifty scores between 180 and 140 were recorded! Surely we are reducing archery "to a science" on this

side of the ocean, at least at the short ranges.

York Rounds of 106-508 by Mr. Will, H. Thompson, of 34-444 by
Mr. Maurice Thompson, of 85-419 by Mr. P. S. De Graff, of 85-405 by Prof. Willard, of 99-401 by Mr. Walworth, and of 87-379 by Mr. Hyatt are exceedingly creditable records, and reveal a general advance. As much credit is due those members whose practice has not been so long, and whose skill is naturally less, for the improvement revealed by their October record. Many of those now low in the scale of excellence will be found in the frontrank next summer, after a few months careful practice shall have given them an equal after a few months careful practice shall have given them an equal chance with their more experienced fellow members. Looking Average 90 yards.

over the list of members again, the secretary cannot forego the pleasure of noting the improved skill of Mr. Walworth, Mr. De Graff, Prof. Willard and Mr. Hyatt. These gentlemen are rapidly

#### RANGE AND GALLERY.

A CHALLENGE FROM ENGLAND-No. 20 Grosvenor Place, S. W., London, Nov 26, 1880.—Sir: As chairman of the Council of the National Rifle Association, I have the honor to invite the National Ride Association of America to compete with a team of Great Britain and Ireland next July in an international long-range rille match. If you are pleased to entertain the suggestion, I hope that I may persuade the American Rifle Association to send over a team of eight gentlemen to represent their country at the Wimbledon Camp-meeting, which commences on the second Monday of July,

1881. The international match could take place about ren days later if convenient, when undoubtedly it would attract very considerable and wide-spread interest.

My object in writing thus early is that the Council of our association is anxious that if the match takes place all preliminary details may be fully arranged. I have the honor to be, Sir, yours Sanyarous. very respectfully,
The Hon. Judge Gildersleeve, President National Rifle Association.

The above letter from Earl Stanhope was received by Judge Gildersleeve on the 13th instant. No action upon it has yet been

BATH, N. Y., Dec. 9.—We had an all-comers' rifle shoot here to day with some fair scoring done at 200 yards. The record was : 
 day with some tair scoring done at 200 yards.
 The record was:

 Vym. E, Pitch, Bal. S.

match which began Dec. 1 is fast becoming very popular, many availing themselves to practice at this favorite range. Mr. Elihu match which began Dec. 1 is last becoming very popular, availing themselves to practice at this favorite range. Mr. Elihu Wilder, the inventor of the Wilder machine gun, has shown good holding with this little weapon; 50 feet, rounds 8, possible 40, three scores to win or possible 120:

Boston, Mass., Dec. 11. - The cold of to-day was the only objection to sport at Walnut Hill, though to the marksmen in the winter shed it was no objection at all. The weather conditions after 12 M. tempted large delegations there in the afternoon, and the shed was well filled by the devotees of the rifle, who stuck to their work until darkness compelled them to pack their traps. The day must be acknowledged to have been a good one for the sport. The sun was obscured, and the mirage before the butts, which is always encountered on a bright day from the sun's reflection upon the snow, was absent. The wind gave no unnecessary trouble, and was easily handled by the old vets, while the younger markemen saw "mage" appear for too much or too little wind elevations. Only the best

BEACHMONT, Mass., Dec. 10.-The German Schuetzen Corps of East Boston held their shoot at their range, Beachmont, to-day. The day was intensely cold, and the wind strong and hard to con-trol. The attendance was large and the shooting capital for the day. The Massachusetts target was in use. Mr. H. Max suc-ceeded in carrying off the honors with 106, leading all competitors Mr. C. M. Gueth, however, pressed the former marksman very hard and made a total of 103. This new club is in a very flourishing condition, and large scores are anticipated during the season Following are the best scores made:

. Max13	12	11	9	11	9	12	9	10	11-106

## Bachting and Canoeing.

SINGLE-HANDED CRUISING.

BY A SINGLE-HANDED CRUISER.

TOR many years I have oblighted in single-handed cruising, and in floating allone, on river, lake or sea, in either came, duck-boat or yacht. When I say alone I do not mean alone in the sense that a large number of eanosists use the term, who, although they are the solo occupants of their respective craft, generally cruise in company together, sleep at night at some hotel ashore, and fondly imagine that they are enjoying single-handed cruising. The great money and the company together, sleep at night at some hotel ashore, and fondly imagine that they are enjoying single-handed cruising. The great money are enjoying single-handed cruising. The great money are the solo occupants of the company together and your eraft for all the comforts of life, communing with no one but nature, and taking all sorts of weather as it comes with zest and enjoyment, whether good or lad, is a pleasure unknown to those gentlemen. I met a party of them on a cruise down the St. Lawrence four or five years ago, and, while I gazed in silent wonder at their fancy yeachting shirts, sailor contained boats with gandily painted manes, I did not in the least ency them when a storm suddenly came and I saw them send in dismay for the enerset farmhouse, their fancy toggery dripping wet, while I reclined comfortably in my plain old craft, the rain beating in vain against my light waterproof tent, and the little coffee pet singing joyfully on the alcohole stove.

Money book, and straightbury got me a cance in which several expeditions were made. But the confined quarters of the Rob Roy "book, and straightbury got me a cance in which several expeditions were made. But the confined quarters of the Rob Roy displexed me. It was not suited for a permanent habitation, and the continued working of the double paddle blistered my hinds. Such as the service of the Rob Roy displexed me. It was not suited for a permanent habitation, and the continued working of the double paddle blistered my hinds. Such as the season of the sound paddle blistered my hinds. Suc

avro de Grace if desired.

In the first place she shall be longer, as I think twenty-two feet
in be handled safer by one man in a "long" sea than eighten; a
cyt she shall be narrower, Tylft, being what I consider an ample
nam; she shall have a keel instead of a centreboard (I found my
on centre board too heavy for raise comfortably when I wanted to

anchor in shallow water), and the ballast shall be on the keel as ranch as possible; she shall draw a little more than three feet of water, and the eabin "house" shall not have more than just sufficient height above the deek to admit of four small dead-gyes being fitted, her sails shall be on the same plan as those of the old boat, except that the mainsail shall be in two pieces—as described by "Sauceliko" in a back number of Fonesy Am Straka—so that by dropping the peak I can instantly change to a leg of mutton scal, instead of being compelled to reef in a studden squall that had, instead of being compelled to reef in a studden squall that it shall carry a light batch on deek to put over the direct cockpit when I leave the yeach alone; every rone, even to the signal-hallards, shall lead aft to the cockpit, and tiller ropes shall be led all the way around the boat, from bow to stern, so that I can steer her in whatever part I happen to be; her ground tackle shall consist of four auchors, heavy enough to hold in a burricane, and manilla cables shall be used instead of chain; and lastly, I shall have a ten-foot cannus tender, which will be light enough to carry on a deck and be eastly shifted, containing four of the signal and a start of the containing four of the signal shall be intended bowsprit with corresponding the variety of the signal thank I shall be fitted for as long a cruise as a yachtsman could wish to undertake. "Sancolito," for whose opinions I have an exceeding reverence, grieves me by upholding an "Americanized yawl," with a full mizzen-mast and leg-of-mutton sail, and extended bowsprit with corresponding ibl. I think such a rig would be heavy outside sea, with only one man to work her, the original English yawl, in my opinion, is the best craft that can be devised. In a late number I notice your inquiry for an old-stove for yacht-tanework of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of t

#### MEASUREMENT.

Editor Forest and Stream:

The letters from Mr. Archer which have recently appeared in your paper and your own comments thereon, tempt me to write a few lines on the subject of yacht measurement. I am the more inclined to this because your pen and pages have been used and with manifest effect to influence the construction of yachts of better dimensions and model than those of the prevaling type, more especially of the small class of yachts, and because the method of measuring has a direct and other very paphabot of converging the development of others undesirable except as a means of gaining advantage in speed. Thus if happens that an English yacht will have a width of beam equal to less than 20 per cent, of her length, and those built here will sometime sexceed 40 per cent, with a corresponding disparity in their respective depths.

Some of this difference may reasonably and properly be due to difference in water, but to any one who has watched the constantion of beam it is a plain manifestation of their owners willingness to suffer loss of accommodation and to incur increase of expose to evade the penalizing effect of a faulty measurement rule, which makes necessary an outlay for ballast to serve a purpose which might to better accomplished by giving the vessel a little more beam and better accommodations, effect of the English rule, a yacht owner must receive from his builder a much smaller bott than he could get for the same money and invest a considerable sum in lead, or give up expectation of prize winning in regatas. While his is the case it cannot be charged against the rule that it produces a dangerous class of yachts, or yachts that are heavily rigged and unhandy.

It is no uncommon thing for us to speak of the English rule as bad to the extent of being ridiculous. How is the the rule as bad to the extent of being ridiculous. How is the the rule as bad to the extent of being ridiculous.

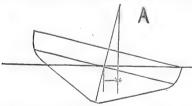

unhandy.

It is no uncommon thing for us to speak of the English rule as bad to the extent of being ridiculous. How is it with the rules here?

bad to the extent of being ridiculous. How is it with the rules here?

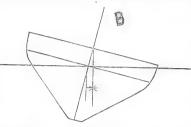

The effect of length measurement in developing the flat and wide variety has been so often the subject of your effective editorial comments that I will only say that I hope never to be caught out in one of those craft in a nasty sea and bad weather unless there is a port within easy distance to leeward.

There are, however, worse rules, I opine, than either the English or length rules, and after some study of the matter through many years, I have formed the conclusion that the very worst rule with

which I am acquainted is that of the New York Yacht Club. Viewing the subject as I do, it is difficult to conceive of any rule which could be worse and yet be specious enough to secure any consideration from yachtsmen. There is not a single good feature in yachts that it tonds to develop, not a bad one that if discourages. If any one should build a yacht to escape the kind of tax which it imposes, such vessel would necessarily be deficient in the characteristics of a safe, comfortable sea-going vessel. The best that can be hoped of such a rule, is that any one about to build will fail to pay any attention to it, and that he will not stint his craft of roceboard, so moundoins and serie, let the subject contents be what they may. This brings us to the question: What would be the characteristics of a good rule for time allowance? In trying to answer this question I shall try to deal rather with the principles to be attended to than the details of the application. A rule should tax only the elements out of which speed may be obtained so far as these are capable of recognition. It should, as far as may be consistent with equity, avoid penalizing features that make a boat safe, handy, roomy, economical or otherwise desirable. Other things being equal the rule which permits the largest liberty in design is best. Something has alroudy bone said in your paper as to the reasons why allowance should be made by one vessel to another, but a few words out it hisself laid down the principle. The property of the subject of the

the full advantage of her increased size, and the lighter convas of of the small vessel may even tell against the large one. When the wind blows harder the larger vessel has the double advantage of being able to travel faster than is possible with the smaller one, and of standing up to her canvas better, or using more of it. In addition to this there are some miner gains, such as the smaller offect of sea warves upon her, and the reduced frictional effect of water to which methon has been communeated by passing over surface to which methon has been communeated by passing over surface to the standard of the standard

waves of displacement and replacement are generated —when the surface traveled over is roughened by waves—when per square foot of surface it is necessarily less in the larger vessel than the smaller

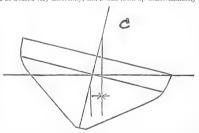

of some of the second years the sages the second management of the seco

consequently at high speed. There could be no difficulty in formulating this.

It might be assumed that as vessels of the same model increase their sail carrying power and resistance in a ratio approximately known, that their displacement or tonnage would form a good basis on which to reckon time allowance.

Such an inference is correct only when the same type of vessel is in competition and can, I claim, only be relied upon for just results when other parts of the rule for measurement insure that only such vessels shall be subject to the rule as have similar porportional dimensions. Otherwise the inference is as false and the operation of the rule as mischievous as it well can be. At this time when opinion is quite unsettled, it is, I think, important that no fallacy in regard to this matter should pass unchallenged.

A little attontion to the subject will show that of the three dimensions which enter into tonnage or diplacement the uses and offects of each are different from the other, and that they have different values as agents for the procurement of speed. They ought to be treated very differently, and to mix them up indiscriminately

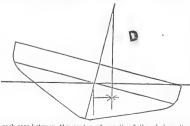

is to my mind to make confusion of a kind that can produce only the worst results. It is, in fact, to follow the example of the old time man-of-wars-man, who, to get rid of counting lent his measmate a handful of mixed gold and silver, and asked a like repay-

time man-ot-wars-man, who, to get rid of counting lent his messmate a handful of mixed gold and silver, and asked a like repayment.

I contend that no well proportioned vessel designed for comfort,
handmess and sea worthiness, can by displacement or bulk measurement rule afford to allow time to another one designed expressly to win prizes in regattas over a summer course.

It is the state of the s

in each case between the centre of gravity of the whole section, and the centre of buoyancy of each section inclined to an angle of 13 deg. The distance which separates horizontally the centre of gravity from the centre of buoyancy multiplied by the weight of the section as represented by the displacement, will, of course, give the force of the righting power at the angle shown, and the consequent relative ability to carry sail over such a vertice of the section A represent the Undine. B, the same terms and the consequent relative ability to carry sail over such a vertice to the section A represent the Undine. B, the same terms are the section A.

feet draught, and the same amount taken from beam. C, the Undine with two feet added to draught. D, the Undine with two feet added to beam. Let W represent the weight of each section, and L the length of the righting lever or the distance horizontally which separates the centre of gravity from the centre of buoyancy and we have the following:

"B—W 1.337 x \( \tilde{\text{L}}\) .4054 = .55

C—W 1.514 x L .65 = .934

It will be seen that the addition to depth gives no suchadvantage for carrying sail as is to be got by increase of beam. That it is not equivalent when exchanged for it is shown by reference to B. That addition to depth without diminution of beam may fail to give advantage in stability, unless accompanied by increase of free-board, is shown by C. That addition to beam does add immensely to sail carrying power on a wind is shown by D. That the loss of stability in narrow yachts is partly compensated, even in smooth water, by easier lines and smaller rigs, and that such boats are immeasurably superior and more handy is, I think, so palpable that the recognition of it must constantly increase. Hitherto, however, notwithstanding that the N. Y. Y. C. is exceptionally conspicuous in taxing depth and free-board, and that and builders have shown no displant of both of the more than a minimum of either. Our open yachts, the most extreme type of racing machine, usually have a draught of about \$\frac{3}{2}\$ of an inch to a foot of length, and are doek to water when inclined 12 deg. Larger vessels commonly have their decks to water at an inclination of 15 deg. Yacht builders will tell you they do not want too much boat. Nor do they want to get the sails too high. There appears to be a more healthy disposition growing, but I am afraid that it would not bear to be handreapped. The Seawanhaka Club has a rule that is probably the least objectionable in use It takes into account beam and length only, and although the club contains some deep boats as well as very wide ones, it does not appear that the most extreme and why some penalty on depth or the favorite mode of ballasting would be reasonable. A much better alternative would be to relieve the yachts from the cramping and injurious effects of the present too heavy tax on beam. If this were done and at he as amo inno our own roles modified so as to encourage more depth and less beam. Mr. Archer would fi tries.
New York, Dec. 4.

## YACHTING NEWS.

New Yacurs.—Hardly has the season closed for one year, before the chips begin to fly in all the building yards in expectation of the next. Prospectly having returned to commercial circles, it seems more than likely that this winter will see a larger number of keels stretched than any yet gone by. The builders of Boston already have much new work in hand, principally of the smaller cruising classes of sloops which meet with so much favor along the rugged Eastern coasts and the list of vessels undergoing alterations and repairs promises likewise to be a long one. Nearer home, Ward & Stanton have launched the new composite steam yacht for Mr. Journal of the standard of the steam of the steam yacht for Mr. Journal of the standard of the steam of the steam of the standard of the standard of the steam of the standard of the

Speed of Yachts.—The trawling yacht Spider, yawl-rig, 26 tons, made the run of 191 knots, or 220 miles, from Dover to Exmouth in 22% hours, under double-reefed winter canvas, blowing fresh Northeast gole and high sea.

J. McC., 40, San Francisco, Cal. Remove all the grease and fat possible with a knife, then tack on a board and rub with powdered chalk until wholly free from grease. The skin can then be backed

R. H. D.—The method of building you propose is a difficult one or smatters. Would advise a frame with canvas stretched over for amateurs You would have trouble in calking. See back files on building canvas canoes

J. C. L., Little Utica.—Will you please tell me what is the name of the bug that bores in wood? Ans. A great many insects deposit their eggs in wood and the larve live there until they go into the pupa state. Very many beetles have this beautiful. some Lymenoptera and other orders of insects.

J. C. S.—The stern wheel you propose is the best arrangement for your purpose. For designs of Nonparell write to Mr. Thos. Clapham, Rodyn, L. I. They will suit your purpose perfectly. Wheel should be about 6 feet diameter, 30 to 40 revolutions: twelve buckets, 5 feet 4x8 inches and % thick. The boat might be made 35 feet long to advantage, with 8 feet beam. About 6 horse power required for 6 to 61/2 miles an hour.

F. S. W., Bath, N. Y .- Is there any law in this State relative to registering dogs in the Clerk's Office. Ans. We know of no law and think that there is none requiring dogs to be registered. The Revised Statutes require that every owner or possessor of a dog liable to be taxed "shall, whenever required by any assessor, deliable to be taxed liver to him a discription in writing of every such dog owned or

ed by him." Penalty for neglect or refusal or false state-This is only statute within our "ken" in the nature of or approaching a requirement to register.

AMATEUR, Boston, Mass.—1. Are metal shells any better than paper shells for fine shooting? 2. Is No. 4 shot the proper size for paper shells for his shooting? 2. 18 No. 4 shot the proper size for ducks? 3. When No. 6 shot is used how should a shell be loaded to make the best possible pattern? Please state number of wads, weight of powder and shot? 4. 1s it better to turn the shells, if paper. Gun is No. 12: one barrel, the other medium. Ams. They are generally considered to shoot a little stronger. 2. Yes, for some localities, i. e., sea shooting. 3. You do not give weight of gun, or length of barrels. 4. Yes.

20 V. B. M., Raleigh, N. C.—Will you please answer the following question? I had a bitch speyed in the latter part of October, 1879, m January, 1880. Came in season, which did not surprise me, as I understand such to be frequently the case a short time after a bitch is speyed. She is at this time (November) in season, at least nine months between this and her former period. Is this not unusual? Can she have puppies? Two ovaries were taken from her at the time the operation was performed. Ans. If the operation was properly done your bitch cannot now have puppies, although she might have conceived during the first period.

G. H. S.—The America differs from recent vachts in being deeper and having an easier bilge, much more dead rise and finer ends. She is less of a box than the modern centreboard racing schooner. She is faster than anything of her size built since 1849 in America— proof that a properly designed keel yacht is not slower than the centreboard. A glance at her model and those of other yachts in the club rooms of the N. Y. Y. C. shows plainly that we have retrograded since her days, though we are now again beginning to appreciate her points, and are building more in consonance with the principles of naval science, and giving less credence to the clumsy notion that fast boats should sail "over the water," a meaningless and atterly impossible supposition, which produced such ancenth dangerous specimens as the Mohawk and a whole class more or less like her. The America is called "crank" by landsmen, because she heels a little to find her bearings-something which gives a sailor no concern if an aid to other desirable qualities.

Any subscriber or reader of Forest and Stream in want of any kind of carpetings, oil cloths, rugs, etc., etc., can be sure of fair treatment at the hands of John H. Pray, Sons & Co., Boston. Call or correspond with them, and get their prices before buying, It will pay you to try them.—[Adv.

#### PUBLISHER'S DEPARTMENT.

HOLABIRD Shooting Suits, Upthegrove & McLellan, Valparaiso, Ind. We know that there is nothing on 'earth equal to Hop Bitters as family medicine.

We have seen the Parker Pocket Scales advertised in another column and should think that they were well fitted for use by sports-men. They are small enough to be carried in the vest pocket and weigh up to 8 lbs.

Bethabara Wood.—The bethabara wood, which is imported from Africa by Messrs, Shipley & Son, of Philadelphia, Pa., for

rods, is by reason of its elasticity and strength peculiarly adapted to meet the angler's requirements. The wood is highly spoken of by those who have used it; and promises to increase in favor as it becomes better known.

A good opportunity is afforded any gentleman desirous of pos-curing a good well bred dog at a reasonable price by "Sheil" whose advertisement will be found in this week's number. The dogs are in fine healthy condition. Would seem to be well worth the money asked for them. Their breeding is A 1 and they have received notice on every occasion where they have been shown.

The photographic copy of "Fysshynge Wyth an Augle," by Dame Juliana Berners, A. D., 1496, for sale by Mr. Bouton, is a handsome "plaunfiet" in the old "black letter." Our readers will do well to remember that we have several copies of the delightful old book, edited by Mr. George W. Van Siclen, handsomely bound and in good plain type with the quaint spelling preserved, which we can supply at \$1.50 per copy. A few rubbed copies at \$1.25. Send your orders to this office soon.

#### FOREST AND STREAM.

NEW YORK, THURSDAY, DECEMBER 23, 1880.

\* The Forest and Stream goes to press Wednesdays. Correspondents are requested to mail their communications se that they may reach us before that day

Do Not Forget that a paid ssubscription to the Forest and Stream for one year is a most appropriate Christmas gift.

The proposal to require licenses from gunners on Long Island will meet the hearty approval of the better class o sportsmen, and as land-owners are to be excepted from the requirement, farmers will be equally pleased with it.

THE CABLE brings us the news of the death of Francis Trevelyan Buckland, or as he was best known, Frank Buckland, who was perhaps the most widely known writer in England on natural history. For several years he had conducted the Natural History columns of Land and Water, and through that paper and other mediums he had been remarkably successful in popularizing that study.

----

When the Forest and Stream was considering which on of many special features, that presented themselves, should be provided for its readers this Christmas week, nothing seemed more pleasing and appropriate than a collection of reminiscences of that famous coterie of writers, who contributed long ago to the old Porter's Spirit-the Forest and STREAM of its day. And it was most fitting, too, that these reminiscenses should come from the pens of those writers themselves. We accordingly communicated with such of them as we knew to be still living, and our requests have been met by a most gratifying response, and we present to-day contributions from Gen. II, II, Sibley, Isaac McLellau, Col. Thos. Picton and S. C. Clarke.

These are the few who are left; the members of that band who have not passed away with their generation.

This reunion of famous writers, after the lapse of a quarter of a century, is a notable event in American sporting litera-

THE meeting, which is partly reported in another column, was a most interesting one, and was characterized by several important and highly interesting papers, which were

CENTRAL FISH CULTURAL SOCIETY.

followed by equally interesting discussions. We have urged the members to put their views in form of a "paper" which, prepared at leisure, fully represents their ideas, and is always correctly rendered in the local and other papers as well as in the Society's reports. This will be remedied next year, as a resolution was adopted which authorizes the executive committee to call on members for a paper, and then to prepare a

programme in accordance with this plan.

Among the papers read was one by Prof. Forbes on the food of fishes in their early life, which has an important bearing upon fishculture and the intelligent stocking of waters; one by Mr. Fairbank on the breeding of California salmon in fresh waters, something which has been done by him in Geneva Lake, Wis., where his salmon have not only lived but have actually spawned in the lake; one by Mr. Ballou on protection of fishes in Lake Michigan ; one by Mr. Mather on the growth of carp in America, wherein he proved by many witnesses that in their new home their growth exceeded that of their native land three or four times; and one by Mr. Shaw on fishways, besides letters and communications from others.

One of the humors of the meeting was a joke on Commissioner Shaw, of Iowa, whose resemblance to General Garfield is so strong that strangers looked after him. One of the wags told a waiter at the hotel that the gentleman dining at the next table was the President-elect, and that the one with him (Commissioner Bartlett, of Illinois), with the huge moustache, was General Logan, and the fun lay in seeing the procession of darkies file by to get a look at the celebrities, and the astonishment of Shaw to see the pyramids of dishes containing all the delicacies in the house piled in front of him until no space was left for more.

We will publish the papers and discussions in full, from week to week, and afterward issue them in pamphlet form. The members of the Society recognized the labors of Forest AND STREAM in the line of fishculture, and the few who had not formerly taken it ordered it sent. It may be that the Society will never get the legislation it seeks from the general Government, but if it never accomplishes legislation of any kind it has a sufficient reason for existence in the diffusion of fishcultural knowledge, the exchange of ideas and the general waking up of the public to the value of fishculture through the press, which gives, as the Chicago local papers did, columns of discussions and extracts of the papers read and comments upon them.

#### THE NATIONAL RIFLE ASSOCIATION ELECTION.

WITHIN a few days the life members of the National Rifle Association will be given an opportunity at the annual meeting of the association to fill a number of places in the Board of Directors. Common sense would seem to dictate that a change be made from the old plan of complimentary re-election of retiring members, and that an effort be made now if ever by the actual shooting men of the asso ciation to make the Board of Directors something more than a more parcel of figure-heads, at least as a large majority. The affairs of the association have now reached a stage where it becomes an absolute necessity that somebody should do something. From being a live, healthy organization, leading ritle practice and infusing life into the sport, the National Rifle Association has degenerated into a mere empty shell The military shooting on the one hand is entirely removed from the jurisdiction of the Board, and on the other hand the most popular all-comers' match of the year 1880 has been carried out not only without the actual co-operation of a major ity of the Board, but with expressions of the liveliest disgust and opposition on their part. The fact now is that those who control affairs in the National Rifle Association are not in active and earnest accord with the men who do the shooting on the range. Every important step which has been taken has been forced upon the Board, and this unwieldy force of inincapables have been rather a hindrance than a help to rifle shooting. A single energetic man could easily run the Creed-

moor range, and the only function which the present Board of Directors seems to fulfill is that of passing ridiculous resolutions at inopportune moments. The Palma has been virtually shelved through the weight of conditions laid upon it, and the whole question of international small-bore shooting has been dragged into a quagmire of confusion, and there dropped. Having the opportunity to become the dictator in all matters connected with rifle shooting in this country, the association, by an annual turn-over of its rules and regulations, has managed to make a match shot "under the rules of the National Rifle Association" considerable of a risk unless everything passes off exceptionally smooth. The financial management of Creedmoor might come in for no small share of sharp criticism were we inclined to venture into that field.

The whole remedy for this state of affairs lies with the shooting men among the life members. There are enough such to select a good, live contingent at once, and ultimately to the weeding out of every fossil from the Board. There has been growling and grumbling enough, both on and off the range, at the neglect of those in control. The whining ones can now put their cry for reform into practical shape of ballots. Let them decide upon a list of men who thoroughly understand the needs of modern rifle practice, men themselves know somewhat of the seemingly slight causes which may cause a man to turn with indifference from one range and seek another. Our plea for a "change" is no idle one, for affairs in the N. R. A. cannot well be worse than they are now, and in face of the fact the coming shooting season will determine whether the N. R. A. is to live or die. The infusion of new blood into the Board must be a help to its deliberations

Banners and buntings and streamers, the boom of cannon and the flare of skyrocket, these are the attendants of our midsummer anniversary, the symbolisms of our national pride and patriotism. Each recurring holiday is marked by its distinctive and approved material expression of the sentiments which prompt to its observance.

And Christmas has its greens. This week our nomes are decorated with the simple boughs brought in from the woodland and fragrant with the spicy odor of the forest.

There is much of significance in this, that for the memorial of that day which the Christian world has set apart for the commemoration of the one momentous event in its history, it rejects the decorations of art and finds in the simple gifts of nature its fitting and eloquent symbols of joy and cheer and

It matters little when or where this custom arose. That it has lived and is year by year more widely adopted is an unconscious, perhaps, but none the less emphatic and true, expression of man's sympathy with Nature. It is the unerring token of her children's affection for Mother Earth.

Massachusetts Game Protection.—The Massachusetts Fish and Game Protective Association have appointed Messis. Iris W. Adams, John Fattler, Jr., and F. R. Shattuck, a committee to superintend, if necessary, a revision of the Game and Fish laws of the State during the coming session of the Legislature. This committee invites correspondence from other similar committees of the different State Associations or from individuals interested in the subject of fish and game protection, and will welcome any suggestions which may bear on this matter. Letters may be addressed to any member of the committee, in core of the Association.

Words, Words, Words.-When Carver was setting out for Europe, he prepared the way by a grandiloquent exchange of wordy challenges to Bogardus; and when the flood of newspaper notoriety thus secured was at its height the "Doctor" mounted the crest of the wave and rode into fame across the sea. After a prolonged absence abroad Carver appears again in the daily papers with more challenges to Bogardus. This means, we presume, that Carver thinking about coming back to America. He is preparing another wave of newspaper notoriety, and when the sound-ing-line shows the requisite depth of water on the bar we may look for the redoubtable marksman to come sailing grandly into port.

Tides-moon-moonshine. Carver challenges-wordswords-words.

## A Christmas Reunion.

A VISION OF THE PAST.

N the silence of my room, at this solemn noon of night, I sit and muse of other years, of years that were so bright.

There's no light of lamp nor gleam of fire to dissipate the gloom No star-spark nor a moon-ray the darkness to illume. As down Time's dusty corridors I turn my wistful eye Fond retrospect brings up the scenes of the days so long gone by.

I seem to see before me, like old portraits on the wall, Sportsmen whose forms and features I can at once recall As memory's magic wand I raise, the mea of other days, Like apparitions of the past come trooping to my case behold in this, my vision, each old familiar scene, Where we had tramped the meadows or trod the woodland green Where we'd scaled the breezy upland, or plunged in bosky dell In summer's heat or when the leaves of russet autumn fell. In hemlock wilderness, where roved the wild deer herds of Maine Where antiered stag or tawny doe held unmolested reign; Where the drum-beat of partridge or woodcock's startled cry Were heard in piny thickets down where the brook swept by. And where lone Adiroudacks their shadows wide extend And the blue mountain summits with the horizon blend Where sparkling stream and crystal lake, like gems, the valor inday There, well equipped with rod and gun, we loved to take our way

And where the sylvan prairies of Illinois outspread Their measureless green pastures, where thick the grouse flocks fed .

Where myriads of wild pigeous and coveys of brown quail Filled grove and plain; where oft we'd keep the trail Fast by thy shores, old Ocean, by rocky reef and bar, In shelly cove, or where the sand-spit stretched out white and far. There, hidden in our boat, we'd lie in ambush for the flight Of hovering brant or bonking goose from day-dawn until night. And oft where reedy marshes their league-wide me And plover-call and curiew-cry were resonant o'erhead, There, oft amid those wary flocks, to deal out death we came And home return'd with sumptuous wealth of migratory game

And when the winter days had come, and sports of held were o'er, And, gun and red and dog dismissed, we sought our homes one

We lov'd by fireside blaze to sit and there enjoy agai In genial talk, the noble sports of wood and flood and plain. Cale Loring, of old Boston, prince of fowlers rare, Can I forget your royal sports, your skill beyond compare!
Forget our "Acorn," "Cypress," in these recording rhyme
Then wont to fill the sanctum of the Spirit of the Times? in these recording rhymes,

Tall Son of York! O, Porter, who might torget thy fame? What memories now brighten at mention of thy name So eloquent in speech, so cultur'd in thy mind. A giant in thy form, as woman soft and kind! And others, too, were there, renowned with gun and pen Sibley and Picton, Scott and Wilkes, all princes among men; Anthon and Clarke and Foster, and, chiefest name of all. Frank Forrester! What scenes those names recall

Poor Herbert! Who so brilliant, so versatile as thou Whether in smiling mood or with a clouded brow?

Ah, who so earnest in the field, amid the birds of air, Or where the trout and salmon gleamed in the sunny glare.

These portraits of kind faces, these pictures of the past. Glow ever in my memory; to fade they will be last.
But, alas! the dust and shadows of the grave have closed fore si On many of these we cherish'd in the long-departed year,

Shelter Island, J. J. Isaac McL ISAAC MCLELLAN

"THE SPIRIT" CROWD.

BY COL. THOMAS PICTON

HIRTY-FIVE years ago The Spirit of the Times, the metropolitan weekly, for many years previously prosper ous under the peculiar editorial management of William T. Porter, had attained the height of its popularity, celebrity and influence through its recognition as the "gentleman" newspaper" of the period, with a corps of contributors com prising numerous writers of local distinction in every portion of the country, whose productions, generally composed during moments of compulsory leisure and expressly designed for instruction or entertainment of a distinctive class of ap preciative readers, first saw the light of day in this diversified preciative realers, itsis saw the ignt to day it him surveished sheet. The Porter brothers were men of decided ability and of tire literary attainments, genial, social companions and of extended worldly experience, and hence it was not surprising that when William, the "Tall Son of York" as he was fauniliarily designated on account of his remarkable stature, assumed control of The Spirit's columns, aided by the stature, assumed control of The Spirit's columns, aided by the advice and literary co-operation of his more highly cultured brothers, it penetrated with incredible rapidity into the houses of turfinen, sportsuce, planters and country gentlemen, while being acknowledged in this metropolis as a standard

while being acknowledged in this interropoles as a standard for refined anusciments.

It must be remembered that in those days, when the passing generation were tinetured with a decided predilection to ward patriclanism and a prejudice favoring social exclusiveness, professional gentlemen and those of habitual leisure were, as a general rule, not only ripe scholars, but enthusiastic admirers of field sports, tutored in admiration of the passition steen habitual in action by the central work. times and diversion lish soil. The sports held in esteem by the gentry upon times and diversions near the section by the gentry upon Eng-lish soil. The sportsmen of forty years since were almost entirely dependent upon English publications, and those of a very high price, for current literature, and consequently one of the leading features of The Spirit in its initial issues had been a judicious reproduction of articles from the London of Magazine and similar periodicals, the perusal of ired the ambition of our native writers, who, ere lause which fired the ambition of our native writers, who, ere lapse of little time, and the satisfaction of perceiving their contributions to The Spirit transferred to the Old World with landatory comments upon the unexpected uprising of a sporting literature in an American wilderness. Such was the case particularly in the instance of Tom Thorpe's "Tom Owen,

the Bee Hunter," and the "Big Bear of the Arkansaw," two sketches, descriptive of life in the Southwest, for which he had vainly sought a medium of publication at the South, where he was then dwelling a comparatively obscure editor. Upon advice of a friend the manuscripts were transmitted to Porter, whose appreciation of talent and humor and keen sense in detection of character, at once suggested prominent publication of the articles, which were, through his indorsement, reprinted extensively in popular journals, and finally adopted in England as types of hitherto unknown American characteristics. Through this fortunate chance in making a first appearance in The Spirit, and a subsequent contribution to the American Turf negister, likewise edited by William, Col. Thorpe acquired a profitable reputation, enduring up to the time of his death, insamuch as he was among the very few sporting writers wielding a money making pen. The Turf Hegister, moreover, was the main cause of bringing into existence as a sporting author Frank Forrester, as therein Herbert made his debut in his controversy with Cypress, Jr., regarding quail, continued in a series of articles, which, subsequently enlarged and enhellished, laid the foundation for a number of papers upon American game printed in the magazines and forming the skeletion of his American Field Sports. Porter, personally, was no ardent disciple of the gun, but a most devoted worshine of the rod, suendine his vacations. Zines and norming the skeleton of his Anherican Fred Sports. Porter, personally, was no ardent disciple of the gun, but a nost devoted worshiper of the rod, spending his vacations annually in making short journeys into the trout regions of Long Island, and the wilderness of Sullivan County and of John Brown's Tract, usually accompanied by some genial friends of more practical piscatorial ubilities than tendencies for literary coverious, receiving the proposal properties of the control of the properties of the p unidary in manages and politheres of Sullivan County and of John Brown's Tract, usually accompanied by some genial friends of more practical piscatorial abilities than tendencies for literary exertions, prominent among whom could be remarked Henry Inman, the artist; Brough, the wocalist; Genio C. Scott and Lyman Derby, aspirants to leadership of fashion in the fabrication of male garments; Wilkins Kendall, of the New Orleans Pieupane, yearly a visitor to our city during the summer months; Possidic, an occentric genetic manage of the property of the property of the county nce of being called out of town to argue a motion before the Chancellor, so strong was the then prevailing sentiment among business men against their legal advisers going forth for "a day's shooting." Another chandestine contributor to The Spirit was the Rev. Dr. Bethune, who, however, nustered courage adequate to public avowal of himself as editor of American edition of "Walton's Angler," much in demand with local bibliomaniaes hunting after the volume, on account of the reverend annotator's reputation, with an impulse similar to that actuating acquisition of a black letter Julia Bernyer. Bernyer.

It will be perceived that in those earlier days a sporting

It will be perceived that in those earlier days a sporting lawyer or a piscatorial divine stood in danger of excommunication were his proclivities to be honestly confessed, and hence came it that the inviting fields of sporting literature remained with us multiled save by surreptitions or disguised laborers, until Mr. Hawes and Herbert set a commendable example to ambitions aspirants through voluntarily unmasking their faces to an admiring public. Henry William Herbert differed from all his sporting contemporaries in the grave particular of being condemned to involuntarily literary servitude whereby to earn his daily bread, and for many years indugence in field sports was rather a compulsory relaxation, necessary to relieve an unremitted pressure upon an overloved brain than for the sake of mere amusement. It was necessary to reneve an innermitted pressure upon an over-taxed brain than for the sake of more amusement. It was fortunate for the sportsmen of Americathat Herbert chanced to be a man of very limited means, otherwise he would never have been forced into composition of those volumes upon which rest his post-mortem fame, for, during his lifeupon which rest his post-mortem fame, for, during his life-time, he toiled assiduously to attain celebrity as a classical and historical author, regarding his sporting contributions to magazines and newspapers as mere ephemeral productions to alleviate passing financial difficulties. Upon the "Roman Traitor" and "Oliver Cromwell, England's Great Protector," he placed his firmest reliance for a durable reputation, while upon "The Captains of the Old World" he bestowed more labor and research than upon others of his productions, ex-cepting his elaborate work upon "The Horse," which en-gaged his leisure hours at "The Cedars" for more than a series of years, its compilation having been commenced at suggestion of J. Prescott Hall, once a prominent lawyer and series of years to compitation having occur commenced suggestion of J. Pressolt Hall, once a prominent lawyer as President of the Jockey Club at the time of the exciting max between Boston and Pashion. Herbert was a very superhorgeman and quite a cavairy officer, having commanded company of yeomanny before leaving England, and was t e of the exciting match company of yearnamy comments as an amateur rider, being beaten, however, on account of the superiority of the horse of his antagonist, the well-known Lovel Purdy, upon the Union Course.

When The Spirit was commenced by a gentleman named Fisher, who prided himself upon being brother to the famous

and precocious actress Miss Clars Fisher, it was announced to be intended as "a chronicle of Field Sports, the Turf and the Stage," but, upon its falling beneath charge of William T. Porter, the literary department was assumed by Dr. Porter, who at one time was co-editor with N. P. Willis in a weekly, The Corsact, intended as a rival to the Albion. Among the compositors in The Spirit office was thorace Greeley, who was indebted to William, when foreman of the printing house of Banga & McElrath, for the first employment obtained in this city, the duo having originally come from the same town in New Hampshire. Greeley's first editorial essay appeared in The Spirit, clandestinely inserted during absence of the editors at the races, and was deemed to be so brilliant as to draw forth an injunction not "to do the same again." Some legal difficulties having occurred touching ownership of The Spirit, the paper was, at Greeley's suggestion, issued for a couple of weeks as The New Yorker, a title adopted by the "white-coated philosopher" when venturing into business for himself in conjunction with Henry J. Raymond, another of Porter's townsmen. The success of The Spirit as a literary journal was materially enhanced through perpetration of an ingenious hoax upon Porter, whose publication in good faith created somewhat of a sensation in the literary circles. Dickens having announced the publication of a new serial to succeed "The Pickwick Papers." which literary composition was initially designed to be a burlesque sporting narrative as a letter-press accompaniment to etchings executed by Seymour, whose "Sketches" had attracted much attention in England, some one supplie The Spirit with the opening chaplers of "Boz's" new romance, the authorship being variously ascribed to litchard Adans Locke, Herbert, Lewis Gaylord Clark, Clay the caricaturist, and other writers of distinction, whose letters of reputation, more or less indignant, contributed amazingly to have more an accent of the imposition when it was discovered to have and precocious actress. Miss. Clara Fisher, it was announced I precocious actress Alis Guara Fisher, it was aumounced be intended as "a chronicle of Field Sports, the Turf and 8 Stage," but, upon its falling beneath charge of William Porter, the literary department was assumed by Dr. Por-, who at one time was co-editor with N. P. Willis in a

remark, a strong sectional feeling charaterized our races from the earliest inception of that sport upon this continent, Virginia claiming representation of the South and New York that of the North from the days of the exciting match between Eclipse and Henry down to the more recent contests between Fashion, bearer of Northern colors, and Boston and Peytona, respective champions of a "soild South." During the spring and fall meetings of the Jockey Club, then held upon Long Island, the sanctum of The Spirit was a scene of cdifying confusion as a neutral ground, whereupon the magnates of the turf, ever men of distinction in paths of public life, assembled in barmonious communion. Prominent among these horse owners stood, upon the part of the South, Col. William R. Johnston, of Virginia, a small-sized gentleman, with a super-luxuriance of gray hairs, rather grandiloquently claimed as being "the Napoleon of the turf;" Wade Hampton, of South Carolina, the perfect type of Southern chivalry; Long, of Washington, and Dick Ten Brocck, of Kentucky, famous to the present hour through his trans-Atlantic experience. To meet these men of note our city produced such sporting worthies as Alderman Charles Henry Hall, a patrician, whose town residence had been converted into the famous Niblo's Garden; Walter Livingston, owner of Trustee, a diplomatist of the olds chool, familiarly known as "the last of the white cravats;" William Gibbons, owner of Trustee, a diplomatist of the olds chool, familiarly known as "the last of the white cravats;" William Gibbons, owner of Suchnig and divelop-tily's immense fortune; and the Stevens brothers, subsequently identified in the promotion of yachting and divelop-quently identified in the promotion of yachting and divelop-quently identified in the promotion of yachting and divelopthe earliest inception of that sport upon this continent, Virginia claiming representation of the South and New York ing steamsing owner and indeed founder of Commodore Van-derbilt's immense fortune; and the Stevens brothers, aubse-quently identified in the promotion of yachting and develop-ment of engineering enterprises—a congregation of wealth, probity and intelligence the like of which, it may be well observed, we may never chance to see again.

Editor Forest and Stream :

Yours of Nov. 29 is before me. I should be glad to comply with your request for an article for your Christmas number, but I fear it will not be in my power, as I have been for many weeks laid up by an attack of rheumatism and neuralgia in my head, which prevents me from the use of my pen, except for short notes. When I was attacked I was preparing an article for Forest and Stream, the end of which I g an article for Forest AND STREAM, the cut of which I must anticipate. This disease is the angler's special enemy, I have good reason to know.

I think my cousin, Isaac McLellan, and I are among the old-written on accessive arbitrary.

et united by cousin, issue Stochala, and I are among the out-est writers on sporting subjects. I began more than fifty years ago, in the Sporting Magazine, published in Baltimore by J. S. Skinner, and have written for most of its successors. As soon as I am able to travel (if ever) I expect to go to my usual haunt in South Plorida, from which you will bear

from me.

When my friend Hallock left your paper I expected to lose my interest in it, but such has not been the case. I see no falling off, but rather the reverse.

Very truly yours,

Marietta, Ga., 1880.

and after much persuasion I induced a Sioux Indian named

#### SPORTS OF BY-GONE DAYS

Editor Forest and Stream.

The pen of "Hal a Dacotali," which you call upon to perform service for your Christmas time issue, has been so long unused in the sporting line that it is decidedly rusty. I must endeavor to burnish it for the nonce with what success you must be the judge.

Arma, virumque cano, as old Virgil bath it. sing as did the poet, I can at least tell your readers in plain prose somewhat of the men and of the arms they us other days in their field sports.

The co-contributors with myself to Porter's Spirit of the Times and other sporting journals more than a quarter of a century ago were Frank Forrester (Wm. II. Herbert). Kendall, T. B. Thorpe, Picton, Lewis, Andubon and others of more or less note. With Porter, Herbert and Kendall, I was personally acquainted: they all passed away years since to the undiscovered country.

> "Their swords are rust, Their bodies are dust. Their souls are with the suints, I trust."

The writers I have referred to composed a corps which for

Their bodies are dust,
Their souls are with the saints, I trust."

The writers I have referred to composed a corps which for ability and brilliancy in their particular department of literature has seldom been surpassed. Dwelling in different portions of the Union the aggregate of their experience as from time to time made public had much effect in popularizing legitimate field sports, and in repressing the practices of pollution of the propertion of the Union the aggregate of their experience as from time to time made public had much effect in popularizing legitimate field sports, and in repressing the practices of pollutions of the properties of the p

with Herbert's self-exile from his native land which was never divulged, but which preyed upon his peace of mind and caused that deep depression to which he was subject at intervals, and which, combined with the infelicities of his domestic relations, brought about the final distressing catastrophe. "Requiescal in pace," Porter, of The Spirit of the Times, and Kendall were both true-hearted and genial men, as well as able and practiced writers. They had hosts of friends, North and South, and were general favorities.

Force, of the sparts of the thick, and a chedual were both true-hearted and genial men, as well as able and practiced writers. They had hosts of friends, North and South, and were general favorites.

My own sphere of operations was far more extended than that of any of the sportsmen I have named, and hence the articles furnished by "Hal a Dacotah," although by no means remarkable for their literary merit, were sought for with eagerness, because of the novelty of the scenes he described and the magnitude of the field over which he roamed. That field comprised what are now known as Northwestern Iowa, the whole of the great State of Minucosta lying west of the Mississippi River, and a part of Eastern Dakota. No white men inhabited this wast region, save the comparatively few who were engaged in the fur trade with the Indians. Here were to be found at all seasons of the year the building, or bison, in countless numbers, great herds of the wapiti, or elk, the deer, the bear and the wolf, and not infrequently the panther and other animals. The streams shounded with beaver, otter, mink and other amphibia, and the lakes, of which there are more than seven thousand in Minnesota alone, were covered in the spring and fall with swan, geese and ducks of every variety. It was in this elysium of hunters that the youthful Hal, not long out of his teens, six feet in his stockings, atthletic and active, a sure shot with ride, shot-gun and pistol, and withal an enthusiast in field sports, for successive years piled his weapons to the destruction of myriads of furered and feathered game. His contributions to the sporting iterature of the period were strictly truthful, but tinged with the somewhat romantic character of their young author. The interest manifested by the public in those effusions was enlanced by the fact that there was no other representative of the extreme Northwest in the group of witers referred to.

The position I held as one of the partners of the Great American Pur Company, having under my innucdiate and exclus

and after much persussion I induced a Sioux Indian named Doxon, or the Singer, to act as guide to the party, promising him protection in ease we fell in with Chippewas, with which tribe the Sioux were at war, and a liberal compensation for his services if he proved himself competent and faithful We were all mounted on tough and serviceable horses, and we relied upon our arms to furnish us with f. od. We crossed the Minnesota River at the Little Rapids, about forty miles above Mendota, without serious difficulty, the water being shallow. We then entered the woods, and traversing them under the direction of the guide, we emerged upon the open prairie on the following day. The month was October, the woods and prairie had assumed the hues of autumn, and the weather being warm and pleasant, the party having secured sufficient game for supper, were in a merry mood, and made good headway towards the northwest. Deer and bear sign was plentiful, but the Indians had lately hunted there and killed or driven the antinals away. The next day we traveled industriously, but fell in with no game of any kind, and we reached a lake, bordered by a thick grove of poplors, where it was decided to encamp for the night. Having eaten nothing during the day, and without provant for supper, the situation was anything but cheerful. The sun was disappearing in the west, when to our delight we heard among the poplars the peculiar chuckle of ruifed grouse when preparing to roost; and they were soon discovered and fifteen of them seemed, which afforded a very satisfactory meal. That the situation was anything but cheerful. The sun was disappearing in the west, when to our delight we heard among the poplars the peculiar chuckle of ruffed grouse when preparing to roost; and they were soon discovered and fifteen of them secured, which afforded a very satisfactory meal. That was the only day that there was scenitive of food during the entire trip, deer and water fowl being abundant. The route was continued along the verge of the forest until, about noon of one of the days, we saw in the distance on the prairie a heard of elk, consisting of a hundred or more, lying down on the top of a hill. How to stalk them with success was the problem to be solved. There was but one chance in a score that it could be done, but I determined upon a trial. Learning the rest of the party to care for the horses, none of which were fast enough to overtake the elk, I took with me a young half-breed and Dowan, and started on foot. We were compelled to make a march of three or four miles to reach the only point from which to make an approach. The hill where the animals lay was precipitous on the side where we found ourselves, and if the valley between us could be safely crossed, we would be safelyed for the safely crossed, we would be safelyed for a shot or show himself until I stripping ourselves of all superfluous articles, we wound prairie grass around our bodies and crowned our heads with it. I kept the half-breed with ne, and told Dowan to crawl at a little distance in a parallel line with us, but under no circumstances to fire a shot or show himself until I strived at the proper spot. Serpent-like we worked our way through the grass for a distance of four or five hundred yards, and had reached the sheltered spot without alarming the game, when, to my unspeakable horror and indignation, I saw the miserable swarge Dowan rise from the ground, run rapidly up the hill, and discharge his double barrel. I was near enough to the herd for a certain shot, but the rising ground intervened, shutting it out from my view. I toward the Indian, intending to beat him soundly, but he was a fleet runner, and when I mounted the hill he was in full chase of the elk and almost a gun-shot ahead of me. I felt like putting a builtet through the wretch, but he did not make his appearance among us until late at night, and my wrath had then subsided. What he had been doing in the meantime no one could tell, but when I questioned him the next morning he said he had followed an elk he had wounded, but did not succeed in overtaking it. I abused him heartily for his misconduct, and asked him why he had not waited for me before shooting. He replied that he could not see nee in the grass, and supposed I had abandoned the chase. How the fellow failed to secure at least two of the herd, I can not conceive, for he was within twenty yards of them when he discharged his gun. I have oftentimes had my patience tried by the stupidity of fellow-hunters, or of my men, when instructed to perform some task requiring tact and caution in approaching game, but nothing ever occurred to me more irritating than the case I have related. We fell in with other elk in smaller numbers during the trip, but the country was

approaching game, but nothing ever occurred to me more irritating than the case I have related. We fell in with other elk in smaller numbers during the trip, but the country was not favorable for stalking, and a trial to overtake them with our horses on one occasion proved a ludicrous failure.

After reaching the valley of the Sauk River and looking with pleased eyes upon a beautiful sheet of water, now known at Osakis Lake, and celebrated for the abundance and excellence of the fish it contains, the weather changed, threatening a storm, and I determined to return homeward by a more westerly route. On the second day thereafter a huge bear was killed by one of the party and the carcass proved a god-send to us, inasmuch as a sudden snow-storm, which lasted two entire days, overtook us and drove us to the shelter of the woods. Hunting was out of the question while the snow-fall continued, and we had to make ourselves and our poor animals as comfortable as the pacity of covering material would permit. The large kettle of sheet-iron was kept upon the fire and supplied without intermission with the meat of the bear, which was our only recourse. The amount consumed by the party of nine while thus snow-bound was simply prodigions, there being little of the bear left for the wolves when we departed. Our course led us through the Kandiyohi region, noted for the size and beauty of its lakes and the fertility of its soil. The party arrived without accident at their homes, after an absence of twenty-two days, the only incident worth mentioning being the bagging of four large geese on the wing by the writer by a single discharge of his gun on horseback.

I first came to St. Peter's, now Mendota, in the fall of 1834,

only incident worth mentoning being the bagging of rour large gees on the wing by the writer by a single discharge of his gun on horseback.

I first came to St. Peter's, now Mendota, in the fall of 1834, the trip from Prairie du Chien, nearly three hundred miles distant, having been performed in company with a gentleman named Bailly, two hired voyageurs and a half-breed boy, all of us being mounted. I have heretofore given some details to the readers of The Spirit of the Times of the journey, which was fruitful of incidents, some ludicrous and some grave. Soon after my arrival I visited Fort Snelling and presented letters of introduction, with which I had been furnished by my army friends elsewhere, to the officers, and they secured my entree at once to the society at the post. The garrison was composed of five companies, with nearly a full complement of officers, several of whom had their families with them. There were four lieutenants, W., McC., P. and G., who, like myself, were unmarried, and who had formed themselves into a club, which they called the bote-server. These youngsters were disposed to be fast, and some of their pranks were annoying to Major P., the staid and somewhat austere commandant, verging as they did upon insubordination and disrespect, but never quite rendering their authors amenable to the penalties of a court-martial. The two first and last whose initials are given met with an early death; the third fall a victim to vellow fever at Vera Cruz gulps. tion and disrespect, but never quite rendering their admonst amenable to the penalties of a court-martial. The two first and last whose initials are given met with an early death; the third fell a victim to yellow fever at Vera Cruz subso quent to its surrender to Gen. Scott. After the lapse of several years Captain Martin Scott, fa-

mous as the best shot of his time, in or out of the service, was assigned to the command of Fort Snelling and he brought with him a score or more of thoroughbred dogs of different kluds. I had in my own kennels twenty-two canines, at the head of which was the matchless Lion, an Irish wolf dog, immortalized by Frank Forrester in his published works and in late years by Mrs. Jessie Benton Fremont in the columns of the New York Sportsman. The tastes of the new commandant and myself were so similar that it is not strange we because intimate or that the intimacy incord into a warm

late years by arts. Jossie Bernon Fremont in the Commiss of the New York Sportsman. The tastes of the new commandant and myself were so similar that it is not strange we became intimate or that the intimacy ripened into a warm friendship, which lasted uninterruptedly until his death. He fell, as we all know, at the head of his regiment, while galabarily performing his duty on the bloody field of Molino del Rey, in Mexico, in the year 1847.

The Captain and I frequently hunted grouse on the prairies, and in the winter season we made fierce war upon the workes and foxes which were attracted by the offal from the post. When we took the field with more than two score dogs there was music in the air and small chance indeed for any of the scavenger beasts in the neighborhood. There was a large timber wolf, distinguished by his size and by his peculiar dark color, which had balled every attempt of Captain Scott and the other sportsmen at the fort to capture, although they had fleet greyhounds in their pack. I told these gentlemen that my dogs could catch and kill that brute, but they were utterly incredulous. It was arranged that I was to be advised when next the wolf put in an appearance, and not many days passed before the notice was served upon me. My fastest horse was forthwith saidled and I crossed the Minnesota River with my dogs, and was soon in full class of the animal, which was so confident in his own powers that he distained the shelter of the woods and took his course, much to my delight, across the prairie. Suffice it to say that Lion and his brother Boston overhauled the wolf after a short race of three miles and pinned him to the ground. When I reached the spot the wolf was in the agonies of death, and in a few moments ceased to breathe. I attached one end of my long slik sash to the hasp in my saddle and tied the other of the dissoniture praire to the fort and exhibited it, to the dissoniture of the disselleving and the triumph of my noble dogs.

ling silk sash to the hasp in my saddle and tied the other round the wolf's neck, and thus accounted I dragged the heavy careas over the smooth prairie to the fort and exhibited it, to the discomiture of the disbelieving and the triumph of my noble dogs.

On another day I received an urgent message from the Captain, by his orderly, requesting me to cross over with my dogs, as he had two wolves coralled upon the large island below the fort. I forthwith complied, and on my arrival found the Captain had placed an entire company of soldiers along the bank of the stream to prevent the escape of the wolves. The island was surrounded by open water except on that side. We went over on the ice, found and killed one wolf, and the other only evaded the onset of the dogs by pluming into the water, when he was carried by the swift current, despite all his struggles, under the ice.

My armory contains one rifle and three double guns, each of which recalls to my mind incidents of much interest in which it has played a prominent part. There are missing from the collection two double barrels, one a plain neat gun which I purchased from Capt. Scott on the eve of his departure for Mexico. It was his favorite arm, and I used it with great care for several years and finally presented it to a warm friend, since deceased. It is now in the possession of his son, by whom it is valued as a family relie. The other was, next to my Wilmot, the weapon I most relied on for ordinary shooting. It is responsible for the death of innumerable victims, from the lordly hison, through the ganut, down to the tiny jacksnipe. The excellence of its shooting will be worked for by our able and worthy Commissioner of Agriculture, my old friend General W. G. Le Duc, who wilmessed divers leats performed with it in the field. I lent it to a fellow sportsman several years since and have never been able to recover it, which I very much regret, for that arm was my reliance in many a strait and never failed me.

There was enough of danger attendant upon the sport

The transformation which has taken place in the vast countrierred to as the scene of my early adventures in less than a generation is almost inconceivable. The white settlements were few in number, and confined mainly to that part of Minnesota's territory east of the Mississippi River. Where the buffalo were to be found covering the prairies and great herds of elk disported themselves idourishing towns and cities have sprung up, and thousands of stalwart farmers have established themselves and are furnishing; the staff of life to the dwellers in less favored lands. Within ten miles of where I now write are more than a hundred thousand people embraced in the twin cities of St. Paul and Minneapolis, both of which are increasing in population and wealth with wonderful rapidity, and to which the great Northwest is tributary. There are no buffalo and very few elk to be found now in this immense State of Minnesota. Deer are abundant as are the Canada, pinnated and ruffed grouse which do not seem this immense State of Minnesota. Deer are abundant as are the Canada, pinnated and ruffed grouse which do not seem to suffer serious dimunition, notwithstanding the annual raids made upon them by the sportsman and the pot hunter. The numerous lakes are still the haunts in the proper season of

multitudes of geese, brant and ducks, affording fine sport to mutuates of geese, fram and affects, anoroning line sport to the many possessors of breech-loaders in all parts of the State. My old, peaceable and well disposed Dakota friends after being made the victims for long years of broken prom-ises, violated treaties and bad faith generally on the part of the government, were at length converted into cruel and thirsts the government, were at length converied into crucia and thirsty savages who spread desolation and death along the frontiers of Minnesota and Iowa in 1862 and 1863, until, routed in successive engagements by the Minnesota forces under the command of the writer, many of them were captured and executed, and the remainder sought refuge in the British Possessions and across the Upper Missouri River there to await the fate which has befallen the Indian tribes successively as the wave of white immigration has reached and destroyed them.

In view of the benefits conferred upon the human race by the opening of this new Northwest to white settlement, the true sportsman will not regret that he has been deprived of many sources of pleasure thereby. He can still find opportrue sportsman will not regres that true sportsman will not regres that many sources of pleasure thereby. He can still find tunities for the display of his skill, even in the most unities for the display of his sport will not be the most Tunities for the display of his skill, even in the most por lous parts of the State, although his sport will not be so pilous and exciting as was the chase of the greater and fier animals in the olden time.

St. Paul, Minn., 1880.

## Matural History.

OUR WATERFOWL.

Bucenhala clangula. Golden Eve. Garrot, Whistler. Male. head puffy, dark glossy green, except white oval spot beneath and in front of the eye, which touches the base of the bill. Lower neck, under parts, a patch on the shoulder, most of the scapulars and wing coverts white; other upper parts black; tail, ashy; bill, black; feet, yellow; length, over sixteen inches. The female has the head dark brown without white markings, and has the breast and sides gray, the black of the back replaced with dark gray.

The Golden Eye, or Whistler, as it is more often called on the Atlantic Coast, is abundant during the migration all through the Eastern States, but is not so numerous west of the Mississippi River. We believe that it has not been found in the Missouri River region, though it probably occurs in small numbers at some points in the Rocky Mountains, having been reported from that region in Forest and STREAM by Mr. Morton Grinnell.

The flesh of the Whistler is not regarded as particularly delicate, though much better in this respect than that of some of the species to be hereafter mentioned. It does not by any means confine itself exclusively to an animal diet, and sometimes feeds on corn and other grain. It is very expert at diving, and single birds, found feeding near the shore, may often be approached by running toward them while they are beneath the surface, and then dropping flat on the ground when they come up again. The Whistler sometimes comes up well to decoys, but we have usually found it rather an uncertain bird in this respect.

Bucephala islandica. Barrow's Golden Eye, Rocky Mountain Garrot. This species bears a very close resemblance to the preceding, but is generally regarded as a valid species. In the male the white loral spot is larger than in B. clangula, triangular in shape, with one of its sides touching the whole side of the bill at the base. The white on the wing is divided by a dark bar. Otherwise similar to B. clangula. The female is with difficulty to be distinguished from the last, but perhaps has the dark bar across the white of the

Barrow's Golden Eve was regarded by Audubon as the specimen plumage of the common Whistler. It appears to be much more Arctic in its distribution than that bird, and is everywhere rare in the United States. Its southern limit during the winter is given as New York, but on the shores of Canada it is said to be not very uncommon during that season. It has been taken in the Rocky Mountains by Mr. Henshaw as far south as Utah, though not abundant there But little is known of its habits, and its breeding place is supposed to be in the Far North.

Bucephala albeola. Buffle Head, Butter Ball, Spirit Duck, Dipper, Salt-Water Teal. The male has the colors generally as in the Golden Eye. Head extremely puffy, iridescent, with green, gold and violet reflections, without the white loral spot, but with a white patch reaching from behind the eve backward, meeting its fellow of the opposite side behind Female gravish or slate color where the male is black, with a trace of the white head patch.

The little buffle head is well known to every one who uses the gun, and needs no extended description. The full plumaged male is a very beautiful bird, while the female is, as Dr. Coues remarks, "an insignificant duck," in striking contrast to her highly colored mate. The buffle head is an expert diver and a very swift flyer. It does not often, on the Atlantic Coast, pay much attention to decoys. It is rather unsuspicious, and one may often row a boat up to within gunshot of the feeding flock.

This species is found almost everywhere throughout the United States, and in winter is very common. Although by far the greater portion proceed to the British Possessions to rear their young, yet we found them breeding in Montana in the summer of 1874. No nests were found, but many broods of young still unable to fly were seen, and a number of specimens taken. This, we believe, was the first record of the

breeding of this species within our territory.

Harelda glacialis. Long-Tailed Duck, South Southerly, Old Wife, Old Squaw. Tail of fourteen narrow, pointed

feathers: in the male the central ones very long and slender. about equalling the wing in length. The nail of the bill occupies the whole tip. The plumage in winter different from that of the summer. Male in summer has the back and the long parrow-pointed scapulars, varied with reddish brown, but changing in winter to white or pearl gray. General color, black; below, white from the breast back; sides of head gray. In winter the head, neck and upper breast are white, but the gray cheek patch remains, and there is below it a larger dark area. Bill black, with a yellow or flesh-colored bar toward the tip. The female is an ordinary looking gravish bird, without the long tail feathers or scapulars, but may be known by the shape of the bill, the patches on the head and neck and the wing without any white. Length varies with the length of the tail feathers from fifteen to twenty inches.

The Old Squaw, as it is usually called on this coast, is one of the most truly maritime of our ducks. It is very rarely seen except on the salt water, and seldom ventures even into the mouths of rivers except when wounded. There are a few instances recorded of its capture on inland waters-for example, on the great lakes-but these, in view of what is known of its range, can only be regarded as accidental occurrences. During the winter it is extremely abundant along our whole New England coast, and from the constant clamor that the birds keep up is derived the popular name, Old Wife The title South Southerly is given it from a fancied resemblance of its cry to these words, but to make them at all like the note of the Old Squaw, the two first syllables must be spoken rapidly, and the third strongly accented.

The old squaw, though its flesh is very poor eating, is shot in great numbers along the coast, and, being a bird of rapid and somewhat irregular flight, affords very good sport. the spring this species comes up well to decoys, and we have known of over sixty being killed in this way during a morning's shooting. The favorite method of killing them, however, is by forming a line of boats between the feeding grounds and the outer water, where they pass the night, and shooting them as they fly over. They rarely rise to any great height, and, as the boats are stationed only about a gunshot apart, many good opportunities are given the gunner. This method of shooting is also practiced with success for coots. It has been more than once described in these columns. The Old Squaw retires to the North to breed, and is said to rear its young on the fresh-water lakes of Labrador. We have good reason to believe that it sometimes breeds on the Conpostiout coast, but it is probable that the hirds which, do so are wounded ones, which are unable to make the long journey to the North. This species is found on the Pacific coast, and is also a common bird of northern Europe.

Camptolemus labradorius. Labrador Duck, Pied Duck. Bill enlarged toward the end by membranous expansion: cheek feathers rigid and somewhat scale-like. The male has the body and wing-tips black, a black collar about the neck, and a longitudinal black stripe along the crown of head: elsewhere white. Female, slatey gray; length, about two

The Pied Duck is not spoken of by older writers as an uncommon species, but is now extremely rare. It is difficult to understand what can have caused the disappearance of this bird, but the fact remains that specimens now scarcely ever find their way into the collector's hands. During the last ten years we have never seen but one individual (a young male) in the flesh.

Sportsmen, therefore, who may be fortunate enough to scure specimens of this species would do well to have them preserved, and to record the fact without loss of time. According to Audubon the Pied Duck is a truly marine species, and rarely enters rivers. It is said to occur as far south as the Chesapeake Bay.

[ro be continued.]

#### MIGRATION OF THE WAGTAIL

THE following letter contributed pseudonymously to the Evening Post contains much that will be new to most of our readers. The account is so interesting and so pleasantly written that we reprint it entire in the hope that it may clicit some expression of opinion on the subject from our own ornithologists: In the autumn of 1878 I spent several weeks on the Island

of Crete. On several occasions the papas—village priest—a friendly Greek with whom I spent the greater part of my Friendly Green with whom I spent me greater pair or my time—frequently directed my attention to the twittering and singing of small birds which he distinctly heard when a flock of sand cance passed by on their southward journey. I total my friend that I could not see any small birds and suggested that the noise came from the wings of the large ones. This that the hoise came from the wings of the ratge thes. This he denied, saying, "No, no! I know it is the chirping of small birds. They are on the backs of the cranes. I have seen them frequently fly up and alight again, and are always with them when they stop to rest and feed." I was still skeptical, for with a field-glass I failed to discover the "small back! seeples of I lunging of saying always always and found. skeptienl, for with a field shass I failed to discover the "small birds" spoken of. I inquired of several others and found the existence of these little feathered companions to be a matter of general belief among both old and young. I suggested that possibly the small birds might go out from the shore a short distance and come in with the cranes. "No, no," was the general answer, "they come over from Europe with them." I certainly heard the chirping and twittering of birds upon several different occasions, both inland and out upon the sea. But in spite of the positive statements of the natives, I could not believe their theory until convinced one day while fishing about fifteen miles from the shore, when a flock of cranes passed quite near the yacht. The fishermen, hearing the "small birds," drew my attention to their chirp-hearing the "small birds," drew my attention to their chirp-hearing the "small birds," drew my attention to their chirpflock of cranes passed quite near the yacht. The fishermen, hearing the "small birds," drew my attention to their chirp-

ing. Presently one cried out, "There's one," but I failed to catch sight of it. Then one of them discharged his flint-lock. Three small birds rose up from the flock and soon dis-

lock. Three small birds rese up from the flock and soon disappeared among the cranes.

I subsequently inquired of several scientific men, among whom were two ornithologists, as to the probability of such a state of affairs. They all agreed that it could not be, and I, too, was forced to cling to my original judgment, and let the matter go. Recently, however, while reading the "Gartenhaube," my attention was attracted to an article bearing directly upon the subject. The writer, Adolf Ebeling, tells the same story, and adds the statements of some ornithologists of distinction, which makes the whole matter so striking and interesting that I quote the paragraph from his book:

"Shortly after my arrived in Crise I.

book:
"Shortly after my arrival in Cairo I greeted various old German friends among the birds that I observed in the palm-garden of our hotel. First, naturally, was the sparrow, the impudent protestrate—I had almost said social democrat, oe ause the whole world to-day has that bad word in the math. He appeared to use to be more shameless than ever oe ause the whole world to-day has that bad word in the mouth. He appeared to me to be more shameless than ever in the land of the Pharaohs, for he flow without embarrassment on the breakfast table, and picked off the crumbs and bits from every unwatched place. But the mark of honor we paid to the wagtails and in truth chiefly because we did not then know that the wagtails were birds of passage. We had thought that they passed the winter in Southern Europe, or atfarthest, as many of them do, in Sicily and the Grecian Islands. That they came to Africa, and especially to Nubia and Abyssinia, was then unknown to us. This appeared to us singularly strange, nay, almost incredible, particularly on account of the peculiar flight of the wagtails, which it is well known always darts intermit ingly through the air in longer account of the peculiar flight of the wagtalls, which it is well known always darts intermit rigly through the air in longer or shorter curves, and apparently, every few moments, inter-rupts its flight to sit again and 'wag its full.' But there was the fact, and could not be denied. Everywhere in the Gar-dens of Cairo you could see them under the palms that border the banks of the Nile; on the great avenues that lead to the pyramids; nay, even on the pyramids themselves in the middle of the desert. And there it was that 1 first heard of this signifier whereomens.

pyramids; nay, even on the 'pyramids themselves in the middle of the desert. And there it was that 1 first heard of this singular phenomenon.

"One evening we were sitting at the foot of the pyramid of Cheops, sipping our cup of fragrant Mocha and in jolly conversation, rolling up clouds of blue smoke from our Korani cigarettes. We were waiting for the sinking of the sun to make our return to Cairo. The deep silence of the surrounding desert possessed something uncommonly solemn, only now and then disturbed by the cry of the hoarse fish-hawks far above us. Still higher the pelicans were grandly circling. Their flight, though heavy when seen from anear, possesses a majesty in the distance attained by no other bird. Right before us several waguils were hopping around and 'tilting.' They were quite tame, and flew restlessly hither and thirter. On this occasion I remarked, "I could not quite understand how these birds could make the long passage of the Mediterranean.' Sheik Ibrahim heard this from our interpreter. The old Bedouin turned to me with a mixture of French and Arabic as follows, which the interpreter interpreters are supplied as follows, which the interpreter is the product of the sage of the Mcditerranean. Since Amanda mean and the our interpreter. The old Bedonin turned to me with a mixture of French and Arabic as follows, which the interpreter aided us to fully comprehend:

"'Do you not know, Hadretch (noble sir), that these small birds are borne over the sea by the larger ones?"

"I laughed as did our friends; for at first we thought we had misunderstood him; but no; the old man continued

had misunderstood him; but no; the out man community that many the maturally:

"Every child among us knows that. These little birds are much too weak to make the long sea journey with their own strengtin. This they know very well, and, therefore, wait for the storks and cranes and other large birds, and sattle themselves upon their backs. In this way they allow themselves to be borne over the sea. The large birds submit to it willingly; for they like their little guests, who by their merry twitterings help to kill the time on the long voyage.\

It appeared incredible to us. We called to a pair of brown the properties of the properties of the seal of the properties of the seal of the properties of the prop the themselves upon their backs. In this way they allow themselves to be borne over the sea. The large birds submit to it willingly; for they like their little guests, who by their merry twitterings help to kill the time on the long voyage. It appeared incredible to us. We called to a pair of brown Bedouin boys, pointed out the wagsalls to them, and inquired: "10 you know whence come these small birds?" "Certainly, they answered: "The Abu Saad (the stork) carried them over the sea. "At supper in the Hotel du Nil, I related the curious story to all present, but naturally enough found only unbelieving ears.

e only one who did not laugh was the Privy Council-"The only one who did not laugh was the Privy Councillor Heuglin, the famous African traveler and, excepting
Brehm, the most celebrated ornithologist of qur time for
the birds of Africa. I turned to him after the meal, and inquired of his faith. The good, royal councillor smiled in his
caussic way, and with a merry twinkle remarked: 'Let the
others laugh; they know nothing about it. I do not laugh
for the thing is known to me. I should have recently made
mention of it in my work if I had laid any strong personal
proof to justify it. We must be much more careful in such
things than a mere story-teller or novel-writer; we must have
a proof for everything. I consider the case probable, but as
yet cannot give any warrant for it.'

yel cannot give any warrant for it.

"My discovery, if I may so call it, I had kept to myself, even after Heuglin had thus expressed himself, and would even now maintain silence on the subject had I not recently discovered a new authority for it."

discovered a new authority for it."
I read lately in the second edition of Peterman's great book of travels the following:
"Professor Roth, of Munich, related to me in Jerusalem that the well-known Swedish traveler, Hedenborg, made the following interesting observation on the Island of Rhodes, where he stopped. In the autumn tide, when the storks come in flocks over the sea to Rhodes, he often heard the

come in flocks over the sea to Rhodes, he often heard the songs of birds without being able to discover them. Once he followed a flock of storks, and as they lighted he saw small birds fly up from their backs, which in this manner had been borne over the sea. The distance provented him from observing to which species of singing birds they belonged." Thus wrote the famous geographer, Peterman. Professor Roth and Hedenborg and Heuglin are entirely reliable authors. This was a matter of great curiosity to me, and after I found others had made similar observations, and expressed them in print, I thought they would be of no less curiosity and interest on this side of the Atlantic, and equally describe of public notice. I hope that connoisseurs, amales. deserving of public notice. I hope that connoissents, and equally teurs and experts may be excited by this to extend their observation in this line also. The instinct of animals is still, in spite of all our observations and experience, almost a sealed book to us. By a little attention we might hear of still more curious things in this field.

PROCEEDINGS U. S. NAT'L MUSEUM.-Volume II. of the proceedings of the U.S. Nat'l Museum, for 1879, published under the direction of the Smithsonian Institution, contains amount of new and varied information.

Goode and Bean, either severally or jointly, contribute a very considerable portion of the matter published in the volume, and their investigations comprise the fishes of Alaska as well as those of Florida and the Gulf of Mexico.

The fourth installment of Dr. Coues' Ornithological Bibliography, which appears here, relates strictly to faunal publications which treat of British birds, and will be of the greatest value to ornithologists abroad as well as in this country. The present volume also contains valuable papers by Dr. Jordan, the late Dr. Brewer, Mr. Oscar Harger, Dr. Kidder, U. S. N., Dr. Merrill, U. S. A., Professors Verrill, Smith and White, and a number of others.

We shall have occasion to speak further of this volume at a

future day.

SOCIETY OF AMERICAN TAXIDERMISTS. -The first competitive exhibition of the Society of American Taxidermists is now being held in Rochester, New York. The exhibition is being held at No. 62 State street, in that city, and is said to be very fine, no less than twenty-five of the members having specimens of their work on view. The judges are Prof. J. A. Allen, of Cambridge, Mass., Dr. J. B. Holder, of New York, and Mr. W. E. D. Scott, of Princeton, N. J. following is a list of the prizes to be given:

following is a list of the prizes to be given:

To best piece in entire exhibition, silver medal. To second best piece in entire exhibition, bronze medal. To best general exhibit, bronze medal. To second best general exhibit, bronze medal. To second best general exhibit, diploma of honor. To each exhibit in Class A—Taxidermy proper—which shall stand at 85 or over, diploma of honor. To each exhibit in Class A—Which shall stand at 75 and under 85, a certificate of merit. To grotesque groups and animals grotesquely mounted, diplomas and certificates will be awarded at the discretion of the judges. To the handsomest 5), a certificate of ment. To grotesque groups and animals grotesquely mounted, diplomas and certificates will be awarded at the discretion of the judges. To the handsomest article of ornament or use, diploma. To the best exhibit of accessories to Taxidermy in each section, diploma. To second best in the same, at the discretion of the society, certificate.

THE GEOGRAPHICAL SOCIETY ASTRAY—New York, Dev. 14.—Editor Forest and Stream: In one of the recent bulletins of the American Geographical Society, an address, delivered before it by the Earl of Dunaven, is published under the title of "Moose and Caribou Hunting in Colorado." The worlly member who superintends or edits the publications of the Society may be a most excellent geographic, but his knowledge of natural history is lamentably deficient. Moose and Caribou in Colorado! Well, that will be a revelation to the brotherhood of sportsmen and naturalists, as it most assuredly will be to the noble Earl, who is accredited with the address, for there is no man who speaks with more authority upon moose and caribou than the Earl of Dunaven. How he will wince when his friends twit him about moose-hunting in Colorado; and what misconceptions will prevail among those ignorant heretofore that this noble deer is to be found in that State, for the seal of authority of so eminent a body of scientists could not well be disputed! Let me advise the Society to call in this publication.

NATURALIST.

SNARE SWALLOWING ITS YOUNG—Baltimore, Dee 14.—Editor Forest and Stream: In the summer of 1877 I was spending my vacation in the country. One afternoon several boys and myself took a walk, and while returning we saw a snake which was getting out of our way, so we prepared for battle, and came out victorious in a little while. The snake wrish of very long, not over fifteen inches in length, but it seemed to have a lump in the abdomen, and on taking it to the village store the storekeeper said he (more likely she) had swallowed a toad. We then determined to dissect it, and on procuring a knife ripped it open, and to our surprise found it to contain twenty-two small snakes of the same species. They were all alive and about six inches in length. Where did they tain twenty-two small snakes of the same species. They we all alive and about six inches in length. Where did the come from? The species was Entonia sixtalis, or Gart snake.

AN ALBINO RAT.—A correspon dent sends us a clipping from the Cincinnati Enguirer which is as follows:

A curosity is on exhibition at Firth's drug store at this place,
Madison, Ind. It is in the shape of a full-grown milk-white rat, with pink claws and jet-black, head-like eyes. He was caught by Robert Quail, of Brooksburg, in a trup.

## Sea and Liver Hishing.

WHICH SALMON IS BEST?-We find the following question and answer in the Deutsche Fischerei Zeitung, of Stetten, Germany, "Is the California salmon equal in quality with the salmon of the Elbe or the Oder ?\* What is the relative rank of the following fishes in regard to flavor-Rhine, Elb, Oder Vistula, North Sea, Northern, Swedish, California and Canada, salmon, and which are best to smoke? Answer: Who is in position to have all these different sorts upon his table? This can only be answered by the largest fish dealers. Some idea may be formed from the price. The Rhine salmon is, above all, the first, finest and fatest. The California salmon comes to us only preserved in boxes and is not found fresh in our markets. Those here are for breeding salmon, and so are of great value and cannot be compared. The North Sea salmon are like the Elbe and Weser salmon. At the Fishery Exhibition in Berlin there were fish from Sweden labeled 'Waener salmon,' which must be lake trout, Trutta lacustris, that do not go into salt water. The 'strandlacks,' or 'silver lachs, of the North Sea is the sea-trout, Trutta trutta, and are very good. For smoking the best' will show themselves We will be thankful if we can obtain further information from our circle of readers."

This question has been raised in America, but California is so distant from Eastern markets that the salmon have to be sent in refrigerators and do not appear so well. Natives of California claim excellence for their tish.

RASS FISHING IN CENTRAL NEW YORK

Syracuse, Nov. 29.

I HAVE had so much pleasure in reading your fishing cornight; because if we who enjoy the tales of others fun don't tell a story or sing a song, we don't deserve to remain in the company.

tell a story or sing a song, we come a secondary.

We have some good bass grounds right here, and all around this Salt City. Baldwinsville, Fulion and Minetto, on the S. & O. R. R., Tully Lake, on the S. & B.; Oak Orchard, Brewerton and Caughdenoy, on the Syracuse Northern, the "Wide Waters" (reached by the N. Y. Central to Kickville, and then by foot or wheels for a couple of miles) are all places of note among our bass catchers. And if one doesn't care to go more than a street car's journey, let him "take in" Vern pent. places of note among our bass catchers. And if one doesn't care to go more than a street car's journey, let bim "take in" Onondaga Lake, he can take out plenty of bass. Your penman saw one string during the past summer that contained an aggregate of about twenty-three four-pounders. This catch was made in an afternoon by two fishermen, one using grasshoppers and crabs for bait, and the other enjoying the tun much more without a bit of bait, landing two of the "big 'uns" and a foir share of the mess.

But when I bud in mind was to relate the advantages of

from much more without a bit of bait, landing two of the "big 'uns" and a fair share of the mess. But what I had in mind was to relate the adventures of three Syracusers at Caughdenoy (pronounced "Cokkynoy" by the people thereabouts) one day last August. This is a little hamlet on the Oneida River, and its existence is duce hiely to cels. The river along there is from three to five feet deepjust right for wading. The cel catchers have exceted their weirs through about half a mile of the river, where the bottom is composed of good-sized stones and gravel. That is the sort of bottom where we expect to find the big mouth, or "Oswego" bass in this region, and the rifless made by the ele weirs make the place look like a Hy-shserman's paradise. Our trio, took the evening train from here for Brewerton, afteen miles, and went to bed at Wadsworth's. We had made arrangements with "George," the oursman, to be on band at four the next morning with all the necessaries for the day, including bait, tackle, cooking utensils, port, potatoes, coffee, etc., etc. In the morning by the first light, and allittle sconer we were on our way down the four-mile stretch of river, with our trolling spoons out. We didn't catch a pike or a pickerel, but Prof. P. made some excellent shots with his carbine. It was no doubt fun for him, but the little "tip-ups" he slangthtered were no good for dinner, and seemed to be enjoying themselves along the shore before meeting with those bullets.

We got to the eed weirs soon after old Sol showed his broad face, and prepared for hiz. Two of the party waded in with their rule and files while the other serviced in the time with their rule and files while the other serviced in the water for the party waded in with their rule and files while they they removed.

We got to the eet weirs soon after out sol showed his broad face, and prepared for biz. Two of the party waded in with their rods and flies, while the others remained in the boat to see how the club, bass, pickerel, pike and what-not (don't know the scientific name) liked their style of handling

bait.

About seven o'clock we all met on narrow island between the river and the "cut," where George was ready for us with a large fire of glowing coals, with cups, plates, knives, forks, etc., laid out on the grass in a shady spot, "duly waiting" for the fish to arrive. Well, we had enough! But you have all had a fish breakfast under similar circumstances, so why make you wish that winter was over by dwelling on the scene? Doesn't it seem as though the whole inner man must be a vast stomach when you come to think over what can be laid away at such a time?

It was a pretty hot day and we ameondized (is that a good word?) in the shade for a while. Then to fishing again. Not much luck till about half-past five. Then how they did catch on, both to fly and bait! Yours truly never had a better two hours' bass fishing, don't expect any better and don't want

much luck till about hait-past nve. Then now they due caucion, both to fly and bailt. Yours truly never had a better two hours' bass fishing, don't expect any better and don't want any better. Two at a crack several times and twice all three flies loaded. We didn't keep or count the rock bass, looking upon them as nuisances on that occasion, though I have seen times when, laboring and longing for a rise, even a rock bass was a relief.

times when, haboring and longing for a rise, even a rock bass was a relief.

I won't give you the figures for fear of arousing unbelief, but will state, in general terms, that we took home to our friends two baskets full. Will leave the size of the baskets to be inferred, on account of the fear aforesaid. We had enough left over, however, to make a large and juicy supper when we got back to Brewerton.

The fishing in the waters adjacent to Syracuse, Oswego and Utica is growing better every year, thanks to the efforts of the officers and individuals interested in bringing about such a state of things. The fishing clubs of the counties of Onondaga, Oneida and Oswego mean business and the fish stealers are finding it out. I think there is no bettice bas fishing in the State than can be found in the lakes and rivers of this locality. Next summer I hope to just revel in it.

The Figureirs Question.—Professor Hind, of Windsor, N. S., who was an official of the Halifax Fishery Commission and some months ago made charges that the statistics used in the British case were false, has had printed in pamphlet form a letter addressed to the Governor-General of Canada, in which he makes charges of a broader character. He says that not only were the statistics presented to the commission false, but the official blue books of Canada hearing on the fish trade with the United States were systematically falsified for a series of years to produce results that would serve the purpose in view. Exports of the United States were made to appear much less than they really were, for the purpose of making out that the province benefited little by the free admission of fish into the States. Fictitious items of exports to foreign countries were introduced to make it appear that the provinces were less dependent than they really were on the American market. Other flottious items were inserted to make it appear that the American stoud a large market for fish in the provinces. The letter is lengthy and very elaborate and gives many comparisons and calculations leading to the conclusions already stated. It is alleged that these falsiciations began soon after the treaty of Washington was made. The correct returns appear to have been sent from the various provinces to Ottawa and there to have been manipulated in the manner above stated. Professor Hind claims to be fully able to prove all he says before a committee of the House of Commons. able to prove all he says before a committee of the House

If GIVE Us a PLAIN LAW—Editor Forest and Stream: I note in your last issue the decision rendered by Judge Riegel, of Syracuse, involving the right of use of "any device other than a hook and line" in the taking of fish in the fresh waters than a hook and line" in the taking of fish in the fresh waters of this State, which is in exact opposition to a decision rendered in the Supreme Court, August 14, 1880, by Hon. Wm. C. Ruger, also of Syracuse, upon the same question, viz.: the right to use nets, weirs or scines in the fresh waters of the State. The later decision appeared in the Forast and Steran of October 7. Now, as a most extract sportenan

and one desiring the fullest legal protection possible, I propose this question, in view of these recent conflicting opinions, both emanating from legal gentlemen of high standing and known ability. If the law of 1890, Chapter 531, is liable to such varied construction, should not the Legislature of 1881 revise the work of the past winter, and give us in plain and explicit terms a new, simple and effective act with relation to the protection of fish and game within this State? According to our present light, an attempt to suppress poaching or illicit hunting or fishing, under the existing law, is a good deal like tossing a penny for a decision; should it come heads we win, but if tails we lose. The law affords no positive rule, and consequently no protection. tive rule, and consequently no protection.

Osrego, N. Y., Dec. 10.

British Columbia Fisheries—Victoria, B. C., Nov. 15.— We have read so much of the great stride in fishculture made by the United States Fish Commission in equipping a steamer to follow the fishes in their spawning and hatching them on to follow the fishes in their spawning and hatching them on board that we are about to apply the principle to the canning of fish, that is, totake the cannery to the fish instead of transporting the fish to the cannery. A company is about to be forn ed here to build a steam floating fishery, which can follow the different runs of fish from one river to another and put them up in this in the freshest possible condition. The salm in-canning business is not as good as formerly, the business is not as good as formerly, the business is not as good as formerly, the sum of the first possible condition. The salm is a sum of the salm in the salm is a sum of the salm in the salm is a sum of the salm in the salm is a sum of the salm in the salm is a sum of the salm in the salm is a salm in the salm in the salm is a salm in the salm in the salm is a salm in the salm in the salm in the salm in the salm is a salm in the salm in th

more extensively before long.

Thout is Orbeon.—Our correspondent, S. A. Bob, now in Empire City, Oregon, writes that he has been enjoying himself in trout-fishing in Millicoma River. Empire City is in Coos Bay, about 200 miles south of the mouth of the Colmbia River and 400 miles north of San Francisco and can be reached by steamer from the latter place in forty-eight hours. He tells us that there are two runs of trout there, the first taking place in April and May and the second at the end of Angust. Red and yellow-bodled files are the favorites, and during the height of the season the catch per rod will be from fifty to seventy-five fish, averaging two pounds, the largest reaching from three to four pounds. They take the fly readily and many have the appearance of the Trutta marrina, or Irish sea trout, although other trout are plenty. Irish sea trout, although other trout are plenty.

HATCHING THE GRAYLING.—Anglers will learn with pleasure that the Michigan Fish Commission are about to hatch this fish in its native streams and attempt to save this elegant fish from the extermination which threatens it from its limited range and delicate organization.

## Mish Culture.

THE CENTRAL FISHCULTURAL SOCIETY,

FIRST DAY.

THE second annual meeting of the Central Fishcultural Society was held in the rooms of the Grand Pacific Hotel at Chicago on the 15th and 16th days of December, 1880. A few members gathered at 10 A. M., when, in consequence of the absence of others who were expected on later trains, it was decided not to open the session until 3 p. M. At that hour the meeting was called to order by the President, Mr. N. K.

The attendance throughout was small, but lacked nothing in enthusiasm and interest on that account. Members came and went as business engagements pressed them. The following were present during a part or the whole of the proceedings, the names being given in the order of their arrival: E. R. Miller, Mich.; Frank N. Clark, Mich.; Fred Mather, FOREST AND STREAM; Prof. S. A. Forbes, Ill.; Major J. M. Crummey, Colorado; B. F. Shaw, Iowa; Wm. H. Ballou, Ill.; N. K. Fairbank, Ill.; H. W. Welsher, Wis.; J. Smith Briggs, Dl.; S. P. Bartlett, Ill.; Dr. W. A. Pratt, Ill. F. Douseman, Ill.; D. Camezon, Minn.; A. E. Lytle, Wis.; E. L. Brown, Ill.; C. E. Rollins, Ill.

The following letters were read:

The following letters were read:

Mr. PRESIDENT AND GENTLEMEN:
It would give me much pleasure to meet you at the second annual meeting of the Central Fishcultural Society, at Chicago on the 15th inst. This will not be possible, my museum duties requiring my presence here. I cordially thank you, and must content myself with reading the account of proceedings in the Fouera AND Stream, which reaches me regularly and brings me into acqueintance with piscicultural and other interesting matter outside of Utah and from all parts of the world.

With bearty wishes for the prosperity of the Central Fishcultural Society, its President, to whose care I commit this letter, and success to attend its Corresponding Secretary, I remain,

Joseph L Barroor,

Curator and Fish Com. of Utah.

East Saginaw, Mich. Mr. F. MATHER

Mr. F. Mather.

G. C. Sec. Central Fishcultural Society, Chicago:
My Dear Sir—Acknowledging your courteous invitation to
attend the 2d annual meeting of the Central Fishcultural
Seciety, permit me to express sincere regret that business
engagements will prevent my attenting, and also to assure
you of my interest and hearty co-operation in the objects of
your association. Fraternally yours, H. B. RONEY.
Sec. Mich. Sportsmen's Assoc.

Dear Sir—I am in receipt of an invitation to attend your meeting, for which receive my thanks. I very much regret that an engagement at Washington to attend a meeting of the Board of Managers of the National Soldiers' Home prevents my attending. Trusting that at some future time I may be able to attend your meeting, I remain very sincerely yours, L. A. Harris, Commissioner of Fisheries.

ELLSWORTH, Kansas,

Hon. M. K. Fairbank, President:
Sir—I expected to have met with the society at its present meeting, but cannot do so. Kansas is m.king slow but sure advancement in the science of fish culture, although we realize our littleness in the great work that is to be accomplished by the friends of this important enterprise.

<sup>\*</sup> In German markets the name of the river is always appended to the salmon, as Rheinlachs, Oderlachs, Elblachs, etc., and the fish from certain rivers have the call at better prices. They claim to distinguish the fish even when smoked.

multitudes of geese, brant and ducks, affording fine sport to the many possessors of breech-loaders in all parts of the State. My obl, peaceable and well disposed Dakota friends after being made the victims for long years of broken prom-ises, violated treaties and bad faith generally on the part of ises, violated treaties and bad faith generally on the part of the government, were at length converted into crue lard thirsty savages who spread desolation and death along the frontiers of Minnesota and Iowa in 1862 and 1863, until, routed in successive engagements by the Minnesota forces under the command of the writer, many of them were captured and executed, and the remainder sought refuge in the British Possessions and across the Upper Missouri River there to await the fate which has befallen the Indian tribes successively as the wave of white immigration has reached and destroyed them them

In view of the benefits conferred upon the human race by In view of the benefits conferred upon the human race by the opening of this new Northwest to white settlement, the true sportsman will not regret that he has been deprived of many sources of pleasure thereby. He can still find opportunities for the display of his skill, even in the most populous parts of the State, although his sport will not be so perilous and exciting as was the chase of the greater and flercer animals in the olden time.

Hall A DACOTAL

St. Paul Minn 1880.

## Matural Distorn.

OUR WATERFOWL

Bucenhala clangula, Golden Eve, Garrot, Whistler, Male, head puffy, dark glossy green, except white oval spot beneath and in front of the eye, which touches the base of the bill. Lower neck, under parts, a patch on the shoulder, most of the scapulars and wing coverts white; other upper parts black; tail, ashy; bill, black; feet, yellow; length, over The female has the head dark brown without white markings, and has the breast and sides gray, the black of the back replaced with dark gray.

The Golden Eye, or Whistler, as it is more often called on the Atlantic Coast, is abundant during the migration all through the Eastern States, but is not so numerous west of the Mississippi River. We believe that it has not been found in the Missouri River region, though it probably occurs in small numbers at some points in the Rocky Mountains, having been reported from that region in FOREST AND Stream by Mr. Morton Grinnell.

The flesh of the Whistler is not regarded as particularly delicate, though much better in this respect than that of some of the species to be hereafter mentioned. It does not by any means confine itself exclusively to an animal diet, and sometimes feeds on corn and other grain. It is very expert at diving, and single birds, found feeding near the shore, may often be approached by running toward them while they are beneath the surface, and then dropping flat on the ground when they come up again. The Whistler sometimes comes up well to decoys, but we have usually found it rather an uncertain bird in this respect.

Bucephala islandica. Barrow's Golden Eye, Rocky Mountain Garrot. This species bears a very close resemblance to the preceding, but is generally regarded as a valid species. In the male the white loral spot is larger than in B. clangula. triangular in shape, with one of its sides touching the whole side of the bill at the base. The white on the wing is divided by a dark bar. Otherwise similar to B. clangula, The female is with difficulty to be distinguished from the last, but perhaps has the dark bar across the white of the wing.

Barrow's Golden Eye was regarded by Audubon as the specimen plumage of the common Whistler. It appears to be much more Arctic in its distribution than that bird, and is everywhere rare in the United States. Its southern limit during the winter is given as New York, but on the shores of Canada it is said to be not very uncommon during that season. It has been taken in the Rocky Mountains by Mr. Henshaw as far south as Utah, though not abundant there But little is known of its habits, and its breeding place is supposed to be in the Far North.

Bucephala albeola. Buffle Head, Butter Ball, Spirit Duck, Dipper, Salt-Water Teal. The male has the colors generally as in the Golden Eye. Head extremely puffy, iridescent, with green, gold and violet reflections, without the white loral spot, but with a white patch reaching from behind the eye backward, meeting its fellow of the opposite side behind. Female grayish or slate color where the male is black, with a trace of the white head patch.

The little buffle head is well known to every one who us the gun, and needs no extended description. The full plumaged male is a very beautiful bird, while the female is, as Dr. Coues remarks, "an insignificant duck," in striking contrast to her highly colored mate. The buffle head is an expert diver and a very swift flyer. It does not often, on the Atlantic Coast, pay much attention to decoys. It is rather unsuspicious, and one may often row a boat up to within gunshot of the feeding flock.

This species is found almost everywhere throughout the United States, and in winter is very common. Although by far the greater portion proceed to the British Possessions t rear their young, yet we found them breeding in Montana in the summer of 1874. No nests were found, but many broods of young still unable to fly were seen, and a number of specimens taken. This, we believe, was the first record of the

breeding of this species within our territory.

Harelda glacialis. Long-Tailed Duck, South Southerly,
Old Wife, Old Squaw. Tail of fourteen narrow, pointed

feathers . in the male the central ones very long and slender. about equalling the wing in length. The nail of the bill occupies the whole tip. The plumage in winter different occupies the whole tip. The plumage in winter different from that of the summer. Male in summer has the back and the long narrow-pointed scapulars, varied with reddish brown, but changing in winter to white or pearl gray. General color, black; below, white from the breast back; sides In winter the head, neck and upper breast of head gray. are white, but the gray cheek patch remains, and there is below it a larger dark area. Bill black, with a yellow or flesh-colored bar toward the tip. The female is an ordinary looking grayish bird, without the long tail feathers or scapulars, but may be known by the shape of the bill, the patches on the head and neck and the wing without any white. Length varies with the length of the tail feathers from fifteen to twenty inches.

The Old Source, as it is usually called on this coast, is one of the most truly maritime of our ducks. It is very rarely seen except on the salt water, and seldom ventures even into the mouths of rivers except when wounded. There are a few instances recorded of its capture on inland waters-for example, on the great lakes-but these, in view of what is known of its range, can only be regarded as accidental occurrences. During the winter it is extremely abundant along our whole New England coast, and from the constant clamor that the birds keep up is derived the popular name, Old Wife. The title South Southerly is given it from a fancied resem blance of its cry to these words, but to make them at all like the note of the Old Squaw, the two first syllables must be spoken rapidly, and the third strongly accented.

The old squaw, though its flesh is very poor eating, is shot in great numbers along the coast, and, being a bird of rapid and somewhat irregular flight, affords very good sport. the spring this species comes up well to decoys, and we have known of over sixty being killed in this way during a The favorite method of killing them morning's shooting. The favorite method of killing them, however, is by forming a line of boats between the feeding grounds and the outer water, where they pass the night, and shooting them as they fly over. They turely rise to any great height, and, as the boats are stationed only about a gunshot apart, many good opportunities are given the gunner. This method of shooting is also practiced with success for coots. It has been more than once described in these columns. The Old Squaw retires to the North to breed, and is said to rear its young on the fresh-water lakes of Labrador. We have good reason to believe that it sometimes breeds on the Connecticut coast, but it is probable that the birds which do so are wounded ones, which are unable to make the long journey to the North. This species is found on the Pacific coast, and is also a common bird of northern Europe.

Camptol@mus labradorius. Labrador Duck. Pied Duck Bill enlarged toward the end by membranous expansion; cheek feathers rigid and somewhat scale-like. The male has the body and wing-tips black, a black collar about the neck, and a longitudinal black stripe along the crown of head: elsewhere white. Female, slatey gray; length, about two

The Pied Duck is not spoken of by older writers as an uncommon species, but is now extremely rare. It is difficult to understand what can have caused the disappearance of this bird, but the fact remains that specimens now scarcely ever find their way into the collector's hands. During the last ten years we have never seen but one individual (a young male) n the flesh.

Sportsmen, therefore, who may be fortunate enough to secure specimens of this species would do well to have them preserved, and to record the fact without loss of time. According to Audubon the Fied Duck is a truly marine species, and rarely enters rivers. It is said to occur as far south os the Chesapeake Bay.

TO BE CONTINUED.

#### MIGRATION OF THE WAGTAIL.

THE following letter contributed pseudonymously to the Evening Post contains much that will be new to most of our readers. The account is so interesting and so pleasantly written that we reprint it entire in the hope that it may clicit some expression of opinion on the subject from our own ornithologists:

In the autumn of 1878 I spent several weeks on the Island of Crete. On several occasions the papas-village priest—a friendly Greek with whom I spent the greater part of my time—frequently directed my attention to the twittering and friemly Grees with whom a specific process of any time—frequently directed my attention to the twittering and singing of small birds which he distinctly heard when a flock of sand cranes passed by on their southward journey. I told noy friend that I could not see any small birds and suggested the process of the same process of the same process. my friend that I could not see any small birds and suggested that the noise came from the wings of the large ones. This he denied, saying, "No, no! I know it is the chirping of small birds. They are on the backs of the cranes. I have seen them frequently fly up and alight again, and are always with them when they stop to rest and feed." I was still skeptical, for with a field-glass I failed to discover the "small birds" spoken of. I inquired of several others and found that we have the second bullet among both old and young. I sure skeptical, for with a new second of several others and the existence of these little feathered companions to be a matter of general belief among both old and young. I suggested that possibly the small birds might go out from the shore a short distance and come in with the cranes. "No, no," was the general answer, "they come over from Europe with them." I certainly heard the chirping and twittering with them." I certainly heard the chirping and twittering several different occasions, both inland and out no," was the general answer, "they come over from Europe with them." I certainly heard the chirping and twittering of birds upon several different occasions, both inland and out upon the sea. But in spite of the positive statements of the natives, I could not believe their theory until convinced one day while fishing about fifteen miles from the shore, when a flock of cranes passed quite near the yacht. The shsermen, hearing the "small birds," drew my attention to their chirp-

ing. Presently one cried out, "There's one," but I failed to catch sight of it. Then one of them discharged his flint-lock. Three small birds rose up from the flock and soon dis-

lock. Three small bittos rose of the process of the cames.

I subsequently inquired of several scientific men, among I subsequently inquired of several scientific men, among whom were two ornithologists, as to the probability of such a state of affairs. They all agreed that it could not be, and the country of the countr whom were two ornithologists, as to the probability of such a state of affairs. They all agreed that it could not be, and 1, too, was forced to cling to my original judgment, and let the matter go. Recently, however, while reading the "Gartenlaube," my attention was attracted to an article bearing directly upon the subject. The writer, Adolf Ebeling, tells the same story, and adds the statements of some ornithologists of distinction, which makes the whole matter so striking and interesting that I quote the pa agraph from his book:

ing and interesting that I quote the paragraph from his book:

"Shortly after my arrival in Cairo I greeted various old German friends among the birds that I observed in the palmgarden of our hotel. First, naturally, was the sparrow, the impudent proletariate—I had almost said social democrat, oe ause the whole world to-day has that bad word in the muth. He appeared to ue to be more shameless than ever in the land of the Pharaohs, for he flew without embarrassment on the breakfast table, and picked off the crumbs and bits from every numethed place. But the mark of bonor we paid to the wagtalis, and in truth chiefly because we did not then know that the wagtalis were bird of passage. We had thought that they passed the winter in Southern Europe, or at farthest, as many of them do, in Sicily and the Grecian Islands. That they came to Africa, and especially to Nubia and Abyssinia, was then unknown to us. This appeared to us singularly strange, nay, almost incredible, particularly on account of the peculiar flight of the wagtalis, which it is well known always darts internuitingly through the air in longer or shorter curves, and apparently, every few moments, interrupts its flight to sit acain and 'wag its tail.' But there was the fact, and could not be denied. Everywhere in the Gardens of Cairo you could see them under the palns that border the banks of the Nile; on the great avenues that lead to the pyramids; my, even on the pyramids themselves in the middle of the desert. And there it was that I first heard of this singular phenomenon.

"One evening we were sitting at the foot of the pyramid of Cheops, sipping our cup of fragrant Mocha and in jolly conversation, rolling up clouds of blue smoke from our

"One evening we were sitting at the foot of the pyramid of Cheops, sipping our cup of fragmant Mocha and in jolly conversation, rolling up clouds of blue smoke from our Korani cigarettes. We were waiting tor the sinking of the sun to make our return to Cairo. The deep silence of the surrounding desert possessed something uncommonly solemn, only now and then disturbed by the cry of the hoarse fish-hawks far above us. Still higher the pelicans were grandly circling. Their flight, though heavy when seen from anear, possesses a majesty in the distance attained by no other bird. Right before us several wagtalls were hopping around and 'lifting.' They were quite tune, and flew restlessly hither and thitter. On this occasion I remarked, "I could not quite understand how these birds could make the long pussage of the Mediterranean.' Sheik Ibrahim heard this from our interpreter. The old Bedouin turned to me with a mixture of French and Arabic as follows, which the interpreter sage of the Mediterranean. Sheek Brahim heard this from our interpreter. The old Bedouin turned to me with a mix-ture of French and Arabic as follows, which the interpreter aided us to fully comprehend: "Do you not know, Hadretch (noble sir), that these small birds are borne over the sea by the larger ones?" "I laughed as did our triends; for at first we thought we had misunderstood him; but no; the old man continued

had misunderstood him; out no; the out man continued quite naturally;

"Every child among us knows that. These little birds are much too weak to make the long sea journey with their own strength. This they know very well, and, therefore, wait for the storks and cranes and other large birds, and setwait for the storks and cranes and other large birds, and seltle thenselves upon their backs. In this way they allow
themselves to be borne over the sea. The large birds submit
to it willingly; for they like their little guests, who by their
merry twitterings help to kill the time on the long voyage.'
It appeared incredible to us. We called to a pair of brown
Bedouin boys, pointed out the wagtails to them, and inquired:
"Do you know whence come these small birds."
"Certainly,' they answered: "The Abu Saad (the stork)
carried them over the sea."
"At supper in the Hotel du Nil, I related the curious
story to all present, but naturally cough Jonde only unlesstory to all present, but naturally cough Jonde only unles-

story to all present, but naturally enough found only

"At supper in the Hotel (In Nil, 1 related the cirrousstory to all present, but naturally enough found only unbelieving cars.
"The only one who did not laugh was the Privy Comeil-lor Heuglin, the famous African traveler and, excepting Brehm, the most celebrated ornithologist of qur time for the birds of Africa. I turned to him after the meal, and inquired of his faith. The good, royal councillor smiled in his caustic way, and with a merry twinkle remarked: 'Let the others laugh; they know nothing about it. I do not laugh for the thing is known to me. I should have recently made mention of it in my work if I had had any strong personal proof to justify it. We must be much more careful in such things than a mere story-teller or novel-writer; we must have a proof for everything. I consider the case probable, but as yet cannot give any warrant for it."
"My discovery, if I may so call it, I had kept to myself, even after Henglin had thus expressed himself, and would even now maintain silence on the subject had I not recently discovered a new authority for it."
I read lately in the second edition of Peterman's great book of travels the following: "Professor Roth, of Munich, related to me in Jerusalem that the well-known Swedish traveler, Hedenborg, made the following interesting observation on the Island of Rhodes, where he stopped. In the autumn tide, when the storks come in flocks over the sea to Rhodes, he often heard the

following interesting observation on the Island of Rhodes, where he stopped. In the autumn tide, when the storks come in flocks over the sea to Rhodes, he often heard the songs of birds without being able to discover them. Once he followed a flock of storks, and as they lighted he saw small birds fly up from their backs, which in this manner had been borne over the sea. The distance prevented him from observing to which species of singing birds they belonged."

Thus wrote the famous geographer, Peterman. Professor Roth and Hedenborg and Heuglin are entirely reliable authors. This was a matter of great curiosity to me, and after I found others had made similar observations, and expressed them in print. I thought they would be of no less

pressed them in print, I thought they would be of no less curiosity and interest on this side of the Atlantic, and equally curiosity and interest on this side of the Atlantic, and equally deserving of public notice. I hope that composseurs, amateurs and experts may be excited by this to extend their observation in this line also. The instinct of animals is still, in spite of all our observations and experience, almost a scaled book to us. By a little attention we might hear of still more curious things in this field.

PROCEEDINGS U. S. NAT'L MUSEUM,-Volume II. of the proceedings of the U. S. Nat'l Museum, for 1879, published under the direction of the Smithsonian Institution, contains vast amount of new and varied information,

following the subject further, but have been requested to do so by an old subscriber to your valuable paper, one of the most successful sportsmen either in this village or this island. I was prompted to first notice the subject by recollections of my boyhood days, suggested by the article on "Trapped Birds on Long Island." I have, as a farmer's boy, trapped as much game as any boy on Long Island, and have no reason to be ashamed of my ability in that direction. I have, however, never violated any law, nor would I do it, no matter how unjust the law might be.

Near where I was brought up was an old farm, on which were several low places, swamps, affording an excellent cover for game. A gentleman from your city, a well-known newspaper man, and, if I mistake not, a valued contributor to your paper, used to either hire the farm or apartments in the vicinity during the hunting season. He was always wellfollowing the subject further, but have been requested to do

eover for game. A gentleman from your city, a well-known newspaper man, and, if I mistake not, a valued contributor to your paper, used to either hire the farm or apartments in the vicinity during the hunting season. He was always welcomed by the farmers and their boys, and his departure was a source of regret to them. The sign "No Shooting Allowed on these Premises" had not errors for him. He gunned everywhere. We boys used to tell him where quail or partridge were most plentiful, and we always knew, and it is unnecessary to add that he always found plenty of game and as a natural consequence plenty of sport. Now I shall give the reasons why he was so well treated. First, he was a gentleman, not a pirate. Second, he was a true sportsman. He knew a pointer from a setter, he did not gun with "black and tans," and never killed small game, such as robins, sparrows, etc. He identified himself with the people and interested himself while in the vicinity with local affairs. He used to riddle our hats with shot, "just for fun," shoot crows and hawks for us and occasionally give us a rabbit or odd bird that he night chance to kill. He never disturbed our traps or suares, often setting them for us. On one occasion he put a crow in a spring pole. We were delighted and appreciated the joke by showing him a flock of quail when we discovered its author. He never, to my knowledge, threw down a pair of bars, shot toward a farmer's house, nor permitted his dogs to disturb their poultry. He was a true sportsman.

In striking contrast to him are the improperly called "true sportsmen"—properly the pirates—who hires a "gunning dog," borrow an old fowling piece, and on Thanksgrying or

He was a true sportsman.

In striking contrast to him are the improperly called "true sportsmen"—properly the pirates—who hires a "gunning dog," borrow an cld fowling piece, and on Thanksgiving or Christmas make a raid upon the Long Island farmers. They cannot tell a pointer from a setter, in fact a common house dog answers their purpose just as well.

They tramp over the farmer's fields, throw down his fences, fill his cattle with shot, shoot at his house as quick as anywhere, kill anything from a sparrow to a chicken, not sparing cats or dogs. They not only violate the game laws, but steal almost anything they can get away with. If they do not kill themselves, or get killed by some sportsman like themselves, they return to the city, usually at least three-quarters drunk, with their game bags filled with stolen goods complaining because farmers' boys have captured game which they had not sufficient skill to get. Could I describe seemes which I have wit, usually at least three-quarters drunk, with these game had been a sufficient skill to get. Could I describe seemes which I have wit, usesed in smoking cars or trains returning to the city during the gunning season it would be a disgusting picture. True sportsmen know and respect the rights of land owners, and are sea rule welcomed in agricultural districts, but the "visting gunner" who does not know or regard the rights of the

the gunning season it would be a disgusting picture. True sportsmen know and respect the rights of land owners, and are as a rule welcomed in agricultural districts, but the "visiting gunner" who does not know or regard the rights of the land owner is an unmitigated nuisance and will be eventually exterminated.

Unjust laws produce disregard for all law. If the poor farmer or his children are deprived of the right to take game (in which, if it is common property he has the first right) in their own primitive way they will do all they can to prevent the wealthy, the transfent sportsman from taking with his more perfect, and therefore more deadly appliances. I know whereof I speak and I do not believe that there have been 1,000 quail caught on Long Island in traps or snares in any one year during the last twenty years. It is not the farmers, their boys, nor real sportsmen who are exterminating both game and song birds, it is piratical gunners who periodically overrun the island. The readers of the Forest Andrews of the state of the

I have been reading your plan of preserving game birds and making the sportsman and land owner mutually interested with much interest. Your plan is a good one and I heartily indorse it. It, will be more applicable to the Eastern States indorse it. I indorse it. It will be more applicable to the Eastern States than there in the West, although many farmers have their lands posted; in Indiana and Illinois there is very little difficulty in obtaining permission to shoot if the sportsman proceeds in the right manner. The mode of procedure should be this: If possible see the parties upon whose lands you may wish to shoot before you intend going out, and in a gentlement of the procession of t he this: If possible see the parties upon whose lands you may wish to shoot before you intend going out, and in a gentlemanly manner ask permission to shoot, assuring them that you will not shoot among or toward their stock, and will leave the fences and gates in as good condition as found. If you obtain their permission go to their houses when you go out to shoot, and let them know who it is that is shooting on their premises, and if you can spare a few pieces of the game that you have killed on their lands leave it at the house of the owner, and the next time you wish to shoot you will have no trouble in obtaining permission. This is my way of proceeding, and I have no difficulty in obtaining permission to shoot on any lands I may wish.

But there are some farmers who are very selfish, and no amount of promises of good behavior would gain you the desared permit. In such cases in almost every instance your plan of a fair renumeration would bring them over to your wishes, and would eaties such men'to take pains to rear and protect the birds for the shooting fee, and it is right for them to demand the renumeration if they wish it. They raise, protect and feed the birds from their crops, and no gentleman sportsman will refuse. Almost all the ill-feeling between the

sportsmen and farmers has been caused by rowdy men who have shot into stock, left fences down and gates open, having no respect for the farmer or his property. Where such cases have occured you cannot censure the owner for posting his lands against hunters. If they would all observe the Golden Rule in their conduct there would be much more friendly feeling between both parties. Every hunter is a trespasser upon inclosed lands, whether there is existing game law or not unless he has permission; and they should bear in mind that it is a privilege granted them, and no right that they may possess.

R. E. S. sportsmen and farmers has been caused by rowdy men who that they may possess.

Newport, Ind.

Newport, Ind.

In reading your paper one would think that a farmer was anything but a gentleman and a law abiding citizen. There are farmer sportsmen here who do more to protect game than all the sports of the cities. I have known them to feed quali in winter for many weeks, and to protect them from hawks and other enemies; and then to be called pot-hunters. I never saw our baggage cars loaded with snared birds or any other game; but it may be so for all I know. There is not a trap or net in this neighborhood that I know of but we have some birds here we expect to turn out next spring. All the birds that we wing here we keep and turn out in the spring to keep our stock up. It is some trouble to us to doctor them up, but we save a great many.

Our woodcock law here is a robbery to us, because all the birds leave here about the 15th of June and go North. We can't shoot them, and so Northern men get all of our birds, But we must keep still because we are farmers and don't know anything! If we raise game we look upon it as ours, but we don't want to be hoggish if our friends want to come and see us they are welcome, but they must not think hard of us because we can kill more game than they can. That seems to be the most trouble. If they must not think hard of us because we can kill more game than they can. That seems to be the most trouble. If they hunt the same way that we do they can get game too, but they are afraid of getting scratched and spoiling their hands in the briars. I hope that our city friends won't think so hard of us farmers; we are not so bad as we look.

\*\*Keyport\*\*, N. J.\*\* scratched and spot our city friends wo so bad as we look. Keyport, N. J.

Allow me to add my name to the list of those who are will-Allow me to add my hame to the list of those who are will-ing to pay more to the farmer for quail than he can realize from trapped birds. Until real protective associations are established in every county who will employ an agent at a fair salary whose only duty will be to see that the game laws are enforced and all offenders brought to justice, it is the only way to save the quail. I know from experience that the farmer will trap quail as long as he can find a purchaser, the tarner will trap quant as long as he can find a purchaser, and under the present management and enforcement of the game laws the only way to prevent it is to make it an object for him to stop. Your journal has become indispensable to me. If you will send a specimen copy to Wm. Shapter, South Grange, I think he will subscribe.

W. South Orange, N. J. .

I have read with great pleasure your articles upon the establishment of new relations between the gentlemen sportsmen and the farmers of Long Island. If the scheme can successfully be accomplished—and I see no obstade in its way—you will receive the hearty thanks of many to whom the resources of Long Island have heretofore been almost a sealed book. The waterfowl have been always accessible, but when one tred of inarist or beach and longed for a tramp through wood or stubble, the irate voice or almost universal posting warned him off. Please add my name to your list.

\*\*Custom House, New York, Dec. 7.\*\* W. W.

#### OUR ROCHESTER LETTER

ROCHESTER, N. Y., Dec. 17, 1880.

THERE is about a foot of ice covering the waters of this activity in field sports. Now and then a foolish duck that neglected the warning of instinct to go south, is shot on the shore of Lake Ontario, or on the rapids of some stream not yet covered with ice. The wild fowl that remain here are hard pressed by the severity of the weather, as was demonstrated one day this week when two flocks of ducks dropped in the water of the reservoir that sunnlies the city and

strated one day this week when two flocks of ducks dropped in the water of the reservoir that supplies the city, and which is within the city limits. On the same day at flock of wild geese were seen hovering over the reservoir as if they too would tlike to dip their wings in its water, which as it comes from a deep-water lake resists the congenling influence of the frost long after other quiet sheets are frozen. In this county a law passed by the Supervisors prohibits grouse and qual shooting for three years from the autumn of 1879. This operates to prevent any shooting near the city, except by the few who go out for hares, of which there is, or was, a good supply this senson. Hunting them with ferrets has reduced the number greatly, since the snow enabled the lunters to track them to their burrows, and there is every prospect that the selfish and short-sighted ferreters will "kill the goose that laid the golden egg," by exterminating the

nunters to track them to their burrows, and there is every prospect that had short-sighted ferreters will "kill the goose that laid the golden egg," by externinating the breeding hares, and so spoil their sport for future years. The markets are full of "cotton-tails," and examination not revealing any shot wounds on them, the inference is that they have been snared or taken in bags with the aid of ferrets. It is next to impossible to punish the persons guilty of thus violating the law. There are also a great number of ruffed grouse and qualt hanging up in the markets and restaurants, and I fear they did not die from honest powder and shot, but by the pot-hunter's snare.

Several sportsmen residing in this city were on shooting trips to the West this fall, and found game abundant in Ohio. Indians and Michigan. They relate stories of famous sport among the quait and ducks of our favored sister States, in which a good days' shooting may still be had without walking over a county. Our Western friends of the gun should be wise in time, and if possible take measures to perpetuate the advantages they possess for enjoyment of shooting. I thought's ears ago that the plan recently proposed by Forest Asis Stream, and previdence in the plan recently proposed by Forest and Stream, yield any game is to be preserved at all. I hope we shall never see the oppressive and undemocratic game laws of England disgracing the statute books of these States, but there is a vast difference between limiting sport to a few, and allowing indiscriminate slanghter of birds in and out of season. We should try and find the golden mean.

and allowing indiscriminate slaughter of birds in and ont of season. We should try and find the golden mean. What I have written above about shooting trips reminds me that although most of the visiting sportsume—not slates, men—have returned home, one distinguished member of the fraternity followed the example of the birds and went south in time to avoid the cold. I speak of Robert Tangneny, the ishing-tackle maker, well known in New York, an odd genius of French descent, born in Ireland and a cosmopolitan

by inclination. He start with two boys for Florida a few weeks ago with the intertion of "doing" that State this winter in a canvas boat of his own construction. I heard from him a day or two ago and he was then on the St. John's River with a good prospect ahead. I commend him to the good offices of any of your readers who may chance to meet him. He will entertain a sportsman with tales of trout-fishing in the longis of Ireland, salmon-fishing in Norway or adventures with the alligators and sharks of the South. A defler hand to tie a fly does not exist, and he is a good shot. A catalogue of his outfit would occupy too much of your space, but it included four guns, two or three thousand feet of netting, fish lines by the mile, fish hooks without number, some made of half-inch steel, for alligators and sharks. He expects to make the trip pay by fishing and collecting bird skins, alligator teelt and other rarities.

The organization and first annual exhibition of the American Society of Taxidernists took place here this week. The exhibition is now in progress and the election of officers was held yesterday in the rooms of the Monroe County Sportsmen's Club. The meeting opened with an address by Frederick S. Webster, of this city, who traced the progress of the art from its earliest history to the present. Prof. W. E. D. Scott, of Princeton, N. J., on behalf of the Judges' Committee, offered the congratuations of the judges on the excellence of the display made at the first exhibition. The Constitution was adopted and the following officers cleeted for the ensuing year: President, W. E. D. Scott, Princeton, N. J., Vice-President, P. S. Webster, Rochester: Screenary, Vm. T. Hornaday, Rochester; Treasurer, P. A. Lucas, Rochester. Standing Committee: Thomas W. Fraine, William G. Smith and J. F. D. Baily, Rochester. The society has six honorary members, one corresponding and thirty-seven active members. The latter are scattered through five States. The catalogue of the exhibition, to which it would be difficult, if not

The city police court has a case before it of some interest to your readers. A certain man is under arrest and will be tried next week on charge of allowing some valuable dogs, which he was boarding, to starve to death. One dog he had was a black setter named Sport. This dog died, and others he had are reduced to skeletons. Sport was valued at \$50 by his owner, Isaac Weighell, who left the deg with the accused last summer and found out a few days ago that the dog was dead and that others were in danger of death from the same cause. One of these is a bitch—Lulu, blue belion—said to be out of a Gordon setter sent by the Prince of Wales to Henry Milwood, of Chicago. Her hair had nearly all fallen out and the bones were pressing hard to come through the skin, which was covered with a seruffy eruption. The prisoner says the dogs have mange. Weighell, the owner, who is thoroughly acquainted with the diseases of dogs, says it is not mange, but ill-treatment, that afflicts the living dogs and killed the ones that are dead. nte.
The city police court has a case before it of some interest

#### OUR DETROIT LETTER.

HAVE just come from an interesting interview HAVE just come from an interesting interview with a party of deer slayers, and such enthusiastic fellows I never saw before. One of them is at this moment skinning a deer of his own killing, and he swears by the recollections of the last two weeks that he is going to have that skin lined and ornamented and spread in front of his bed for a morning foot warmer.

To save space I will condense my interview and give it won as succinctly as possible in parentive from simple.

of the fast two weeks that he is going to have that skin lined and ornamented and spread in front of his bed for a morning foot warmer.

To save space I will condense my interview and give it you as succinctly as possible in marrative form, simply explaining that I shall employ the language of the capitain of the party instead of my own.

"Our party," began my special informant, "consisted of A. J.Rogers, Superintendent of Police of Detroit; Ed H. Gillman, John E. Long, Frank Eddy, of Detroit; Win McSweeney, of Frazer, Mich, and James Moore, of Toledo, O. We had been a long time making up our minds, but tinally perfected the details preliminary to a campaign in the big north woods of Mich, and started out from Detroit. November 25, with dong Winchester rilles, wet and dry supplies in abundance, and an unlimited stock of hope, happiness and appetite. We took train at 0:10 r. s. on the Detroit and Bay City Railway, arrived at Bay City in time for an early breakfast and, after a matutinal eigar, left at 8:20 A. s. on the Mackinaw division of the Michigan Central Railroad in the paternal care of conductor James English, one of the most aniable and careful of railroad patriarcis. Otsego Lake was our immediate objective point. This is about two hundred and fifty miles from Detroit, as I estimate it. We reached there in the evening and stayed over night at a most confortable inn where the accommodations were on the most liberal and honelike scale, and where we had a night of delicions and refreshing sleep in needed preparation for the next day's fatigues. We were going fifty-two miles almost due north into the woods to a point which we subsequently christened Rogers Lake in honor of our chief, who proved to be a dandy in camp, a splendid cook, a man of inexhaustible good humor and a dead shot, the result of years of experience in the army and on the plains of the Far West. (He is an old Californian overlander).

"That was one of the toughest journeys I ever land, and one adventures, if you' had roomed to the most line

giving us the whole comp. Such hospitality one don't encounter except among men with the true instincts of the sportswan, even if he does happen to be a lumberman. I would like to linger over our stay there, but the yarn spinning must not stop for such reminiscences now.

"Sunday morning November 28, found us again moving. At mid-day we stopped at Potter's camp for dinner, fed the cattle, and at a quarter to four once more cracked our whip, and with a ho! for the merry good green wood! a good-by to the Potter campers, a few whoops of satisfaction, away we went bouncing along on the roughest road man ever lived to conquer. At Miner's farm, which we reached at 6 o'clock r. M., we were joined by Joe Kurtz, who was henceforth to be our guide and captini. Joe is a character—a regular backwoodsman, lithe, strong, swift, with the organic grace of the catamount, eye of the eagle, nerve of iron and a nature as rugged as the man is picturesque. His cabin is only a few miles from Miner's and we were soon domiciled. The place is of logs, but confortable, even if it is only fourteer feet square, and boasts besides the bed a table nailed up to the side, and some rather primitive but mighty useful cooking utensils. Including Joe and his partner "Buck" (Albert Bufor) another genuine son of the forest, eight of us bunked in that one room. My chum and I were well fixed with balsam boughs, blankets and deer skins, and I don't want a better bed than we enjoyed all the nights we passed there.

"Daylight found us stirring. Deer signs were plentiful and, marshaled by Joe and Buck, we went to business. Nine alays we stayed, and during that time we six killed twenty-six of the prettiest deer I have seen this scason. Our chief killed four, Gillman and McSweeney killed five each, and Long, Moore and Eddy killed the remainder. Four of them we nee and twenty-two of them we hought to town, hesides one live one which we are going to present to the city for Echic Isle Park. Those nine days we store certainly among the most enjoyable I can rec

same way about the trip. I shall have to give McSweeney the honor of first blood, but after that we divided the honors with fraternal equality. Long was accused of a slight attack of 'buck fever,' but he took the joke in good part and gare us all practical demonstration of his nerve and coolness in the midst of the most glorious exerting sport.

"Eat! well, I reckon. Our solids consisted of venison, pork, potatoes with the jackets on and unlimited at that. We broke eamp December 8, paid Black's camp a visit on our return and reached Otsego Lake (where we were to take train) in a heavy snow storm, all broke up and ready to tumble into bed at 6 r. m. on the 9th. Horses, men and dogs were well cared for by Mr. Brink, of the Otsego Lake house. He is a man who knows every inch of that country, and I can cheerfully recommend him to sportsmen as one they had better know if they go that way.

"Now we are back in town and I am going to heal just as quick as I can get there."

So spoke the jolly hunter, and if our friends will come this way I have no doubt that they will be even better entertained by the recital at first hands than I was. It is a tale to stir the sportsman's blood, and I only wish that I could have tasted some of the pleasures of that menorable fortnight among the antlered nobility of Michigan's splendid foresis.

GIFF LACKEAW NNA ASSOCIATION.

#### THE LACKAWANNA ASSOCIATION

SCRANTON, Pa., December 11.

THE gentlemen of this city are not devoted to the interest of trade and nanufacturing entirely, despite the fact that coal sud iron are our staple products, but among them are many who find time and the active cares of lousiness to chase the antiered monarch of the glen or hook the gleaning neteor of the brook. The time has gone by when one could find good trout fishing within ten minutes walk of the could find good trout fishing within ten minutes. one could find good trout fishing within ten minutes' walk of the city's centre, for the polluted water pumped from a lundred sulphurous shafts has poisoned the most of our streams to such an extent that no living creature can abide therein; neither can a deer be started up in the course of an easy walk from town. But an hour's ride will land one at good fishing water, and a half-day's journey carries the eager hunter into the wild forests of Sullivan or Warren.

The rapid development of this section, with its consequent inroads upon fish and game, threatening their utmost extinction, led to the formation, about a year ago, of the Lackawanna Game and Fish Association, the members of which are piedecd to assist in every way in the development.

Lackawanna Gane and Fish Association, the hechibers of which are pledged to assist in every way in the development of profismanlike pursuits. To this end frequent meetings are held at which notes upon topics of timely interest are exchanged, and particular attention is paid by the association to the protection and development of game. To this end carefully compiled abstracts of our game laws have been discussed in the processor and many of the best balva and

to the protection and development of game. To this end carefully compiled abstracts of our game laws have been distributed among the farmers, and innuy of the best lakes and in the county are being stocked, with choice fish under the direction of members of the club. Trout and land-locked entron have been supplied to all parties asking them for stocking purposes, and some thirty of the lakes in this and adjoining counties have been plentifully sown with wild rice with the intention and hope of inducing the wild duck to make his inhistant there.

The association is under the presidency of Dr. I. F. Everlard, a born naturalist, whose knowledge of woodcraft and game lore is inexhaustible, and whose taxidermic collection of native birds and beasts is unquestionably the finest in the State, the Doctor lawing made the postural peculiarities of his subjects a study.

Lata hight the association gave its first game dinner, inaugurating therein a custom which is meant to be carried out yearly hereafter, at which almost allist members were present, and vehich was carried out with consummate skill of arrangement and detail. The large dining-hall of the Wyoming House was the scene of the reunion, and the bill of fare embraced every seasonable dish of game indigenous to this locally as well as a noble contribution from friends at the Far West. The preparation of the various dishes was perfection and that the editorial mind may not think me guilty of gush I inclose the means that you may decide for yourself upon its comprehensive character, only regretting that the teste and the flavor of the several dishes cannot be transmitted also. One of the enrisoities of the ovening was the wild rec, which was served bailed dry so that every grain stood out individually plump and firm, and which was served with squirred. One of the curiosities of the evening was the wildrice, which was served boiled dry so that every grain stood out individually plump and firm, and which was served with squirrel and Fronein peas. This rice has a dehicious flavor, more pronounced than the cultivated article, and yet of a peculiar delicacy, and it was unamously declared to be a fine article of diet far exceeding in character such preparations as atmeal, hominy, crueked wheat and other familiar faintaccous dishes. This wild rice was obtained from Canada.

The dinner was served in courses, and lasted from half-past nine p, m, until after one o'clock. Toasts were proposed and

responded to as follows: "The Lackawanna Game and Fish Association," by Dr. J. F. Everhart, the President; "Quail and Grouse Shooting," by Cornelius Smith, Esq.; "Deer Hunting," by Col. A. B. Blair, "Game and Fish Protection," by Mr. H. E. Hess; and "Fox Hunting," by Mr. Chas. R. Smith. Fun and nueclote cullivened the evening, and the occasion was one replete with pleasure, from which the members separated with renewed encouragement in their work and a determination that next year's dinner should as fur surpass this as the present one exceeded anything hitherto attempted here. fempted here

the three three three in the contribution of this association is that no expense is permitted to be incurred unless there is money in the treasury to pay the same, so that the "cancerous leprosy of debt" can never fasten itself on the society's prosperity. It is doing its work in the right way, and because of your well known approval of all that conduces to the welfare and encouragement of sporting interests I venture to send you this account of the first annual dinner of the Lackawanna Game and Fish Association.

II. E. II.

#### SOUIRREL SHOOTING

Macon, Mo., Der. 12.

I'N your issue of December 5, "Sancho Panza" has introduced the subject of squirrel shooting, for which I extend my hand. I am sure squirrel shooting is fine sport, that none need to be ashamed of, and hope to see the subject kept up in your valuable paper.

I began my shooting career long ago with my grand-father's old flint-lock Kentucky rife, and have enjoyed the sport in all its shades and colors, and have found it to possess many attractions and pleasures not found in other kinds of shooting.

sport in all its shades and colors, and have found it to possess many attractions and pleasures not found in other kinds of shooting.

In my youthful days we used ritles altogether, and in those days a man that would shoot a squirrel through the body was looked upon in about the same light that a poishot is now.

In my shooting I have encountered much of the same kind of experience Sancho Panza speaks of. Have often exhausted every means at band in order to induce his squirrelship to step around on my side of the tree without succeeding. We have only two kinds of squirrels here, the fox and gray. The gray is much more shy than the fox squirrel, and much harder to induce to come around on your side of a tree. When you see a fox squirrel take a tree, if you will remain perfectly still for five or ten minutes you will be very likely to get a good shot, unless the squirrel was put up by a dog, as his curiosity to know what has become of you will induce him to look around on your side. I have often secured a good shot in this way, and often scarced them around by throwing a stick into the leaves beyond the tree. This will not always do, but I am satisfied that "Saucho Punzal" plan will almost always work to a charm. Very lew her how how to hunt squirrels. Most nen are apt to bunt too much, and too much is worse than not enough. To hunt successfully you must, hunt very carefully and very slow, remail and too much is worse than not enough. To hunt successfully you must hunt very carefully and very slow, remain entirely still at least one half the time. Any one can see much better among the leaves and branches of the trees by standing still. Sit down on a log or stump, every few hundred yards, and remain just fifteen or twenty minutes, and will offen better two problems.

dred yards, and remain just fifteen or twenty minutes, and you will often have you patience revailed by seeing one of the little rodents jump up on the side of a tree and skip along on a log near by, or, perhaps, see one caper out on some of the lower branches and begin to bark or chatter. I agree with "Sancho Panza" that it requires considerable skill to shoot a squirrel running on the ground, or a fallen tree, and particularly on a worm tence. There is no use in trying to follow the motion of the squirrel in a worm fence. Catch sight at a corner he is approaching and fire the instant he arrives. In shooting at them running from one tree to another among the topmost branches, aim to get in your work just as they stop to make the spring from one liable to another, but don't feel disappointed if you miss, for I assure you have no dead sure thing.

work just as ting yes top to make the spring from four him to mother, but don't feel disappointed if you miss, for I assure you that you have no dead sure thing.

It is fine sport to shoot them in the fall, when they begin to cut down hickory nuts. Go out into the hickory timber early in the morning, or late in the afternoon, and stand still for a short time, and if there are any near you the falling particles of hulls striking ngainst the leaves will soon inform you of their whereabouta. It takes a strong shooting gun, and a full choke at that, to bring them down from the tops of some of the trees in this part of the country; they frequently get entirely out of reach of an ordinary muzzle-loader in the hands of the typo.

As it is in order now, I will relate one of my exploits in squirrel shooting. Last October, myself and Capt. Jon. London (the reason I mention Capt. London is that I may have a witness) went squirrel hunting on the Chanton River. I found four up one tree. Got into a position where I could see one, took aim, fired and killed it, but it hung to the side of the tree a few seconds, as they often do. Just as I had

see one, took aim, fired and killed it, but it hung to the side of the tree a few seconds, as they often do. Just as I had slipped in unother shell and closed my gun, I saw another rear the top of the tree, which I shot and killed, and just as I fired the second shot squirrel No. 3 started to run, and I gave him the other barrel, and had three falling at one time. Some writers say squirrels lay up a store of nuts, etc., for winter use, which I think is a mistake. I hope to hear more on this subject.

#### TEXAS CURISTMAS TURKEYS.

NEW ROCHELLE, N. Y., Dec. 10. NEW ROCHELLE, N. Y., Dec. 10.

THE editor of the Henrietta Shield, Clay Country, puts the matter thus: "Thanksgiving turkeys were not numerously circulated in these parts yesierday. The weather has been too cold to go out and shoot them."

ously circulated in these parts yesierday. The weather has been too cold to go out and shoot them."

From this we see that the wild turkey is, of all others, "the bird," in Texas, looked for to grace the holiday tables. But what say you, "ye daring sportsmen," to this very charitable charge—"too cold to go out and shoot them." Pshay! they evidently must have gone hunning and taken along ttleir frying-paus, but in their joyful mood around their camp-fires, and in their utter forgetfulness of Christmas the turkeys they killed found their way into these pans, and so "evaporated," of course. That's the trouble, no doubt; and very naturally too, for you well know how alluring the odor of turkey cooking around the camp-fire is, especially on a cool, bracing day. This is surpassed only by the taste of the bird.

Speaking of the toothesome merits of the turkey reminds me of the Fronchman's description of it, he was fond of a square meal. Said he, "The turkey is one very inconvenient bird; he is a little too much for one person, but not quite enough for two." And this was said of the tame turkey, not of the gamy wild one. Qurry: What would he lave said of the juicy, fat, wild turkey? Just enough for one, of course.

The same paper says, "A load of wild turkeys was recent-

ly brought into town and sold at fifty cents apiece. They are reported to be abundant in the West." Only think of buying nice wild utrkeys, some weighing fifteen to twenty pounds, no doubt, for fifty cents. This would exactly pay for five boiled eggs in some of our fashionable eating houses I observe, however, that the price of turkeys has risen since I was in that contry. I used to buy from the wild Indians large, fat goblers for twenty-five cents, and the smaller ones for ten and fifteen cents. But this was in 1834-5, when there was not a solitary resident in this northwestern part of Texas. A cold snap, commonly called "a norther" in Yexas, is just the best time possible to hunt them. They then huddle together and are quite confused and easy to kill. They do not seen, like Northern wild turkeys, to stand the cold weather with indifference. I now recall a short hunt I made for them during one of these northers. It was from Fort Belknap, lying in the sune region of country. In two evenings we shot, mostly by moonlight, six round dozen, when we ceased firing, withdrew and carried off the dead. We had enough for all, and as nany as our wagon could accommodate. I made use of my trusty rifle, and by moonlight brought them down at every shot from their high roosing-places among the trees. I placed them directly between me and the moon (two days from the full), simed a little low on them, pulled the trigger, when they came tumbling to earth. This was at the crossing of the Clear Fork of the Brazos River, main road, and not far from where Fort Griffin is now situated. The month, December. I mention all this mainly to stimulate the good sportsmen of Clay Country, to good deeds for Christmas and New Year's days. I hope to hear through the Shield a most favonable account of them, and that lots of plump gobblers, with all the eterors, have circulated most freely, not only there but everywhere else on the coming helidays. Especially may the eitior of the spoting dour and Fortsman and Shield and the section of the deservin

#### THE SOUTHAMPTON CLUB

THE Southampton Sportsmen's Club was organized in 1878 and duly incorporated under the haws of the State of New York. The membership is limited to twenty and comprises some of the leading and most thorough sportsmen in New York and Brooklyn.

The club has leased for a term of years the exclusive right of shooting over a large tract of the quail and woodcock country, consisting of farms at Southampton with

of shooting over a large tract of the quaif and woodcock country, consisting of farms at Southampton on the cast end of Long Island, and is pursuing the only true course for the proper protection of gaue and the preservation from igne-miny of the principles of old time sportsmanship.

Included in the property of the cith are all the necessary paraphernolia to a complete rig for duck shooting on Shinne-cock Bay. Also a beautiful fresh water lake about two miles square, which will be thoroughly stocked with black bass this coming spring. A game keeper is employed permanent-ly to watch over the premises, detect and report to the club poachers, sparers and persons shooting out of season, for the purpose of prosocution, and already several arrests have been made and eminent counsel engaged to punish offenders for violating the game laws. violating the game laws.

In winter the birds are thoroughly fed and by this means

In where the birds are thoroughly fed and by this means kept alive through the severe weather; and the good results of this plan have been fully attested by the peaceful and happy whistle of the cock in the spring and the abundance of game in the fall. A bag of from ten to twenty-live head being a fair day for a good shot with good dogs.

During the opening week of the present season there was a very fine display of setters in the field belonging to the members; the most noted being the Hon. Townsend Cox's blue Bel. on Ned; Edward C. Whitaker's English white setter Milo, an extraordinary quall and woodcock dog; D. T. Kennedy's Irish setter Sankey and Henry M. Leverich's black and white setter Ban. The two latter are magnificent rangers and exhibit extraordinary powers of endurance and keenness.

ers and exhibit extraordinary powers of endurance and keenness.;

During the winter months fox hunting is a very enjoyable feature, the club owning several fine fox hounds and genuine wild red foxes being plentiful on that part of the island.

It is only through such associations as this that the shooting in the vicinity of Kow York can be preserved and sportsten in the vicinity of Kow York can be preserved and sportsten in the vicinity of Kow York can be preserved and sportsten in the vicinity of Kow York and stached to it by the persistent massacre and wanton destruction of the poor little domesticated pigeon, and the absurd, useless and oftimes aimless breaking of glass halls.

The large clubs of New York and vicinity, both for shooting and the protection of game, seem to have entirely lost sight of the real object of their organization and have degenerated into a system of periodical dinners and post prandial bombastry, and with many members "going shooting" it synonymous with necturnal Bacchanalian revelries with whisky for ammunition and the only game "poke."

If the clubs really interested in pursuing their favorite pastine in a sportsmanlike manner were to enablate the example set them by the Southampton Sportsmen's Club they would find themselves on the true path to honorable, healthful and humane enjoyment.

humane enjoyment.

#### THE LONG ISLAND ASSOCIATION.

An adjourned meeting of the Game Law Committee of the Long Island Sportsmen's Association was held at the Fountain Gun Club Roomes, 440 Flatbush avenue, Brooklyn, last Saturday evening, Capit, W. L. B. Steers in the chair. The question on the size of the neesh of nets created considerable discussion. It was finally decided that whatever size mesh was adopted, the word "sequare" should be inserted after the word "inches." It was resolved that the claimans also louid have the power to appoint a committee to go to Albany, as near the assembling of the Legislature as possible, for the purpose of recommending to the Speaker of the House a committee on the game have for Long Island. Mr. Barnett Phillips spoke in regard to the alarming decrease in fish, and cited some statistics that were almost incredible. Also that the Association must work together and hasten slowly in order to secure proper laws to protect fish and game. N adjourned meeting of the Game Law Committee of

The Secretary was instructed to write to Mr. A. E. Godeffroy in regard to the trapped qualit that he saw on a Long Island railroad train, and ask him to furnish information on the following points: The name of the boy that was selling the qualit he name of the baggage-master, proof that they knew the birds were trapped, and in what county he saw

<sup>\*</sup> Texas papers please copy.

them. Provided Mr. Godeffroy would give the above information, Mr. Abel Crook would assume all expense of proscution. Col. Pike spoke in regard to gause protection, and remarked that the first thing wanted to protect game was gause protectors and licenses. Mr. Walsh said that he thought two dollars was a large enough fee for a license. It was decided that the license question be left to discretion of the Long Island Association.

Judge Lot spoke in regard to the game laws, and said that what was wanted was less law and more enforcement. A communication from Mr. Geo. A. Chappell was read, suggesting that when the committee adjourned, it should be to some special time and place, and a committee from the game and fish dealers in Polion and Washington markets should be myited to be present and give their views in regard to the game laws. Mr. Chappell was appointed a committee of one to invite the market-men. The meeting then adjourned to meet at the same place Tuesday evening, December 28.

#### THE BUFFALO RANGE.

CANYON CREEK, Montaua, Nov. 25.

CANYON CREEK, Montana, Nov. 25.

A S I have just returned from the buffalo range, I thought some of the readers of your valuable journal might be interested in this kind of game. We'll mounted on our ponies, with Sharps' 45 cal, rifles, we started need to Bull Mountain, some thirty miles from the Yellowstone. We reached the head of Razor Creek the first day and found buftalo in good numbers. As we had come after a winter's supply of meat we made no fancy play, but struck camp and nade arrangements for morning. When daylight came we were all ready. I counted twelve bands within shooting distance; but as we did not wish to kill and leave then I selected a band of cows and calves, filled my belt with cartridges, and in an how I bad killed nine calves one or two years old. As we were not experts at the business, we spent the balance of the day skinning and packing the neat in camp. When our work was all done we had a supper well supplied with marrow-hones, which I consider one of the finest dishes of the mountains.

When our work was all done we had a supper wen mapper with marrow-bones, which I consider one of the finest dishes of the mountains.

The second day we killed twelve and in eight days we had silled thirty-six. We could just as easily have killed two or three hundred, but as we had twelve apiece, thought them quite sufficient for our winter's met.

On our return home we found parties killing them for the tongues alone, not even taking the skins. If the buffals were nord in any kind of moderation they would last for many years yet. I saw one herd alone that, I think, had twelve or fifteen thousand; besides hundreds of small herds of from fifty to a hundred dotting the plains and mountains. I found them up in the mountains where a pony could hardly clinb.

When the Northern Pacific Railroad is finished I would like to see some of our Eastern brothers out here. Besides buffalo, we have deer, elk, antelope, bear and mountain sheep, also geese, ducks, sage hens, grouse, etc. We have as fine trout fishing as can be found. If any choose to trap we have plenty of beever, otter, mink, marten, muskrat, welves, etc. If any wish to try their skill they can try the the bear or mountain ilon.

Thanking you for so completely exposing that Ditmar powder, by some of which I came near I sing my life, I remain yours.

#### "THE SILVER LAKE HORROR,"

you'll correspondent, "B. C. M.," in issue of 16th inst., gives a glowing account of the "remarkable" shooting at Silver Lake, when out of forty-live geese, viz., eight, six, ten and twenty-one, which swam to the stools, not one secaped. Think of seven men sitting behind a blind waiting for geese I think of seven men sitting behind a blind waiting for geese I waiter even considered himself fortunate to be present at such a scene of pot-lunning and butchery.

This manner of hunting is tending to exterminate our game, particularly the waterfowl. That style of shooting is no better than butchering a bevy of quall on the ground.

I would rather sit half: a day alone in a blind and have the satisfaction of killing a couple of ducks "on the wing," knowing that my own gun did the execution, than shoot a hundred ducks or geese by wolley firing with a gang of six or cicht sportsmen (?) of the Silver Lick stamp.

With the war of extermination going on both spring and autumn we shall be obtiged to lay aside our guns within a period of ten years.

This month I visited a part of the southern coast where I formerly had good shooting, but recently two life saving stations hare been erected in the lecality, and the men whose duty it is to patrol the coast bave kept up such a fusiliade against the ducks and geeze from before dayight until late in the night, that it now scarcely repays one to visit the place.

The Coast Guard has done more to ruin the wild fow shooting on our seaboard than all other causes combined.

All the sportsmen's clubs in the country must commence action at once. The citu of which I am a member is ready with funds as soon as any responsible parties will take the lead in game protection. YOUR correspondent, "B. C. M.," in issue of 16th inst. gives a glowing account of the "remarkable" shoot

action at once. The club of which I am a member is ready with funds as soon as any responsible parties will take the lead in game protection.

#### PINNATED GROUSE IN DELAWARE.

HAVE learned more in reference to the pinnated grouse that was sent from Lower Delaware. The game dealer who took it to Mr. John Krider was Mr. Johns H. White, 140 Chestant street. The bird he was unable to identify, and wanted Mr. Krider to purchase it as an oddity. The specimen being a poor one, and only half-grown, was rejected. White's son told me this morning he had thrown it away, not thinking it was any value.

This half-grown prairie chicken undoubtedly came from those Dr. Purpell mt out, and there are certainly worse of

those Dr. Purnell put out, and there are certainly

them.

In the remembrance of Mr. Krider there were pinnated grouse in Burlington County, N. J., and at one time, thirty or forty years ago, he saw at Manahawken, N. J., in the possession of a local gunner, six prairie hens, or grouse as they were called, that had been shot in the "Barrens," in the above-mentioned county. You know Frank Forester speaks of them in his works as having once existed on Long Island, in the Pocono region of Pennsylvania, and in the "Barrens" of Barlington County, N. J. To be sure; they were called hy different names in these localities, but they were nothing more nor less than the pinnated grouse. Undoubtedly, with the proper protection, the same bird can be replanted and be made to thrive in their once natural breeding grounds.

Homo,

FOND DU LAC GAME CLUB—Fond du Luc, Wis., Dec. 13.—I send you a record of this Club, believing that portions of it are meritorious and have produced good results. In Pebruary, 1867, the first organization was effected, with S. B. Amory, President; L. M. Wyatt, Secretary; R. A. Baker, Treasurer. The Club was limited to ten members, and was composed of gentlemen sportamen, who realized the necessity of preserving game, and was among the first organizations in the State. The Club is represented through its Secretary in the State Association, and has always exercised a salutary influence in the enantements for game preservation. In August, 1876, a reorganization was effected, S. B. Amory, President; J. W. Carney, Vice-President; L. M. Wyatt, Secretary; T. S. Wecks, Treasurer, and O. C. Steenberg, Tobert Drummond, and Albert Becker, Executive Committee. This Club, through the Fond du Lac members of the Senate and House, introduced a bill at the last session making September, October and November the shooting season for all game; but they encountered so much opposition that only the portion relating to deer became a law, but even this has saved the State thousands of deer the present season and has been of inestimable value.

Grouse Treeing-Reynoldsville, Pa.-I noticed a com-Groess Treenke—Regnoldsville, Pa.—I noticed a communication in your paper a few weeks ago stating that ruffed grouse did not tree when hunted by dogs. I have been shooting them all this season, and my experience is that in nine cases out of ten flush be bevy and they will all tree. In this country they generally take to the hemlocks. They are very plenty, but are sadly decreasing from the raids of the wild cats and foxes. Two weeks ago I saw twenty-five grouse fly out of a single hemlock where they bud taken refuge from a fox. I think this was the largest hevy I had ever seen, but would like to hear from your readers whether they can beat it. We shot a number of mallard and teal on our ground this fall, and have been having, all things considered, a good season in the woods.

R. L. eason in the woods.

Moose and Carroo Hunnig.—The Quebec Telegraph tells us that "Coionel Rhodes, the veteran Nindord sportstand of the Province, and party, well supplied with Enfeld's double barreled fowling pieces and other internal alimentary supplies, left the city yesterday morning for the region of the moose and cariboo. We heartily wish the Colonel and party every success in the glorious sport and in securing a heavy return load of venison."

Col. Rhodes, though considerably past the meridian of life, still retains all his youthful fondness for the sports that Canada's fastness offers to the hardy and experienced sportsman, and what is more to the point, the Colonel enjoys the vigor and health to pursue them. A winter rarely passes that the Colones's snow-shoe trail cannot be followed into the haunts of the carrbou and moose, and the crack of his unerring rifle heard as some lofty monarch crimsons the snow with his life blood. Should you reach his camp the genial hospitality extended would more than compensate for the hardships of the journey. There is no such other host as the Colonel. He is a fine exampte of the English gentleman sportsman.

New York, Dec. 13.

New York, Dec. 13.—In your department of "Game Bag and Gun," I see no notes from this part of the country. Perhaps a few notes would be of interest to your readers. Of game we have quail by thousands, and now and then a turkey; also an occasional rulled grouse. Prairie chickens replently, and any amount of rabbits (cotton tails). Thanks giving over 250 quail and nearly as many rebbits were shot, and brought into town by the boys. Owing to the nature of the ground, which is brush and tail grass, there is no useform dog except to retrieve. My friend Moore and I in one day's shoofing put up hineteen coveys of quail, good sized coveys at that, say twenty-dive to forty. As the result we killed as many as we wanted to carry. Our duck shooting is excellent in the spring and fall, fifty to stay being no musual bag in a day's shooting. Geese in good numbers are found eight miles west of this place at the mouth of the Platte River. I think your paper simply perfect. May its slandow never grow less.

Massagnusetts—Campello, Mass., Jac. 13.—A party of seven sportsmen, who own a stand at Widgeon Point, Silver Luke, had rare sport one day last week. The first shot was at a flock of geese, ten in the flock, and they brought then all down. The next was a flock of twenty-one, and they also shot the whole bunch, the last shot with seven men, we think, is one of the best on record. The shooting in general here is very poor, and I quite agree with one of your contributors, "Hunter," that all game should be let alone in this State for the next three or four years, except of course birds of prey. F. G.

Bound to Get the Quall.—A flock of quail was scared up by a hunter in Belvidere, N. J. He singled out one of the birds and fired, not observing that a friend who was hunting within mass standing within rance about twenty yards away. A shot imbedded itself in his friend's cheek, others brought blood from his arm, and another struck his thunb. The wounded man, however, determined not to lose the bird that his companion had missed, and placing his gun to his shoulder he fired and brought down the bird. Then he gave his wounds attention.—Sun.

Enforcing the Law in Maine,-The Sullivan, Maine, ENFORCING THE LAW IN MAINE.—The Sullivan, Maine, Bulletin says: "Some sportsmen have come to grief, we understand, in our neighboring county. They took hounds and went for the deer which are pretty numerous this winter, intending to make a business in slaughtering them; the dogs were clusing one, and the game warden being out the deer ran across his truck, he shot it and then shot the dogs. The hunters, on coming up, found their game taken cure of, dogs shot, and themselves under arrest. They came out of the scrape with loss of game, loss of dogs, and having \$40 in fines to pay. All this for setting the law at defiance."

No Recond.—An anonymous correspondent, who writes from Salem, Mass., sends us what purports to be the weight of an enormous woodcock which he says he killed last month. We decline to publish his statement until he sends us his real name and some particulars of the alleged occur

New Jersey, Morristown, N. Y., Do. 7.—Game of all kinds is very searce here, and is very wild and hard to find. On the outskirts of the town the hunting is very good. Our friend, E. W. Luimly, has just returned from Pike Co., Penn., and he had splendid luck. I saw seven large woodcock to-day, but did not shoot any.

ON SNOW-SHOES—Boonville, N. Y., December.—I have been fairly bottled up in snow and ice in Brown's Tract. Only reached home on Thursday, and then on snow-shoes for four-teen miles through the woods. The lakes are all frozen solice, teen miles through the woods. The label increasing almost from 24 to thirty inches deep and increasing almost R. P.

Hoy's Wilderness—*Pittsburg*, *Pa.*, *Dec.* 15—Game is as plenty as ever in Hoy's Wilderness. "Wish." Miller, whose name has frequently appeared in your paper, came in yesterday from a hunting expedition to that region. He brought down soven deer, one bear, seventy-five pheasants and other small game, including five wild turkeys.

LIVE PRAIRIE CHICKENS WANTED—Springfield, Mass., Dec. 20.—Can any of your readers inform methrough the columns of your paper where some live prairie chickens can be procured. They are wanted for the purpose of trying the experiment of letting them go in this vicinity and seeing if they will propagate.

Maine.—Two Foxcroft hunters report having came across a herd of thirty caribou in a bog north of that town.

Inginia-Covington, Dec. 14.—Turkeys are more plentiful than they have been for years.

#### SHOOTING MATCHES.

PIGLON SHOOTING IN CONNECTICUT, -A movement is on foot among the gunners of New Haven to attempt to promure a repeal of the law which prohibits the trap shooting of pigeons.

#### SENSATION.

CENSATION is the property of the Westminster Kennel Club, of this city, and was bred by Mr. J. D. Humphrey, England. This famous lemon and white pointer is by Mr. R. J. Lloyd Price's Jim, out of Mr. Humphrey's Nell. Jim was by Whitehouse's celebrated Hamlet out of On September 9th, 1876, Mr. George De F. Grant Juno. sailed for Europe, and while in Wales picked Sensation out as the best dog he had ever seen. Sensation was broken when bought, and was bred for a field trial dog. He was whelped May, 1874, and imported on November 10th; 1876. His winnings on the other side were as follows: Shifnal, 1875 first prize; Swansea, 1875, first prize; Carmarthen, 1875, first prize; Oswestry, 1875, second prize; Birmingham, 1875, second prize; Llanelly, 1875, second prize, and at Newport, 1876, second prize. In the United States he won first and special at Baltimore, 1877; first and three specials at St. Louis, 1878; first and two specials at Baltimore, 1878, and first and special at Boston, 1878. Besides these winnings the dog has been exhibited at all of the New York shows, but not entered for competition. As a stud dog there has never been a pointer in the country whose services have been in more frequent demand. The dog is so well known on the bench that it is unnecessary to refer again to his make up. His head, which is grand, is as well known among dog men as Hambletonian's shape is by lovers of the The appearance of Sensation in the field was a surprise to many, and his excellent performance an astonishment to all but a very few. He is a plucky goer, and has a wonderfully good style, backed by a very keen uose. In the trials he was placed after contesting for first with the famous Gladstone.

#### FIELD TRIAL RULES.

PITTSBURGH, Va., Dec. 13.

Editor Forest and Stream: I have read the Forest AND STREAM of late with increasing interest, and noticed its rapid improvement. How often of late, after reading many articles, such as your own on Dittmar powder and correspondents on various subjects, have I felt like slapping the authors on the shoulder, and with hearty approval, in the language of an old friend, saying, "That's right, my boy, now you are shouting," But "Couples" articles of late on the crudities of the N. A. K. C. Field Trial rules are what have called me out. Now, "Couples" is moving in the right direction, and I doubt not but what he is seconded by many sportsmen all over the country. Though in his second letter he seems to manifest a little impatience that no one has rushed in to assist, him, yet these letters will be productive of good fruit. And let me say in the language of the good old Scriptural injunction, "Be not weary in well doing."

Id on to propose at this time to undertake a revision of these rules, but simply write to ventitate some thoughts in support of "Couples," and regarding the dissalisfaction at the Pennsylvania State Field Trials, which, in his article, he says came near breaking up in a row. I think I am safe in I have read the Forest and Stream of late with incr

saying there never was a period in the history of this country when sportsmen were so thoroughly interested in field trial than now. Last spring the spirit scienct the sportsmen of the Keystone State, and the Pennsylvania State Field Trials Association and trials at Lancaster last October were the outgrowth. We adopted with little change the N. A. Field trial rules, and we discovered at the trials that the rules were not perfect by any means, and that when read it cost no little effort to understand them fully. As an illustration of this let me relate a circumstance which took place at the hotel at Lancaster on the evening of that rainy day when King Dash though victorious in the field had been laid how de combat by the judges. In a private room I observed the Secretary, 1st Yicc-President and Treasurer ero flavored the Secretary found that the rules were the subject under discussion. The Vice-President and Treasurer were insisting that at the conclusion of the first heat (not yet finished) the 1st, 2d and 3d prizes should be awarded, and the free-for-all ended; the Secretary contended they were wrong, and on referring to the rules, and reading and re-reading the disputants only insisted more firmly on the correctness of their positions. Not until the Secretary called in overwhelming evidence would the Vice-President and Treasurer be convinced that they were wrong. So much for the application of the rules in this particular on the part of intelligent gentlemen.

nrmy on the correctness of their positions. Not mult the Secretary called in overwhelming evidence would the Vice-President and Treasurer be convinced that they were wrong. So much for the application of the rules in this particular on the part of intelligent gentlemen.

Again, two circumstances at Lancaster brought to light very serious defects in the rules. For example: After the heat between Siler's Dash and King Dash had been awarded Siler, he left, taking his dog with him, thus shutting King Dash on the free and the remained and gone to the front winning first money King Dash would have had a chance for second or third place.

At the conclusion of the heat between May Laverack and Brown's Dash, in favor of the former, Mr. Snelhenberg announced that he withdrew May, boldly avowing his intention by so doing to shut Dash out. The judges decided King Dash's chances should not he prejudiced by Mr. Siler's action (which the rules gave them no authority to do), and also relused to allow May to be withdrawn.

There is no doubt about the rules being crude and indenite, but I cannot agree with "Couples" that he bad feeling at Lancaster grew out of this fact, but rather out of a misapplication or wanton disregard of the rules, and here are the facts to prove what I say:

King Dash was badly off in nose, as all knew who saw him, but not withstanding this he demonstrated he had some nose, while Siler's Dash showed no nose. He ranged wide, quartered his ground well, showed good style and speed, was perfectly obedient, found all the birds, secured one magnificent point and retrieved the bird when killed.

Siler's Dash showed no nose. He ranged wide, quartered his ground well, showed good style and speed, was perfectly obedient, found all the birds, secured one magnificent point and retrieved the bird when killed.

Siler's Dash did not find a bird or secure a single point, except a false point, upon which he dropped, when King Dash, and yet we had the strange anomaly of a dog which had absolutely done nothing awarded the

worded the heat to Siler's Dash Now the strangest part of awarded the heat to Sher's Dash. Ason, the strangest part of this transaction is this: as it was a question of "pointing" and "retrieving" to be settled, that the judges should order up the dogs for a fresh brace right in the midst of scattered

birds. Then again, it was asserted on good authority that the judges admitted that the figures of merit actually given by them in the field showed King Dash had (9) nine points the advantage. O, ye gods! what strange work we have out of judges at field trials.

advantage. G, ye gous: what strange work we have out of judges at lield trials.

What we need is a set of rules as near perfect as possible, that will not admit of jockeying or tricks, and judges that, regardless of person or blood, will dare to do right and give honest judgment according to the rules. I can safely say there never will be another trial run in this State under the present rules. In this connection I should like to speak of some of the irregularities of the N. A. K. C. trials, and especially the bad taste in Dr. Rowe in trying to run Count Noble to the front when he was fairly beaten, in the judgment of parties present, by two entries in the Derby, but I will leave this until my next.

The chief interest now among sportsmen of this city is the coming dog show in January. We learn some of the finest dogs in the country will be here, and it blids fair to be the most interesting show ever held in this city.

Depentive Rules.—December 17, 1880.—Editor Forest and Stream.—In the account of the Eastern Field Trials given by your Western contemporary, he speaks of Isabella having won at Memphis in 1876 by an imperfection of the rules. I would ask any practical sportsman (not the gilt-edge modern Solomon whose cartridge belt weighs more in the morning than his game bag at night) whether rules that will admit of a part of a third prize going to a bitch at the N. A. K. C. field trials for pointers and setters which made mothing but flushes, and later at the Eastern field trials a first prize going to a bitch at the N. and the state of the state o

#### EASTERN FIELD TRIALS CLUB.

A MEETING of the Eastern Field Trials Club was held at 24 Park Place, Thursday afternoon December 16. The following gentleman were present: Mr. Chas. H. Ruymond, Mr. G. W. Bassford, Mr. H. W. Livingston, Mr. W. A. Coster, Mr. Max Wenzel, Mr. E. A. Herzberg, Mr. F. A. Ryer, Mr. J. Pentz, Dr. L. O. Momroe, Dr. Holmes, Dr. H. F. J. Aten, Mr. J. Von Lengerke, Mr. H. E. Hamilton, Mr. J. O. Donner, Mr. Charles DeRonge and Captain Tuttle, Vice-President F. N. Hall in the chair. The committee on the Tileston fund reported the subscription closed and ready to be handed to Mrs. Tileston.

The following gentlemen were unanimously elected members of the club: Mr. J. Stewart Slosson, Mr. G. DeForest Grant, Mr. Robert C. Cornell, Mr. H. S. Blodgood, Mr. Newton Earle, Mr. Benjamin M. Earley, Mr. James Bencard, Dr. S. Fleet Speir and Mr. Chas. Fiske. The President, Dr. Aten, having arrived, now took the chair. The following were elected honorary members. Dr. J. Rawlings Young, Col. Gordon, Mr. S. O. Bruce and Mr. George Bird Grinnell. The secretary read a protest from Mr. G. W. Bassford protest wexied a decidedly warm discussion, and was finally decided by declaring the stake off, and returning the forfeit money to those who have paid it. It was decided to call a meeting of all the members of the club for the purpose of attering the J-laws in regard to changing the number necessary to compose a quorum of the Executive Committee from hinto five. The club resolved that the thanks of the club Stakes Should be raffied off, for the benefit of the club, and

Messrs. F. R. Ryer, J. Pentz and W. A. Coster were appointed a committee to arrange the raffle. The nominations of officers for the election in January was next in order, and a number of candidates were nominated for each office. The meeting then adjourned.

#### PITTSBURGH DOG SHOW.

PITTSBURGH DOG SHOW.

The entries will close on January 17, 18 and 19. The entries will close on January 6. Major J. M. Taylor, of Lexington, Ky., as we have already stated, will be the judge. The St. Charles Hotel has been selected as the headquarters for the committee and sportsmen, and under the able supervision of Mr. Charles Lincoln, the show promises to be a grand success.

The prizes are for champion English setter dogs, \$20 and \$10; bitches the same. Native English setter dogs, \$20 and \$10; bitches the same. Native English setter dog puppies under 12 months, \$10; bitches the same. Champion Irish setter dogs, \$20 and \$10; bitches the same. Success.

The prizes are for champion setter dog puppies under 12 months, \$10; bitches the same. Champion Irish setter dogs, \$20 bitches the same. Champion British setter dogs, \$20 and \$10; bitches the same. Grandpion Gordon setter dogs, \$20 bitches the same. Champion pointer dogs over 55 lbs, \$20; bitches under 50 lbs, \$20; bitches the same Champion Gordon setter dogs, \$20 shitches the same. Champion Finders of the same of the same champion Gordon setter dogs, \$20 bitches the same. Champion Silve, \$20 and \$10; bitches the same. Champion Lincoln setter dogs, \$20 and \$10; bitches the same. Champion Lincoln setter dogs, \$20 and \$10; bitches the same. Champion Silve, \$20 and \$10; bitches under 50 lbs, \$20. Pointer dogs over 55 lbs, \$20 and \$10; bitches under 50 lbs, \$20. Follar same, Irish water spaniels, \$10 and \$5. Cocker spaniels, \$10 and \$5. Field spaniels, should and \$5. Fock hounds, \$10 and \$5. Fock hounds, \$10 and \$5. Fock hounds, \$10 and \$5. Fock hounds, \$10 and \$5. Sock deer hounds, \$10. Mastiffs, \$1. Bernards, Newfoundlands, Siberian or Ulm, rough-coated shepherds, shull dogs, bull dogs, bull derices, and shepherds, smooth-coated shepherds, bull dogs, bull derices, and sheet and shepherds, shull dogs, bull derices, and shepherds, smooth-coated shepherds, bull dogs, bull derices, and sheet and shepherds, shull dogs, bull derices, and sheet and shepherds, shull do Fox terrier dogs, \$10 and \$5; bitches, \$10 and \$5; puppies, \$10. Greyhounds, \$10. South deer hounds, \$10. Mastiffs, \$18. Bernards, Newfoundlands, Siberian or Ulm, rough-coated shepherds, smooth-coated shepherds, bull dogs, bull terriers, skyo terriers, pugs, Scotch terriers, bulck and tans, York-shire terriers, King Charles or Blenheim spaniels, Italian greyhounds and miscellaneous classes, \$10 to first and \$5 to second in each class.

The special prize is will be published next week.

Address all communications to Chas. Lincoln, Lock-box 303, Pittsburg, Pa.

#### PREVENTING DISTEMPER.

Editor Forest and Stream

Editor Forst and Stream:
In one of my late letters to Forest and Stream I wrote of M. Pasteur's (of the French Veterinary College) discovery of a means of vaccinating chicken cholera in connection with my article referring to the modifying and preventing of distemper in dogs by the same or a similar method. It may be of interest to your readers, certainly to the scientific ones, to learn of M. Pasteur's proceeding with the feathered race, as showing how feasible it may be in the case of the canine malady.

malady.

The gentleman in question has finally disclosed his famous result, so long awaited, and we copy from the Cincinnail Leavet and Clün'te the following: "We have before us the text of the publication presented simultaneously to the Academy of Science and the Academy of Medicine. This revelation consists in the attenuation of the virus by simple contact with the atmosphere. In effect it is the simple change of the mode of culture of the parasite, whereby the stages of its development are clongated. In this way the virulence of the virus is pressively diminished until, as the author says, 'we obtain a true vaccinut virus which does not kill, produces a benign form of the disease, and protects against a mortal malady.' The author declares further: 'It is not to be believed that these attenuations of the results occur with fixedness and mathematical regularity. In some experiments the virus continues to exhibit considerable virulence even after the lapse of The gentleman in question has finally disclosed his fam-The author declares further: 'It is not to be believed that those attenuations of the results occur with fixedness and mathematical regularity. In some experiments the virus continues to exhibit considerable virulence even after the lapse of five or six months. The cause of this difference, however, becomes apparent on examination. Very often a high degree of virulence ceases suddenly with the death of these microscopic parasites. The death of the parasite is an habitual and constant circumstance with the lapse of sufficient time. "It is this necessity of 'temporization,' which M Pasteur invokes in passing, as the true cause of his silence to the present time. "The attenuation of the virus is the capital fact. But what is the real cause of the diminution of the virulence? "The cultivation of the parasite requires as a necessity an absence of air. This parasite is therefore one of those which M. Pasteur has already characterized as erobies. It cannot develop in the presence of the air. Is it then the oxygen of the air which reduces the intensity of its virulence? Does the parasite undergo such attenuation in the presence of oxygen as to suffer modification in its effects? "This hypothesis was easily verified by experimentation. For it is true that in the experiments conducted by Pasteur, with all his characteristic precision and delicacy, the virus kept in hermetically sealed tubes lost none of its poisoning power, while that exposed to the air gradually lost it altogether. "The problem we study thus resolvesitself,' said M. Pasteur. 'It is the oxygen of the air which enfectles and destroys the virus.'
"And further he adds:

rasteur. At is the oxygen of the air which enfectles and destroys the virus."

"And further he adds:
"We have here probably more than one isolated fact. We have come into possession of a principle. We may hope that the inherent action of oxygen, a natural force present everywhere, may show the same efficiency with regard to the virus of other diseases. The widest generalization should be made at once of this method of enfeebling the virulence. It derives its virule from the cosmic order of things, so to speak. May we not, indeed, attribute to this fact the limitation of epidennics in our times and in the past?

"This modification induced in virus by the action of the atmosphere has been long known and appreciated. We have, for so long a time as we have had it, protected vaccine virus from the air in every way. Exposure to the air destroys it. We keep from the air by wrapping it in lead foil, or we seal it hermetically in glass tubes by the aid of the fame of a lamp."

it hermetically in guiss those by the first property in likewise stated that vaccination was resorted to in France for distemper in dogs, but particulars were not given. We helieve, however, that before long it will be, if it is not already, as efficacious as the vaccination of the human patient for smallpox; but we are not so sure that vaccine matter is the true virus. We advised its trial in our last, butdoes not the discharge in distemper embody a parasite? Can any one of your readers inform us? Let us microscopically examine, and if it is found to be so we have the starting point.

Homo.

#### WHAT IS A COCKER?

ANN ARBOR, Dec. 12.

WHAT IS A COCKER?

Editor Forest and Stream:

Thave canvassed the various views presented in late issues of your valuable and "high-toned" paper touching the standard of the modern cocker, and while I appreciate the one great object that seems to animate all these writings, I see in some of them a decided leaning rather to their own strain of dogs than to the fixing of a universal standard that shall govern all classes. I know it will be found a difficult, possibly a theukless, task to adjust the various opinions as to the weight, size and the manifold points that are to make up correct judgment in preparing this standard. Therefore men of mature judgment, men who have spean many years of their lives in studying the nature, habits and physical proportions of this bright, beautiful dog, men who can see by that knowledge, gained by long and familiar experience with the cocker, what is required to form this standard in order to bring him up to the perfection demanded, should be put on this committee. The more I hear from those interested in this subject, both through your paper and from private correspondence, the more I am convinced that we will have either an excellent and judicious criterion from which to judge the modern cocker, or we shall have an abortive method which will be erroneous, impracticable and unsatisfactory to all save those, perhaps, who are especially and particularly interested. Now let me say here that I ask no preferment in this matter, nor will I have anything more to do with it than to open the way to see that the right men are placed on this committee. I have no axe to grind, and I hope what I may say will be construed as meaning only a deep and abiding interest in the cocker; to lift him out of the slough of uncertainty and doubt into an honorable and creditable position where he shall stand among dogs the peer of the best and inferior to none. That he possesses the highest and best traits of canine quality, both for the field and the house, there is no one who know this intelligent and

engender animosity and create a neutious standard that will degrade this bright and heautiful dog to the vilea?

"Mongrel cur of small degree."

We want no "club" such as has heen talked about; we want no "prize of \$50;" we want no "bench show" judgment as at present recognized; in fact, we want nothing to do with "fixing up a cocker" that "comes nearest to our present standard," until there is a just and sound standard to judge him by. Who that has read about the judgment of the cocker in our "bench shows" already had, who that has seen the impotent and lame decisions that have caused the blush of shame to mantle the cheek of him who knows the cocker, will acquiesce in these recommendations, so devoid of good judgment, so recreant to the knowledge of what truly belongs to this grand little dog. While we have such breeders and lovers of the cockers as McKeon, Whitman, Cummings. Pitcher, Allen, Hoe, and others too many to individualize, I trust his good qualities will be appreciated and the genius of his dogship will be kept spotless and untarnished from the machinations of schemers and selfish propagandisms. Let us have men, not boys, to fix the status of the modern cocker; then let us all do whatever lies in our power to cultivate and bring these field and house pets up to a commendable standard. Let us all, who are true friends of the cocker, work right up to the standard that shall embrace the good of the hreed, its future usefulness, strength and beauty, place him where he belongs in the strain that shall elevate him to a higher destiny and prove him not to be the least valuable acquisition to the true sportsman. I will assist with money and influence to erect such a standard if you will give the cause publicity and help us on to the acquisition of a better status than has heretofore governed the cocker. I believe the largest breeders, from obvious causes, are, as a rule, most worthy to be appointed on this committee. Now is the accepted time, and let all true friends of the cocker strike while the iron is

The Cocker Club-1,182 Chestnut Street, Elizabeth, The Cocker Club—1.182 Chestnut Steet, Elizabeth, N.
J., December 14.—Dear Sin: As you have doubtless seen in
the columns of Forest and Strief and exhibitors, and
the request that I should ach as Secretary protein, to which
I have acceded, I take pleasure in laying before you the general outline of what is proposed to be done. You will readily
understand that these ideas are by no means fixed, and it is
the province of gentlemen who may join the club to make
any proposition they may desire to have placed before the
associate members. I send you the views which have been
appropriated to be and have been talked over by investl and
friends in this neighborhood assembly these most applicable to

attain the desired end. First I will state the objects of the nb, which are as follows:
The framing of a standard for the judging of cockers and

The framing of a standard for the judging of cockers and spaniels.

The offering of extra premiums at bonch shows at which suitable classes are given, and whore the show authorities will select competent judges from a list compiled by the club. In England several clubs exist, such as the Mastiff, Bulldog, Fox Terrier, Irish Terrier, and Dandie Dinmont Terrier, and the good they have done in advancing the breeds to which they are devoted is incalculable. Such being the case, we can hardly do better than accept them as a guide for us in forming our club. A gentleman of this city, who was one of the originators of the Irish Terrier Club, has given me the following information as to how that was formed and what the club did:

A circular letter wassent to every person known to be interested in the breed, and from the list of those who expressed a willingness to accept a dozen was struck off as a committee of management, and sent around for the vote of the members. My informant says that such a large committee was found to

ested in the breed, and from the list of those who expressed a willingness to accept a dozen was struck off as a committee of management, and sent around for the vote of the members. My informant says that such a large committee was found to work slowly and much delay business, and that one of seven would expedite matters materially. The whole management of the club and the election of new members falls to the lot of this committee. Having thus formed their club, the Irish Terrier committee men waited upon the English Kennel Club committee, and expressed their willingness to give additional prize money, together with medias, provided the Kennel Club would select from a list of half a dozen names one gentleman to act as special judge of the breed. This the Kennel Club readily predictors to do, as thereby they were assured of a better premium list, and also of the support of the prominent breeders as exhibitors. The same course has been adopted ever since, and by the instrumentality of the Irish Terrier Club committee classes are given at many shows where none were provided before, and the breed has now become one of the most popular in the estimation of those who like a game terrier. An annual meeting of members is held once a year, when the new committee is elected to act for the year then ensuing.

It is just such a club as that that we require here to do away with the present very much diversified types of field spaniels and cockers as seen at our bench shows, and get some harmony in our exhibits by knowing what we must all recognize as the standard. That the renains for the committee to do. All I am desirous of doing is the procuring of your name to put on the list of members. The annual dues will be either \$2 or \$3, as determined by the committee, and as an entrance fee will likely be required from those who join after the organization of the club, it will he an advantage for you to give me a favorable answer at your early convenience, besides that I want to get things in running order as soon as possible.

THE COCKER CLUB.-We should be pleased to comply with the suggestion of "Senex" and those who have seconded his request that the Forest and Stream should send out circulars to the cocker breeders had that request not come to us after we had already received and published Mr. Macdougall's assent to "Leam's" nomination of that gentleman as Secretary pro tem. To so interfere would be ungracious, and indeed we believe that the opposition to "Leam's" nomination has arisen from a misapprehension of just what our correspondent To put cocker breeders into communication really meant. with each other it is necessary that some one individual shall do the clerical work. Mr. Macdougall has expressed his willingness to perform that labor, and offers to act as a temporary secretary until those who are interested shall by their ballots appoint the secretary and committee of the proposed club. The cocker breeders who join the club have it entirely within their power to elect whom they please. The Forest AND STREAM hopes to see a large enrollment in the proposed club and a competent secretary put into office by the ballots of the members. The whole direction of the club must be in the control of a majority of its members. Let that majority decide by their votes.

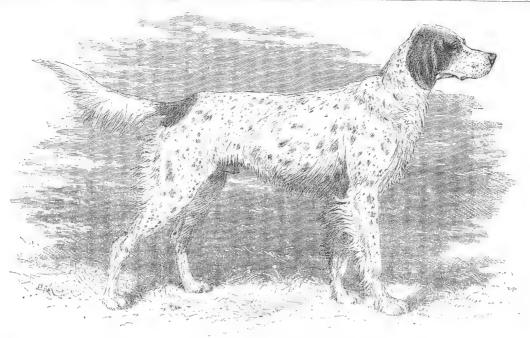

FRENCH TRUFFLE HUNTING .- The following extracts, taken from a letter recently printed in the Times, are of interest to dog lovers. The gathering of truffles gives bread to a considerable portion of the peasantry in the neighborhood of Bordeaux, and the account of how the dainty is found is

of Bordeaux, and the account of how the dainty is found is an attractive one. The extract is as follows:

The ground is red, a tritle stony, and not over productive. The good peasant has to toil and moil, and then gets but a poor return. He carefully selects the richest spots, those that are warmed by the sun, and then le plants his crop. It used to be a notable vine country, and people made a good living with their wine crops; but alas! the terrible phylloxera came and destroyed the grape, and things were going, at least with those who owned vineyards, from bad to worse. It became then a necessity that many of the peasants who worked in the vineyards should find some other pursuit. But necessity is the mother of invention, and the peasants, who had long known that truffles existed in their grounds, now set about looking for them.

A man alone cannot always find a truffle. In this country the assistance of that animal, sometimes associated with good St. Anthony, is dispensed with. Perigord truffle-hunters still worship the pig as the great discoverer of the cryptogram. The pig has a rare nose, but he is a glutton. Think only of the many lovely truffles these brutal and gluttonous pigs have surreptificusty devoured! There has been heard a crunch, then a grunt of satisfaction, and a glorious truffle, which, had it been rescued from the animals jaws, would have graced the windows of the great Chevet in the Palais Royal and attracted all Paris, has gone for ever, to simply please the indiscriminating appetite of a hog. On peasant here employs a dog, and the instinct of the animal and the intelligence of the man are combined.

The dog himself is no special breed. We call hin a quiffon. I do not think he is of pure race. You would pass him by without a comment at your dog shows. I know in New York you have gone crazy about dogs, and would think it few majeste to put your \$1.000 setters or pointers at truffle, hunting, out be awayed that, although familiar with dog and gun, I have a profound admiration for the great s

P. H. BRYSON'S GLADSTONE

little French griffon shows. I would put his fine nose and instincts on a par with your best blooded stock. A griffon, then, has a delicate sense of smell, and all that has to be done is to educate him. Catch him spoiline a truffle! He would no more do that than would a retriever chew up a woodcock. In order to educate the dog he is scantily fed, and only given bits of bread or pieces of meat which have been rubbed with truffles. One might say that though the dog's face was seant it was well flavored, and quality took the place of quantity.

In hunting for truffles with a dog, the animal quarters, leaving not a foot of ground uncovered. He comes to a full stop, and points whenever he noises a truffle. He not only points, but sets to work to find the truffle is not too deeply imbedded he will drag it out. Whenever he fluids one, or has indicated the place where a truffle is discovered, he is rewarded. Besides being called "good dog," he is given a piece of cheese or a fragment of cake.

#### GLADSTONE

(MAMPION GLADSTONE is owned by Mr. P. H. Bry. son, of Memphis, Tenn. He was bred by Mr. L. H. Smith, of Strathroy, Canada, and was whelped July 23, 1876. Gladstone is by Llewellin's Dan ont of Higgins' Petrel; he is a blue Belton and weighs about fifty-five pounds He is powerful in the loin, fore-arm and hind quarter, with plenty of chest and the very best shoulders, and the most perfect, feet. He won the Puppy stakes at the Tennessee Trials held at Nashville in 1877, by a score of 64% out of a possible 66, the highest score made by any single dog in the United States. He won third with dog Whip in the Brace stakes at the same meeting, also second with the half brother Lincoln at Nashville, in 1878, in the Brace stakes. It is claimed he is the fastest all-day dog in America. In the race against Joe, Jr., at Florence, Ala., December, 1879, owing to a broken tail, he could not be hunted for two mouths before he ran. His speed and bottom were so apparent the judge for Joe, Jr., stated after the race that Gladstone was third faster than Joe, Jr. One thousand dollars to five hundred was offered at the end of the second day that Gladstone could beat Joe the third day, but this offer was declined. He ran through this race with his broken tail glued in muslin. He was entered in the Free-For-All at cennes, in November last, and sold in the pools almost equal to the balance of the field, which was composed of some of the best dogs in America. A snow-storm prevented the race. He won first in the All-aged stakes at Robin's Island, on

the fourth of this month, in a class of twenty-seven dogs many of whom were the finest in the East. He has never been beaten on the bench, and numbers the following as his winnings : Champion First in Open Class; Special for best English setter, and Special for best setter of any strain, St. Louis, Champion and Special for best setter of any strain, Boston, 1878; Champion and Special for best imported set ter of any strain, and Special for best setter imported or native, Baltimore, 1878. Mr. Bryson has perhaps had the highest offers for Gladstone ever made for any setter in the United States, but he refuses to sell him at any price.

IRISH WATER SPANIEL KENNEL—Messrs. Whitman and Olcott, Chicago, Ill., have named their kennel of Irish water spaniels, Excelsior Irish Water Spaniel Kennel. This kennel, comprised of Champion Barney, said by J. S. Skidnore to be the best dog of the breed ever sent to America; the

dog Mike, also imported from Skidmore's kennel, and winner aog Mire, arso imported from Skidinore's kennel, and winner of several prizes on the Bench in this country, together with the bitch Bridget, imported from Richard White, Dublin, Ireland: Lady and Queen of the River, descendants from the noted Sinbad, make a kennel equal if not superior to any in America. It is believed to be the only one having two first class stock dogs imported from the best kennel in bereland. in England

#### KENNEL MANAGEMENT.

22 Hammer Less.—My bitch got out while in heat and was lined by a mongrel. She now has pupples three days old. What can I Ans. Kill the puppies and dry do to get her in hunting shape?

23 G. H. B., Yashua, N. H.—What shall I do for my pointer puppy eight months old? About three months ago he had two fits and I thought he had worms and I gave him areca nut and followed if up with easter oil. He passed blood, To-day he had a rit and and then cannot o himself again. Ans. The puppy needs plenty of exercise which will probably put him all right

24 T. A. G., Esopus, Ulster Co., N. Y.—The best book on dog training is by Col. Hutchinson. English edition \$3.75, or same combined with treatment of dog diseases by Dinks and Mayhew, American edition, #3. We can furnish either.

25 J. P. S , Leavenworth, Kansas, -1, Can you tell mo safe cure for distemper? I have used various remedies, but have found that they often left the dog in bad shape. 2. I have a dog that is just recovering from a very severe attack of the mange, used Glover's mange cure on him after trying almost everythi else, and now he seems in perfect health; no fever, appetite good, but his hair does not seem to start. He has been apparently perfeetly well tor over three weeks now, but the hair obstinately refuses to come out and he is still as baldas a billiard ball. 3. Please give me the pedigree of Dr. Ateu's Glen. Ans. 1. There is no specific for the cure of distemper; each case requires special treatment, 2. Try crude petroleum, rubbing a little in at a time. A friend of ours recently was very successful in its use. Of course if the roots of the hairs are destroyed nothing will do any good. 3 Dr. Aten's Glen is out of Mullin's Belle by Colburn's Dash by Putnam's Dan out of Valentine's Fannie. Dan by Paul Mead's by Futuan's Dati out of valentine's Famile. Data by Faul Mead's Dash out of Putuan's Nell. Faunie out of Talcott's Nell by his Sport. Nell by W. Watson's black and tan dog out of Munkittrick, Mullin's Bell by Polhemus' imported Duke out of Jane. Jane by Robinson's Jack out of Thompson's Belle. Jack by Putnam's Dan out of Palmer's imported Belle. Thompson's Belle by Rodman's Dash out of Fannie. Rodman's Dash by Paul Moad's Dash out of Palmer's Belle.

26 H. W. H., Lowville,-I have a hound twelve months old whose eyes are small. Five months ago a cat scratched one eye; since then it has run a great deal. Both eyes have been quite weak. The hound then became unwell and at times refused to eat. The dog has been fed on fresh meat. What shall I do for him?
Ans. Feed no meat for a month, and wash the eyes with tepid

27 F. M. P., Madison, N. J .- What can I do for my o I have owned him four years. A year ago he commenced coughing very badly and I supposed he had caught cold, but he has kept that cough now for a year. He at times tries to choke something up, but he does not succeed. A gentleman recently told me that he has seen coon dogs in the South troubled with exactly the same thing, and that the cough is caused by hair getting in the wind pipe. Ans. The dog should be carefully examined by some competent surgeon to ascertain if there is a foreign body that can be removed. See Dr. Dancer, Central Hotel, Orange, N. J., he will make examination.

#### KENNEL NOTES.

#### NAMES CLAIMPID.

NAMES CLAIMED.

Rer.—Mr. Juhn W. Woodring, of Chicago, Ill., claims the name of face for frish setter puppy out of Dell by Elcho H. recently purchased from Dr. J. J. Jennelle, Du Quoin, Ill.

Rap.—Mr. Edmond Orgill, of Brooklyn, N. Y., claims the name of Rap for pointer dog puppy out of Clymont (Fluke-Lily), by Rocket (Claude-Roun).

Rival—Mr. Edmund Orgill claims the name of Rival for pointer bitch puppy out of Clymont by Rocket.

Roverel—Mr. Edmund Orgill claims the marne of Rowett for pointer dog puppy out of Ruby (Flake-Lily), by Rome (Sensation-Rose).

pointer dog puppy out of Ruby (Flake-Lily), by Renne (sens-nuon-Rose).

\*\*Rill—Mr. Edmund Orgill claims the name of Rull for pointer bitch puppy out of Ruby by Rome.

\*\*Melody—Mr. Edmund Orgill claims the name of Melody for besgle bitch puppy presented to him by Gen. Rowett, Carlinville, Ill

\*\*Tuck—Mr. Edmund Orgill claims the name of Tuck for fox terrier dog puppy by Nip out of Wasp.

\*\*Bee—Mr. Edmund Orgill claims the name of Boe for fox terrier dog puppy by Nip out of Wasp.

\*\*Grip—Mr. Edmund Orgill claims the name of Grip for fox terrier dog puppy by Nip out of Crib.

\*\*Klord—Mr. Edmund Orgill claims the name of Grip for fox terrier dog puppy by Nip out of Crib.

\*\*Klord—Mr. Hugh L. Willoughby, of Saratoga Springs, N. V., chaims the name of Rice for his black with white markings cocker spaniel blitch puppy, whelped Nov. 18, 1880, out of Doliy by Wilden.

\*\*Special Render Charles, Edbl. N. V. observation.

ir.
Tear—Mr. Byron B. Fowler, Glenn's Falls, N. Y., claims the name of Tsar, for his thoroughred St. Bernard puppy, wholped June 10, 1880, out of Mr. Alfred Brunctt's Gretchen by same owner's Don.

mute 10, 1880, out of Mr. Alfred Brunctt's Gretchen by same owner's Don.

Palssy-Mr. M. H. Clark, Clarksrille, Teun, claims the name of Palsey for Irish water spaniel puppy out of Lady, recently purchased from Messra, Whitiana and Olcott, Chicago, II.

Connectrons—Gypsey—In our issue of December 2, Mr. S. G.
Bovington's name was published Mr. S. G. Berner, Jr., we wish to make correction, and state that Mr. Bevington claims the usnue of Gypsey for his bitch puppy out of Buff by Heck.

Sales.

Eleho II.-bell Whelp—Dr. J. J. Jennelle, of Du Quom, III., has sold to Mr. John W. Woodruff, Chicago, III., a red Irish setter dog pup by Eleho II. out of Dell.

Irish Runger-Irish Countess Whelp—Dr. J. J. Jennelle, of Du Quoin, III., has sold to Mr. L. F. Kelly, Princeton, Kan., a red Irish setter bitch pup by Irish Ranger out of Irish Countess.

Judy and Sanuty—Mr. M. H. Clark, of Clarkswille, Tenn., has purchased the Irish water spaniels Judy and Sanuty from Mr. W.

H. Holabird, Valparaso, Ind.

Sally—Mr. F. F. P. Ficher, Riverside Cocker Spaniel Kennel, Claremont, N. H., has disposed of the cocker spaniel bitch Silly (Suin-Elit, C. F. P. Filcher, Riverside Cocker Spaniel Kennel, Claremont, N. H., has dely on Mr. F. F. F. Fircher Mr. F. P. Filcher, Riverside Cocker Spaniel Kennel, Claremont, N. H., has seld to Mr. Win. Lee, the cocker spaniel bitch Filtr out of imported Julietto by unported Snip, wholped May 25, 1877.

Bob-Filtr Whelp—Mr. F. F. Filter, Riverside Cocker Spaniel

777. Bob-Fürt Whelp—Mr. F. F. Pitcher, Riverside Cocker Spaniel ennel, Claremout, N. H., has sold to Mr. S. Porter a dog puppy

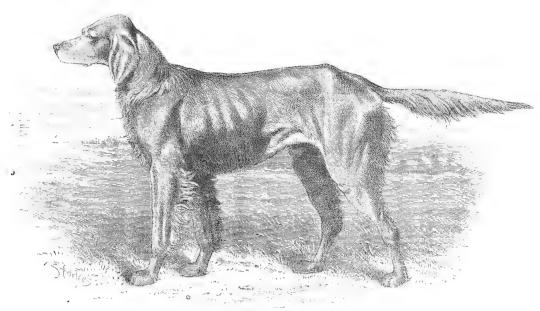

Bob-First Wheep—art, F. E. MARKEY, The Reme, Claremout, N. H., has sold to Mr. S. Porter a dog puppy out of Plirt by Bob. Dan—Mr. C. Du Tour, of Cinemnati, Ohio, has purchased from Mr. H. B. Vandersmith the red Frish dog puppy Dan, out of Banshee by York.

Countess Bear—The Montriew Kennel, Columbia, Tenn, has sold to Mr. H. H. Pursell Llewellin, South Ornsby Hall, Lincolnshire, England, Countess Bear (Dan-Countess) Hall, Lincolnshire, Lincolnshi

Laird—Hamilton, Ont., Dec. 15, 1830—I had usmed the Gordon setter received from Dr. Niven, Laird. You will be sorry to hear that Laird died on the 7th inst. very suddenly, showing no symptoms of disease.

English Fox Hanting.—The item to which this caption was given last week, and with which it was intended to appear, was this:

The Chidding fold hounds, of which Mr. J. Godman is master, met at Bromley, near Guildford, on November 13. A fox was soon found, and the hounds were in full cry when.

MAX WENZEL'S CHIEF.

on coming to Allden's Hollow, the whole pack went over the brink to the bottom of the hollow, a depth of nearly forty feet. Two of the hounds were killed, and eight others seriously injured. ----

#### CHIEF

CHIEF is owned by Mr. Max Wenzel, of Hoboken, N. J., and is a very fine, well made Irish setter dog of fifteen months, and his having been trained with good judgement, landed him at the head of his class in the Puppy Stakes. He is by champion Berkley out of champion Duck, both sire and dam being owned at this time by Mr. A. H. Moore of Philadelphia. Chief won second in a class of twenty-seven entries, N. Y., 1880. Hissire, Berkley (Elcho-Loo II.), was whelped July 10th, 1876, being bred by the St. Louis Kennel Club, and has won the following prizes: Hampton, Iowa, 1877, second prize, puppy stakes, nineteen entries; St. Louis, 1878, first prize, open class; also following specials: best brace with his dam, Loo II.; best pair with Loo II.; best kennel with Loo II.; best setter of any age or breed bred in America; best setter bred in the United States. Boston, 1878, champion prize; also specials; best pair with Loo II.; best kennel with Loo II., etc. New York, 1878, champion prize. St. Paul, Minn., 1878, champion prize. Philadelphia, 1879. champion prize; also special for best Irish setter dog; St. Louis, 1879, champion prize, also special, with Duck, for best pair of Irish setters, and special for best Irish setter dog; New York, 1880, champion prize; St. Louis, 1880, champion prize, also special for best Irish dog or bitch in the show

Duck (6209 English Kennel Club Stud Book), dam of Chief, was imported by E. F. Stoddard, of Dayton, Ohio, and bred by Dennis Reidy, Esq., Castle Island, Kerry County, Ireland. She is by King's Erin, out of Rose. Her winnings are as follows: Before importation, Birmingham, 1875, first prize; Brighton, 1876, second prize; Wellington, 1876, first prize; Nantwich, 1876, first prize, and lington, 1876, first prize; Nantwich, 1876, first prize, and champion cup for the best sporting dog exhibited. Since importation she has won: St. Louis, 1877, first prize; St. Louis, 1878, second prize; Boston, 1878, first prize; Baltimore, 1878, champion prize; St. Paul, champion prize; Detroit, 1879, first prize; and special prize for best Irish setter dog or bitch; St. Louis, 1879, champion prize, and also special for best Irish bitch and, with Berkley, special for best pair of Irish dogs. It will thus be seen that Chief comes of "moighty purtty sthock."

HON. O. F. WINCHESTER.

(From the New Haven Palladium, Dec. 11.)

[From the New Haven Palladium, Dec. 11.]

THE American flags, displayed at half mast yesterday noorning from the turrets of Winehester's armory, aunounced to the gathering workmen and the passers that the genius which had conceived that great enterprise, and the hand that placed in motion its swift flying machinery, lay palaced in death. The death of Governor Oliver Fisher Winehester was not a surprise to those who were aware of his feeble condition for the past few weeks, yet, as is natural when a life that has been busy and eventful with enterprises closes, the community stops for a moment to review that life and regret its dissolution.

Although the most active, prosperous and useful portion of the Governor's life has been spent in this metropolis of Connecticut, he was not a native of the State, being born in Boston in November, 1810. Living in Boston under its peculiar influence for a con-siderable time he naturally became imbued with a knowledge of the importance of education as a bulwark for our republic, for the in later life. The early years of his life gave such taugible support in later life. energy and enterprise which produced the success which crowned his life-work, and made him such an important factor in the comms inte-wors, and made aim such as important factor in the com-mercial and manufacturing interests of the city of his adoption. At seven years of age he left the city for farm life, attending school in the winter and working upon the farm in the summer. At fourteen, with these limited means of education, he was ap-prenticed to a corpenter. Faithfulness and broadness of character marked this peoch of his life, as in all subsequent periods of his existence, and six years later he went to Baltimore as a master builder. Although a mere youth he took the contract for building a church, which he consummated with success. In 1837, then twenty-seven years of age, he changed his business and opened the first men's furnishing store in Baltimore. He remained there eleven years, when, in 1847, he came to this city, and since then his life and enterprise have been well known by the older inhabit-ants of the city. As a natural outgrowth of his business in Baltimore, he invented a perfectly fitting dress-shirt and obtained a patent for it in February, 1848. He immediately began the busi-ness of shirt-making, a new business for those times, and was located on State street, in what is known as the old Carfield building, only half of which is now standing. Patronized at first by appreciative friends his business soon increased, culminating in the extensive factory on Court street, between Olive and Union streets, and his partnership with J. M. Davies. The enterprise was a success, sewing machines taking the place of hand labor, and hundreds of thousands of the patent shirts were produced. It was here that the fortune which was the basis of his other enterprises was amassed.

prises was amassed.
In 1857 he became interested in a new fite-arm invented by Pen-jamm F. Henry, of Gentreville, and a company was formed for its manufacture. The shop was located on Artisan street and Mr, Winchester was a large stockholder. The name of the company was the Volcanic Arms Company. The enterprise did not prove a success, and Mr, Winchester purchased the entire stock and formed a new company in 1860, under the name of the New Haven formen a new company. He was selected as its president, and immediately assumed control of its affairs. This may be said to be the beginning of that great business which is now known the world over, and which has added so much to the commercial strength of the city, giving employment for a longer continuous period of time to more people than any other enterprise ever conducted in this city. A sketch of the rise and progress of this enterprise would almost be a record of the improvement in fire-arms for the pastwenty years. Mr. Winchester was progressive and eagerly sought out the latest improvements and inventions, calling to his aid and the aid of the company, at the head of which he stood, the most improved machinery for manufacturing the goods. In 1865 a special charter was obtained, and with a capital of \$500,000 the Winchester Repeating Arms Company was established. New in-ventions were adopted at this time, and the Winchester repeating rifle soon came to be known as a standard fire-arm. The principal unprovement was one designed to faciliate the transfer of the cartridge from the magazine to the barrel. Improvements were made in 1873, and still further in 1876, the latter being called "The Centennial." In 1872 the company began the manufacture of curtridges, which forms a large element of its business. It need not be added that in every respect this enterprise is a success, and brought to the founder and mover of it all a large fortune. This fortune, however, was not for self alone. Mr. Winchester was a liberal man and contributed largely to various worthy objects.

In 1876 he gave to Yale College the tract of land of thirty-six acres north of his residence, for which he paid \$90,000. This was donated for the establishment of an astronomical and physical ob-servatory. This tract of land is one of the most eligible for resiservatory. This tract of land is one of the most eligible for residences within the limit of the city, and will in time bring to the college many times its cost to the donor. He also contributed liberally to other departments of the college, more especially to illurially to other departments of the college, more especially to the scientific school. He was connected with the Calvary Baptist Church, and assisted materially in the crection of the heautiful house of worship at the corner of York and Chapel streets. He was a friend to all plans of education which would upbuild

and bonefit the people. As a man occupying a prominent position in the city and always interested in its welfare, he was naturally drawn into politics. Hus first public position was councilman from the old Fourth Ward in 1833. He was also a presidential elector. In 1866 he was nominated and elected lieutenant governor of the

State on a ticket headed by General Joseph R. Hawley for governor. Governor Winchester early became interested in pomology and floriculture, and, as his fortune increased, made a practical use of his tastes in the beautiful grounds on Prospect street surrounding instances in the occurring grounds on Prospect street surrounding his residence. These are the most extensive and most beautifully kept grounds in the city. No expense has been spared to make them complete productions and artistic in arrangements. Here in his beautiful and palatial home, surrounded by the fuxuries of all that could be accomplished by a skillful gardener sustained by liberal means, Governor Winchester passed the twelve months of illness under the tender care of loving friends and relatives. From the broad windows are extensive views to inspire the heart and please the imagination. To the west and south the rugged front of West Rock, with outlines melting away into the dense forests of Edgewood, while nearer, the great armory, teeming with life, showed its long line of walls and its banners of curling smoke. Showed its long line of wairs and its camers of curing smoke. City and country, forest and plain, necadow and stream blend to make the view a delightful one. Governor Winchester was endowed with vouderful perseverance and indonitable courage; be saw the red and golden streaks of sunshine where to others it was cloudy and overcast. He was a representative of what may be acomplished by hard and honest labor by every American boy. His death was the result of a stroke of paralysis which he sustained about a year since. Although unable for the past twelve months to give his attention to his business, he was confined to the house but a few weeks previous to his death. He leaves a wife and a son and a daughter-William W. Winchester, intimately connected with his father in the arms company, and the wife of Thomas G, Bennett, secretary of the company.

#### RANGE AND GALLERY.

CREEDMOOR-Dec. 18.-The Christmas match which took place to-day was another of those very attractive contests on the same plan as the popular match which was had on Thanksgiving. The shooting was at 200 yards, State model rides, and the match was open to everybody. There was some uncertainty growing out of the naming of the match, some of the marksmen having an idea that the shoot was to take place on Christmas Day. There were 119 original entries for the match, and the re-enteries ran the total up to nearly 700. The day was very cold and a cross wind mads holding somewhat difficult, but with so many excellent off-hand shots present it became necessary to hold very close if any ex-pectation was had of getting into the hundred prize drawers. Rifles were loaned and ammunition furnished free for the match by E. Remington & Sons, and the long list of prizes included many articles of large, aggregate value from leading houses. The conditions made the aggregate of two scores necessary to a record, each score to consist of five shots. Willie Robertson outdid himself and the records of Creedmoor by putting in a perfect score of five consecutive bull's eyes at 200 yards, while another score of 21 gave an aggregate of 46 points. When the scoring had

finished at 4 o'clock, after a very summary and irregular wind-up of the match by the Secretary of the Association, a rush was made for the club house to see the novel drawing for the prizes. Much time was wasted in deciding many equal scores by drawing, a ceremony which might have been performed much quicker without the personal assistance of the shooters themselves. Then came eal pot-luck handicap of the match, for the 150 prizes had been numbered, and from the bag of numbers the shooters drow according to the following scheme. The maker of the largest aggregate to draw ten tickets or numbers from the bag:

To the second man, 8 tickets: third, 6; fourth, 5; fifth, 4; sixth, 3; seventh, 3; cighth, 3; ninth, 3; tenth, 2; clovesth to nineteenth, inclusive, 1; twentieth, 2; twenty-first to twenty-finth, inclusive, 1; thirtieth, 2; thirty-first to thirty-ninth, inclusive, 1; fortieth, 2; forty-first to forty-ninth, inclusive, 1; fiftieth, 2; fifty-first to fifty-ninth, inclusive, 1; saxtieth, 2; sixty-first to sixty-nurth, inclusive, 1; seventicth, 2; seventy-first to seventy-ninth, inclusive, 1; eightieth, 2; eighty-first to eighty-ninth, inclusive, 1: ninetieth, 2: ninety-first to ninety-ninth, inclusive, 1.

The six tickets remaining went to the leaders in a boy's match shot during the afternoon by lads under sixteen years of age. The boys shot five rounds each, the winning scores being: Harry Overbaugh, 23; J. S. Grohman, 23; H. A. Summers, 20 C. Paulding, Jr., 20; G. B. Brower, 19; Geo. Wingate, 19.
Frank Donaldson, the Secretary of the N. R. A. and originator

of the match, allowed his three tickets to remain in the bag until all others had drawn, and found a silk hat and a case of Rhine wineswaiting him. W. E. Wood drew a ticket, which he at once "swapped" for a dollar box of cigarettes, only to find a few moments later that the ticket drew a fine rille. Adjutant Murphy got an eight-day clock; J. Behan, a dictionary; \$100 in cold coin fell here and there, General Wingate getting a \$20 gold picca, and Styles and Silvernail took \$10 cach, leaving \$5 gold pieces for A. Beattie, L. S. Stevens and C. Le Boutillier. G. L. Morse, of the Morse Building, got an order for a new silk hat, a sort of head gear which he abominates. Denman, who had come all the way gear which he adominates. Defining, who have one at no way from Rahway, N. J., drew a large iced cake. A. Steele got a slik hat and three Japanese dolls. N. D. Ward, a Father Mathew man, got a case of Rhine whie. Some queer prizes Fell to the boys. Three of them received big boxes of tobacco, and one an order for a silk hat, a tool chest and a photo album.

Three of them received big boxes of tobacco, and one an order for a silk hat, a tool chest and a photo album.

The secres in the order of merit as determined by the drawing off of ites, stood as follows out of the possible 50:

W. Robertson, 46: 4. L. Fautding, 46: 1. Steele, E. W. Price, W. Robertson, 46: 4. L. Fautding, 46: 1. Steele, E. W. Price, D. L. Groiman and S. Charke 43: each; E. Alder, J. L. Morse, D. R. Groiman and S. Charke 43: each; T. J. Dolan, J. W. Mangran, W. M. Baires, J. Gavanagh, N. D. Ward and W. J. Underwood 42: cacl; J. Myers, J. H. Doughly and H. Douglass 41 cach; T. J. Williamson, J. Ross, C. E. Overbaugh, B. H. Holton, A. B. Van Heusen, C. L. Madison, A. J. Howlett, H. T. Parrell, T. C. Williams, R. Simpson, G. T. Seabury, J. R. Demma and J. J. Dixon 40 each; S. Kerr, C. W. Williams, M. M. Master, J. H. Cobb, W. R. Platt and W. Gushing 39: each; A. Deattie, W. F. Higgins, Geo. W. Wingate, C. J. Henry, H. C. Titus, A. M. Miller, 38: each; C. G. Zettler, J. P. Silvernial, J. Havishaw, J. M. Turner, T. Malfas, C. H. Stylos, M. P. Ross and C. S. Shaw 37 each; C. E. Lewis, A. Sumpson, C. E. Taynbor, G. F. F. Williams, H. H. Jowell and C. Le Boutillier, 36 each; N. E. Spaulding, W. H. Murphy, F. G. Fullgroff, W. Simpson, J. J. Simmonos, J. F. Klien and W. E. Wood 35 each; D. Miller, G. W. Robinson, W. Cormolly, L. A. Stevens, C. Johner, J. L. Boutilliere dessen, G. F. Live, On Langue, and M. Schmer, J. M. Summers, J. T. Hilton, C. G. Zettler, T. Ryan and S. Parsons 30 each; J. Behan and J. M. Hyatt 29: each.

NEW YORK SCHUETZEN CORPS, -A note from the Commandant. New York Schuetzer Corrs.—A note from the Commandant, Capt, Georga Aery, informs us of the death of one of the proniment members of the corps, Mr. B. H. Tienken, who has so well filled the post of secretary for fourteen years past. He died after long suffering on the 18th inst, and was buried on the 2t, attended by the corps in full uniform with the usual badge of mourning.

by the earlys in the instant water the detail stage of moderning. Boston, Mass., Dec. 18.—Though to-day was a charming one in overy respect, but few rithenen availed themselves of it to pie up a good score at Wahut Hill. The wind was rather hard to control, it being of that peculiar kind that would soften and then blow like a little gale, and all wind calculations were upset at every shot. The snow, however, has disappeared, and no unpleasavery shot. The show, however, has disappeared, that no impleas-ant effects were experienced from this cause. The spectators were numerous, among them being a lady from the western part of Massachusette, a Miss Griffin, who from the shoulder made the ole-gant score of 43 at 200 yards. Only the best records are given: Creedmoor Match,

On Saturday next a special Christmas match will be shot in ad-

lition to the regular list.

Mammoth Rivle Gallery .- Boston, Dec. 17, 1880.-The MANAGOTH MITHER ATTEMENT — BOSON, ROCK, 1986.—The second week in the any-rido match at the Manunoth Gallery has shown better shooting than any week during the season, and the crack of the Ballard, Stevens, Wesson and Remington rifles has been almost lacessant. The gallery was well filled both day and evening during

week. Mr. J. Merrill now heads the list with an excellent record of 192 out of a possible 200. He was nearly successful twice in getting the \$15 in gold, making two splendid thirty-nines. He made nine consecutive, ending a score of 39 with four bulls-cyes, and his first five shots on his next score were also bullseyes. He out up five scores which will be hard to equal, although Mr. J. H. Brown, of the famous Empire Rifle Club of New York, was equal to the task. He stopped at the gallery on his way back to New York from his trip East, where he went a week ago with the well-known shot, Milton W. Farrow, who is still there. Mr. Brown New York from his trip East, where he went a week ago with the well-known shot, Milton W. Farrow, who is still there. Mr. Brown showed good work and capital holding, and also made 192, but was outtanked by Mr. Merrill. Mr. U. A. Pollard is third with 190 Mr. Frank Hollis is fourth with 189 Mr. H. A. Buck is fifth with 186, and Mr. George Elisworth is sixth with 185. The subjoined summary will show the standing of the several competitors to date; 50 yards, rounds 8, possible 40, five scores to win or possible 200

J. Merrill	38	38 39	39-192
J. H. Brown38	38 3	38 39	89 - 192
U. A. Pollard37		38 38	39 - 190

the week. Many members of the Massachusetts Rifle Association practice here daily with this little arm, and prove themselves capital shots at this range. Mr. Elihu Wilder has increased his score one point during the week, and he now heads the list with 109 out of a possible 120; Mr. H. E. Armstrong is second with 106, and Mr. F. J. Rabbeth is third with 104, followed closely by Mr. J. Miller with 104, but outranked by Mr. Rabbeth. There are three Affiler with 101, but outrained by 30, taken a fixed collars for a clean score of eight consecutive bullscope. The following are the leading competitors with scores to date; 50 feet, rounds 8, possible 40, three scores to win or possible 120:

Ellin Wilder 36	36	37 - 109	Geo. F. Ellsworth, 33	33	34-10

YACHTING FOR THE MILLION.

Editor Forest and Stream:

EMILIOT FOREST MIM SOFTEM:

OTHING has given mo so much pleasure as the accounts of single-handed cruising that have appeared from time to time in your oxellent journal; for that sort of yachting is what I have taken to myself for the last three or four years with the groatest satisfaction. I think that if many of those who can afford large boats would give this manly side of the sport a fair trial they would never have cause to regret it. I have owned larger boats than the one that has now done good service for

several seasons, and I can sympathize thoroughly with those who, in a moment of confidence, have admitted that they were trived of keeping a "a salicy's boarding hones" aload. With all the charm there is in owning a fine large craft with an ample cabin for display and cutertainment, there are many opportunities when one would like to sail, but the very thought of what must be done to get a big vessel underway, and the necessary delay before size of the saws." On her course, cause many to give it in pand either like away." On her course, cause many to give it in pand either the sainthout we sample on their dilighty which amay in view of the sainthout we sample of the field of the course of the sainthout we sample of the course of the sainthout we sample of the course of the sainthout we sample the course of the sainthout we sample the course of the sainthout we sample the sainthout the sainthout we sample the sainthout the sainthout we sample that the sainthout the sainthout we sample that the sainthout the sainthout we sample that the sainthout the sainthout we sample that the sainthout the sainthout the sainthout we sample sainthout the sainthou veral seasons, and I can sympathize thoroughly with those ard. I will just here mention what division was made of the available

times exhibited my little cabin and accommodations with pride to an occasional boat worshiper whose honest "By Jove, what lols of room!" made me forget some of those disappointments to windward.

I will just here mention what division was made of the available space in a boat twenty-three feet and a few inches long. On deck, forward of the trunk cabin, there was six feet, giving onough room to handle anchors with safety. The trunk was 9ft, by 7ft,, the cockpit, 6x7, and 2ft. overhaug aft. The cabin was re divect to seven feet inside by forward bulked griving and one to the control of the control of the cabin was reduced to seven feet inside by forward bulked griving according to the control of the cont

have cover regretted because of the comfort gained, and now and then I meet some one who indorses this sentiment. As regards have never regretized because of the comfort gained, and now and then I meet some one who indorese this sentiment. As regards size in these small cruisevs I think thirty feet not too large, if a keel boat. We experience and knowledge of that of others, in this line, teaches that the boat should not be too large to prevent one gettling under way for a single hours' sail, or too small to accommodate two or three companions on a cruises. I have been often alone, and though I thought it rather show at first, with some risk perhaps, there being no helping hand in case of accident, I have beened to I have the best quantum of my own company and have perhaps, there being no helping hand in case of accident, I have beened to I have the best quantum of my own company and have beened to I have the best quantum of the cause of accident to boat and rigging. Every day's experience because something and brings another addition to one's store of facts. Old occan is a rough teacher sometimes, but we can never learn all in a lifetime. I shall hop to hear more of the experience of others in this stirring pastime through year columns, as the subject must be a popular one.

Neeport, R. L., Ibec. 10.

PINYLE.

Huxr's Manazis.—The December number proves to be more interceding than the summer issues. Craises and yealthing experiences take the place of dry racing accounts. From the craise of the Guinecree on Lake Ontaro, we quote the following:

Huxing but two weeks at my disposal this summer was not the Guinecree on Lake Ontaro, we quote the following:

Huxing but two weeks at my disposal this summer was not the Thomasund Islands at the lower end of Lake Ontario and back to Toronto via Oswego, Rochester and Ningara. I had just the University of the University of the Huxing overed 300 miles in her since being launched, had anaple opportunity of testing her sulling eventually the property of the biolidays commenced, but having covered 300 miles in her since being launched, had anaple opportunity of testing her sulling control of the Control of

of Qunite. The yacht is said to have capsized, the crew estiminary salore.

Here was a staggerer. Our friends in Toproth would see this in the morning before our telegram could arrive, and would naturally feel some anxiety. However, we had the consolation of knowing that their minds would soon be relieved by our telegram. We found afterward that on seeing the notice they telegraphed to Kingsbon for further information, and received reply that the report was a heav, just as our telegram arrived. It was rather rich, a centro-board yacht reporting a deep drugght critishing boat sa having succumbed to a gale which she herself had weathered safely, and those who know the qualities of the two yachts merely laughed at the report. I may add, however, that in the course of some correspondence in the papers on the subject, the owner of the Coquette denied that the report originated with him.

PADDLE vs. OARS, CEDAR vs. OTHER CANOES.

FADDLE vs. OARS, CEDAR vs. OTHER CANOES.

Editor Forest and Stream:
In your issue of Dec. 2 "Canvas Back "says; "The objections of 'Nessmuk' to the use of oars in hunting might be overcome by using bow-facing oars." In soom respects "Canvas Back "is right, in others he is not. Neither bow-facing or other oars could be applied to advantage on a canoe of twenty-seven inches beam—at least not without outriggers—and any one who wished to use an Beyonad canoe would hardly ear to suitch 15 pounds (actual Beyonad canoe would hardly ear to suitch 15 pounds (actual the state of the canoe would hardly ear to suitch 15 pounds (actual the state of the canoe would hardly ear to suitch 15 pounds (actual the canoe would hardly ear to suitch 15 pounds (actual the canoe) and the canoe would have the state of the canoe with a suitch 15 pounds. The same of spruce weighs less than 12, pounds so much for what the canoes has to "such eart" over the portages. Now about lumting with oars. If one was lumning on a very crooked stroam against a current, in a 40 to 60-pound beat, the bow-facing gear would be proferable, as by using great cure and taking short strokes he could go comparatively will "only our pactatively," for nothing else can could he deathlike ciliness with be ready to mer paddlew will propel a canoes—and would always be ready to mer paddlew will propel a canoes—and would not be required, and, if the reader will imagine a deer well in toward the further shore, in the accompanying sketch he will readily see the

advantage, and all the advantage, these cars posses

men to Bave a cance that would state a carry a long pole injury, "Canvas Back" says: "I would much rather carry a long pole of twenty pounds than a boat of same weight." Did "Canvas Back" over carry a boat in this manner?

Not on a hard wooden yoke hollowed out to fit the shoulders, but on a hight frame with broad straps that can be adjusted to fit any one in a moment's time. If he has I think he would let some one close take the "long pole," especially if the pole was covered with wet canvas, as it would be at the end of a day's hunt. All Adirondesk guides carry their boats in the above manner, and they are carried as easily as a knapasek of the same weight, the weight resting equally on each shoulder.

The average guide will take the So-pound boat over a carry.

The average guide will take the substantial and over a carry.

The average guide will take the substantial that is or 25-pound cance be would not need to rest from me 12 ill neon. The number woodsman, if in good heelth, had better seek pleasure elsewhere than in the wilderness if not equal to the task of taking an 18, 25, or even 50-pound boat in this way over short portages.

The writer has been there many times, "paddling his own cance" over many miles of lake and river, and "sole earling" it over many more ou land. He had rather earry a 40-pound boat on a good neckyoke in an open trail, be the distance one mills or ten, than to carry a pack of the same weight.

Regarding "air chambers," they can be put in any cance, and, though less necessary in a cedar than in any other, in nome can here bo built so easily.

#### Answers to Correspondents.

#### 13" No Notice taken of Anonymous Communications.

DUCKS, Chicago, Ill .-- Waterproof your leather jacket by soaking a week in boiled linseed oil.

W. M. D., Philadelphia.—The gunmaker is an ordinary one, Dues not command a high price.

S. S. T., Chicago.-The tallow if poured on the shot before the wad is put over it will insure close shooting.

M. A. A., Quebec. - Read our advertising columns ; they contain answers to every one of your six questions.

A. N. M., Thomasville, Ga.—Run straight edge along rib of barrels, and measure distance from lower edge to top of heelplate.

Duers, Atlanta, Ga.—1. Use 3½ drs. powder, 1½ oz. No. 4 shot. 2. Perhaps some of our readers may tell you how to ric, your premisers. ises of red ants.

P. F., Johnstown, Pa.-1. We have sent for the list of shot sizes and will publish as soon as received. 2. The highest size of chilled shot made is No. 1.

L. H. M., Walla Walla, Washington Territory, -The Newfoundland woodcutters sprinkle Cayenne pepper in their boots before going into the woods in winter.

DESPATE, Wilmington, Del.-The common blue ointment which you can get at any drug store will effectually protect your gun from rust. It has been tried with success. L. F. F. -Trap the foxes. Remember that all such vermin are

destructive of birds. You can stimulate the boys to clear out much of it before the birds come back in the spring. PRAIRIE CHICKENS .- 1. You may possibly secure the necessary

birds through the notice in the Forest and Stream. 2. The reports of migratury quail have not been satisfactory.

PITTSTON, -Sixteen parts have now been issued of Vero Shaw's Book of the Dog. The publishers are Cassell, Potter, Galpin & Co., 596 Broadway, New York. Price 40 conts a number.

Show Bound, Colorado.—You can procure the snow-shoe slippers erett Smith, Fortland, Me. They are manufactured in They are said to be much superior to the ordinary snow of Mr. Everett Smith, Portland, Me. Canada. ahoa

M. V. L., Carson City, Nev.—The scratches are caused by the shot. You can polish them out. But they will not affect the shooting of your gun, and we should not advise you to worry over -1. For instructions in camp building see our issue of

Jan. 29, 1880. 2. The recoil of your gun is due partially to wrong loading. You can easily determine the proper charge by experimenting. Do not overload.

L. H. M., Springfield, III.—We advise you to buy a breech-loading double-barrelled gun. The muzzle-loader is behind the times and the double-barrelled arm possesses merits which fully make for its greater cost

N. A. H., Saratoga.-1. You will find near St. Mary's, Fla., deer and bears, with ducks, wild turkeys and small game. Hotel secommodation. 2. This is a good time to go there. 3. There is a sportsman's club at Fernandins.

AMATEUR, Maryland, -- Use a No. " O" Newhouse trap for skunks Set near the mouth of the hole, and partially cover with grass and leaves. Bait with a piece of fresh meat. February and March are good months to trap the skunk,

LOWER BUNE, Windsor Locks, Conn.-1. We do not know the name. It is probably one put on a low grade of gun. 2. The price paid was probably sufficient, but of course it is impossible to answer such a question with certainty.

SUBSCRIBER, Philadelphia, Pa.—There is no strict line between amateur and professional shooters. There are a number of men who are recognized as professionals; and each club must exercise its option in barring shooters from its matches.

Curious, Chicago.—If your friend is not satisfied of the true na ture of the "Dittmar sporting powder" ("refers only to blasting powder") send him one of our pamphlets which contains all the important Forest and Stream articles on the subject.

G. H. T., Mount Kisco, N. Y .- 1. Please inform me if migratory quail can be purchased in this country? Where and at what price? 2. Where can 100 native quail be bought and price? Ans. 1. No. 2. We know of no one who can supply them.

T. W. C., New Haven, Conn.--What is the best journal published in Florida giving information about the cultivation of oranges and other fruits of that region? Ans. The San and Press, published at Jackschville, will probably give you the desired information.

Funs, Adanta, Ga. -You will find West Point, in White County, a good point to start out on a trapping expedition in Arkansas; game there, ofters, coons, minks and wild cats. Send stamped envelope to C. L. Lindley, at that place, and he will give you all needed information.

N. E., Granby, Coun.—What class did J. N. Dodge's beagle bitch Belle win first prize in at Thiladelphia, 1879? Aus. Class 42 for beagle bitches, First prize, \$15. No. 377, Dodge and Baker, Detroit, Mich. Bell (not Belle) white, black and tan, one year. Bell by Darwin out of Milley,

J. E., New York City.—Will you let me know the advantages of "hollow pointed bullets?" Are they adapted to target practice? "hollow pointed bullets?" Are they adapted to target practice? Ans. They are intended to flare out on striking heavy game and by the great shock and tearing of parts produce instant death. They are not used for target practice.

CONSTANT READER, Brooklyn, L. I.-How much will it cost to COSTANT READER, BROOKINA, D. 1.—How much with the cost to import a pair of beagles from Europe? What would the duties amount to? Aus. Address E. B. Goldsmith, 58 Wall st. He can give you all information. See advertisement in Kennel column. We do not know the firm you mention.

MELEAGRIS.—There are several patterns of turkey calls. Perhaps some of our Southern friends can instruct you Letter than we can how to make them. One style, the most simple, consists of a short piece of Spanish cedar through which is driven a nail, and across the head of the nail is drawn a piece of slate.

F. B. H., Elmira, N. Y .- Is there any paper published in the West that is devoted exclusively to sheep raising in California and New Mexico, or any paper that can give me any information on the subject? Ans. Write to the National Association of Wool Manufacturers, No. 95 Milk st., Boston, Mass. We know of no such paper.

J. N., Boston.-1. We can draw no comparison between the two makers, save to say that the English are altogether superior. makers, sever to say test the Linguist and arogetted sparted. It has been rati-factorily demonstrated that a 28in, barrel will shoot as well as one of 30 or 32 inches. The only advantage of the longer barrels is the better possible sighting, while on the other hand the weight is increased.

C. S., Muncy, Pa.—1. A No. 10 gauge gun will, other things being equal, shoot better than a No. 12. 2. This is the reason why distinction is mado against the use of them, 3. The 28in barrel will shoot as well as the 30in barwel, 4. Your 28in, 81b, gun will answer for pigeon shooting. 5. Carver is in England. We do not know when he proposes to return to this country.

New Subscriber, New Bedford, Mass.-1. Put your brass sh dish with hot water enough to cover them. Then add 2ozs. oxalic acid and let them stand half an hour. Wipe off outside and dry them thoroughly by putting in an oven. Then prime, For oxalic acid you may substitute 1/21b. muriatic acid, as before, and after ten minutes efferescing rinse, drying before you prime them.

PHEASANT, Harrisburg, Pa.-1. While lunting grouse the other day, after having carried some in my lunting coat, I discovered a curious looking fly in my sleeve. I inclose the same for your excurrons footing by in my sieeve. I inclose the same for your examination. Will you phose inform no whether it is the so-called grouse dy. 2. Also, whether grouse so infected are fit for use? Ans. 1. Yes. 2. Undoubtedly. The fly does not render the birds less valuable for food.

SHELLS, Boston, Mass.—You omit to give gauge of your gun and it is therefore impossible to direct you about the loading. You can and out for yourself by practical tests with a target for pattern and penetration. The rules for loading vary with different guis by experimenting you may satisfy yourself what is required. Use wads two sizes larger than the size of your metal shells. Shells cost all per box of 20.

J. P. S., Leavenworth, Kansas.-1. Can you supply me with Yero 3. P. S., Leavenworth, Assissa.—1. Can you supply me with vero Slaw's book? 2. Has he published any article on the fox terrier? 3. Can you recommend a reliable cure for distemper? Ans. 1. Address Messrs. Cassell, Petter, Galpin & Co., 596 Broadway, New York. They are the publishers of Mr. Shaw's illustrated book of the dog. 2. Yes. 3. There is no specific remedy for distemper. Each case is different and requires special treatment.

SOUTH WEST VIRGINIA .- 1, Where did Frank Forester (Herbert, meside? 2. What was his rank by birth as an Englishman? 3. What were his rank by birth as an Englishman? 3. What were his social qualities? 4. Ought not his Sporting Scene-and works of fiction of same nature to be ranked among the foremost of the kind in English literature? Ans. 1. In this country, at Newark, N. J. at Newsrk, N. J. 2. He was the son of an English dergyman, William Herbert, Dean of Manchester; and the grandson of the Earl of Carnaryon. S. Read "The Spirit Crowd" in this issue. 4. Yes. The Petersons, of Philadelphia, publish some of his works.

J. A. Jr., Indianapolis, Ind.—How can I get the California salmon trout which go to salt water and return like the salmon? would like to introduce them into a stream in Connecticut and have tried to get the Commissioner of that State interested in them, but have failed. Ans. have failed. Ans. We are not sure just what fish you mean. If it is to be had at all it can probably be obtained from Prof. Baird, U. S. Fish Commissioner, to whom we have forwarded your letter. He has the California, or quinnat, salmon eggs in October and will have the eggs of a trout which unfortunately has several common names in the East. It is the Salmo triblea and is called by the following manes: "California trout," "rainbow trout," "California mountain trout," "MeCloud River trout" and, we believe, "red banded trout." This may be the fish you mean by "California salmon trout."

Any subscriber or reader of Forest and Stream in want of any kind of carpetings, oil cloths, rugs, etc., etc., can be sure of fair treatment at the hands of John H. Pray, Sons & Co., Boston. Call or correspond with them, and get their prices before buy It will pay you to try them .- [Adv.

## FOREST AND STREAM.

NEW YORK, THURSDAY, DECEMBER 30, 1880.

\*\* The Forest and Stream goes to press Wednesdays. Correspondents are requested to mail their communications so that they may reach us before that day,

You are making a mistake if you neglect to file your FOREST AND STREAM, and to have the successive volumes bound. They form a library which cannot be duplicated.

—This is an excellent time to call the attention of your friends to the merits of the FOREST AND STREAM. We shall be happy to supply specimen copies of the paper to any addresses which may be sent us for that purpose.

Before these lines meet the eyes of our more distant readers the midnight bells will have tolled the Old Year into the past, and 1880 will have been succeeded by 1881.

We wish our readers a Happy New Year.

F WE INVITE a careful reading of Col. Nicholas Pike's paper relative to the protection of song and insectivorous birds. The writer of that address speaks directly to Long Island farmers, but the facts cited apply to other agricultural districts as well. The system of protection urged for the lands adjacent to the great heterogeneous population of the two cities, New York and Brooklyn, will recommend itself to the good judgment of right-thinking sportsmen.

Among the Amenities of editorial life are the kind words of cheer which friends send to us in approval of our endeavors to maintain for the Forest and Stream a high standard of excellence. Especially do we value these expressions of appreciation when they are written by those whose long experience in the active labors of journalism lend an additional emphasis to their words. We publish this week such a letter of mid-winter gratulation, written by Gen. D. H. Bruce, editor of the Syracuse Daily Journal. Coming to us as it does spontaneously, and from such a source, it is a compliment indeed,

## GAME PROTECTION IN WYOMING.

SOME TIME since we called attention to the formation in Wyoming of a Game Protective Association, and expressed the hope that it might do for that territory the work which was undertaken too late in Colorado.

We are happy to learn on the best authority that the prospects of this new association are most encouraging. The Wyoming Stock Growers' Association is lending all its influence to further the good work, and has in a body joined the Game Protective Association; moreover, the stock growers have pledged themselves as individuals to prosecute violators of the laws, and from such action on the part of such a body of men the best results are to be expected.

The worst slaughter of game in Wyoming does not come from the killing by skin hunters, for in the rough mountains which constitute so large a portion of that territory it is impossible to get green hides to market, as they have to be packed long distances on the backs of mules. Parties of hunters from the East, men who slaughter simply for count and to boast of their bags when they get back to civilization, are the ones toward whom the Game Protective Association must turn its attention.

The great extent of territory to be covered by the Association, and the fact that it is but sparsely settled, make it clear that, no matter how earnestly its members may work. they cannot do all that is necessary in patrolling the country and looking out for law-breakers. What is needed is a small mounted police force to ride the mountains and take cognizance of the doings of the hunting parties that may be traveling through the country. Mr. Moreton Frewon, now in this city, is endeavoring, with the co-operation of that veteran sportsman, Mr. Sam Ward, to secure a small appropriation from the general government, by means of which such a force may be engaged, and we trust that his efforts may be successful. No one, who has not traveled for successive years through the mountains of the West, can form any just idea of the rapidity with which, in many sections, our large game is disappearing. We trust that Congres may take this matter up and give it favorable consideration without delay. It is one which requires attention.

The amount to be expended is so trifling in comparison with the good that may be done by it, that it is difficult to understand how any thoughtful man can be doubtful as to the advisability of making the appropriation.

## THE BRITISH RIFLE CHALLENGE.

THE invitation to visit Wimbledon and contest there in a friendly long-range match, which was sent by the chairman of the Council of the National Rifle Association of Great Britain to the President of the National Rifle Association of America, still remains unacted upon. This is owing to the fact that there has been no meeting of Directors or members since its receipt, nearly a month ago. The proposal to have another American team visit the leading English range meets with general acceptance. One of our contemporaries, expressing its approval of the match, says that "If the mountain will not come to Mahomet, Mahomet must go to the mountain. "" It must not, however, be forgotten that though America may accept this challenge and a team visit Wimbledon next year, the emblem of national preminence in long-range shooting, the 'Palma,' still remains in America. " " Until the 'Palma' is won by a foreign team the title of champion cannot pass from America." Another Journal of prominence says of the situation:

This communication arrives in good season, and we hope that it

This communication arrives in good season, and we hope that it will be presented at the anunal meeting of the life members in January next for the combined action of the association. \*\* \* \* There can be no reason why America should not take up the challenge and send a representative team to Wimbledon in June, 1881. American ridemen are well satisfied that unless we send a team to Wimbledon the "Palma" will have to be placed on the shelf. Yet America, in the face of its numerous victories, can well afford to be magnanimous, accept the challenge and send over a team in 1881. If this letter is placed before the life members of the association there is not a particle of doubt that it will be accepted unanimously, in which case the several committees on practice, ways and means, etc., can be selected from the active workers of the association and the team carried to a successful formation.

The surgessisin for a reference of the whole matter to spe-

The suggestion for a reference of the whole matter to special committees, made up in large part at least of mem-

bers of the association outside of the Board of Directors, is a With such a management there is some prospect good one. of a creditable showing being made at Wimbledon, and if those who are put in these positions of responsibility recognize that there are shooting men in other parts of the Union than New York, and on other ranges than that of Creedmoor, a great stumbling block in former matches will be avoided. If indications are to be relied on this match will be the one which will most try the ability of our shooters. The shooting men in the management of the Wimbledon gathering have not been unmindful of the methods on our American ranges. They have, they think, caught the secret of American team success, and are now prepared to add their experience to our system and assume the position which they so long held at the head of the world of marksmanship. There is no reason, however, for American riflemen to fear more than a close, well-fought battle; and, win or lose, a fail-ure on our part to take up the challenge promptly and in the most liberal spirit can only be attributed to a narrow-minded policy or a prejudice ruinous to the best interests of American rifle shooting. For the first time we have the opportunity to beard the British Lion in his den, and our only ambition should be to give him an effectual reminder that in many points connected with long-range rifle practice he is woefully behind the age.

## NOSE AND PACE.

AN it be true that the breeders of pointers and setters, O particularly those of the last named breed, are sacrifi-cicing nose for pace? To us, who have witnessed the field trials of this year, this question seems full of interest. While thinking this matter over we have fortunately found, in our advance pages of Vero Shaw's book, a paragraph on the subject that exactly meets our views of this very inv-portant point. It is as follows: "In field trials a fast dog looks flash, and by his superior pace can cover more ground, and therefore increase his chance of finding birds. The natural result of this is, that such a dog defeats his slower but surer companion, who keeps steadily plodding on throughout the trial, and would do so throughout the day without a fault, and probably would wear his gay companion down in half a day. That such a thing is done at every trial a reference to the reports thereof will amply testify, and this, we trust, will have the effect in time of causing steps to be taken to remedy the evil. Field trials are such excellent institutions in themselves, if properly carried out, that every step should be promptly taken to prevent fashionable prejudices from doing any injury to the class of dog which is meant to be benefited thereby."

These are sound words and to the point, and are especially applicable to shooting as practiced in the East. What are field trials for? Are they to introduce to public notice some particular strain or strains of dog that will in a short-lived heat dazzle the eye of the inexperienced sporting public, much as the last scene of the pantomime does the school-boy during holiday week? Are they to be run in the interest of breeders to make a profit, and enable them thus to find a ready market for their stock, or are they to be run for the benefit of professional handlers? Looking at it in one light, it certainly would seem that there was a tendency that way. How many of the bona fide owners of dogs run last autumn handled their own dogs, or even could handle them if they would, and how many owners trained the dogs that were This is a question that needs no reply. It therefore cannot be expected that owners who, for some reas n or an other, are not personally acquainted with the individual traits and dispositions of their own stock can be competent judges of how their dogs should be brod for perfect working and the most thorough killing and lasting qualities. We despise a slow, poking dog; yet in a week's shooting we have seen more birds killed, and a beat swept cleaner over a tortoise of this kind, than over the bounding hare alongside. Of course it is a novel luxry for the tyro, who knows no better, to see a dashing fellow skim after him field after field, until he brings up standing on a bevy of quail or a brood of grouse, and if the act ends there it leaves a lasting impres-But take the slow and sure, the dog whose nose has not been sacrificed for foot, and beat out the same fields and find birds in each which the lightning dog failed to scent and passed, and which is the better dog? If there could be devised some way at field trials to show up the number of birds passed by these air-splitters, it would rather astonish more than one of the hill-side critics. It has been well said that field trials are new in this country, and to judge from the expressions uttered by "a large majority" of spectators, one would be led to believe that for the first time in their sporting career they had positively witnessed a dog pointing out of a book or a chromo. We caunot say it is quite as bad as what Mr. Winkle said:

"What's the matter with the dog's legs?" whispered Mr. Winkle. "How queer they're standing."

"Hush, can't you?" replied Wardel, softly.

see they're making a point?" But it is something like this: "How grand," says one "Glance your eye on his tail, how stiff," says another. "How staunchly he smells them; this is indeed a sight really worth traveling a thousand miles to see," says number three And these encomiums are paid Master Fido simply because he has pinned some poor wretched, scared-to-death bird, when going up wind, and simply pointed it as he should, "because it's his nature to." It is now the skilled newspaper man gets in his fine work, and shakes the hand of the cheerful owner, whose feelings are way up in the seventh heaven until he is informed that his dog has lost the heat! It is pleasing incidents like this that help to interlard field trials with interest and break in upon their monotony, but it is dreadful humbug nevertheless.

Now, if any one can detect our saving in the foregoing that we do not believe in fast dogs that have good noses, let him write us down as but a sorry sportsman. But what we contend is this: that first of all comes the nose, and that speed is but a secondary consideration. Therefore, is not pace in the Eastern Field Trial rules rated too highly? We advise breeders not to sacrifice nose and bottom to obtain the qualities of a quarter-horse.

## "IDLE TIME NOT IDLY SPENT."

T was tantalizing enough to know that there were scores of eyes surveying our well-placed deceits and winking at each other with airs of superior intelligence, as much as to say "Bless my boots! but that fellow on shore is oppressively fresh this morning. He had better get out in the sunshine and evaporate a little."

They are whimsical fellows; to-day they are inconceivably ignorant, as confiding and verdant as a plow boy on his first visit to town, becoming a victim to the most transparent lures; to-morrow they have become regular sharpers, detecting immediately the game sought to be played upon them; and again, the following day they have relapsed into their verdancy and the simplest fraud deceives. This was one of their knowing mornings, for they evinced an obstinate determination worthy of government mules not to take hold, but even a government mule can, with proper treatment, be prevailed upon to devolop decent qualities. Stroke him with the hair and all that sort of thing before emphasizing your language and actions. If that does not suffice put a rope around his neck. The trout may avoid your flies, as impecunious dead beats avoid their creditors, but they can be brought to terms by having some luck, using a little diplomacy and other things. At your first east, all the care and caution of a suppliant; at your first strike, the manner and action of a dic-

Like the miller fluttering about the flame did these beauties coquette with the deceits we offered them. It was an exhauster, almost an annihilator, of patience; but at last we heard an old trout say "Oh! you wicked little fellows, stand aside and let your poor old father show you how the thing is done. Now watch that Grizzly King. Here goes.

The youngsters, inexperienced and boisterious, had been threshing around like so many fiails more intent on mischiefmaking than the more serious and important business of providing for the inner fish; but the old gentleman had a double
object in view. First, his idea of cunningness in capturing
the delicious looking fly; and second, the more selfish one of
pandering to his appetite. Number one was a grand success,
for coming up under the fly he quietly and quickly sucked it
in and made no splash until the hook, responsive to the twist
of the wrist, convinced him that his second idea was an epicurean fizzle. Of course the youngsiers stood one side and
said "Old Smarty, you have got yourself in a fine pickle and
said "Old Smarty, you have got yourself in a fine pickle and
said it is cold to-day."

The old gentleman makes no reply. He had exciting business requiring his immediate attention. He seemed to have
pressing engagements everywhere and was trying to
them all, developing an astonishing amount of energy in the
fractional part of a second. It was a regular game of Simon
now up, now down, and then wig-wag. Merrily whistles
the The cas away he goes like a courser at the prick of spurHe displayed no appreciation of the eshetic quality of the
sport. His conduct evinced a leaning toward the practical.
He would condemn theories and escape, no matter how, to
the home that has sheltered him for many a year.

"Confound you," he cries, "come over hore. I'd like
about three minutes of your company and I'd drown you."

"You egotistical old scoundrel, you want to get us overboard and cut our throat with your first dorsal fin, but we
mean to fight it out here. When ze Frenchman hunts ze tigare, threshing around like so many flails more intent on mischiefmaking than the more serious and important business of pro

ah! ze sport is grand, magnifique! but when ze tigare hunts ze Frenchman—oui! zere is ze very devil to pay.

Vainly he endeavored to outmanouvre us. \il the expedients of which he was master were brought into play, but humoring his eccentricities and scrupulously guarding against any possibility of his escaping a firm, yet yielding, hand nullifted all his resources, and then the fatal net enveloped him. Toss him on the green grass. There he is, fresh as a bride; the Dolly Varden fish, beautiful in its speckled splendor. Silver belly, pink fins, yellow sides "bedraped wi' crimson bail," all marvelously contrasted and blended, and shading off into the deep rich brown of his back and glancing like the rays of a prism

"Well, this is worth living for!" you exclaim, and can well believe with Sterne that "it is better to do the idlest thing in the world than to sit idle for half an hour." MILLARD.

MAN differs from all other animals in that he smokes, and among men who smoke they are distinguished for their good taste who use Kimball's Vanity Fair. This excellent brand is growing in favor among those who are capable of judging what good tobacco really is. And for this increasing popularity we need not look further than the inherent excellence

## KIND WORDS.

SYRACUSE, N. Y., Dec. 27, 1880.

Editor Forest and Stream I have just finished the reading of last week's Forest and STREAM, and I cannot resist my inclination to thank you for it : and I am sure that I only voice the opinion of all your readers in expressing the opinion that the paper, as now conducted, is a credit to its editors and publishers, and to American zeal, ability and enterprise. I am sure it has no equal either in this country or in Europe, and so good and instructive a publication might enter every household with advantage to the occupants, for its tone is excellent, its columns are closu, its matter is nearly all well written, and its teachings on various subjects would make a valuable textbook every month. You deserve the congratulation and encouragement of every one of your readers. Editors get plenty of bard knocks and but few compliments, and I want to record myself among the number who have only kind words of approvat for your excellent work.

D. H. BRUCE.

## THE TILESTON MEMORIAL FUND.

New York, December 23,

Editor Forest and Stream : I have to acknowledge the receipt of further subscriptions to the "Tileston Memorial Fund," as follows:

\$845,60 

Net amount of Fund. \$35.00 which was sent to Mrs. Tileston on the 21st inst., and for which we have her receipt. The committee would also give credit to Mr. Willy Wallach for his contribution of printing and stationery, the FRED. N. HALL, Sec'y. value being \$25. hours truly,

Mrs. Tileston has recovered \$5,000 from the Harlem Railroad Company, the owners of the Madison Square Garden where Mr Tileston lost his life. For the injuries sustained by himself at the Garden, Mr. Walter Webb has recovered \$4,500; and this with a generosity worthy of the highest praise he has presented to Mrs. Tileston.

# The Sportsman Courist.

PIROGUING ON THE SQUATOOK.

The New Brunswickers up here. Frenchmen though they be-

The New Brunswickers up here, Frenchmen though they be relatives of Evangeline perclainee, make no beautiful thing. But this homely Edmundston is the threshold to a world of rare natural heauty. It is impossible in this limited space to describe all the trips that may be made from here, trips rich in sport and scenery. From here they start for the "Great River trip," for the "Fish River trip," for the "Squatook" or "Round the Lakes trip." Any of these excursions may be according to the measure with which the tourist or sportsman is biessed with time. It is proposed here to briefly describe the "Squatook trip," ca uno, etc.

In this region the traveler has his choice between the film-sy and readily upset birch bark cance and the invulnerable but also as readily upset birch bark cance and the invulnerable but also as readily upset bord but also as readily upset birch bark cance and the invulnerable but also as readily upset bord but also as readily upset birch bark cance and the invulnerable but also as readily upset briefly and most savage looking double how. But it is a good servant when dexterously managed, as it invariably is by the French guides.

These French guides are the very flower of backwoodsmen.

bow. But it is a good servant when dexterously managed, as it invariably is by the French guides.

These French guides are the very flower of backwoodsmen. They are mostly the descendants of those Acadians who, after the cession of their homes by the peace of Utreeth, field from the new masters of the soil far into a more hospitable wilderness. They can for the most part neither read nor write, and speak almost exclusively French with variations. For instance, ver is "vart" with them, bien is "bang," bid, "icit," pres "pret," frais "fret," ctc. Their artificial surroundings are, as we see in Edmundston, excessively honely. And yet—by what subtle influence preserved?—one finds in them, in all its purity, the characteristic politeness and polished manner of the French gentlemen. In sunshine or in storm, dry or wet, fed or hungry, they are always deferential, gracious and empressée. It is delightful to hear the courteous tone with which they emphasize "Merch mensieur." Ah, their manners are different from those of the no less good guides of Maine and the Adirondacks. Besides, these French guides are scrupulously neat, and give you a clean and confortable life in camp. They are good cooks and very cheap, costing only from one to two and a half dollars a day. At the same time it must be admitted that they are seldom good sportsmen; that in fishing they have a censurable penchant for the seine and spear and are strangers to the fly, and that in hunting they are decidedly inferior to the dirty and unatterably homely Micmae Indians, a few of whom still furnish inspiration for nightmare in these regions.

You start up the Madawaska, a guide apiece, luxuriously reclaining in the bow of your prograc facing your course, and behind you, defly and swithy poling you up the steady current, your strong and graceful Frenchman. Amidships are packed the impedimenta—bout in the guides call behind you, get you and general Prenchman. Amidships are packed the impedimenta—bout in the guides call them—a tent, uternils and the usual food

benind you, defly and swiftly points you up the steady current, your strong and graceful Frenchman. A midships are packed the impedimenta—buth the guides call them—a tent, utensils and the usual food for a camping party. So you go seventeen miles that day, over fair lishing grounds most of the way, with no notable rapids to obstruct you, and now and then the excitement of a shot at a stray duck, wild or domestic; for along the river thus far a single line of farms fringes the bank. That night you camp on the bank of the stream at the beginning of a portage.

Early the next morning you are awakened by the volubility of the French spoken by a Mr. Lynch, of Cork, who monopolizes the portage business, and who straightway fastens his oxen to the bows of the pirogues and without ceremony hauls them over and through rocks, roots and trees, three miles to Beardsley Lake. Next morning the pirogues, still intact, are launched in the lake, and soon are on the bottom of its outlet, Beardsley Brook—but the brook is not more than three inches deep. Then the guides taking the place of the oxen of yesterday, drag the ponderous craft foot by foot, plowing a furrow between the bed rocks of the stream. It is impossible sufficiently to admire or praise the undamageable qualities of the pirogue. The little brook is beautiful enough, and you may catch a creel full of small trout if you choose to wade ahead of the tunult and debris caused by your flotilla; but it is a hard and tedious day's work, and every one is glad when the tent is pitched and you are told that the worst three miles are over.

On the morrow you resume the brook, which is now deep enough to float the pirogues, but so narrow that the dense alders, through which it flows, completely overlock it. For several miles you crouch down and are pushed through a greenwood tunnel. But all this time the stream is growing. At last it suidenly widens, breaks away from the adders in a gallant rift, and the Maurata Chemin is ended. Thence to the end of the trip is plenty of sca-roo

the end of the trip is pienty of sea-room, and "twenty miles a day," if you like.

Fresently, as you float on, with a great silent shoot over yellow sand, the Squatook river springs upon the little brook and devours it, and now you are on a noble front stream, none colder nor clearer in the world. It is abundant in water, clear, deep-pooled, well sifted and fed by scores of icy little brooks—an ideal home for the Salmo fontianlis, thence day by day you are paddled or poled over beautiful lakes connected by superh water-courses. Your whole way is down stream, and there are more than a hundred miles of it. Searcely a wilderness in the world can furnish more varied and beautiful streams than and Yukadi, more varied and beautiful streams than the Upper Squatook and Yukadi rivers. You pitch your tent whenever and wherever you like. You are not confined to one camp spot as in most other wildernesses. You carry your whole camp easily with you, you live in the entire region, and wherever spot or scenery beckon to you, as you glide along, you pause, pitch your tent, and are at home.

Memories of stationary camps in the Adriondacks are odious, after this voyageur life. You can paddle or pole, you can hunto of sho, or, if you like, you can be an iller and hunton fish, or, if you like, you can be an iller and banks for hours and hours shift their exquisits scenery for you. Every now and then the excitement of a rapid will rouse you. The rapids are not particularly dangerous, but the water, and darts down the boiling and tossing incline, you can turn its bow into the exact direction, and then boldly rouse you. The rapids are not particularly dangerous, but the guides understand and crease the rapids are not particularly dangerous, but the guides understand and roar, until a counter current turn its bow into the exact direction, and then boldly or waves, is not the least interesting sight of the trip.

Finally, you step out of your pirogue, back at Edmundeston again. You have been carried down over a hundred and fifty miles

ou, innumerable bears, thousands of ruffed grouse (fifty only a fair bag for one man in a day here), spruce pardidges, wild ducks, are the game of the region. To reach Edmunston from New York, go to Bangor, Me., ence to Woodstock, New Brunswick, and thence to Edwards of the region. thence to

mence to Woodstock, New Brunswick, and misne to Ed-munston, all by rail.

People who are getting tired of the Maine woods and the Adirondacks, will find it worth their while another summer to try a "trip" from Edmunston.

W. D. Edmonds. Edmunston, New Brunswick, 1850.

# Natural Distory.

### OUR WATERFOWL

Histrionicus torquotus. Harlequin Duck. Bill in this species very small and short, the whole tip occupied by the nail; the tertiaries are curly. Male in color deep lead blue, fading into browner below; sides of head chestnut, as are also the sides of the body posteriorly; a lengthwise stripe on grown of head, and the tail black. Patches of white are present on the head at base of bill, on the side of the occiput and of the breast and of the tail. Two on the neck, one on each side, almost meet, forming a nearly complete ring. There are other patches of white on the wing, and a collar of the same color about the throat. The speculum is violet and purple. Female less strikingly marked; bluish brown, paler below. and changing to white on belly. A white patch before and one behind the eye. Length sixteen inches.

The little Harlequin is one of the most curiously marked. and one of the most beautiful of our ducks. It is a Northern species and is rarely even in winter taken as far south as New York. Although during its migrations it is found only on the salt water we know that it occurs in the Northern Rocky Mountain region where it breeds. Dr. Coues states that in August, 1874, he found broods still unable to fly on streams flowing into Chief Mountain Lake.

The Harlequin is said to be quite abundant on the Northern coast of Maine and thence northward. On the northwest coast, especially in Alaska, it is also reported as very abundant.

This species is still rare in private collections. It is a somewhat difficult bird to secure, as it is a most expert diver, sometimes diving from the wing at the flash, and being so quick in its movements that when on the water it will often disappear beneath the surface before the shot reaches the On the North Atlantic coast the males of this species

are called lords and the females ladies.

Somateria stelleri. Steller's Eider Duck. "Head white with a pearly gray tinge, a green occipital band, black chin patch and eye ring; collar round neck and upper parts, lustrous velvety black, the lengthened curly scapulars and tertiaries silvery white on the inner webs, the lesser and middle wing coverts white, the greater coverts and secondaries white-tipped, inclosing the violet speculum; under parts rich reddish brown, blackening on the belly and crissum, fading through buff to white on the breast and sides, where there are black spots. Female reddish brown, blackening below, varied with darker on the head, neck and fore parts; tips of greater coverts and secondaries alone white, inclosing the speculum. Length about 18 inches" (Key to N. A. Birds, pp. 291-2).

Steller's eider duck is a bird of our northwest coast, about which but little appears to be known. Although ornithologists have long known of its existence, comparatively little appears to have been written about its habits, though these perhaps do not differ markedly from those of the common S. mollissima. The present species is not likely to come under the notice of any of our readers, except those who reside in British Columbia or Alaska. Any sportsmen, however, who may meet with it would do well to make a note of the fact, and to contribute what additions they can to our slender stock of knowledge of the habits of the species.

Somateria Fischerii. Spectacled Eider. "Male black or blackish, the throat, most of the neck, foreback, wing coverts, scapulars, tertials and flank patch white; nape and occiput green; a whitish space around the eye, bounded by Female said to be brown, varied with darker, the black. chin and threat whitish, the eye-patch obscurely indi-cated; after the summer moult the male is said to be like the female. Length about two feet." (Key to N. A. Birds, p. 202.)

The Spectacled Eider is another Northwest Coast bird, which is not likely to come under the notice of sportsmen. It is said to be common about St. Michael's in Alaska,

Somateria mollissima Dresseri. Eider Duck. Bi'l with two long processes extending up on the forchead from each side of the upper surface of the bill, the broad feathered surface extending down between them. Male in spring dress white, creamy on breast and tinged with green on the head. Lower breast, belly, back, tail, quills and a forked patch on crown black. Female has bill smaller, and is brownish or chestnut, barred and speckled with black. Length about two feet.

The eider duck is known to every one producing the famous cider down of commerce. It is not particularly abundant with us though occurring in winter as far South as New York, but not in any great numbers. They are usually found associated with the species of &demia, called on the New England coast coots, which in their manner of flight and in some of their habits they closely resemble. On the Mas-

sachusetts coast they are more abundant, and from there northward may even be called common from October to April. Specimens are found occasionally in the New York

The down for which this species is so famed, and which has led to its being semi-domesticated in some localities, is plucked from the breast of the parent birds to cover and keep warm the eggs during the absence of the mother. American bird was for a long time regarded as identical with the European, but was senarated from it a few years since by Sharpe, and this decision appears to have received the approval of our best American ornithologists.

Somateria V-nigra, Pacific Eider Duck, Exactly like the last except for the presence of a V-shaped black mark on the chin.

This species, if such it be, is only found in the North Pacific. It may require to be regarded only as a variety of the common eider duck.

Somateria spectabiblis. King Eider. Bill with a squarish knob on its upper surface near the base. Male in full plumage black, including a V-shaped mark on chin, a frontal band and space about the eye; neck, anterior portion of body, part of interscapulars, partof wing coverts and linings and patch on the flank, white; throat washed with creamy, sides of head with green, crown and nape with bluish ash. The female resembles that of S. mollissima Dresseri, but may be distinguished by the peculiarities of its bill

The range of the King Eider is about identical with that of its plainer cousin, and it occurs in winter as far south as New York. Both this and the common eider are sometimes taken on the inland waters of this State and on the St. Love rence River, and there are several records, we believe, of their capture on the great lakes.

X CEdemia americana. American Scoter, Coppernose. In the male the bill is shorter than the head and swollen on its upper side toward the base. It is black at tip, the swelling being of a bright orange color. Plumage of male, black throughout. Female has bill wholly black, general color sooty gray, much paler on belly and sides; feet brownish with black webs. Length about two feet.

The genus Œdemia, to which this and the next two species belong, includes those black sea ducks, known along our Atlantic coast as Coots. In this genus the males have the plumage black, with or without white spaces, and the bills of all are wide at the tip and curiously swollen toward the base, and in the males are highly colored. They are provided with very thick heavy plumage, are good divers, and feed almost wholly upon shell fish. As might be imagined their flesh is not especially delicate, but nevertheless they are shot in great numbers on the coast during spring and fall by gunners, who make more or less use both of the flesh and feathers. Birds of this group are sometimes found on fresh

The Scoter is perhaps the least abundant of the three species of this genus, although it occurs in considerable numbers all along our shores. The full plumaged male is quite a striking bird, but the female is the very reverse. The term Coppernose is strikingly applicable to the male, as any one who has ever seen the living or dead bird can testify, Scoter occurs occasionally on our inland waters

Œdemia fusca. Velvet duck, white-winged Coot. Bill swollen above toward base, the feathers in the middle line reaching nearly or quite to the nostrils, those on the side not so far; bill black at base with a broad orange or pink tip, shorter than head. Male, black with a spot of white beneath the eye, and a large white wing patch. Female, sooty-brown, paler below and on sides of head and neck, with small white wing patch. Bill, black, rather larger than the preceding

The white winged coot is with us decidedly the most shundant representative of its genus. It usually reaches New York and Connecticut waters early in October, and remains until the middle or last of November when it proceeds further southward. On its return journey it does not become abundant until the first of May, and early in June the flocks may still be seen passing to the northward. On the Connecticut shore these birds are called Bell tongue, or Bell tong, coots, for what reason we are unable to say unless from some fancied resemblance of the thick, fleshy tongue to a hell in its shape.

Ædemia perspicillata. Surf Duck, Sea Coot, Skunkhead. Snufftaker. Bill swollen on sides as well as above toward base. A narrow sirip of feathers in the middle line reaching nearly to the nostrils, but no feathers encroaching on the bill Bill about as long as head; in the male in life orangered, pure white on sides with a large circular black spot on each side at base. Plumage of male black with a triangular white space on the forehead and another on the nape. Female has bill black, the feathers in the middle line not reaching as far as nostrils; plumage sooty brown, fading to pale gray below, with patches of dull white before and behind the eye. Size of the Scoter. Variety troubridgei, of the Pacific coast is slightly different with a smaller bill and the frontal white patch smaller.

Two of the local names of this bird are quite striking, and somewhat interesting as showing how readily even the most unobservant people seize on the salient points in a bird's appearance, and from these points give it a local name. Skunkhead, of course, refers to the contrast of colors on the head of the bird, and is precisely paralleled in the name skunk bird, sometimes applied to the bobolink, Dolichonyx oryzivorus.

while Snufftaker as evidently points to the bright orange red of the hird's bill about the nostrils

The surf duck is almost as numerous in our waters as the velvet duck and arrives a little carlier in the fall. On their first coming they pass most of their time far from the shore but later draw into more shallow water where food is more abundant and to be had with less exertion. At this time they are shot in great numbers as they come up well to stools, and fly low over the water so as to afford good shots to the gunners in line.

[TO BE CONTINUED.]

Y EFFECT OF COLD AND HEAT ON FISHES.

THE following quotations, taken from Dr. Kidder's Report on Experiments upon the Animal Heat of Fishes, will be found very interesting. It had been assumed up to within a short time that the temperature of a fish's blood was that of the water in which it lived, but Dr. Kidder has shown, as already stated in these columns, that this assumption is erroneous and that the temperature of the body is higher than that of the surrounding medium. In his report, published in the Proceedings of the U. S. Natl. Museum for 1879, he quotes freely from different authors to show the different conditions of heat and cold under which a fish may live, and some of these we give below.

Mr. Jesse tells of a friend who saw a gold fish which had been frozen into a block of ice and afterward thawed into

Dr. Richardson relates that the gray sucking carp, common in the fur countries of Arctic America, may be frozen and thawed out again without injury.

Perch have been frozen and transported for miles, returning to life when thawed, and John Hunter says, "that these (fishes) after been frozen still retain so much of life as when thawed to resume their vital actions, is a fact so well attested that we are bound to believe it."

Mr. J. W. Milner (Assistant Fish Commissioner) had a mud minnow (Umbria limi [Kirt.] Gunther) which was frozen within solid ice in an aquarium globe, three or four times, and each time regained its vitality upon being thawed out. Instances similar to the foregoing can be be adduced indefinitely.

The only hybernation which is definitely known to occur among fishes, says Professor Goode, takes place in the fresh water lakes and streams of cold regions. The fishes are driven by cold into the deeper waters and there remain in a state of torpor, proportional in degree to the amount of cold which they experience. Hybernation does not appear to be in any case a voluntary act. The fishes do not become torpid of their own accord. They avoid it as long as they can and only succumb when they are deprived of the means of They never become torpid when there are greater escape. depths to which they can retreat.

Dr. C. C. Abbott reports of the fresh water mullet (Myxostoma oblongum): "No degree of cold seems to affect the movements of this species, and hundreds can frequently be seen under the ice, moving slowly along the bed of the stream, feeding upon the wilted remnants of pond lily and splatterdock plants. \* \* \* \* This applies also to our common roach (Stilbe americana) which, to a less extent, braves the chilling waters of our streams throughout the winter and, in consequence, suffers from the persecution of the three species of pike (Esox reticulatus, fasciatus, porosus) inhabiting our streams."

See also Mr. Rudolph Hessel's observations upon the winter torpor of the carp. This appears to be a true hybernation, during which, although the fish takes no food in some climates from October until March, there is no diminution in weight.

On the other hand fishes are reported as living and thriving in water at an exceedingly high temperature; high enough to produce death by coagulation of the albumen in their blood and tissues, unless there is some provision by which their interior parts are maintained at a temperature lower than that of the surrounding water. As the existence of any protection analogous to that afforded to mammals by the function of perspiration and evaporation seems obviously impossible to animals living in the water, it is difficult to understand in what way such a reduction in temperature can be produced and kept up.

Thus Humboldt and Boupland observed living fishes in hot water thrown up from a volcano and showing a temperature of 210 deg. F.

Desfontaines found a Chromis in the hot springs of Cafsa, in Bombay, the water in which showed 30 deg. R. (97.5 deg.), and Shaw afterward saw small mullet and perch in the same springs.

Saussure saw eels, rotifera and infusioria in hot springs at Aise, in Saxony, in 1790, at a temperature of 113 deg. F.

Bruce says that at Feriana, the ancient Thala, are springs of warm water without the town, where he saw small fishes, four inches long, not unlike gudgeons. The temperature is not noted, but he says: "Upon trying the heat by the thermometer I remember to have been much surprised that they could have existed, and even not been boiled, by continuing so long in the heat of this medium."

Facts mentioned by Somerset induced Bronconnet to make some experiments on the degree of heat which river fish are Details of the degrees of heat are not capable of enduring. stated, but many species lived several days in water too hot for the hand. "

Prof. Goode writes: "In warm countries an analogous

phenomenon (to hybernation) takes place, which has been called asstiration. When the lakes and streams are dried up by the heat the fish seek refuge in the deepest pools, and when they too are dried up they bury themselves in the mud at the bottom and remain torpid until the rainy season refills the reservoirs and revives them."

Day reports that on January 18, 1809, he visited a large tank which was then almost dry, having only about four inches of water in the centre, while the circumference was hard enough to walk on. The soil was a thick, tenacious, bluish clay, from which, fully thirty paces from the water and two feet below the surface, were taken five living fishes. Ophiocephalus punctutus and three were Rhincobdella aculcata They were covered with a thick adherent slime. "All were lively and not in the least torpid." Day also reports Amphipnous cuckin as having been dug up under similar circumstan-Mr. Whiting, chief officer of the western province of Ceylon, informed Sir Emerson Tennant that he had been twice present when the peasants had been digging up fish of nine to twelve inches long, full grown and healthy, which jumped on the bank when exposed to the light.

Batrachians, tortoises and land snails are commonly found in a torpid state during the hot and dry months, a state which may truly be called aestivation, but which differs decidedly from the condition of activity described above as observed in buried fishes, and for which there is no very obvious explan-

The instances cited are sufficient to show that the popular belief that fishes possess no animal heat of their own rests upon well attested observations. At first sight it is difficult to understand otherwise how these animals can undergo the extremes of heat and cold which they have been known to undergo and continue to live. Yet when the adaptability of birds and mammals, whose nominal range of body temperature is so extremely narrow compared with that of fishes, to extremes of heat and cold is fairly considered, the necessity for this inference seems not to be so very obvious. one appears to have tried the experiment of subjecting the same individuals to great differences of temperature whereby the immense effect of inherited adaptation would have been thrown out of the account.

## THE BASKING SHARK

CEVERAL years ago a basking shark was captured at Top-sail, in Conception Bay, about twelve miles from St. Johns. It was thirty feet in length and fifteen feet in sirth sall, in Conception Bay, about twelve miles from St. Johns. It was thirty feet in length and fifteen feet in girth at its thickest part. Unfortunately before I heard of the matter and reached the spot the fishermen had cut it up for the sake of the oil it contained. In all the museums of the world there are at prescut only four specimens of this shark, and had this one been preserved the captors would have got a birth write for it as nuturalists table a great interest. In this and had this one been preserved the captors would have got a high price for it, as naturalists take a great interest in this singular sea rover, which is rarely got hold of. Under the circumstances I did the best I could. I secured a portion of the skull which unluckily had been cut into several pieces. Some of the vertebre, the firs, and above all the curious ap-pendages on the glids which are arranged like the teeth of a

the skull which unitedity had been cut into several pieces. Some of the vertebre, the fins, and above all the curious appendages on the gills which are arranged like the teeth of a comb and are believed to serve as filters in collecting from the water the small marine organisms on which the fish lives. I also secured some of the teeth, which are very small, not more than 3-10 of an inch in length—this species of shark being harmless, and living on the minute creatures with which the waters of the ocean abound. I sent a portion of these fragments to Prof. Turner, Edinburgh University, one of the most eminent anatomists of the day. He is Professor of Anatomy in the University of Edinburgh, and author of the article on "Anatomy" in the new edition of the Encyclopedia Britamica. He was very much pleased to receive these portions of such a rare fish, and after a careful study of them he prepared an elaborate paper on the subject, which he communicated to the Royal Society, Edinburgh, in March last, and which he has since published in the Journal of Anatomy and Physiology, Vol. XIV.

In this article he says: "Having been engaged some years ago in the study of the structure of whalebone I was desirous of examining these appendages in this shark to see if they corresponded in structure with the plates of Balecon. It was with great satisfaction, therefore, that I received from the Rev. M. Harvey, of St. John's, Newfoundland, during the autumn of last, year along with a number of other interesting objects of natural history presented by him to the Anatomical Museum of the University, a portion of one of the combike fringes which he had removed from the gills of a basking shark presented to me by the Rev. M. Harvey was 5½ inches long. It consisted of 154 flattened plates which varied in length from 41 to 5 inches. Each plate possessed semi-lumar base attached to the nucous membrane of the branchial arch, and this membrane passed for a slort distance between the bases of the plates. The plates were grayish brown in color a tance between the bases of the plates. The plates were grayish brown in color and with a smooth, shining surface, and they were so brittle as to be easily snapped across. The peneral arrangement of the plates was, indeed, not unlike that of plates of whalehone, and there can be no doubt that they fulfil the office so generally ascribed to them of readily allowing the passage of water through their interstices, and of preventing the passage of small organisms which may be suspended in the water. When the semi-lunar base was examined microscopically it was seen to contain a network of canals. The anastomosing network of canals was prolonged from the base of the plate into the slender shaft, where the canals termianastomosting network of catanas was photogra from the base of the plate into the slender shaft, where the canals terninated in a single clongated cavity occupying the centre of the shaft. The solid matrix of the plate bounding the anastomosing canals and central cavity had the translucent, somewhat granulated character one sees in the matrix of bone or the dentine of teeth. The matrix was permeated by multitudes of fine branching tubes. These tubes had the appearwant granulated chandled one sees in the matrix of one of the dentine of teeth. The matrix was permeated by multi-tudes of fine branching tubes. These tubes had the appearance and general mode of arrangement of dentine tubes, but they were nearly twice as large as the tubes of human dentine and were separated from each other by a larger proportion of matrix."

tion of matrix."

After a minute and lengthened description which could only be appreciated by students of anatomy, Professor Turner arrives at the conclusion "that the structure of these

plates leaves no doubt that their type of structure res

plates leaves no doubt that their type of structure resembles the dentine of a tooth," and "therefore these plates differ in a marked manner from those of whalebone."

"Along with the comb-like branchial appendages Mr. Harvey also sent me a portion of the dentary border of the jaw with the teeth in sett. The teeth were arranged in seven rows and were embedded at the base in the mucous memrows and were embedded at the base in the nuccous membrane. Each tooth was not more than three-tenths of an inch long and a little less than two-tenths of an inch wide at its base. They were conoid in shape, with sharp-pointed free ends, somewhat flattened on the anterior and posterior sur faces, and without serrations. In its structure the tooth, like the semi-lunar base of the plates of the comb, consisted of a hard unvascular dentine externally, and of a central core in which were numerous anastomosing canals surrounded by a matrix containing characteristic dentine tubes. These canals collectively represented the pulp cavity. The chief difference between the plate and the tooth was this, that in the plate the canals formed ultimately in its shaft only a single central cavity, while in the tooth the anastomosing arrangement of the canals was preserved up to the apex of the core, and no single pulp cavity existed."

Professor Turner concludes his paper in the following terms: "The presence of bodies possessing the structure of tecth on the gills of the basking shark is not so aberrant an arrangement as might at first sight appear. It is well known that a row of teeth is situated on each branchial arch in many of the ossows fish, so that there is a tendency among fish for dental structures to arise in connection with the nucous membrane covering this part of the skeleton. The peculiarity in the basking shark, therefore, is the excessive development which the branchial teeth undergo. a development brane. Each tooth was not more than three-tenths of an inch

ty in the basking shark, therefore, is the excessive developty in the basking shark, therefore, is the excessive develop-ment which the branchial teeth undergo, a development which is correlated with the small size and simple form of the maxillary and mandibular teeth, with the non-predacious labits of the fish and with the particular nature of the food on which it lives." He remarks on the fact that hitherto though "sentered notices of these curious fringes have appeared in the periodical zoological literature of various coun-tries, systematic writers on fishes have in their treaties ig-nored the existence of these appendages, noviwithstanding their haportance in connection with the food and habits of this shark, and their constituting a most important structural

peculiarity."

The publication of this important paper by Professor Turner will remedy this defect, and will have the effect of calling the attention of naturalists to one of the most curious and interesting arrangements in the economy of this inhabitant of the world of waters.

M. Harvey. St. Johns. N. F.

## ANOTHER CAPTIVE WOODCOCK.

Montreal, December 17.

Editor Forest and Stream:

Editor Forest and Stream:
A gentleman yesterday picked up on one of our up-town
streets a live woodcock. The bird is still alive and is in perfect condition as regards flesh and plumage, being quite equal
in size and weight to the birds we get toward the close of the in size and weight to the birds we get toward the close of the season here, that is about the end of October IIe, however, had a wound across the skull, at the rost of the bill, which may have been made by a telegraph wire or a shot striking him sideway. Where this bird came from is a mystery. The latest date at which woodcock were killed in this vicinity this year was about the 10th or 12th of November, which is later by a week than usual.

Since the 14th of November we have had enough snow for constant sleighing, and the mean temperature in the day time (8 a. M. to 6 r. M.) has only been above the freezing point for eight days during that time. Of course, if the mean temperature for the twenty-four hours were taken, the figure would be much lower; but I have not got the statistics at hand. From this it will be seen that the weather has been so severe that it is almost incredible that a woodcock could

hand. From this it will be seen that the weather has been so severe that it is almost incredible that a woodcock could have existed through it.

Some of our local sportsmen are of opinion that this bird

has been lying near a spring in the thick recesses of a swamp, or other warm place, where he managed to pick up a living, while others think he must have escaped from capswamp, or other warm powers alwing, while others think he must have escaped from captivity. Many of your readers here would be glad to have your opinion in the matter.

The bird is now in the possession of Mr. W. V. B. Hall restaurant keeper, St. James street, eats well and appears to Mr. R.

feet quite at home.

The woodcock I wrote you about the other day, which was picked up in the street here one week ago, is still alive and "doing well." It has been well supplied with worms and with a quantity of raw meat, both of t which it eats with apparent relish. To-day many persons were greatly interested at seeing it "boring" for worms.

Mr. Hall, who has the bird in his possession, requests me to ask, through your columns, for information as to the best kind of a cage to keep the bird in; also as to the best method of giving him food, whether or not he should have access to water, and, in fact, for any reliable information regarding the care of woodcock in captivity. Perhaps some of your readers may be able to supply the desired information.

H. R.

We presume that the bird has been living, as suggested near awarm spring hole in a swamp, and that he hurt himself by flying against a telegraph wire, when at last he was obliged to start for the south. He is certainly a very late bird, though not altogether unprecedentedly so. We once started a woodcock in Connecticut Dec. 24.

If the eage for the bird is to be a large one it should be low, and should be lined on top and along its upper sides with cloth, so that the bird may not injure himself against the wires and sides. The larger the cage the more likely the bird is to do well, but the wilder it will remain. The cage should not, we think, be over a foot or fifteen inches high. The bird should have water, of course. Some interesting facts in regard to this bird in captivity will be found in the Forest and Stream of August 12 and 26, 1880.

Please keep us advised as to the welfare of the bird.

PINE GROSBEAK IN MINNESOTA-Boston, Dec. 19.-PINE GROSBEAK IN MINNESOTA—168800, 1999. 191.—Off the IIII December I received from ny friend, G. F. Benson, Esq., Lake Gity, Wabash County, Minnesota, a female pine grosbeak (Pinicola enucleator), the only individual of this genus seen in this locality for twenty years.

It is perhaps worth notine. worth noting.

MORE ABOUT SOUIRRELS.

IN the interesting article of "Antler" in your issue of December 2, 1880, entitled "Something About Squirrels," he mentions the respective habitat of the gray and black squirrels as being distinct. However it may be in Tennes. he mentions the respective habitat of the gray and black squirrels as being distinct. However it may be in Tennessee, they certainly occupy the same hunting grounds in some sections of this State. In my last exploit at squirrel shooting near Memphis, Onondaga County, I bagged five blacks and seven grays within a square mile of territory on the same day. In Chatauqua County, a few years ago, I saw in a single stroll eleven blacks and not a solitary gray. In the more casterly county of Saratoga the grays seem to preponderate, although I once shot a couple of blacks there. The guides in the "Brown Tract" country tell me that they never see the black, although the gray is an occasional visitor.

Parke and Godwin and (I think) Audubon mention the young of the black and gray being found in the same nest. I have never seen this actually verified, but should suppose the natural result of such a cross would be an albino. Some time since a picball of this sort was mentioned in your columns. It has always seemed to me that the main diversities between the two species (or colors) are that the black is

time since a picual of this sort was mentioned in your con-unns. I has always seemed to me that the main diversities between the two species (or colors) are that the black is slightly less in size and more agile and shy than the gray. I have also observed that the black always "drives" or chases

slightly loss in size and more ague and sny than the gray. I have also observed that the black always "drives" or chases the gray.

The wide range of this interesting wood denizen is somewhat curious. In New Granada, Ecuador, Peru and Northern Chili I have shot a gray squirrel of about the same size and general contour as ours, the only apparent difference being a white circular spot, of the area of a silver half-dollar, commencing just back of the ears and extending over the neck and shoulders. They hark or "synall" like our own species, and plunder the "chacros" and fields in the same reckless style. Although usually found in the high woods there, yet I have seen thein on the cactus plain, su there is no other sustenance, even for a horned toad, on those arid plains. The little rascals are termed in those Southern latitudes, according to locality, "Ardillos" or "Monos" We Yankee hunters used to style them "Padren," from their fashion of back-hair, much to the holy horror of the natives. Senea Falls, N. N., Da. 8.

The black and gray squirrels are regarded merely as diff-

The black and gray squirrels are regarded merely as different colors of the same species. The South American form referred to is an entirely different species.

I wish "J. E. L.'s" (Nov. 16) hunting ground had appeared to enable me to locate the place of his large squirrels. I think his scales may have weighed incorrectly to have an average of 1 lb. 14 oz. for black and 1 lb. 10 oz. for gray squirrels. I have nover seen black ones so heavy anywhere, un werage of 1 lb. 14 oz. for black and 1 lb. 10 oz. for gray squirrels. I have nover seen black ones so heavy anywhere, nor gray ones either, except in Wisconsin, Illinois, etc. The large fox squirrels of these States will hardly average 1 lb. 14 oz., unless all are old ones. I have weighed strings of gray and fox, but not of the black. My weighing gave about 1 lb. 90z. for the large gray of Wisconsin, and 1 lb. 14 oz. for the fox. I would estimate the weight of the black haven 1 lb. 40z. They seem about the same size wherever I have found them, but smaller in Canada if anywhere. I cannot say my scales were correct, but it strikes me they were. At any rate the fox is fully one-third heavier than the black. I will take the trouble to find his weight soon and report it.

port it.

While bunting in Wisconsin this full I killed a black squirrel (to appearances) nearly as large as the lox, but on examining closely I found him to be clearly a cross of the fox and black, which accounted for his size. So in Central Illinois I chanced to kill another specimen of this cross, and nearly as large as the fox, but the smaller jet-black parent I did not see, and of about two-thirds the size of those killed.

Westchester County, N. Y.

Many years ago it was my fortune to shoot two gray squir-One, 25 inches in length, 2lbs.; the other, 26 inches, 24lbs. I have since shot many hundreds, but none exceeded 2 lbs.

LOCKED HORSS.—A correspondent who writes from Toronto, sends us a cutting from a Peterboro' paper as follows: "Mr. F. Lillicrap, of Lakefield, made a very strange discovery last week while hunting in the woods in the vicinity of the boundary between the township of Harvey and Burleigh. His attention was arrested by a large gathering of ravens and crows, which were holding high carnival in a thicket at some distance. This babel excited his curiosity, and a close inspection was made, when the carcasses of two very large bucks were found lying on the ground with their horns citiwined or locked. It was quite evident that these very large bucks were found lying on the ground with their horns entwined or locked. It was quite evident that these deer had heen engaged in a deadly combat. In this fight their horns must have interlaced, and in this position the stronger had thrown the weaker on to his back. This change of position created a leverage which fastened the two sets of horns inextricably together. In this and plight they must have died without any possibility of escape, as viceims to their own pugnacity. Some of the hunters went the next day and secured the two sets of horns, but the carcasses were useless."

Such occurrences are not so uncommon as to excite any very great surprise, though of course they do not often come to the notice of hunters. We have seen a few pairs of horns so locked, one of which resisted all efforts to separate them.

Harits of the Beaver.—I see your Canada correspondent gets after me on the beaver question. All right. Let every gray-haired hunter of the Eastern, Western of Middle States who has killed his hundreds of deer, reflect on the many regions he has hunted in where deer were fairly plenty. Were there not old "beaver dams" in every section? And were there any beaver in one case in fifty, though deer, bear, and even elk were tolerably numerous? There are a dozen counteis in Pennsylvania that can ofter very fair deer-hunting. Each and all can show the old beaver dams, but I cannot find that there has been a live beaver in any of them in sixty years. I know there are some beaver in Canada; I think there are a few in Northern Maine, also in New Brunswick and in the South. These are the exceptions, and they will vanish long before the last deer has passed. I rather like the notion that I got my forest lore in the near neighborhood of New York or Chicago. I would as soon live in Bedlam as either of them. Have spent ten days in the deep primal forest where I never spent on in cities or large towns, and HARITS OF THE BEAVER .- I see your Canada correspondent

have lived more in bark or even brush shantles than in hotels boarding-houses But n'importe.

A Question About Ruffed Grouse—Hills of Linganore, Dicember 13.—If the female ruffed grouse is driven off her eggs during the period of incubation, in what way does she make her exit from her eggs and nest? Is it by taking wing and booming off, or by taking heel and running away? And in what manner does she return back to them again, on foot or on the wing? I stand ready to answer these questions correctly when called upon, but before I do let us have the views, opinion and experience of other sportsmen and ruffed grouse shooters on the subject.

HARRY WOODLAND.

We have seen the female ruffed grouse leave her nest, but before giving our experience we would like to hear from

## Mish Gulture.

## THE CENTRAL FISHCULTURAL SOCIETY.

CIPST DAY CONTINUED

THE discussion on the subject of securing national legisla-tion for inter-State waters, such as the Mississippi River and the Lakes, having closed Mr. Miller offered the following resolution:

Whereas, This society has lost a valued member since its last meeting in Prof. James Wood Milner, of Waukeegan, Ill., an assistant to the U.S. Fish Commission, who was both a fishculturist and a scientific man, therefore be it

Resolved, That the Secretary of this society prepare a letter of regret and enter it in the records of the society, and send a copy of it to Mrs. Milner. Carried.

Mr. Clark moved that no papers should be read before the society except those prepared by persons who are memhere of it

Mr. Fairbank .- "That seems to me to be hardly fair. I have written to gentlemen who are not members asking them to write us something to be read here, and have no doubt that such letters would be interesting."

MR. CLARK .- "Mr. President, before putting the question, I ask to be allowed to explain my motion and the reasons for making it. I can see that such letters will be interesting, but hold that the writers should become members of this society in order to obtain the privilege of either reading papers before it or of sending them here to be read. I make this motion entirely in the interests of the society, with the object of increasing its membership and thereby extending its influence. I do not know who, if any, outside of the society, have sent papers and hastened to make the motion before such papers were made known, in order to prevent the motion from having a personal application.'

MR. BAETLETT .- "I object to the motion, and would invite papers from all who may feel an interest enough in our good work to prepare one and send it to us."

Mr. Miller. -- "I would make all who send us papers honorary members of the society."

MR. FARBANK,—"I hardly think it would be wise to pass this resolution. We might get some of our most valuable hints from outside the society."

Mr. Clark .- "I am willing to admit this, but think that since the admission fee has been reduced to one dollar, and the annual dues to fifty cents, the least a person who is interested in our cause can do is to join us. I have no paper to read, and will be glad to hear all that others have to say on the subject, but there are men here who have come nearly a thousand miles at an expense of time and money to be present here and it does not seem fair to admit others who stay at home to equal privileges, and I would compel these men at least to join the society and help support it by the small sum named, even if they never attend the meetings."

The President then put the motion and it was lost,

MR. MATHER proposed Prof. Spencer F. Baird, U. S. Comner on Fisheries as an honorary member. Carried.

Mr. Ballot found no power in the constitution allowing the society to elect honorary members.

Mr. Miller moved that the constitution be amended so as

to allow of the election of honorary members by a majority vote and that Prof. Baird be enrolled among them. Carried. The Secretary then read a communication from Mr. II. W.

Welsher to Mr. N. K. Fairbank as follows: There is no longer any doubt in regard to the impregna-tion of California salmon eggs that have been reared in fresh

water. I have impregnated a few hundred, which now show embryo fish plainly to the naked eye.

Mr. MATHER.-This note of Mr. Welsher's is a most important one. It proves that the California salmon not only live and thrive in the fresh waters of Geneva Lake, Wis., but that they develop eggs and will breed there."

Mr. MILLER .- "I have known of this some time. have in the pends of the Michigan Fish Commission some salmon which have spawned a few eggs. Mr. Welsher's case is more interesting because he has more."

Mr. Fairbank .- "This subject of the growth and spawning of the quinnat salmon in fresh water is a very interesting one to me and I will have something to say upon this subject to-morrow, when I will have my experience written out in the form of a paper which I will prepare.

Mr. Lyrle exhibited a drawing, in full size, of the fish which was recorded in the pages of the Forest and Stream of Oct. 7, 1880, as follows:

of Oct. 7, 1880, as follows:

I have sent to-day to Prof. Baird a very fine specimen of a California salmon weighing eight and a half pounds, a female, full of developed ripe eggs. She was taken by Mr. Welsher, who has charge of my hatching and ponds here, on Monday last, in the small creek which empties into the lake. The day before he saw seven or eight together, which he judged would weigh from eight to twelve pounds each, but had no means of capturing them at that time. It begins to look like breeding salmon in fresh water, but I shall not assert it for a fact until Lenov; but I will assert my belief in tow. I do not believe that salt enters into, or is an essential element in the problem. I believe that with clear, deep water, and plenty of food, the salmon will propagate in fresh water.

N. K. PAIRBANK. N. K. Fairbank

Mr. Clark .- "It is of great interest to know that this fish will breed in deep, cool lakes. I have kept them in small ponds in great numbers, as many as ten thousand, and never found a ripe female, although ripe males were common.

PROF. S. A. FORBES, of the Illinois State Labratory of Natural History, then displayed a series of oil paintings of Illinois fishes, from which the plaster casts of the Institution were to be colored, which were much admired. Also a few of the casts which were colored.

The meeting was then adjourned until the next morning at

The entire proceedings, papers and discussion will follow as fast as we can find room for them. I

## REPORT OF THE TEXNESSEE COMMISSION.

THE following is the report of Commissioner George T. Akers to the Governor of Tennessee. Mr. Akers has done much good work at no expense to the state, and we think it is time that he had an appropriation to enable him to go ahead and fill the water with food for the people

Nashviller, Tenn.—To His Excellency, Gov. Albert S, Marks: Sir—My report as Fish Commissioner must necessarily be brief. No previous General Assembly having ever made any appropriations to enable the Commissioners to engage, to any extent, in replenishing the stream of the State with desirable varieties of Jood fish, they have been unable to de anything in that regard.

to do anything in that regard.

Hop. S. F. Baird, Fish Commissioner of the United States Hon. S. F. Baird, Fish Commissioner of the United States, has, on his own account, within the last three or four years, placed some shad fry in the Cumberland River, and salmon in the Tennessee River. How these have done I have no present means of knowing, but from the results in other steams and localities, I have no doubt will prove, in due time, a very admirable addition to the fish supply of those streams

time, a very admirable addition to the fish supply of those streams.

The U.S. Commissioner, last winter and the present, has had the kindness to send to me for distribution in this State, eleven hundred German carp fry, which I have sent to various points in our State, gratuitously. The reports I have from those distributed last season are of the most connave from those distributed has season are of the most encouraging character, representing them as healthy and growing exceedingly weil. I entertain high expectations of the one-come of this new variety of fish. In addition to being a choice fish for the table, they are adapted to ponds, pools and small takes, and thus can be localized and multiplied to any extent, which is not so much the case in those requiring swite-maining water. They require but little attention, are very prollife, and grow to large size. The persons who now have possession of them in this State mast generally essureme they have good and wholesone habitations for them, and being able to protect them on their own premises, it is hoped the liberality of Prof. Baird will result in such increase that in a comparatively sure time the State may be generally supplied with them. Having been turnished at the expense of the General Treatury and myself I have held that those who received them are in some sense custodines of them for the public, at leass so far as to furnish the fay to others when they have reached the period of multiplication. I have great hopes of the carp becoming the chief home growing fish for the table in our State. couraging character, representing them as healthy and gre

The artificial propagation of the best varieties of fish is no Inger a matter of speculation or experiment. It is as signand certain as the reproduction of any land animits, and become a fixed industry. All the streams of our green

and certain as the reproduction of any land animals, and has become a fixed industry. All the streams of our greatly favored State are largely depleted of their once abundant supply of game fish.

In a few years, and at a comparatively small expense, they all might be restocked and refilled with bass, joes, true and the larger and better varieties of pirch.

Vicquial has tried it successfully. Streams in that State, which is few years since were fishess, now are full of the choicest kinds, easily obtained and cheap to the consumer. Temusesee might easily do the same thing. But to do so, it will require the expenditure of some money in the establishment of one or more hatcheries. The smount of money required would not be great, compared with the great benefits derived.

After the work of stocking our streams is accomplished

After the work of stocking out Strams is accomplished, the lautheries might be abundoned, or sold to individuals on be continued as private encaprises. In the event the Legislature should consider fix orably such a work there as one essential and indispensable prorequisite, and that is the encuent of laws, protecting that in every stream in the State, from the least to the greatest, and from

their sources to their mouths, or as far as they may flow witbin the State. Without such protection by stringent laws, tigidly enforced, I undertake to say that you can accomplish nothing. Our laws herefolfore have been partial and local, whereas they ought to spply everywhere in the State. To illustrate, protect fish in Manry and Bedford counties only, and you can never stock Duck River with fish; because Coffee, Marshall, Hickman and Humphries will be at liberty to take out all you may put in. Local protection is not protection. It must extend equally everywhere within the State to be of any value whatever. The Virginia authorities are at this moment deterred from attempting to stock the streams in her southwestern borders, which flow into Tennessee, for the sole reason that our State offers no protection to them after crossing the line, and they regard it as a waste of time and means to send fish into those streams.

atreams.

In this connection I will add, that while the establishment In this connection I will add, that while the establishment of hatcheries would, in my opinion, be the quickest and best way to replenish our streams with the better and more choice varieties of fish, and heartily recommend that course for adoption; yet, I believe that adequate laws for protection of the fish in our waters would enable our native varieties, in of the fish in our waters would enable our native varieties, in the course of time, to multiply and become abundant, so that they would be easily and cheaply obtained. Whether anything else is done by the present General Assembly, I would most carcestly and urgently appeal for the passage of laws for the protection of fish in all the waters of our State from the wholesale and often wanton destruction, which had been so long practiced as to render our waters, in many places, at most entirely bare of this wholesome and platable article of feod and healthful object of sport and recreation to a great many of our work-weary people.

If such laws are enseted and enforced we could reasonably call upon the United States Commissioner for a share of such as he finds do well in localities such as ours. He has already signified to me that he would cheerfully give all the aid be coubl in supplying land-locket salmon, which would do well in our waters, and other fish desirable, if the authorities of the State would bear the expense of distribution and give proper protection.

the State would over the exposite proper protection.

Who it he fact is understood and superciated that the main object proposed is to provide a plential supply of cheap and wholesome food, for the use of all, rather than furnish an opportunity for sport, the scheme will be heartily approved.

Very vespectfully.

GEV. A. REAS,

Fish Commissioner.

## FISH CULTURE IN NEW HAMPSHIRE.

FISH CULTURE IN NEW HAMPSHIRE.

I SAW in Forest and Stream a letter from a New Hampshire correspondent speaking of a peculiar diseasehe had noticed in certain fish taken from Webster Lake, in Franklin, viz., small hard concretions or lumps scattered through the flesh of the fish. A few days afterward I met the gentleman who wrote the letter in the cars and told him that when I got an opportunity I would write you and tell you of a similar case which I noticed some forty years ago in the perchand sunfish (Domotis volgaris) in Cold Pond. in this State, lying in the towns of Asworth and Unity. It think it was in 1840 that in company with half a dozen other boys I visited this pond for a day's fishing, which, so far as quantity went, was a very successful one, as we caught a good round bushel of the above named fish, but on getting them home and cooking them they were found to be entirely inedible, being full of these little hard concretions, about the size of No. 10 shot, not only in the flesh but in the membranes of the fins between the spines. It was not till many years after that I had an opportunity to visit that pond again, and then in 1806, I think. We found the fish all right, but in much fewer numbers than at the date of my previous visit. What the precise disease was I never knew, but of its existence and final disappearance I can affirm. I notice one or two other things in my last number of FOREST AND STREAM which have brought my pen to my hand this morning. I also notice a letter from Mr. Ferguson Haines, of Biddeford, Maine, in regard to stocking the Sace River with salmon. Two years ago the New Hampshire commissioners placed 20,000 young California salmon in the head-waters of that river, which are in the State of New Hampshire, and if Mr. Haines can get the young fish from Mr. Sliwell or Mr. Smith he had better plant them in New Hampshire, say in Conway or Madison, whence they will push their way down the Saco and return in due time, if proper fishways are provided on the river at the dams in Saco an pleces in the Merrimac and Penigewas et by the salmon which have been seen in numbers all through the summer, in the deep holes and at the mouths of the spring brooks, all the way up the river, from Lawrence to New Hampton. The State of Massachusetts has just sent 200,000 salmon eggs from the Penobscot to the Ph meuth hatching-house, and we expect more, so shall undoubtedly turn out 300,000 young Salmon in the head-waters of the Merrimac next spring. In addition to these, we expect to distribute 100,000 brook trout and 100,000 Schoodic salmon, and we have made a new venture by taking 100,000 eggs of the fish commonly called the "shad waiter" at Lake Winnepesankee, which fish is neither more nor less than a genuine "coregoms," or a local variety of the whitefish, which is a native of Winnepesankee. These we shall divide with Massachusetts, and hope to naturalize of the whitefish, which is a rative of Winnepesaukee. These we shall divide with Massachusetts, and hope to naturalize in other of our New England waters. We expect to hatch and plant at least 750,000 young fish of different warieties next spring. One more thing, I see a letter from New Bedford about spawning losters. We passed a law in this State in 1878 prohibiting entirely the taking of femule lobsters while carrying their spawn, and it would be well if the other New England States would follow our example. W.

IXTELLIGENCE OF CARP .- We are permitted to publish the following letter written from Roslyn, Queens Co., N. Y., to Mr. Eugene G. Blackford, State Fish Commissioner:

Mr. Eugene G. Blackford, State Fish Commissioner:

"The carp came in good order this A. M., and I have just been to the pond and, with my hired man, broken the ice and introduced them to their new home. They gave evidence of their nationality—I call them 'German Philosophers,' They really showed something more can instinct—intelligence—for they quietly arranged themselves in a semi-crice, a deliberative assemblace, applicable in the situation, I They did not shoot away 'pell mell,' but after a few seconds

moved, as if to the manor born, in a dignified way toward the decayed haves and mud at the bottom.

"I know you would have been interested or amused had you seen them. The pond is on the estate of the late W. C. Bryant, and our neighbor, T. Clapham, Esq., you probably know, who is interested in trout culture. My husband, the late deseph W. Moulton, introduced planting of cysters in Hempstead Larbor (our bay) in 1835-6. It is now a profitable husiness here, but he was laughed at for sending a sloop for cysters to plant. In 1837 he procured trout from Ronkonkona Pond and from another source, but the experiment was a failure. I wish he had lived to see the success of Mr. Clapham, I hone this matter of the German carp will suc-Kollsonia Form an was a failured. I wish he had lived to see the success or an Claphan. I hope this matter of the German carp will succeed. I am an old lady and do not expect to see a five-

nger. Nevertheless, am as much obliged to you as if I expected se them on my table. L. M. S. Mourrow." to see them on my table.

to see them on my table.

Dunker's Pishery Calender.—Each year Mr. W. Dunker, editor of the Fisherei Zeitung, Stettin, Germany, issues his calender. The one for 1881 is now before us. It is a small voltune for fish euturists, fishermen and fish dealers, and contains the usual almanae and calendar, blanks for the business accounts of sales, fishery laws of Prussia, Brunswick, Baveria and Switzerland; a chart of the storm signals in use on the German coast; an account of the storm signals in use on the German coast; an account of the angling apparatus at the International Fishery Exhibition in 1880, illuminated with figures of hooks of bone and iron, gangs of hooks, epinning baits, floats, etc.; measurements of fish eggs, by Mr. von dem Dorne; a German and Italian fish dictionary, giving the popular names of fishes in those languages, as well as their scientific names, and much other information concerning the subjects to which the book is devoted, all for the sun of one mark (twenty-four cents) in paper, or one and a half marks bound. a half marks bound

the sum of one mark (twenty-four cents) in paper, or one and a half marks bound.

PROTICT SPAWNING LOBSIEL — South Norwalk, Conn.—
J. E. Jr., strikes the nail on the head when he says in his note "Save spawning lobsters." The law now existing in some States, that lobsters under a centain length shall be returned to the water, does not cover the ground. What we want and must have if we are to have any lobsters, is a law to prohibit the sale of spawning lobsters, and if caught returned at once to the water. It is a mystery to me that the men engaged in this business cannot see that they are killing the goose that lays the golden edge. It does not take an expert to see that they are killing the goose that for every spawning lobster taken hundreds are destroyed, and as your correspondent from New Bedford says, "All the lobsters seem to run in the pots." For the benefit of those who are interested in this subject I will give my observations on the decrease of this most valuable sea fond taken from Norwalk and Five Mile River. Five years ago with one pot well batted I could catch all the lobsters I wanted for use in my family. This year it would take a half dozen pots to do so. What is the cause of this? you will ask. The answer is simple: Parties in Norwalk and Five Mile River are making a living at lobster catching during the summer months, and all the spawning ones are sent to make with the other catch, and the result is they are growing very scarce, and if it continues a few years longer lobsters in our water will be a thing of the past, as it will shortly exterminate them. Let the Fourst and Norwalk and Five Mile River are making a living at lobster reaching during the summer months, and all the spawning ones are sent to make with the lotter catch, and the result is they are growing very scarce, and if it continues a few years longer lobsters in our water will be a thing of the past, as it will shortly exterminate them. Let the Fourst and Norwall and destroyed. I should be most happy to correspond with any parti

Fight for New York Waters.—Rochester, N. F.—The New York State Fish Commissioners desire to announce that they are now ready to receive orders for the brook trout, and California mountain trout from any parties who wish to procure them for the purpose of stocking public waters in this State. All applications must be addressed to the undersigned, giving a description of the waters, and where they are

icated.
Information will be given as to the suitability of the above sh for the waters desired to be stocked.
Orders will be received until March 1st, 1881.
SETH GREEN, Supt. N. Y. State Fish Com., Rochester.

SETH GREEN, Supt. N. Y. State Fish Com., roceaser.
We are permitted to publish the following:
Min. SETH GREEN:
SID—The trout you sent me two years ago last spring were put in Lake Harkness. There was no fleh of any kind in the lake. It was up there this month and saw trout up the brook above the lake that would weigh one-half to three-quarters of a pound, they were on the spawning bed.

## FLY FISHING FOR BLACK BASS.

Indianapolis, Ind., Nov. 29.

Editor Forest and Stream:

A careful reading of the articles in your valuable paper on fly flahing induced me to try my linck with the fly. One afternoon in August last, equipped with a nine-ounce rod, reel, slik line, ris/feet leader and a half-dozen flies of different patterns and of the most approved make, I sought the banks of White River, striking the stream at the Bine Banks, a noted resort for black bass, where I often had good success with bait and where I have there were some monsters.

Putting my tackle together after what I considered to be the most approved method, not omitting to break one tip in Editor Forest and Stream:

the operation, which had to be replaced with a spare one, I commenced whipping the stream in the shallow, swift water below the deep pool, using a silver docter for the stretcher and a brown backle for the dropper. At the second or third cast I booked my first bass, or, rather, he hooked himself, and I landed him in fine slyle. In less than an hour I caught cast I hooked my first bass, or, rather, he hooked himself, and I landed him in fine style. In less than an hour I causht several more, none over one pound in weight, the first taken being the largest of all, but I gained some lasting experience in taking the last one. I was standing on the bank of the stream and casting below me, when I saw a fish rise and miss the flies. Moving back from the bank and carefully walking down the stream until opposite the point where I had seen the fish I made cast after cast with no success, till at last, disheartened, I was about to give up and try another place. Before doing so I thought I would take a look at the flies as they drifted past me and see if they really did resemble anything in the land of the living. I magine my surprise as I saw the flies drifting down the stream, gradually sinking to the bottom, to see a bass following, with what appeared to be great curiosity, with body slightly bent and all the fins working. He deliberately took the hackle and came to grief. Going up the stream I waded as far as possible into the deep pool under the Blue Banks and made cast to a large boulder opposite me in quite deep water, allowing the flies to sink below the surface, and was awarded with a straightening of the line that indicated a fish. A slight turn of the wrist fastened the hook, and I discovered there was something lively at the other end of that line. Thinking to check him a little I pressed the line against the rod with the ball of the second finger of the right hand, but it did not work. My little boy, some twelve years old, says, Thinking to check him a little I pressed the line against the rod with the ball of the second finger of the right hand, but it did not work. My little boy, some twelve years old, says, "Pather changed hands and put bis finger in his mouth and said Ouch!" but I guess he was excited and "does not now remember, if he ever knew" what took place. I know the line burned my finger like a hot iron, and momentarily gave the fish an advantage I was slow in recovering. My excitement was not lessened when he broke water and showed himself three times in succession high in the air. Having had no experience in this kind of fishing I did not know how much strain the tackle would bear. I had no fear of the line, but that single leader and the light rod seemed just then a bad combination. Determined to do my very best, putting my thumb on the reel I gave him nearly all the reistance of the red. Up to this time he had had everything except the hook all his own way: but the resistance of that light rod was more than he had bargained for, and it soon checked his rapid career and changed his direction so that I was enabled to take up a little of the line. This trial of strength gave me some confidence in the rod and tackle. Keeping a stendy strain upon the line and gaining more and more confidence, I found I could to a great extent control his motion, and at last made him circle around me time after time, his efforts becoming weaker, occasionally varied with a sudden rush and leap from the water.

Having no landing up the back when you can be seen the product of the back the part control to the time the control was the sudden rush and leap from the water.

becoming weaker, occasionally varied with a sudden rush and leap from the water.

Having no landing net I was somewhat pouzzled how to act. I had the fish all right, but knew I could not lift him from the water with that tackle. Fortunately the water shoaled gradually at the lower end of the pool over a sandy bottom free from obstacles, so in the end I grounded him fair and square with his head out of water on the shore, and wading up took him out by the gills. He proved to be a small mouthed black bass and weighed four and a half pounds. Such wasmy fish experience with the fly. From that day until the advent of cold weather I used the fly and met with satisfactory success. I have caught many small mouthed black bass that would weigh four and a half pounds, but none larger. Although nearly every old fisherman in this locality has taken them weighing six pounds and more I have not yet had the good fortune to ever see one of that size. On several occasions during the latter part of the season I fished from a skiff with another party who was using live bait (minnows and craw fish) each time coming off the victor with the fly, and am perfectly satisfied with the superiority of the fly over all other kinds of bait for bass fishing in this locality during the summer and early fall months.

Now I would like to say a word for those lovers of the sport who cannot always select the time and place to try

Now I would like to say a word for those lovers of the sport who cannot always select the time and place to try their skill, but do occasionally get a day off—I would advise all such when starting out for a day's sport among the bass to provide a box full of grasshoppers. If on reaching the fishing ground the bass will not rise to the fly, cut the body off from a diver doctor, or other fly, pull the wings off from a grasshopper, insert the point of the book in the head of same, and pass it through two-thirds of the body lengthwise, and bring the point out on the other side; slide the grasshopper well up on the hook, cast and allow to sink; nearly all kinds of fresh water fish will take it readily, including the cut-fish of the different species. If the desciple does not desire to multiate one of his choice collection of flies he can easily make a fly minus the body, and use the grasshopper as directed. Old fishermen who know the haunts of black bass will not be troubled with the smaller tribe, and if they have not tried this bait before will be astonished with the number and size of the take. and size of the take.

## FISH SLAUGHTER IN CANADA.

OTTAWA, Dec. 17, 1880.

Editor Forest and Stream:

Recently I had occasion to correct some misrepresentations concerning the salmon fishing and the Canadian fishery laws published in the newspapers by an English sportsman named Mr. Eardly-Wilmot B. Holt. I have now to refer to misinformation circulated by an experienced American angler well known to your readers, Mr. Geo. Dawson, of the Albany Brening Journal. The distinction made between Mr. Holt's and Mr. Dawson's publications resist on the fact, that the former's assertions profess to be based on actual observation, and the statements of the latter seem to be founded on hearsay.

and the statements of the latter seem to be founded on near-say.

In Forest and Stream of 25th ult., under the heading of "Killing for Count," Mr. Dawson says: "Last year three titled flunkies from England killed 600 salmon on the Casca-pedia. Most of these were taken thirty or forty miles from any labitation where they could be utilized. The result was that most of them had to be buried as offal. But this dis-graceful fact did not accompany the published score which went the rounds of all the sporting papers in the world as the best catch on record, and as proof of the great skill of the fellows who perpertrated the slaughter."

the best catch on record, and as proof of the great skill of the fellows who perpertrated the slaughter."

The angling party on the Grand Cascapedia last year consisted of the Hon. Chas. Ellis, Mr. Ivsson and Captain Percy. These gentlemen rented the stream for \$600. Their score was very high, but nothing improper was supposed to be connected with this extraordinary catch. If any of the fish caught by them were wontonly wasted, as alleged, it would be an infraction of the fishery laws, rendering thom liable to

severe penalties and summary expulsion. It is the business of the local Fishery Overseer to euforce these consequences, for which purposes among others, he is invested with magisterial authority. Mr. Dawson's article was therefore promptly referred to him with a request for explanations. Overseer Dimock is the chief fishery officer at Cascapedia, and during a scries of years has proved attentive and trustworthy. In answer to such reference he states positively that not one of these fish was spoiled or wasted, but that the whole catch (apart from daily consumption) was given away to settlers on the river, and to employees of the party, there being thirteen men, each of whom received something over a barrelful at the close of the ishing. About three fourths of the fish, he adds, were taken in the lower pools. Mr. Dimock's report its corroborated by the affiliavits of several persons who are exertified to us as credible witnesses, being themselves engaged on the river at the time, and the same men who cured, or carried and delivered the salmon.

The accomplished author of "Pleasures of Angling" will no doubt be gratified to learn that in this particular at least he has been misinformed, "Killing for Count" being in itself sufficiently objectionable from a true sportsman's point of view even when qualified by the necessary care and unusual, but commendable, liberality which I un assured were manifested in the present instance. Yours truly,

t instance. Yours truly, W. F. Wircher, Commissioner of Fisheries, Canada.

## THE GREENBRIAR.

WASHINATOR, D. C., Dec. 1880.

THE Greenbriar River in West Virginia was stocked with bass, as you know, several years ago, and in September, 1879. I was the first to sample the stream with a fly, and was rewarded by several good baskets.

This fall I passed through Ronceverte on my way to the woods, and I found the people ull posted as to bass. The fishing was excellent this year. One man caught 500 during the season. The largest went to 4½ lbs, weight. The superintendent of our mill having informed me that it was "no use to fish for them with those single guts" as big fellows had just walked away with certain leaders and files I had sent down to him by request that he might learn to fish properly. To correct his views I rigged up my trout rod, and from a pool just before the mill I took two at once of 2½ lbs. weight. The fish having fortunately taken the dropper, a great many very large bass were taken lower down the Greenbrier, and at Richmond's Falls on New River where I heard of one 5½ lbs.

I do not think the bass will be as numerous next season. The stream having been newly stocked, of source contained a lot of undisturbed minnows, chubs, etc. Now since the bass got large enough to catch—and they will jump at a fly when only two inches long—the small fish have been devoured until there is not a minnow to be seen high or low, and the bass have worked up and down in search of pastures new. Of course there will be plenty of bass in the stream, but only as many as the normal supply of food will sustain. There will not be another as prolific season for the angler as was this of 1880. I spent several weeks on my trip living on venison, etc., etc., including a variety from coon to turkey. Among other trophies of the chase was an eagle 6 ft. 9 across the wings the lead of which I have had set up by Krider. I did not look after any panther as there was no snow. C. Clay. I do not think the bass will be as numerous next season.

## "A WATER-GLASS."

Noting over "Atlantic Islands," a very pleasant book by Mr. S. G. W. Benjamin, I find the following account of an instrument used by the inhabitants of the Bahamas in gathering sponges: "The sponges (says the author) are two or three fathoms below the surface. The position of the sponges is ascertained by means of a water-glass, which is a simple oblong box a foot square, open at the upper end, and containing a pane of glass at the other; on holding this perpendicularly over the water one can see everything through it as clearly as in an aquarium—fish, sponges, coral or shells."

it as clearly as in an aquarium—hish, sponges, coral or shells."

We are not told the length of the box, or the kind of glass used, or the depth of the glass end in the water; but the presumption is, from the use and the parties using it, that it is handy and easily wielded, and not costly in construction. Why has not some angler, or enterprising fishculturist, or naturalist introduced this implement among us? An instrument which would enable us to watch fish beneath the waters—to see all their movements—how they spend their idle time—in a word, lay open to us their whole existence, would be a great boon to the naturalist. But talking one day with an inveterate disciple of old Izaak about such an implement, "Why;" he said, "that would spoil all our fun. Now, when I throw my minnow in the water, I forthwith begin to imagine there are a half-dozen or more huge bass eyeing my bait, and each meditating a deadly attack upon him. And I keep on imagining this, expecting every moment to see the cork disappear, and the very loveliness of this expectancy is what stirs a thousand pleasant musings in my head and makes angling to me so delightful. But with your telescope no more fairy fancies—we should see at once that there were no fish, and we should have no brilliant hopes." "But then," 'Ent that," rejoined my friend, "would not be fair to tha fish. But the thin the stirm of the stirm of the stirm of the fish in the fish in the fish in the fish. no usa, and we should have no brilliant hopes. "Dut then," eaid I, "we could go where we could find and catch them." "But that," rejoined my friend, "would not be fair to the fish, and I'm in favor of the fish having a fair chance, and I love

my dreams."

HANGE OF BLACK BASE AND CAFFISH—Ubecland, O.—Dr. Garlick says in Forest and Stream that in company with Judge Potter, of Toledo, he has fished the waters of the Sault Ste. Marie's rapids and their surroundings for many years and neither of them ever captured a black bass in that locality; nevertheless I have seen at the "Sailor's Encampment" on this river, twenty miles below the rapids, many black bass taken. In 1863 H. C. Gaybord, of this city, while fishing for trout in Goulie's Bay, north shore of Lake Superior, caught two black bass with the fly. They were well grown fish, weighing 24 lbs, each. I saw numbers of this fish at "The Portage," Point Kowendau, in 1859, and persons whose testimony I can rely upon inform me that this fish at found in the region of Duluth, at the head of Lake Superior, and also in the vicinity of Outnongon on the south shore of this take. I am yet in search of the most northern range of our catfish. Perhaps the waters of the Mississippi will be found to carry this fish furthest in that direction. In case it is found in waters north of the divide, that dow into the Arctic seas, please let us hear from the captor, and also have a description of the fish and its habits in that locality.

DE, E. STERLING.

DE. E. STERLING.

MORTALITY OF FISH IN TAMPA BAY.—Our correspondent, "Al Fresco," in writing to us from Jacksonville, Fla., encloses a slip headed "The Epi-ichthyotic," from the Sunland Tribane of Tampa, which says:

Last week we noted the fact that a great many fish of all varieties were dying in Tampa bay. At first it seemed to affect the worse bottom fish, though such as move in the water near the surface were not exempt. On a tolerably diligent inquiry we can learn of no local cause for it. It seems, however, that some time back the poisonous water which appeared on the coast south of here in 1878. had made its reappearance down the coast and it is possible that the almost continuous southern winds which lawe prevailed for some time have brought up the coast and filled our bay with the poisonous water. This idea is confirmed by the fact that fish in the western half of the bay were the first and worst affected by the cause, whatever that may be.

Tennessee—Nushville.—The largest fish ever seen in this market was exhibited by Sulzbacher last week; he called it "Warsaw," but in reulity it was "Jew fish," Promicrops guaso, and weighed 259 pounds.

## TO THE FARMERS OF LONG ISLAND.

Gentlemen:

Many of you are aware that it is the intention of the different clubs and associations of Long Island for the Protection of Fish, Game and Song Birds, to take stremous measures to have the laws now in force revised and amended. These alterations will be, in my opinion, of great importance to every farmer on this island, especially those portions of the laws relating to the insectivorous birds.

Their indiscriminate slaughter, together with the robbing of their nests, has so reduced their number that insect life has increased, till it is now one of the most serious plagues you have to contend against. Many of you that I have had the pleasure of meeting during my rambles over the island, collecting and studying the insects in jurious to vegetation, have seriously complained to me of the ravages which your crops sustain from the attacks of numerous tribes of insects, which often these serious and the properties of the ravages which your crops sustain from the attacks of numerous tribes of insects, which often these serious properties and the properties of the propert crops assumit from the attacks of numerous tripes of insects, which oftentimes spread universal havoe. Your finit trees are scourged by various curculios (snout beetles or weevils) and by Aegeria, a family of clear-winged moth. Your wheat, rye, oats, barley, and in fact every article grown for confort or profit, all have their peculiar species of insects which destroy them.

You who have woodlands must have noticed of late years the profit that the profit of t

stroy them. You who have woodlands must have noticed of late years that many of your forest trees have sickened and died. In the Cemetery of the Evergreens, at Cypress Hills and in Prospect Park, and in other parts of the Island, many of the finest trees have died out, destroyed by insects. Ou the hickory and walnut trees the Tiger Cerambyx (Monohammue Vigrenna, Dr. Geer) deposits its eggs. The worm soon latches and eats into the tree, making a burrow two or turee feet in length, which in time kills the tree. It is only in the spring, when the tree puts forth weak, sickly leaves, that the extent of the ravage is shown, as till then it usually appears sound and healthy. There are many other insects which I could name that are injurious to your forest trees, but this example will suffice. Within a few years a new insect has made its appear use and already developed into a pest dimost as serious as the potato bug. I refer to the Pieria rape, generally known as the cubbage worm—in fact, the list of your insect plagues is endless.

Now, gentlemen, there is cause for the great increase of these swarms of insects of late years. In my opinion, it is owing in a very great measure to the wholesale destruction of our insectivorus birds, which were formerly abundant everywhere.

If you visit the woods at the proper season you will then.

tuese swarms of meets of the years. In my opinion, it is owing in a very great measure to the wholesale destruction of our insectivorous birds, which were formerly abundant everywhere.

If you visit the woods at the proper season you will then see that beautiful bird, the golden-winged woodpecker, a bird every farmer is familiar with as the "Highhold." Watch him and others of his kindred; see him liftiting from tree to tree, busily engaged from early morn till, the sun sinks below the horizon, tapping every part of the tree and making the woods resound with the blows from his sharp and powerful beak. He is searching for the worm that is slowly but surely eating away its very life, and his instinct enables him to detect it when man would fail to do so. See what valuable assistance this bird renders to man, and is in not a disgrace that it should be so ruthlessly slaughtered?

From a rough calculation, it is estimated that over one hundred thousand of these birds are destroyed every year. I counted 120 gunners in a small belt of timber near Flatbush this fall, in the course of a morning's ramble, all intent in their murderous work. Then there are the thrushes and a large number of insectivorous birds too numerous to mention in this paper. Last spring I examined several wood-thrushes (Turdus medodiss) given to me, and in the stomachs of four I found over one hundred and twenty specimens and parts of specimens which I could identify, representing sixteen different species of insect known to be injurious to vegants of specimens which I could identify, representing sixteen different species of insect known to be injurious to vegants of specimens which I could identify, representing sixteen different species of insect known to be injurious to vegants of specimens which I could identify, representing sixteen different species of insect known to be injurious to vegants of specimens which I could identify, representing sixteen different species of insect known to be injurious to vegants of specimens which I could identif

a single pair of these birds would destroy at least six hundred insects a day. Swallows and martins live entirely on insects, and as they are always on the wing they rid the atmosphere of noxious pests that, but for their friendly aid, would be unendurable to man. Were it not for these insectivorous birds the earth would be overrum by insect life. By those who have studied this subject it is admitted that the agriculturist is deeply indebted to these birds. The large number of idlers who visit your lands and woods, armed with guns, shooting and destroying everything that comes in their way, even your domestic ford when oppertunity offers, must be repressed in some way, or your labor on your crops will soon be in vain. The remedy in a great measure rests in your hands, and your co-operation is most carnestly solicited to the proposed amendments and additions to the laws, that they may pass the Legislature, as they are a single pair of these birds would destroy at least six hundred

carnestly solicited to the proposed amendments and additions to the laws, that they may has the Legislature, as they are of vital interest to you all.

The laws which it is intended to present are briefly as follows: After some slight alterations and additions to the laws now in force respecting the shooting of game birds, it is proposed that any person detected killing eagles, night-hawks, mertins, whip-poor-wills, swallows, woedpeckers, meadow larks, thrushes, or any of our song or insectivorous birds, shall be fined \$10 for the first offerse, and for the second offense imprisonment for not less than twenty days nor more than three months in the County Jail, with forfeiture of the gun.

For the destruction and robbing nests of wild birds, and for trapping or feeding birds on prepared grain or other policy.

For the destruction and rooming reason what broad marging for trapping or feeding birds on prepared grain or other potsoned ingredients for the purpose of destruction, a fine of \$70 is proposed for the first offense, and \$50 with imprisonment for not less than three or more than six months for the

we also propose to have game protectors for our game and song birds and for fish, one for each county. Also to have a license law, to compel every person who shoots to take out a license, to be issued by proper authority. (Farmers and their families excluded.)

Gentlemen, if those laws can be passed, and I am certain they can with your assistance, they will strike at the very root of the evil. I bope that this article will receive your serious attention, and any suggestions relative to the proposed additions to and alterations of the present laws would be very acceptable and would materially assist us in arriving at some definite conclusion, that the laws presented may be such as you approve, and that you will carnestly use your influence with your representatives in the State Legislature to have them passed. to have them passed.
Any communicatio

to have them passed.

Any communication on this subject can be sent to the
Editor of the Forest and Stream, No. 39 Park Row, New
York.

Nicotals Pirk,
President of the Society for the Protection of Song and Insectivorous Birds of Long Island.

## "THE TRAPPER'S LAST SHOT."

E was probably christened James, but is always Jim

"THE TRAPPER'S LAST SHOT."

It was probably christened James, but is always Jim name he has almost entirely lost his surname. If he had been a few shades lighter he might have been 'Colored Jim,'' but black being the absorption of all color this name would not fit him. So he is known, wherever known at all, as "Nigger Jim." He is an expert trapper and fishermen, but rather singularly, considering these gifts, a poor marksman. For years he lugged about or carried in his boat an ancient lint-lock Queen's arm, so deadly in its action that it would kill pickerel with only a charge of powder, so Jim said, yet he rarely brought home any spoils of field or flood but such as were gained by trap or hook.

Once, however, he made a very telling shot. It was on an October morning, and he was paddling his light trapping skiff up the channel of Womakakatuk as silently as any Indian could, when as he rounded a bend he saw through the tall stalks of the wild rice at least a dozen ducks sitting among the lily pads in the edge of the channel, not six rods from him. Here was his long-sought opportunity, and no somer did he decry them than a backward stroke of his paddle stopped the headway of the craft just before she poked her sharp nose in sight of the unsuspecting fow. Then he had the paddle in the boat without far eligitest noise, and as silently lifted from her resting-place his old gm, whose true inwardness at that moment consisted of all the powder in her owner's possession and a handful of RB shot, but had ded with a half-pound or so of wasp nest. He cautiously thrust her muzzle through the rice stalks, cocked her without a tell-tale click of the ponderous lock; set the breech-plate firnly against his shoulder, laid his elicek to the stock and took such long and deliberate ann that a spider, setting his snare among the rushes, made fast an end of his web to the rusty barrel before Jim shutting both eyes, set his web to the rusty barrel before Jim shutting both eyes, set his web, to such a such a dark with a lartify pull u

Kentuckt, Louisville, November 28. The sport of duck-shooting is now in full blast. Six-mile Island is a favorite resort for gunners. We use a skiff 4 ft, at top, 20 in. bottom and 18 ft. long. We sit on one side of the craft, so that the other side tills up and conceals us from view; and then we paddle down, and nine times in ten manage to get within thirty feet of the birds. I have been hunting for eight years and have found this place most successful.

M. L.

## ATMOSPHERIC EFFECTS UPON SHOOTING.

LE Roy, Dec. 17-

LE Roy, Dec. 17, THAVE been much interested in reading the articles which have appeared lately concerning guns, their peculiarities and how to load them to secure the best results. No doubt many brother sportsmen have noticed, as I have, that a certain proportioned load at one time would produce good results, and at another, under apparently similar circumstances, the results would be quite unsatisfactory. Sometimes a load would be very killing, hitting hard and clean, and at another time the same load would only wing the birds or miss them altogether, even with equal care in loading it, settling powder and shot evenly and having the wads lie at right angles to the axis of the shell, and holding the gun on the birds as perfectly as possible.

time the same lead would only wing the birds or miss them altogether, even with equal care in loading it, settling powder and shot evenly and having the wads lie at right angles to the axis of the shell, and holding the gun on the birds as perfectly as possible.

With regard to this matter I received an explanation once from an axed gentleman who had spent most of the years of his life in Turkey, about Tolatt, Snyrma and Constantinople, and who had always been a great lover of shooting, spending a portion of each year in trips about the country. He said it was always his practice to load a few shells with what he thought the proper amount of powder and shot, and then larget them, observing the pattern and penetration before going into the field. If it was a damp day and the pattern was not pood he would have a larger proportion of powder to shot, and if a dry day rice rersa.

His reason for so doing was this: on a damp day he could burn more powder to get the sume pattern and penetration without recoil than he could on a dry day. He said he learned this from his servant, who was an old and experienced and successful hunter, and who always practiced this plan. He gave an illustration. Once he was out shooting red-legged partridges, and with his first chat dropped the bird clean, with the second he only winged the bird, and as they are great runners he had some difficulty in capturing it. With the third shot he missed altogether. He noticed that the atmosphere was changing from dry to damp, so he changed his load accordingly. With the next shot he killed clean; with the next he only winged, and with the next he missed. He changed again with better results. The third time he repeated his former experience. He trained his son to practice the same care, and they are good shots. This gentleman explained this method to many English hunters whom he accompanied, but they only laughed and persisted in bringing their ammunition fixed, and consequently were uncertain in their shooting.

Now, whether this rule is only appli

to him.

Many shooters in this town and vicinity make it a practice of shooting birds and hares on Sunday as well as other days.

## OUR PHILADELPHIA LETTER.

OATKA.

OUR PHILADELPHIA LETTER.

TAM pleased to be be able to tell you that Mr. Spencer years by the Academy of Sciences to re-classify and arrange the immense collection of birds in possession of this institution, has promised to furnish the writer ornithological notes, etc., to incorporate in my weekly letter to you: and your redders may expect very interesting matter, as we know of no young man whose knowledge on the subject is so varied and who has prosecuted the study with more thoroughness.

Mr. T. writes me this morning referring to the query, "Do snakes swallow their young?" the following: "Doubls have been expressed as to whether snakes swallow their young on the approach of danger, and there has been at various times and places some little discussion on the subject. Last summer, while tramping among the Berkshine Hills in Massachusetts, I came upon a common garter snake (Elutania stratios) which was making all haste from the path. As I think now I might have left the poor harmless reptile to enjoy life, but because some nervous females were near by who declared they were never so frightened in all their lives, I cut the snake in two with my heel, just about the middle, when out popped quite a lot of fittle squirmers, which nade lively time to get out of the way. The old lady was probably basking in the sum, with her family around her, when, hearing us approach, she gulped down the whole number. I only offer this market the Philadelphia Zoological Society have purchased a young hippopopotamus, which will be quite an addition to their ever-increasing and interesting collection." In conversation with some old sportsmen who have long since given up the gun, but who still love to relate of their past experiences, we learned that General Cadwalader, of Philadelphia, who owned a farm and ducking punt on the Gunpowder or Bush series, some years ago made the ettempt to "transplant" the California quait on his property and the surrounding country by liberating a large number. The birds, we understand, perished

hunt at Glen Echo, the residence of Mr. McCallum, eight miles from this city, with Messrs. McCallum and Miller as "hares." At three o'clock the "hares" started on the run, followed by the hounds, Mr. Welsh on Wing, Mr. Fisher on Drummer Boy, Mr. Crothers on Luray, Mr. Walker, Dr. Darrah, Dr. Eisenbray and others. The start was made on a hill and the spectators saw most of the chase, which covered over eight niles. After a stiff run and nuch sport Mr. Crothers proved victorious and captured the hare. Homo.

### TRAPPING COON AND MINK.

TRAPPING COON AND MINK.

THESE being the predominating elements in numbers of the fur bearers in the White River swamp, as well as this State at large, very naturally engage our attention both with pen and trap. Although they do not produce the most valuable fur, yet their easy capture and great abundance make them equally as desirable in vast quantities. Many of those who have seen the picture of the "Arkansaw Traveler" at the pioneer's cabin door, when that national renowned tune was played, can readily call to mind the prominent feature of a coon skin tacked upon the shamty wall, and the cap of the same article adorning the forester's head, which is very typical of that animal's activity.

The prolonged fast occasioned by a heavy fall of snow, which confines the coor family indoors until all is about off, invests them with a ravenous appetite that leads them over considerable territory in quest of provender. It is the business of the trapper, after such a spell, to have all in readiness to welcome the varmints, as they make extensive foraging excursions after such a protracted abstinence. Aside from the usual batting we enjoy fine sport in taking the "ring-tail monster" by placing a white button or bit of paper—anything to attract attention—upon the pan of the trap, which is set along the numerous trails. His inquiring nature will not permit him to pass without manipulating the curious object. It requires about as much skill in handling a pelt to command a fair price as it does to capture some animals, so with this view our mode of stretching coon will probably not be inappropriate. Providing ourself with four 3-foot boards of soft wood and two dozen swall nails, we then, after well helpsing and splitting up the middle of the belty, tack the side edges each to a board, the bottom in like manner, and place a siggle nail through the most into the top board. During this time the skin is slack; now draw, using the leverage of the boards, slowly and frinnly in the found of the result of the side of the result of

a stop to his depredations.

Though nocturnal in habits, we have frequently seen them Though nocturnal in habits, we have frequently seen them in the brakes, frolicting among the numerous cypress knees, too slip and cuming to allow us a shot, which we would take if possible, rezardless of the damaging effect it would have to the skin. The only great pest the trapper must contend with here is the opossum, which not unfrequently forces itself intrusively upon the Nimrod's proparations. The almost valuedess skin is amply amended with the excellent roast, which served in the "sop and tater" style, is quite palatable to the most dainty epicure, in which class the writer stands in the vicinity of head.

## SPORT IN THE LONE STAR STATE.

WAXAHACHIE, TEX., Dec. 13.

SPORT IN THE LONE STAR STATE.

WAXAHAGHE, Tex., Dec. 13.

A 5 the cold weather of the North has closed must of the ment, I would suggest to any of your readers who may feel that they have not brought to bag a sufficient number of heads and tails to make a respeciable showing for the season's work (or play), that they make a trial trip to the Lone Star State, and see what they think of the facilities offered here for spending a few weeks or months pleasantly and profitably (in a sportsman's sense of the word), with rod and gun. The northeastern tier of counties bordering on Red River, being for the most part heavily wooded, are at present literally alive with immense numbers of wild pigeons which have come South to spend the cold season. Several parties are doing a good business netting them for market and for the numerous gun clubs throughout the State. On all the water courses where there is a good mast ducks, geese and other waterfowl are unusually plentiful this winter. While I have not yet had an opportunity of seeing how things are for myself, I am in constant receipt of letters from different portions of the State giving accounts of game and fish prospects, and they are generally good, although I regret to say that, owing to the entire absence of any kind of protection, game in the thickly-settled portions of the State is rapidly becoming a thing of the past. In most of the prairie counties "chickens" are still numerous, and although rather wild at this time of year, good bags are frequently made.

Apropos of chicken shooting, I must tell a good one on a prominent young man of our town. A party was made up to go "hird-lunning," his young gentleman being one of the number. He had never shot over a dog nor seen one handled in the field, and when he saw a pointine make a laft turn too seide and suddenly become as rigid as iron, he naively inquired, "What's the matter with that confounded dog "Being informed that the day was pointing a chicken, and instructed to approach the mainten cautiously, he did so, kee

From the accounts which appear from time to time in yo valuable paper I am of the opinion that this is the best State in the Union for quail shooting. In what is called the post oak country (i.e., timbered uplands), they abound everywhere; groves, creeks, thickets, hedges, any place that after the muzzle.

fords shelter being almost certain to contain from one to three fords suction being almost certain to contain from one to three flocks. In the prairie portions they are less plenty, their numerous enemies, such as hawks, owls, mowing machines and fires having a better chance at them than in the timbered districts. Rabbits, squirrels and the smaller game birds, such as snipe, plover, etc., are found everywhere, but never a woodcock in the State. To any persons, strungers to the country. since, parted, etc., are found evenly were, but never a wont-cock in the State. To any persons, strangers to the country, who may contemplate visiting this State for hunting pur-poses, I will gladly furnish, through your columns, such in-formation as is at my command as to the probable best local-ities for the different kinds of game. C. S. W.

## THE RUFFED GROUSE SEASON.

Editor Forest and Stream:

In looking over the proposed "Code of Game Laws" published in the Forest and Stream of Oct. 21, I find that it is proposed to continue the law ast it is in regrid to ruffed grouse. I take it that the modern idea is to legislate in favor of the legitimate sportsman rather than in favor of the man who shoots for what he can make out of it, but as the law now stands, and as the State Association propose to have law now stands, and as the State Association propose to have it stand it is all in favor of the pot-hunter. I am in favor of making the open season on ruffed grouse from September 1 to November 1, for these reasons: 1. It will give the birds more time for rest, and they will not be so widt. 2. There will be one-third more birds left over each year to propagate. 3. That of all the ruffed grouse that are killed during the of month December in the Central and Northern counties of this State, nine out of every ten are killed by market hunters, pot-hunters and the like, and worst of all, eight out of every nine are killed sitting on trees, where they have been scared by the traditional "yaller dog," whose idea of sport is about as exalted as the man who owns and hunts him. 4. That unless immediate steps are taken to arrest the slaughter That unless immediate set the man who owns amounts a minimary that is going on among the feathered tribe, our children will have no use for the costly gims and implements which we leave behind us save to look at them, and curse the stupility of the men who did not protect that which God provided for

leave behind us save to look at them, and curse the stupidity of the men who did not protect that which God provided for the recreation of mankind.

I speak more particularly of the Central and Northern counties of the State because it is with them I am more familiar, but I have no doubt that what I have said will apply equally well to the Southern half. In regard to the other provisions of the proposed "Code" I have no fault to find save with the one authorizing private parks. It seems to net that the game in such parks should be pr tected by law the same as outside, and should not be killed out of season because that territory might at some season contain most of the game in the twould give him an undue advantage, and besides that, the right to kill involves the right to sell, and we might be treated to the spectacle of partridge and woodcock in marfet in the middle of summer. Poxes destroy more game than any cher animal, and I believe a bounty should be placed on them the same as on wolves. A bounty of \$1 or \$2 would be largely instrumental in exterminating them, and the farmers of the State would favor such a law because it would be not impossible. The pe that brother sportsmen in various parts of the State will express their opinions upon these matters. H. L. G.

## A CANDID STORY.

I HAD always read about the hunting grounds of the West with interest, and here I was as far West as Omaha, and with a couple of guns and anunition suitable for the destruction of anything from a Bob White to a buffalo. I went to a hotel with my luggage, and asked to be shown to a room. When I went up I was a decently attired "commercial traveler," but when I came down with one of my gons I was a "knight of the plains," a "deer slaver," a "r-r-red handed ranger of the plains." I was characteristically attired in a pair ranger of the plains." I was characteristically attired in a pair of grass colored pantaloons, with a row of fringe and engle feathers down the outside; a pair of moccasius made by an "Indian" and his son, of your city: a coat with sporting topics stamped upon the buttons of the same color, and a cap to match; then I had some revolvers, a hatchet, a knife and some carridges in a belt buckled around my waist, I also had a waterproof box in my pocket containing money, matches and sait. I was going out on the Union Pacific Railway for geese. My appearance at the depot caused the most profound commotion, for, although it may be no new thing for the Omahawsers to see men going out from among them armed to their teeth, and with a resolute mein, bespeaking that they are prepared to protect themselves "to the last." thing for the Omniawsers to see then going dut from among them armed to their tecth, and with a resolute mein, bespeaking that they are prepared to protect themselves "to the last extremity." I still fancy that, without meaning to be partial to myself, they seldom saw among them a bunter with everything about him so entirely modern and fresh. It was perhaps with some such thought as this that I asked a policoman how long it would be till train time, and if there was a photographer handy. He said there wasn't, and then he looked at something on my coat and told a man if he'd tell him what that was he could have it. I looked there to brush to ff, whatever it was but I couldn't see anything. There was a man on the train who was a hunter also. His name was Tucker; the other man's name was Penny. They were going after geese too. They asked me if I could shoot geese—if I had ever shot geese before. I said no, but I could soot geese ding the hang of it; I was a regular stunner on glass balls and hitting oyster cans. He said he wasn't very good on geese himself, and I said what he wanted was nerve. He oughth't to get excited. He was too much afraid he'd miss. Then he commenced telling the other men about, if a fellow. and hitting oyster cause greese himself, and I said what he wanted was neared oughth't to get excited. He was no much afraid he'd miss. Then he commenced telling the other men about, if a fellow had a pug nose he was always sure to be a "smart Alex," and then I went and sat in another seat. There is no use in a man getting mad at a fellow, even if his nose is inclined in the right direction, just because he can shoot geese better than he can himself.

The first evening I was out after geeze I didn't shoot any, owing to the altitude of the geese. The next day, as I was to leave the next morning, I was a little burried and didn't do as well as I mostly do when I'n after geese, I only brought home eight. They are thirty-five cents apiece out West. That's all.

Missouri.—Charleston, Dec. 21.—The weather is very sovere here, and the birds have all gone to the dense

David Todd, of Autrim, N. H., last Tuesday added another to the list of those who pulled their guns toward them

QUAIL ON LONG ISLAND

As some of our sportsmen seem to think that quail are exterminated on Long Island, for their benefit as well as for your own information allow me to give you the following facts: I have hunted quail on Long Island regularly every year for the last fourteen years, but I must say that I have never found quail so plentiful as this year, either in Suffolk or in Queens county. To substantiate what I say I will give you my experience. I have had six days' hunting on Long Island this season, four times in Suffolk and twice in Queens, within sixteen miles of the Brooklyn City Hall, and I never started in one day's hunt less than six and sometimes twelve beview.

Han, and I never started in one tay's none less than all and sometimes twelve bevies.

Some of my friends ask me how it is that they hunt the whole day and never find anything. The only way that I can account for it is that they bunt with too fine bred degs—too much bench show and field trial about them at the same too much been snow and neat trial mount inem at the same time. I have my own impression about those same gentle-men, which is that they expect the qualito find them, in-stead of themselves finding the quali, and that they hug the fences too much.

On the 14th of last October a friend of mine and I went

On the 14th of last October a friend of mine and I went to Bucks County, Pa. In two days we killed ninety-two quali, but with all that I believe there are more birds on Long Island than in any other place within three hundred miles of New York city, barring out Delaware and Maryland. I have been to Long Island on later than last Thusday, and started then nine bevies of birds.

Were it not for the trapping and suaring Long Island would be a veritable paradise for sportsmen. Can we not find out a way to stop said trapping or suaring? By all means let us try it. I am willing to subscribe my slane toward said suppression. We have good game laws enough, but we have now any of enforcing them. If the laws we have now are not strong enough to prevent snaring and trapping it is certainly of no use having new laws framed. Now that Mr. A. E. Godeffroy has come forward as willing to make an affidavil, let the Game Association dispose of that begrege master and that newshoy, whom that coward of "A True Lover of the Sport" wrote us about some time ago.

ago.

Judging by the tone of their answer to that sneak of "A True Lover of the Sport," the bleod of the Long Island Game Association must certainly be beliling, and woe to those poor fellows. If the Long Island Game Association will prosecute now I will send you five dollars toward said prosecution. Should they, in the face of Mr. Godeffroy's letter, refuse to act, I would, to use their own language, tent them to hold their peace forever and take in their shingle of "Game Protection."

New York, Decomber 20, 1880.

WEIGHTS OF GROUSE.

WEIGHTS OF GROUSE.

FORT WAYNE, Ind., Dec. 20.

In the Forest and Stream of Dec. 16, "Harry Wood-land" gives Frank Schley's "Ancrican Partridge and Pheasant Shooting" as authority that pheasants weigh from twenty-two to twenty-nine ounces, and seems to think the killing of a pheasant weighing twenty-nine ounces nothing remarkable. I don't think our friend "Harry Woodhand" ever took the trouble to weigh many pheasants, or he would not claim or think it an ordinary occurrence. I have killed a good many pheasants, but have never been fortunate enough to kill one that would weigh as much as twenty-six ounces. A few years ago I bagged while on a short hunt seventeen pheasants which weighted twenty-one pounds, an average of a little less than twenty ounces. These birds, as nearly as I can remember, were killed in the first or second week of Dec. 1876. I will give you the weights of eighteen pheasants which I have weighted the weights of eighteen pheasants which I have weighted the weights of eighteen pheasants with I have weighted the weights of eighteen pheasants which I have weighted the weights of eighteen pheasants which I have weighted the weights of eighteen pheasants which I have weights of pheasants which the stream of Norenber. This letter may seen tedious, but what is the use of guessing at things we write about when we can give facts? Frunk Schley may be correct in giving the weights of pheasants killed in Maryland at twenty-two to twenty-mine ounces. If they weigh as much as that, they are certainly magnificent birds, but I can't help believing that he might be mistaken.

Frank Schley's brok contains a great deal of interest to twenty-mine ounces. If they weigh as much as that, they are certainly magnificent birds, but I can't help believing that he might be mistaken.

Frank Schley's brok contains a great deal of interest to twenty-five or write about when we can be of the scream of the policy magnificent birds, but I can't help believing that he might be mistaken.

Frank Schley's brok contains a great de

I NOTICE that in your last issue "Harry Woodland" thinks that a ruffed grouse weighing 1 lb. 13 oz. is of no unusual weight. Last fall, in this State, I killed 144 grouse, the heaviest weighing 26 oz., and the average not exceeding 20 oz. The three heaviest birds killed by me in twenty years' shooting weighed 30 oz. each. Give the plume to that cocker. I would give \$5 for the bird to set up. K.

## THE GAME PROTECTORS.

CORRESPONDENT who has recently been in the woods informs us that the appointment of a "Protector" in Hamilton County, N. Y., has had a good effect. Mr. Palmer, the officer named, has notified all the inhabitants of his appointment and of his determination to enforce the laws for the protection of fish and game, printed copies of which he has distributed in public places so that no man need plead ignorance thereof. As a consequence the fishermen hung up their tackle and the hunters tied up their dogs at the close of the teach, and Mr. Palmer has had no one to persecute. He found one not in use in an unlawful manner and seized it, but could not find who the owner was, and there are no trout in the neighboring markets nor on the hotel tables. This is quite a step in advance, for jour correspondent has known this region for years and never saw the time before when trout could not be boughtat any season of the year, and deer

have been killed and shipped to market on previous years as late as March. In the winter and spring of 1877 two hunters, now living near Indian Lake, killed fifty-two deer by crust hunting, leaving thirty of them to rot in the woods. Mr. Palmer is now out on snow shoes watching the yarding grounds for violators of the law.

Last week three men went into the grounds of Mr. Frastus Corning, near Albany, N. Y., with ferrets. They were not looking after Mr. Brayton, State Game Pretector, but were more particularly seeking rabbits. When Mr. Brayton appeared they had an engagement elsewhere and could not stop to see him. In their hurry to get home they had not time to gather up all the ferrets, and one is now awaiting an owner in the bands of Mr. Brayton.

## DITTMAR POWDER REVERBERATIONS.

Brookfield, N. Y., Dec.

Editor Forest and Stream Many thanks for your articles on Dittmar powder. I was about to get some. For downright fearlessness when in the right Forest and Stream is ahead.

If. L. G.

Oswego, N. Y., Dec. 10.

Editor Forest and Stream : ration Forest and Stream:
Good for you on Dittmar powder. You have undoubtedly saved the lives of scores of sportsmen. Please send me your pamphlet upon the subject of their compound. F. E. H.

Oftawa, Dec. 15.

Editor Forest and Stream:

Editor Forest and Stream:
While I am writing you this note let me say that I was extremely pleased to read your able exposure of the Dittmat powder, and I ancy most sportsmen read you articles with feelings similar to my own. Had the company gone on there would have been plenty of "cripples" among the sportsmen as well as the birds.

II. 14. S.

II. 14. S.

Spencer, Mass., Dec. 11.

Editor Forest and Stream:

Much interested in your Ditmar powder articles. Many thanks for your faithful and thorough exposure. You have made many new friends hereabout and strengthened old ones. A paper at once so faithful and so fearless deserves a large increase of circulation, and I am confident will have it. Please send me copy of the articles; will distribute to our club should you send several.

A. S. W.

Pittsburgh, Dec. 14.

Editor Forest and Stream:

I congratulate you on the Dittmar powder articles; the good you have done the sportsmen of the country is uncalculable. No words in reply will or can answer the exposure. All sportsmen who value life or limb will let the cursed stuff alone. I have had much experience with it, and had resolved on this action before your exposure, on account of the unaccountables I had with it, and your article confirms my wisdom.

I. R. STAYTON, Sec. Penn. State Field Trials Asso.

Marshalltown, Iown, Dec. 12.

Editor Forest and Stream . Dâttor Forest and Stream:
To say that I am pleased with your journal will convey but
a very faint idea of my regard for its valuable articles and its
purity, freedom and fearlessness. No, you don't need to
shake up Dittmar; he shakes himself up enough in his own tatements. I have to thank you for your exposure of "this tanned down stuff," as I was just about to send for some, but have changed my mind. I had heard of many accidents with have changed my mind. I had nearl of many accounting it, but supposed it was the result of carelessness in loadin but am convinced to the contrary by Ditmar's own sta R. H. W. ess in loading

Windson Locks, Conn., Dec. 23.

Windsor Locks, Conn., Dec. 23.

The cold weather has put a quietus on shooting. We suppose the attention will be turned to fishing through the ice in the Connecticut River. We are informed that bass are freely taken by spears through the ice. About Christmas there will be some shooting by law-abiding sportsmen, as game cannot be taken lawfully after January 1. We wish to say one word in regard to the Dittmar powder case. First, we thank you with all our strength for your exposure; for, although we are amateurs, we still have handled many gons and burned some powder, and we might have tried Dittmar in the future ladyou not exposed it so well. We know there are "Three True Blues" who will ever thank you.

Lower Benk.

NEW ROOMELLE, N. Y., Dec. 15.

Editor Forest and Stream:

I have read all that has been written in your paper about the Dittmar powder From the beginning I distrusted its practical utility for the rifle or shot-gun. After about four years' hesitation I bought one pound to satisfy myself about it. This seemed, on trial, to give no velocity to the bullet. I represented this to the dealer from whom I purchased it, who said the fault was in the loading. My dollar was gone, I represented this to the deater from whos aid the fault was in the loading. My dollar was gone, and I had the stuff on hand. I considered myself sold, and closed the canister for good.

It was not only a cheat to sell this powder in the way it was done, but a crime deserving the highest punishment. I am glad you made war on it, and I only wonder you did not

tore. article of exposure was so complete as led me to say: Your article of exposure was so complete as led me to say:
"The jie is up. Good-by, humbug Dittmar powder, forever." The sale of it was truly a "sawdust" affair. Your
petard blew it "sky high." Thank God! When I get time
I will tie my canister to a twenty-pound stone, row far out
into the Sound and sink it so deep that the lobsters cannot

Editor Forest and Stream:

Forest and Stream deserves well of sportsmen for its exhaustive report of the Dittmar powder. Many times I have been on the point of using it, but always the silent monitor bid me let it alone and be contented with black powder. But there came a time when I ceased to desire to use it. Two of my acquaintances had the one a rifle, the other a shangun, burst at the breech using it. The other man escaped with a bad shaking up and temporary derangement. Neither of the men have made a statement of the matter in print. Why, I do not know, unless it be because they had reely recommended it to others as every way safe, and so

were ashamed to do so. I think, judging by these two instances, that a very small per cent, of such accidents have been reported. Now that the manufacturers have issued their pamphlet, would it not be a good point to "carry the war into Africa," and request, through your columns, the names of parties who have suffered in consequence of using the powder?

TREFIER.

TREFIER GROUSE.—I have been a good deal interested, not to say amused, at the ideas and experiences of different writers about the treeing of grouse, because it happened that my first grouse shooting was over a treeing dog. He was as good as I have ever seen, and I have seen a few good ones—not many, for the hardest dog to find these days is a good pheasant dog, as we call him in Pennsylvania. Hounds, setters, pointers and cockers may be found by any who will seek—and pay; but a pheasant dog comes by mature. He is rarely to be had, and there is no sure way of training him to it. "Old Frank," the last good one we had here, may serve to filustrate what such a dog can do. Four of us made acampon Marsh Creek, where pheasants (grouse) were plenty, with a fair show of woodcock, and our team consisted of a well-trained pointer and Frank. We had all the success we wished; in fact, were obliged tolet up and send twenty grouse home to save them. But the point I wish to make is this; Out of forty-two ruffed grouse that we shot, ten were killed over the pointer or taken by snap shots, and thirty-two were fairly treed, marked and barked at steadily by Frank until some of the party could get in for a shot. A few left after they were fairly treed, being scared out of tree by the hunters; but they usually sat still as statues until shot off. How a dog fluds the right tree, goes to it and gives tongue steadily when the birth has flown out of his range of sight for fifty rods is one of those things no fellow will ever find out. But Massaure.

lhe does it.

MICHIGAN—Escanaba, Delta County, Dec. 15.—December 6 was a poor day for bears. I was out after ruffed grouse. My dog found a bear den. I got one old one and three cubs. To-day I was up the railroad a fow miles and when near home my dog, as usual, ran ahead and came back to meet me. Soon after getting in the house he had a fit and lay on his sides and quivered. I gave him some oil. Soon he got up and went and lay down in the snow. I went to him, when he got up again and walked part way to the house and had another fit, from which he never recovered. I saw nothing unusual about him through the day. To-night I have found two places where he rolled and tumbled about a good deal before he came to meet me. I am at a loss to know what was the matter. I forgot to say I took him up and laid him on a blanket, and when I would just touch him he would spring ard jerk fearfully, yet he did not move off the bed, and would look up so wistfully to me. It has been my constant companion for four years and two months, either in the boat, or on the ears, or in the house, or wherever I went. It looks foolish to mourn for a dog, yet I can't help it, as he has been my only companion for nearly two years. Kow I am alone and shall never hear his joyous bark again. Y. P. S.—Mr. Chas. Bishop and partner killed an old bear and three cubs a few days before I killed him.

P. S.—Mr. Chas. Isisnop and particle and three cubs a few days befork I killed mine.

A VILLAINOTS PRACTICE—Steamnal, Tenn., December 21. The weather for the past week has been like spring, and as a consequence the quail shooting has been unusually good. I was out two days and bagged thirty-three quail, one hare and a solitary duck that I flushed in the creek. My shooting was done over a young pointer untrained until this season. With an older dog the bag would have been much heavier; as it was I lost several birds that were killed but not retrieved. Given a thick cover, a wing-tipped December quail, and you have a problem whose solution is rather difficult for a "young-'un." The river is reported swarming with ducks and geese. As I write this a norther is blowing and the snow is falling thickly; if this weather holds for a few days there will be plenty of sport for the large bores and heavy metals. I wish to mention here the villainous habit practiced by the passengers and officers of the boats on our river of banging away at the geese and ducks from the decks of the steamers, killing many and frightening more, which has the effect of making the fowl so wild as to deprive true sportsmen of much good sport. As the boats never stop to get the game killed, it is wantonly wasted. Such reckless destruction of valuable game cannot be too warmly denounced.

New Jersey Game—New Bedford, N. J., Dec. 12.—Editor Forest and Stream: I am sure that you would confer a benefit upon the public if you would take notice editorially of the necessity for a revision of our game laws. From all parts of the State the reports show that game and game birds are fast disappearing, and there is no doubt that, if the law does not interfere, a year or two more will leave us without any game. New Jersey has in past years been noted as furnishing plenty of game, a source of revenue as well as amusement. If this is to continue, the game laws must be made more stringent. I find that those best informed on this subject generally agree that the time has come when a close period should be established for at least two or three years, during which time it should be made unlawful, under heavy penalty, to kill or Irap any woodcock, quali, rabbit or pheasant at any time of the year. Such a measure seems absolutely necessary, and especially for this section of the State, from which the quali have almost entirely disappeared, although it was formerly a sportsman's paradise.

5. Elle St. Maniel Maniel. NEW JERSEY GAME-New Bedford, N. J., Dec. 12 .- Editor

Protection for Wild Pichons.—St. Elie, St. Maurice Co., Quebec, Dec. 13. In one of the late issues of your paper I notice a correspondent inquires the whereabouts of the wild pigeon. Unless an effectual stop is put to slaughtering the birds on their breeding grounds they will soon become a thing of the past.

They are hecoming accordingly was a superscript of the past.

They are becoming exceedingly rare in this part of the They are becoming exceedingly rare in this part of the country, where they were once as numerous almost as the leaves of the forest. I have seen but four specimens of the bird this season, and with many of your readers mourn their rapid extermination. It seems to me that something ought to be done toward their preservation, either by the enactment of wholesome laws in the different States where they resort to breed, or by the purchase of the woods where they breed. As they are a migratory bird, all sportsmen throughout the States and the Dominion are interested in their preservation. Let us join bands north and south, east and west, and see what can be done.

A VETERAN SPEARS.—It would seem that your remarks in 

and fools will learn in no other." Let them have a little of the "Experience" and if they live through it they will find the way to the breech and probably stay there. For the community at large, a few remarks from you in regard to the manner in which would-be sportsmen and boys carry their guns through the streets and roads might, prove to be of great service. In my section of the country the rule appears to be to carry the gun over the shoulder, and about level, so that in case of accidental discharge something would be sure to be hit.

I think one is more sure of coming out unharmed on a road infested with highwaymen than one infested with young sportsmen. The first, though he aims to do so, probably won't hit you, the last is pretty sure to.

AN OLD SUBSCHIBER.

AN OLD SUBSCHIRER.

AN OLD SUBSCHIPER.

Guns, New and Old—Putnum, Conn.—I usually hunt through hammocks with light rifle strung at my back and a slot gun in band. I have often met my fellow sportsmen with their 550 or \$100 rifle and slot gun of rom \$160 to \$250 value that would scarcely noticemy rifle of \$20 and shot gun of \$15, but whenwe shot to kill my gun had claims they were obliged to respect. My hunting and fishing pleasures I must bay saide, for I am now three-score and eyes fail no, and my hand trembles. Over forty years ago I shot the partridge on the wing with a flint-lock King's arm, when you would have to hold about four feet ahead to allow for the flash-bang. However, I recollect at one time of killingthree out of four shots and without a deg. Had I then the convenient gun we now have I could have killed a great abundance, for game was plenty in the woods forty years ago.

G. F. Willes.

LATE SNIPE—Tolland Co., Conn., Dec. 24.—We all read that the Wilson snipe is a migratory bird; still this is not strictly true. The ground is frozen solid, and all water, except running brooks, likewise; on such brooks they are now here. I have shot them this week, as have others. I have learned from the farmers that they remain all winter. I would not have believed it had I not seen and shot them myself. Partridge and quait scarce, and too cold to shoot anyway.

Mars.

We killed on Saturday, December 18th, an English snipe (Gallinago wilsoni) on Wawayanda Mountain, N. J. It was living along a spring brook and was in good condition. Auother was seen by an acquaintance on Monday, the 20th inst., near the Rutherford's creamery in the Version Valley.

RHODE ISLAND—*Newport, Dec.* 18—Four Wilson snipe were shot on our island Dec. 12. Is this late or early? X. Y. Z.

MICHIGAN DEER SHOOTING—East Saginar, Dec. 23.—Last, week Gary Fleming and one other gentleman from East Saginaw went out six miles from Saginaw City bunting. They killed fifteen partidge and one bear. Brain was brought to bag with a 16-bore gun, loaded with fine shot. Mr. Richter, a taxidermist, of East Saginaw, has set up 250 deer heads since the hunting season opened, and up to the 15th of December, and has plenty of work on hand waiting.

the 19th of December, and the waiting.

There has been more deer killed in Northern Michigan.

There has been more deer killed in Northern Michigan this fall than ever before. About two years more at this rate and the hunters will have to seek other localities besides the North Woods to hunt.

If unterest.

'Shot and Glass Balls—Bridgeport, Conn.—I am using soft shot, and think they have a tendency to stick to a glass ball and not glance as the chilled shot do. Suppose a ball be hit on the side by a chilled shot, the shot is so hard it cannot get hold of the ball. On the other hand, if a soft shot his a ball on the side it will balter just enough to cling to it and be more liable to break the ball than a chilled shot. In bird shooting I think soft shot superior to chilled for the reason they must cling closer to a bone and be more apt to break it than chilled shot. But in every case they must make a larger wound than chilled.

New York, Hayt's Corners, December 20.—Not a wild goose has been seen here in Seneca the past fall to my knowledge, and I have made numerous inquiries in regard to them. They passed here last spring, and, though stopping more frequently than usual, none were brought to bag to my knowledge. All kinds of game is very searce here; quall are indeed scarce, also partridge, squirrels, rabbits. All kinds of game have become almost extinct; there have been at least six hunters to one bird the past season here.

L. E. W.

Illinois—Dudley, Edgar County, Dec. 22.—Deer plentier here than before for years. One man has killed nine in last three weeks and another five. I have brought down four myself, mostly found in cornfields. Winter set in very suddenly and caused a great amount of corn to be left not husked. This is a grand place to chase foxes. All we lack is the dog with bottom and gameness to keep to the track. Prairie chickens and quait plenty. Ducks of no kind have made their appearance yet.

Its Educating Influence.—Please send specimen copies of your paper to the names given below. If I can seeme a good circulation for your paper in the county I think it will be the means of educating our sportsmen up to a higher standard of sporting excellence. I know it has done this for me, and I have been an ardent sportsman all my life.

G. S. W.

NORTH CAROLINA—High Point, Der. 25.—For the benefit of those wishing the information I would say there is too much snow in this State for shooting.

burning question in connection with the Gordon setter—its original color. In every correspondence in connection with this breed, the writers who have addressed the sporting public through the Press have drawn attention to this subject; but still the matter has not, in the opinion of many, been finally settled. It would seem, however, from the colors given above, that by far the largest proportion of the Duke's dogs were wanting in any tan at all, and were simply black-and-white. On considering this, the question arises in our mind whether only those possessing tan were the descendants of the Sheep-dog cross which had been introduced into the strain some twelve years before the date of the sale. We learn from Gervase Markham's "Hunger's Prevention" that at the time of his writing his work, in the early part of the seventeenth century, "some had been currous in observing of their (the setting dog) colors as giving preheminence to the motley, the liver-hude, or the black and white spotted." It is, therefore, we may assume, within the bounds of probability that the original Gordon strain, before the introduction of the Collie cross, were descendants of the "black and white spotted." It is, therefore, we may assume, within the bounds of probability that the original Gordon strain, before the introduction of the Collie cross, were descendants of the "black and white spotted." It is, therefore, we may assume, within the bounds of probability that proof of a decided cross of Sheep-dog blood. The late Mr. Dixon, who wrote under the nom de pitume of "The Druid," is positive in deciding that "originally the Gordon setters were all black-and-tan, and Lord F. G. Halliburton's Swep, Admiral Wemyss's Pilot, Major Douglas's Racket, Lord Breaddbland's Tom and other great craftsmen of the Lord Breaddbland's Tom and other great craftsmen of the Lord Breaddbland's Tom and other great craftsmen of the Lord Breaddbland's Tom and other great craftsmen of the Lord Breaddbland's Tom and other great craftsmen of the Lord Breaddbland's T I , burning question in connection with the Gordon setter-its

as it is in his English relative, and his color, as we have said before, is a black-and-tan. The shade of the black cannot be too deep or intense, and the tan must be as deep or "warm" in color as it can be got. The dispersion of these colors for exhibition dogs should be as follows: The tan should be on the fore-legs below the knee, on the femher on the fore-legs, on the throat, on the checks, inside the ears and over the eyes, on the belly, inside the thighs, and on the vent. The brilliancy of the tan in certain strains has been attributed to the introduction of Irish setter blood; this cross, however, will be more fully alluded to in the succeeding.

and over the eyes, on the belly, inside the thighs, and on the vent. The brilliancy of the tan in certain strains has been attributed to the introduction of Irish setter blood; this cross, however, will be more fully alluded to in the succeeding article, but the reference to it is necessary, as it is a matter of importance to breeders of both varieties of setter.

As a field dog the Gordon has both detractors and elmirers. He is stignutized by the former as an old man's dog, as they maintain that he can rarely do more than "souter about, and is always beaten by lunch-time. This latter opinion is certainly shared by most practical sportsmen; but many of these, even though admitting that he is only a half-day dog, at the same time gladly bear witness to his powers when he is at work. Undoubtelly the Gordon is an errous dog, and here he is behind his English cousin: but it is claimed on his behalf that he does not possess that craving for water which knocks so many of the latter up. In nose a Gordon setter excels, but this virtue is discounted by the want of endurance which has been already alluded to.

Among the most famous breeders and exhibitors of Gordon setters of late years the names of the following gentlemen appear most prominently: The Rev. Thomas Pearce, who breed Argyle II. from Lord Bolinbroke's Argyle out of breeder's Ruby; Mr. Sam Lang, of Briscol, celebrated especially as breeder of the champion Lang, afterward sold to Mr. Coath: The Earl of Dudley; Mr. Josh Jobling, of Morpeth, who won the cup for setters at the first dog show ever held, vir., at Newcastle in 1859, with his Gordon setter Dandle, by Coward's San out of exhibitor's ARJ!, Messra. Rogerson and Adye, who in turn showed Kent, a grand dog, and Premier, black-and-tan setter, from 1850—1869; Mr. Barday Field; the Marquis of Huntley; Mr. J. T. Richardson, whose name is identified with Duke; the Rev. W. Serjeantson and the Rev. J. Cumming Macdona.

The black-and-tan setter has unquestionably been crossed with the Irish, probably to improve th

skull, and head generally, is very like that of the

The exull, and head generally, is very like that of the English, only that it is heavier.

The lips and flews are also heavier, and more like those of the bloodhound than those of the kindred breed.

The nose is rather coarse, and the general formation is altogether heavier than is the case with the English setter.

The stern, too, is shorter, though similar in shape.

The texture of the coat is not so fine as that of the English

The color is a deep, raven black, and a rich, muliogany,

warm" tan. In general appearance the Gordon setter is the heavy-look.

In general appearance the Gordon setter is the nearly-loosing specime of his family, and the substantial amount of bone which he possesses makes him look a slow dog when compared with either the English or the Irish.

In spite of the similarity between the English and Gordon setters, a different scale of points is necessary for adjudicating upon the nearlts of each breed, as the question of color alone renders the English scale inapplicable to the Gordons.

ing upon the norits of each breed, as the question of color alone renders the English scale inapplicable to the Gordons. We therefore add a table, showing the numerical value of the points, at the end of this chapter, as in other breeds.

The specimen of the Gordon setter selected for illustration in our colored plate is Blossom, late the property of Mr. Howard Mapplebeck, of Knowle, near Birmingham, but sold by him to Mr. J. S. Niven, M.B., London, Ontario, Canada, Mr. Niven has written us with reference to the dog: "I have not had much luck with him here, as the Americans are all going in just now for big, heavy Gordons. I got first in Montreal with him, and also special for best setter in the show. The old boy looks splendid now (March, 1880). I have some purps by Grouse out of a Duke bitch, but they are too big, and I am sure will never do the work that smaller dogs of the same class can do."

Blossom was bred by the Rev. J. Cumming Macdona, in 1872, and is by Shot, out of Bloom; Shot by Bruce, out of La Reine. Bruce by Bliss, out of Ruby; La Reine by Mr. Pearce's Kennel Club Stud Book," which is sufficient guarantee for list correctness:

Black and tan bitch of Adamson's. Shot, black and tan. Jobling's Seamn. HIS Nell. Sir Matthew Ridley's liver and tan dog. His black and tan Nell,

Blossom has in the course of his show career in this country performed as follows upon the bench: 1875, first Birmingham; 1877, Agricultural Hall, first Bath, first Burton-on-Trent, first Manchester, first Alexandra Palace, first Editoburgh, first Bristol, first Swindon; 1878, first Birmingham, second Alexandra Palace, second Bristol, second Wolver-hampton (champion class)—performances which prove how

SENSATION AND GLEN. - We were informed at the finish of the Eastern Field Trials that the judges had awarded third prize to Sensation and fourth prize to Glen. Dr. Aten now tells us that the third and fourth prizes were pooled and divided between Sensation and Glen, and that he will make a present of Glen's money to the Club.

## THE LEONBERG DOG IN NEWFOUNDLAND.

OME readers of Forest and Stream, will remember that I gave an account in its columns of the mtroduction of the eclebrated Leonberg dog into this island. The attempt to introduce the new breed was made under the most favorable circumstances. Three pupples were selected by Count Esseg, of Leonberg. Wurteniborg, Germany, the breeder of the new nece, for the express purpose of trying the effect of the Newfoundland blood. The pupples were ten weeks old when brought here by a friend of mine, and in due time grew up into magnificent animals, distinguished for their inmense size, beauty of form gentleness and sugacity. The Leonberg dog is slow in coming to maturity, and the Count did not wish them to breed until their third year, when they are full grown. Unfortunately we lost the male by a dose of strychnine which he accidentally swallowed, but Count Esseg, when he heard of our misfortune, replaced him by a still finer specimen. These circumstances and other did not Wish them to breed until their third year, when they are full grown. Unfortunately we lost the mule by a dose of strychnine which he accidentally swallowed, but Count Esseg, when he heard of our misfortune, replaced him by a still finer specimen. These circumstances and other mishaps retarded the propagation of the breed here, but it is now fairly established, and will multiply rapidly, as we have about a dozen young animals in addition to the three importate. Some of the young are grown up and breeding. So far all are the result of a cross between the Leonberg and Newfoundland dog, and the progeny appears to be a decided improvement on the original stock, the increased dash of Newfoundland dog, and the progeny appears to be a decided improvement on the original stock, the increased dash of Newfoundland blood improving the appearance and good qualities of the offspring. The climate evidently agrees with the breed, and the variety thus produced promises to be of great value. A litter is shortly expected by Diana, one of the female dozs originally imported, now breeding for the first time, though nearly four years old. She is a beautiful creature, twenty-eight inches high at the shoulder, five feet in length, weights 107 lbs. and is exceedingly genile and intelligent. She is by far the handsomest dog in St. John's. Her owner says he would not part with her for \$200. We expect her progeny will be very superior. The owner of one of the younger dogs, now well grown, lately refused \$50 for him. The puppies are eagerly sought after, and when six weeks old sell for \$20 to \$30. The price is rising as their value is recognized. Arrangements are made to have a good number of litters during the next two years of the pure Leonberg breed in order to keep up the purity of the stock and to compare the result with the crossing above referred to. It may be well to state that the Leonberg dog was reared since 1846 by Count Esseg, and that it was the result of a successful crossing of the Newfoundland with the dog of St. B

## HOW TO TRAIN COLLIES.

DECEMBER 20.

Editor Forest and Stream:

Editor Forest and Stream:

In reading the various sporting journals of the day I frequently see articles upon the subject of educating and training setters, pointers and sporting dogs generally, but cannot remember ever seeing anything upon the education and training of my avortite dog, their non-sporting brother the Scotch collie, who, in his sphere, is as useful and valuable as any member of the canine race. And now, since the success of the collie trials held under the auspices of the Pennsylvania State Agricultural Society, at Phindelphia, in the latter part of September, and as it is more than likely that they will be repeated another year, and that other agricultural societies will follow suit and inaugurate them as one of the attractions of their shows, I think it will not be amiss to give you my ideas in regard to their education and training.

Thave owned collies all my life—good, useful and well-trained dogs—and in my walks and drives they are my constant companions. Master Collie is a mischievous and fundowing rascal, and even when well trained this love of mischief will show itself. There is now curied up at my feet one of the handsomest collies in America. She has been shown at several bench shows and has always been placed, and besides is a first-rate worker on stock. She is always under my bugy when I am driving, "except" sometimes I allow two others to follow for a froile and exercise. Now, here the "except" comes in. If by chance this crew epy a cur on the road the mother collie will be of like a shot; out she goes from under the buggy, passing between the front wheels and horse, throws her head back and gives a sharp, quick bark or two, as much as to say, "Come on, Punch and Judy; here's fun for us," and away they all go like a thunderboth, until the cur is overhauled and tumbled about in the dust. Well, it's all over in a jifty and they come crotting back, I sopnose lughing to themselves the front wheels and horse, throws her head back and gives a sharp, quick bark, or two, as much as to say,

or the first six months or so the puppy is allowed to do For the first six months or so the puppy is allowed to do pretty much as he pleases, so long as he keeps his long nose out of the cabbage-pot, doesn't suck the eggs or worry the pets, for Master Collie is a busy-tooly and is nearly always in some kind of deviltry; but even at an earlier age than this the collie may sometimes be seen gathering the chickens in a correct of the lot and manœuvring them as his ma does the

As a general rule we commence their education about the As a general rule we commence their education about the tenth month of the puppy's age; but we sometimes see them younger than this working stock like old stagers. I have one in my eye now that at five months old would go to the pasture field, containing about sixty acres, drive out the cows and bring them home, a distance of over one mile. At six months old she was working sheep and obeying every sign and motion of her water.

months old she was working sheep and obeying every sign and motion of her master. The first thing I do is to make the dog love me. I treat him kindly, never kick nor strike him and never deceive him. I talk to him and pet him until he knows every word I say. There is a great deal. I assure you, in this "love me." When he loves me and understands me I take him into a room and thereteach inin to follow close to heel, to stop at a whistle, to lie down when told, to go forward by motion of hand and to cither right or left. I always stop my dogs with a whistle, to attract their attention before giving an order by mouth or

hand.

When I consider my youngster house-broken, that is, when he obeys my motions and whistle, I take him with sheep—confined in a lane—and allow him to drive them with me, and by motions I keep him moving from one side of the lane to the other—when we are at the end of the lane I say "Around them" motioning the way up the side and go with him and show him. When round them I stop him with a whistle, make him lie down, and leave him: I then go in front of the slicep and tell him, "Bring them along." If he comes too close to the sheep, I stop him with a whistle, and say "Keep wider"—or "Blower." These lessons I repeat until I consider him nearly perfect in driving up and down the lane I then commence to teach him to go from where I stand at one end of the lane to the other and bring the sheep to me, this I do by motioning the way and saying "Far away;" and if be done not go I for lynth him and show him what to do. When I consider my youngster house-broken, that is, when end of the lane to the other and bring the sheep to me, this I do by notioning the way and saying "Far away;" and if he does not go I go with him and show him what to do. When behind the sheep I make him he down, and I go to the spot where I first gave the order and from there whistle him to bring them along. When he does this work to my satisfaction I then allow him to the fields to drive the sheep from pasture, and here I repeat all my former lessons to him; I teach him to jump back and forth over a fence, and to bark when told, but never to bite; and when he attempts to use his teeth I punish him. Now as to punishment, as I said at first, I never kick nor strike—I catch the collie around his nose and give him a shake or light tap on the ear with my hand, a cross word will cower him at once.

There is one thing I never like to do, that is to commence

hand, a cross word will cower him at once.

There is one thing I never like to do, that is to commence
working my puppy on cattle. As a general rule it will not do,
as the dog becomes too severe and it gives trouble to, afterward break him of this habit. I commence first on sheep,
and when he will work them carefully I can then allow him
tadriya other stock.

and when he was to to drive other stock. Now one other point and I am through. The old adage, "too many cooks spoil the broth," applies to Master Collie. If you wish your dog thoroughly trained, only one must work him, and that one I insist must be patient and teach him quietly and gently. If you wish him spoiled and made worthless allow the whole family to work him and you will succeed in this admirably.

COLLIE.

## THE SCARCITY OF REALLY GOOD HUNTING DOGS

The SCARGITY OF REALLY GOOD HUNTING DOGS.

To the causal observer, who reads in the weekly edition of your valuable paper the record of breeding, berths and deaths of the canine family, it looks as if the country would son be overrun with fine bred dogs. This mania for breeding has been going on for years; still, to secure a really fine field dog is no easy task, even though what would be considered by some an extravagant price is offered. To others besides myself these questions may have presented themselves. What becomes of the thousands bred? Why isit so hard to get a really first-class field dog? My answer to the first is that of the thousands bred but few arrive at maturity. The lils to which the canine race are subject are legion; the close in-breeding which is being practiced naturally impairs the physical stamina of those bred; they easily succumb to nearly any ordinary disease. Those that live lave not, in my estimation, justified the great praise that has been bestowed upon the imported breeds as field dog. To be sure now and then an extra fine one is brought out at a field trial, but these cases are the exception arther than the rule.

have not, in my estimation, justified the great praise that has been bestowed upon the imported breeds as field dog. To be sure now and then an extra fine one is brought out at a field trial, but these cases are the exception rather than the rule. By many Gladstone has been looked upon as the best setter in America. The sporting papers have been full of his praise, while Joe, Jr., who is a cross on native stock, has beat him at all trials, but is seldom mentioned. The reason may be that one is a Lewellin, the other not. To produce a really first-class field dog does not in my estimation depend so much on whether he is a Llewellin, Laverack or cross of either or native stock; for whatever breed, I believe the sire and dam must be from strong, healthy stock, with intelligence and unsurpassed hunting qualities.

Some consider speed the great requisite, while others consider a fine nose far superior to excessive speed of the two. Give me fair speed with fine nose, in place of excessive speed and poor nose; the former will find more birds and give more pleasure in a day's shooting than the latter. But the standard for speed has, by the field trial rules, been set so high that what any sportsman would call a really first-class dog to get game over stands but little chance to win, consequently breeders have been trying to produce as fast dogs as possible, ignoring some of the qualities which, to an ardent sportsman, are of more value.

Having produced the whelps from which it is intended fine field dogs shall be made is but a drop in the bucket toward producing a fine field worker. The raising of these whelps—the time, trouble and expense before they arrive at an age fit to decide if they have good natural field qualities—is considerable. Possibly one half of the setter's die; if so, usually we ere apt to think the best if the others do not prove good. But if two out of eix make really first-class dogs. I am satisfied, as by experience I have learned that, breed as you will, all are not equally good, while some are wo

sportsmen who have tried to raise and have broken dogs to suit them. If the amount of money that has been paid out in this way were known it would astonish many sportsmen who think if they are asked \$450 for a well broken dog, that the owner desires to rob them. But for one, my dogs will be selected from seeing them at work in the field in the future; I then have had no trouble in raising, have lost none by death, and have not paid out money enough for each to buy three dogs, still having not a good one to hunt over.

The reason it is so hard to find really good field dogs is but may work work any my willing to any the price it costs.

The reason it is so hard to find really good field dogs is that many sportsmen are not willing to pay the price it costs to produce a really well broken dog, consequently breeders will not produce them. One who has not had practical experience in breeding and training has but a little idea of how many young dogs prove almost worthless as field dogs. Neither have they an idea of the time, trouble and expense one is at to breed and break them, nor how many die under the age of one year.

Let them well consider this subject, and for the future my idea is that less dogs will be bred, sportsmen will buy of somo reliable breaker who has plenty of game in the section where he resides to enable him to turn out annually three or four first-class dogs. Some breakers take twelve or more to train. I will venture the opinion that such seldom turn out an perfect dogs. Six as many as any one man should handle. Even

dog. Six is as many as any one man should handle. Evwith that number, until he has worked them two seasons, I can hardly call them perfect.

Sportsman.

## WHAT IS A COCKER?

TORONTO, Dec. 12.

T HAVE been much surprised and not a little amused in observing the gravity with which your correspondents in some instances enthusiastically draw upon their special fancies for the points of a dog, and then offer the result as a standard of the cocker; and nothers, seriously surgest the formation of a cocker club to determine the standard of an animal which existed in its purity before many of themselves were born.

were born.

Why sir, I might with equal justice enter into a discussion Why sir, I might with equal justice enter into a discussion with the object of ascertaining what constitutes a cow. The question of a cocker has long been quite as definitely settled, and I am surprised at Mr. 6. McDougall (who, I am aware, has had opportunities of knowing something of this breed) raising a doubt on the subject. He knows as well as I do that the modern cocker is purely an English cross, bred for cer-

that the modern cocker is purely an English cross, bred for certain purposes, by those who expended much time and money in effecting their object.

The result of their efforts, now of many years standing, is the modern cocker pure and simple, and the description of this animal, as afforded by the best English authorities in print, leaves no room for doubt as to what it ought to be. There is no need of my setting forth the points of the cocker here save the one question of weight, to which I may allude, because it does not appear to be definitely settled by the present authorities, simply, I presume, because that is as variable in proportion as the weight of a human being. However, from the comparisons made with other breeds, and the accurate description and measurements given, there can be no doubt that a fair limit of extremes is twenty to thirty pounds, and that witkout any depreciation in point of weight against either the larger or the smaller animal, other points being equal. being equal.

your correspondents, Mr. Kirk comes nearest the mark, Of your correspondents, S.H. Kink contest learness the mark, but he also resorts to his own peculiar fancies to supply some of the points, and in each case falls into error, because he totally ignores the real existing standard, notably in his ideas as to head, color and action.

Why then should there be any doubt? England, for many reasons, has long hear the purposery of the finest break of dour

Why then should there be any doubt? England, for many reasons, has long been the nursery of the finest breeds of dogs in the world, and, adopting one of these for our own use why should we depart from the standard laid down by English breeders? In saying this I do not desire to depreciate in the slightest the dogs of America, or the efforts of American breeders, who have of late been effecting such noble results. But why should we endeavor to raise doubts where no room for them exists?

But why should we endeavor to raise douois where no room for them exists?

Create a beautiful strain of spaniel if you like, but give it a distinctive name apart from the cocker as we now comprehend it, and then argue on its points and merits if you will, and I have no doubt that the result will be in a few years the perfection of a strain superior to but distinctive from that now existing as the modern cocker.

A committee of three, so impetuously proposed by Senex and others, would, however, hardly effect that object if it happened to be composed of Messrs. McDougall, Davis and Kirk, each of whom, I think, differ materially in their ideas as to the points of the cockers now, and I should therefore await the result of their deliberations with no slight degree of interest.

CAVE CANEM.

## JUDGES AND RULES.

Editor Forest and Stream:

Editor Forest and Stream:
I should like to say, through your columns, a few words,
I should like to say, through your columns, a few words.
First, I cannot agree with you in the solace you offer the late
disappointed competitors in the field trials held on Robin's
Island. You say that "every one who entered a dog knew
before the running who the judges were." This in the main
was true regarding the names, residences and newspaper
reputations, but the exception and point I raise and which I
deem of vital importuses are that rewas true regarding the manes, remained and newspapea reputations, but the exception and point I raise and which I deem of vital importance are their questionable knowledge of the manner of shooting over dogs as practiced in their home localities, the style and training of a dog suitable to this shooting, and their bias as regards strain, style, size, color, pace, and all that go to make up the qualifications of a dog, to fit their ideal, to meet their fancies and prejudices in accordance with their judgment as their minds have been tutored and formed to recognize from boylood up to the present. If not, and if they overlooked these vital points of importance, they either had unbounded confidence in their dogs or took most desperate chances in bazarding the same to the mercies of an unknown tribunal; and if they suffered and were disappointed I can only say that they should accept the defeat in accordance with the circumstances, and lay the culpable negligence and blame in silence, where the, to their own recklessness and thoughtessness. Experiences of carly defeat in accordance with the circumstances, and lay the culpable negligence and blane in silence, where due, to their own recklessness and thoughtlessness. Experience so dearly bought should prove a lesson never to be forgotten and goes to show the immeasurable value of sound running rules and an even mixture of judges from different localities, that the control average will be adapted to all days, covers and manifestance will be adapted to all days, covers and manifestance will be accorded in different localities.

It should be say to "South Side" that I have according to the say to "South Side" that I

... ... in has been the fate of many | add that I out my eye-teeth in sporting matters over just

such strain of pointers as he speaks of, and so infatuated have I been with the memory of the countless days I enjoyed afield over these priceless canine companions that I determined to ransack the county for the material to reproduce them or a like strain. After four years I have had most gratifying results, and I am confident that in the near fature, if not at the present date, I shall be able to show in the field a dog, or dogs, answering his description—astrain of bold, slashing liver and white pointers, with grand heads, long muzzles, hair short as any modern breed, but coarse and harder to the touch, and thick as plush, capable of any amount of endurance, fatigue and privations, and able and willing to hunt anywhere and everywhere, in any climate, day in and day out, for months in succession; and their premier quality is an extra fine nose and good disposition. These last are the pinnacles on which I pin my faith.

BLACK NED.

## TRAINING FOX HOUND PUPPIES.

SELECT the most promising youngsters, and when they are five or six months old the a cord to a fox's pelt, and drag it for a few hundred yards over a smooth meadow, while the morning dew is yet on the grass. I then select the slowest and steadlest bound in the pack and let him run around while the morning dew is yet on the grass. I then sedect the slowest and stendies though in the pack and let him run around the course. The pupples will soon bearn to follow in sylendid style, and I exercise them in this way until they are eight or ten months old. Thus they become remained to the seem of the fox from their very infrancy. I now mount my horse and drug the pelt for a mile or more. I now mount my horse and drug the pelt for a mile or more. Increasing the distance as they grow older riding well up among them and urging them on with whip and voice. When they are about a year old I secure a living fox and release him in some smooth, broad meadow, giving him only a few yards the start, so that the chase naw be a short one and that they may be sure to eatch him. This first taste of blood has a marvelous effect in the education of the youngster and will never be forgotten in after life. I repeat this as often as a fox can be had for the purpose giving Reymard more start as the puppies grow older in order to prolong the chase. I accustom them to the horn from an early age, and they soon learn its meaning from the steady old dog that its always with them. I never permit them to chase anything but the fox, and very soon they will not notice a lare even though she jumps up in their path. I now take them with me when I go out with the pack for a regular chase, but keep them in hand and coupled until the fox is very hardly pressed, and then cast them off so that they may be in at the death, and yet not fatigued by too long a run. A dog is not fully matured until two years of age, and until that time should not be permitted to hunt with the pack.

Select only the flectest and steadiest animals to breed from, and preserve only the most perfect and promising young-sters. Let the diet of the puppies after they are six months

Select only the fleetest and steadiest animals to breed from, and preserve only the most perfect and promising young-sters. Let the diet of the pupples after they are six months of age consist principally of ment, as its tendency is to build up muscle and bone, not fat. Give only enough of milk and regetables to keep them in health. Never allow them at any time to lay on much flesh.

Give them always plenty of exercise, kind treatment and free access to pure, cold water.

Now there may be more scientific methods of training young-sters than this, but under this system Hal and I have educated packs before whom a fox can soldom live three hours above ground, and many have died in thirty minutes.

Bridgeport, W. Va.

## PITTSBURGH DOG SHOW

THE following arrangements have been made with express companies for the conveying of dogs to and from the

Companies for the conveying of dogs to and from the show:

To E. Gregor, President Western Penn'a Poultry Society and Bench Show, Pittsburgh:

We the undersigned, agents for the several Express Companies represented by us, do agree to return all fowls and dogs (that have paid full rates to the Western Pennsylvania Poultry Society, and brough by our companies) free, to the points where originally shipped from.

J. D. Zimmerman, Agent B. & O. Express; C. S. Sedgwick, Agent Adams Express Co.; T. J. Hudson, Acting Supt. Union Express.

Mr. Lincoln writes us, that all the leading railroad companies have been written to, asking them to convey dogs free of charge, to and from Pittsburgh, when they are accompanied by their owners or care takers.

SPECIAL PRIZE LIST.

A. Parker Brothers, of 79 Chambers Street, New York, offer a double breech-loading gun, valued at \$150.00 for the best setter dog or bitch of any strain.

B. J. J. Snellenburg, of New Brighton, Pa., offer a first-class velveteen or corduroy hunting suit, made to measure, valued at \$50.00, not be competed for by the donor, for the second best setter dog or bitch of any strain.

C. For the Irish setter dog, steel engraving of Biddy and Erin value \$10.00.

C. For the Irish setter dog, steel engraving of Biddy and Erin, value \$10.00.

D. For the best pointer dog, steel engraving, framed, of Keswick and Jessamine, value \$10.00.

E. For the best Gordon setter dog, Laflin & Rand's Powder, value \$10.00.

F. For the best English setter dog, Laflin & Rand's Powder, \$15.00.

G. The Bear Creek Refining Co., Limited, offer a barrel of water white oil, for the largest collection of non-sporting dogs, exhibited by one person.

Separate entries must be made for all specials, for which ten per cent. of the value of the prize will be charged.

CHAS, LINCOLN.

Superintendent.

Address: Office, Old City Hall, Lock Box 303, Pittsburgh, Pa.

Address: One. One of the short, one say burgh, Pa. In addition to the above, donations have been received to the amount of \$412, from various newspapers, firms and individuals, the sportsman's association of Western Pennsylvania heading the list with the liberal gift of \$100.

Chief.—Supplementary to description of Chief from last week we have received the following additional facts regarding the sire and dam of Chief:

Berkley was trained by C. B. Whitford in the most thorough manner with a view to running him in the coming field trials. At Hampton, Iowa, he would have secured first prize had be not pointed a bittern, which was regarded as a fault as the trials were run on chickens. As a field dog Berkley is in every way first class, Mr. Whitford saying, "that he is no of the most killing dogs he ever shot over." In Novem-

ber, 1878. Berkley was purchased by Mr. John Fottler, Jr., the President of the Massachusetts Kennel Club, of Boston, and at a price which at that time was considered a high figure. Mr. Fottler bad numerous bitches bred to Berkley while the deg renained in his kennels, and his puppies are almost invariably grand field dogs, and of fine form and color. In February, 1880. Berkley was transferred to the kennels of his present owner, Mr. A. Moore, of Philadelphia, who paid an almost incredible figure for the dog (about one thousand dollars). Duck is one of the most noted Irish bitches now living. She is very stylish in field work, and many prominent sportsmen who are good judges consider her in every way one of the finest Irish bitches in America. Duck was purchased by Mr. Fottler as a mate for Berkley, and afterward she was sold to Mr. Moore at the time of his purchase of Berkley. Mr. Max Wenzel, the owner of Chief, showed good foresight and judgment in the choice. As soon as he learned that Duck had been purchased by Mr. Fottler and would be bred to Berkley he immediately wrote asking that his name be booked for first choice of Duck's first littler by Berkley, and stating that he had been long hoping for the opportunity, as he considered this pair the finest in the country. Afterward Mr. Wenzel paid a special visit to Boston to make his selection, which it seems was most judicious.

lion, which it seems was most, judicious.

BERF TEA FOR DOUS—Clevelund, Olion, Doc. 13.—If puppies must be fed at times on extract of here the inclosed received will prove the thing wanted. Your correspondent in Homon's correct when he states that Liebeg's extract will kill quicker than starvation. There is a meat extract made by Johnson, of Montreal, that contains all the nutritive properties of beef, but it is too expensive for dog food, and for most human invalids. I inclose a receipt that will, I think, prove satisfactory.

Mr. Willtinson, of St. Mary's Hospital, London, advises the following improved method of preparing beef tea: The meat is cut into small pieces, the fat removed [for dogs, at option of the cook, and placed, in the evening, in an earthen-wave vossel, with sufficient cold water to cover the heat; in this it is allowed to tenuin all night. In the morning the meat is taken out, placed in other water, and boiled for several hours. The meat of the previous slight, and upon this the holling liquor from the day's beef tea is poured, and the whole well stirred, and it then forms the complete beef tea. The characteristics of good beef tea are that all the nutritions elements of the beef should be made available; and by the patient. The scraps can in many cases be used with the extract. Moreover, by this method a much smaller quantity of meat is required than under the ordinary mode, and it would consequently not become a jetly if allowed to stand; but by adding a larger quantity of heef this result could of course be obtained. (This forms with us what is called beef jelly.) It should, however, be remarked that in very hot weather the beef tea cannot be made in this manner, as it would become sour from the length of time required for its preparation. In hot weather the refrigerator can be used for the cold extract.

for the cold extract.

Dr. E. Sterling.

Institute or Reason—No. 2—Northfield, Vi., Dec. 14.—
My English setter Ned, eight months old, is, I believe, the most intelligent dog I ever owned. He seems to know just what is said to him. He has bad but little training in the field, and yet, the first time I took him out with a grun I bagged four partitidges, all of which he worked up and pointed as staunchly as an old dog. He also retrieved at command without any funy business. It was simply done perfectly. Of course he has had a pretty thorough schooling at home, but he adapts that schooling to his field work so nicely that it would please you to see him. I talk to him the same as I would to a person, and the way he sits and listens, with his large, laughing eyes fixed on mine, is very comical. He does many good and useful tricks, one of which is to get the old friend of his "sisters, his cousins and his aunts," Forest And Stersan, at the Post-office every Saturday. I believe if every man who owns a sporting dog would take more pains to educated him the race would improve so much that in ten years the result would be surprising. One day last week I was detained at my office unusually long at non-time, and noticed Ned was getting quite anxious to go to dimer, but paid but little attention to him until he commenced pawing my leg. I turned around to speak to him and was surprised to find he had brought both my overshoes and laid them at my feet. I put them on and went home to dinner inmediately. Who doubts that well bred dogs have reasoning power? I do not, and have presented Ned with a nice plated collar, which he delights in scratching, but always sits down to do so though.

CAPTAIN WILLIAM ROBIM EXONERATED,—The Lancaster Game Association met in Alderman Spurrier's office, Tuesday evening, the attendance being reasonably large. The only item of public interest was the unanimous adoption of

only item of public interest was the unanimous adoption of the following resolution:

Resolved, That after due investigation of the charges preferred against Captain William Roehm, of Quarryville, for laving failed to properly preserve and protect the game upon the grounds near Quarryville, for the late meeting of the Pennsylvania Field Trial Association, we find that the said charges are unfounded; that the conduct of Wm. Roehm in the matter was entirely consistent with the character of a true sportsman.

The Forest and Stream takes pleasure in reprinting the above from the Lancaster, Pa., New Era.

Dog Chains—New York, Dec. 6.—I have a grievance, and a very grievous grievance it is too. I have lost my Gordon dog because his chain broke and he trotted away and was nabbed by some appreciative thief. Can't you tell us dog lovers where we can get chains that are not as heavy as an ox chain, and will yet hold a dog? If you will find that a very moderate pull will stretch apart the links of any fair sized dog chain, even if it is nickel plated and all fair to the eye.

MANHATTAN.

The imported English dog chains are the best. They can be had of Schuyler & Duane, 189 Broadway, E. S. Harris, 177 Broadway and Hartley & Graham, 17 and 19 Maiden

Lost a Pointer Prp.—Mr. William Stone Abert, of Washington, D. C., has lost a fine pointer puppy, about ten months old. The dog was either stolen or strayed away on Decem-

ber 1, and a liberal reward has failed to bring about his return. Mr. Abert's only hope is now that some brother sportsman may see this notice and assist him to recover the youngster, which is a good one. Description: Lost from corner of L and 10th streets, northwest, a white pointer puppy, eyes light in color, ears liver, same color around left eye; right eye surrounded with white; two liver spots side of body; one larger spot on other side; tip of tail cut; hair very fine: had on a steel chain collar, with owner's name engraved thereon.

Mr. R. M. Livingston's Bull Bircu—Rye Beach, N. H., Dec. 17—Editor Forest and Stream: I have just received the bull bitch; she came on nicely in good condition, and up to present time is doing very well. Her pedigree is as follows; "By young Gully out of Rose. Young Gully by Champion Muster Gully out of Daine. Daine by King Coic out of Bevic's Wasp. Rose by White Crib out of Bounce, sister to prize dogs the Abbess, Cliquot and Sugar. White Crib, own brother to Champion Alexander. I will be in New York with her in about a week and will bring her in to show you.

R. M. LIVINGSTON.

A Cure for Mange—Now York, Doc. 8.—Perhaps some of your readers might like to know that sulphuret of poinssa will cure mange. It acted like magic on my setter when all other things—tar, etc.—had faited. Mix it with nutriatic acid as per prescription in "Hallock's Gazetteer," and hold your nose while applying it.

The above "cure" is an old one, and not much use unless capabing fits only a first property.

combined with sulphur ointment, or some other active

- Mr. W. W. Titus, of Centerport, L. I., hundler of Mr. Livingston's Baronet, at the late field trials on Robin's Island, contemplates a visit to North Carolina, about January 6th. He has already secured three dogs to handle during the three months of his sofourn, and will take three more. Parties wishing to avail themselves of this excellent opportunity to have their dogs handled in a section where game is ususually plenty cannot do better than address Mr. Titus at once. Mr. T.'s card appears in another column.

IMPORTED FOX HOYND.—On board the steamer Greece, which strived in this port on Sunday, was the splendid fox hound bitch Blue Bell, shipped by Dr. Gordon's Stables at London, Eng. The bitch was consigned to Mr. E. B. Goldsmith, Forwarding Agent, andre-shipped by him to her new owner, Mr. C. B. Wright, Concordia, Ky. Blue Bell is a very handsome animal and arrived in fine condition.

A Fox Terrier for Sale.—Any one wishing a fine fox terrier shout three years old can apply at once to Terrier, care of this paper.

Wanted Chesapeake Bay Dogs.—Bregders of Chesapeake Bay dogs will please send their addresses to the Kennel Editor of this paper.

## KENNEL MANAGEMENT.

28 H. D., Meadville, Pa.-My pointer pup, two months old, is randried. Can you inform me what I can do for him? Ans. Un-less you can secure the services of a skillful surgeon to perform an operation for the radical cure of hernia, which at best is a dangerous one to attempt, a band placed around the dog and a compress of cork to keep the bowels in place are the only means at your dispos

29 W. B. L., New Orleans, La. -My pointer dog, now nineteen months old, having successfully encountered in battle with worms about eight months since, thanks to santonine, and fully develabout eight months since, thanks to santonine, and fully devel-oped into a most satisfactory field dog and a most velnable com-panion, whose loss would seriously affect me, has now succumbed to what I think is distemper. I observed about ten days since a loss of appetite and spirits. I administered a light purgo which temporarily relieved him. Four days since more alarming symp-toms appeared, as refusal of food, emaciation, decided cough, diffi-cult breathing, mattery eyes, one more affected than the other, nose apparently closed, with slight discharge of matter, extreme weakness and loss of fleeh. Gave day before yesterday two table-senonaful of salt. Last evenius, beine fully determined upon disnose apparently closed, with slight discharge of matter, extreme weakness and loss of flech. Gave day before yesterfolly two table-spoonsful of salt. Last evening, being fully determined upon distemper, applied a seton to the back of his neck. Administered tar pill, proposing to repeat. Shall give two pills daily until further pan, proposing to repeat, small give two pins of any until turther developments. Please advise me in your next issue if I am correct in diagnosis, and what freatment to pursue. Ans. Probably distemper, but by the time this reaches you a tonic treatment is best, Give quinine, two to three grains, three or four times a day, and administer strong meat broths every two or three hours. the dog warm and dry and allow him plenty of tresh air, particularly if his discharges are frequent,

30 J. E. M., Bridgeport, Conn.-Please advise me what to do for 30 J. E. M., Brageport, Conn.—Please advise me what to do for my Scotch terrire dog, nine mouths old. He coughs continually and appears to be rather short of breath. Quantities of matter comes from his nose. He sets rather dull most of the time, Ans. Probably the first stage of distemper, but when this reaches you the disease will be so far advanced as to require tenic treatment. Give two grains of quinine twice a day, and a small quantity of the property of the party of the court thy of strong meat broth every three hours. If you had signed your full name to your communication we would have been able to reply by mail.

31 H. L. G., Brookfield, N. Y.-My fox bound, four years old, has had distemper for about six weeks; was taken with sneezing and at times blood came from his nostrils. As he seemed better I hunted him for two days. Since then he has been much wor. Military and for two days. Since their no ina seen mich worse. Yellow matter runs from his head. He is weak and moves with difficulty; coughs as though something was in his throat. Pulse runs nigh; sometimes at 123, but stands at about 100. He is very thirsty and has some appetite. Water scanty and high colored; some diarrhea. Have given him quinine and poke-rod, also tincture of iron. He has had two fits. He breathes thirty-three times a minute. What shall I do for him? Ass. Give nitrate of potash, eight or ten grains, two or three times a day, and, in addition, two grains of quintne three times a day. Drop the other

32 I. S.R., Erie, Pa. -My Irish water spaniel, six months old, has changed his puppy tusks nearly two months-or, say, six weeks

He is very healthy. Within the last four or five days long strings of slimy saliva hang from each side of his mouth. I have looked for a bone between his teeth, but find nothing wrong in his month. Do dogs at his age cut their back teeth after their tusks? Does it cause trouble as with children? Ans. Yes. The dog is suffering from irritation of the salivary glands, caused by teething. Give a little sulphur and castor oil once or twice a week.

33 V. H. W., New Britain, Conn,-I have a dog, half Newfoundso v. H. W., New Britain, Comi.—I have a cog, half Newronna-land and St. Bernard, nearly four years old, that has been sick nearly three weeks. He began with lolling and loss of appetite, and wanted to be in some remote place. He has grown so weak in his hind parts that it is almost imposable for him to get up, and he is reduced to skin and bone. He has not eaten as much since he has been sick as he would generally eat for one meal, but will cat great quantities of snow. What shall I do for him? Ans. A dog in the condition you describe should be tied up in comfortable and secure quarters, especially if he seems nervous, in case it should turn out to be rables, to which the few symptoms you give seem to point. Try a few (but large) doses of quinine, say five grains twice a day for a week. Write more fully.

34 C. S., Muney, Pa.—My setter dog has the distemper badly. have tried soveral things, but they don't appear to help him. What shall I give him? Ans. As you fail to state the age of the dog or give necessary particulars it is impossible to prescribe. We would advise, however, to try a tonic treatment.

35 J. H. L., Camillus, N. Y.—My setter puppy, seven months old, is troubled with sore cars. I have washed them carefully with castile soap and warm water, and have applied a liniment of carbolic acid and glycerine, but he does not get better. There is no offensive smell from his ears, but on the next day after washing them his ears will be covered with dry blood. What is the correct treatment? Ans. From your description the dog is evi-What is the dently suffering from canker, the membrane of the ear being so congested or inflamed as to yield some blood. Keep ears clean by syringeing with tepid water. Reduce his system by cooling food, such as vegetable diet. Avoid giving meat, and administer once every other day a dose of Epsom sails—say a tablespoorful. Four a tenspoorful of the following mixture in his cars twice a day: Lead water, one ounce; one or two drops of carbolic acid, with large half teaspoonful of glycerine added.

F 36 S. D. R., New York.—My setter dog (ever since he had the distemper) discharges from his eyes a transparent muens in the morning. Can I cure them by some simple remedy, or had I better take him to a doctor. Ans. You had better show the dog to a competent surgeon. There may be ulceration which causes the running you describe. Wash the eyes with tepid water.

37 G. H. B., Watertown, N. Y.—Your dog has internal canker of the ear. Pursue same treatment as recommended to J. H. L. in this column. Persevere and write result.

38 D. H. L., New York City.—1. My English setter bitch, with four pupples two weeks old, have the mange. 2. The pupples have little black sores all over their bodies. 3. My setter dog is have little black sores an over their vocaes. 5. My setter uog is in a very bad state. His hair has fallen out, and he has sores on his head and legs. He is very thin and passes water very often and very much at a time. What shall I do? Ams. 1, 2 and 3 Try Glover's mange cure, and give the setter dog nitrate of potas!) eight or ten grains, twice a day for three or four days.

39 L. M. G., Attica, Ind.—My English mastiff dog, three years of age, is quite sick. Two weeks ago we noticed he would not eat. Then he got very stiff all over, but worse in his right hind leg, which he will barely touch to the ground. He has become very when he will barry to their to the ground. He has become very poor and sunken at the flamits. He walks very slowly and stops to lest every little way. This morning, for the first time, he seemed in pain, groaning a little. What can be done for him? Ams. Your dog evidently has rheumatism. Give Epsom salts; a desert spoonful twice a day. Later on three grains of quinine twice a day will be of benefit to him.

40 U., Westfield, Mass.—I have been greatly interested in reading your excellent paper for the past two years that I have been a subscriber to it, and articles pertaining to pointers and setters and guns and game are those in which I take the greatest interest, and which, on receipt of the paper, I always seck for first, and for some time past have been hoping some of your correspondents would give me the necessary instructions to break my setter from a bad habit that seems to be growing on him; and, not finding it as yet, I decided to ask for it. When I take the dog into the woods after Partridge, if I allow him to get, say 100 feet from me, he will start off sometimes on a sharp run and pay no attention to either call or whistle, unless he should strike a strong scent, when he will stop and go to work as carefully as any dog, but that may be a quarter of a mile from where he left me. He is as staunch as a rock, and will bring the birds in without biting them. And, aside from the habit he has of starting off as described, is as good a dog as any one could ask for. Now, will some one who has overcome this trouble tell me how to go to work to break my dog of it? Do not say shoot him if he doesn't stop, for he has two charges in him say shoot him in the doesn't stop, for he has two charges in him now, and I will not do that again. I have fired scolding him and whipping him for it, but all to no purpose. Sometimes in going from my place of business to my dwelling house he will lower his head and start off into a smart trot, and neither calling nor whistling will make him return until he gets ready. He was two years old last June. Ans. As you have tried both your hand and gun in attempting to make your dog obedient and have failed, we cannot advise you better than to place him in the hands of an experienced dog trainer, who will, with the aid of a check cord, get him into shape and make him mind.

## CURRENT DOG STORIES.

## XXII

A slate picker at one of the Mill Creek coal breakers discovered a spotted setter under the pockets a few days since. Mill Creek is the leading coal centre of the Delaware and Hudeon Canal Company. The dog was mischievously put into an empty gravity coal car. The car was run under the chuic, and soon afterward four tons of clesstant coal were dumped upon the dog. The car was taken away at eight o'clock. The coal from Mill Creek is shipped via the Gravity Railroad to Honesdale, and there transferred into Eric cars for shipment East. This car arrived at the foot of No. 1 plane at 7½ o'clock in the evening. The workmen at the foot of the plane, hearing cries of distress which they supposed to be the moaning of a child, switched the car, determined to solve the mystery. The car was unloaded, and the dog, after a ride of

twenty miles under this pile of coal, appeared upon the scene in good condition. The owner, who lives at Mill Creek, learning of the whereabouts of his dog, sent a messenger with a check for  $\lesssim$ 50 to the lucky workmen who rescued the animal.—Exchange.

to the lucky workmen who rescued the animal.—Exchange.

Iowa Hall can boast of a dog that out-Tanners Tanner, having lived forty-two days without food or water. On the 16th day of September the saimal, owned by Mrs. Armstrong of Bird's Plat, disappeared from its home. They mirvelled much at the property of the saimal, owned by Mrs. Armstrong of Bird's Plat, disappeared from the home. They mirvelled much at the property of the same of the saimal o

disappeared was more than one hundred pounds, and when found it was less than twenty.—Place (Cal.) Argus.

In the southern part of Bolton there has lived for six or eight years past an Englishman, aged about sixty, by the name of Westlick, who did not appear to be doing much for a living. He kept five dogs—some of them ugly—and few people went near the house. Last Thursdyn a notification was left with First Selectman. White that Woolrich had not been seen for several days. Mes-us. White and Summer, two resolute men, went to the house. They were greeded by the furious onset of a large coach dog, who, on their opening the door wide enough to look in, bounded forward with an ominous growl and a display of teeth that meant mischief. The men shut the door and went to the window. Looking in; they saw Woolrich sitting in a chair by the stove, his head bent forward as if asleep. Unable to rouse him, and the dog continuing to exhibit the ugliest symptoms, it was re-olved to kill him. Mr. White had brought his gun, but the dog kept so near his missier, as if guarding him, that it was not deemed safe to fire from the window; and, raising this, the visiors hurled a stone, to start the dog for was discharged, killing the faithful animal instantly. Going into the room the visiors discovered that Woolrich was dead. Probably he had been dead several days, and land been frozen to death, He was not known as a dividing man list other dogs, starved out, had left him, but this one faithful and formidable animal had refused to describ him, and stood it out bravely by his side, in cold and hunger. The dog fell a martyr to his devotion and fidelity.—

HANNEL NOWER.

### KENNEL NOTES.

## NAMES CLAIMED.

NAMES CLAMED.

Mocbuff—Mr. Harry E. Livingston, of New York city, claims the name of Maccluff for red Irish setter doep puppy out of Pierce's being tenue by Mr. H. B. Wygant, Peckskill, N. Deppy is now being trame by Mr. H. B. Wygant, Peckskill, N. Deppy is now being trame by Mr. H. B. Wygant, Peckskill, N. Deppy is now being trame by Mr. H. B. Wygant, Peckskill, N. N., claims the name of Linds for his short-haired throughbred St. Bernard bitch, whelped Oct. 12, 1879, out of Mr. B. Loone's Alpe, by Mr. B. Jernanin's Chamannix.

Lady May—Mr. H. D. Benner, of Nyack, N. Y., claims the name of Lady May for his blue Belton Llewellin setter bitch with dark points by Lofty out of Maud Muller (Rob Roy-Pochontas) bred by Mr. W. A. Irvin, Kokomo, Indisna.

Rochester Ben—Mr. J. C. Bishop, of Monson, Maine, claims the name of Mochester Ben for black and tan fox hound, sixteen months old, bred by Mr. L. M. Woodin, out of Reno by Driver.

Dorn Bell for black and tan fox hound bitch, eighteen months old, out of Pan by Class (liter sister to Blue Beard).

Chavie II.—M. Robert Walker, of Franklin, N. Y., claims the name of Open of Egypt—Dr. J. J. Jennelle, of Du Quoin, Ill., claims the name of Open of Egypt for a beautiful bitch puppy reserved for himself out of the late Elelo II.—Dell litter.

Barkis—Lieut. Fred W. Foster, U. S. A., Fort Laramie, W. T., claims the name of one of Markey for for Irish water spaniel dog puppy out of Lady by Barney.

Megoding-Lieut. Fred W. Foster, U. S. A., Fort Laramie, W. Pegoding-Lieut. Fred W. Foster, U. S. A., Fort Laramie, W. Pegoding-Lieut.

Mickey Free—Capt. A. E. Woodson, U. S. A., Fort Laramie, W. T., claims the name of Mickey Free for Irish water spaniel dog puppy out of Lady by Barney.

Peggody—Lieut. Fred W. Foster, U. S. A., Fort Laramie, W. T., claims the name of Peggotty for setter bitch puppy by Rake out of Phyllis.

Tom—Mr. John Fonda, Brooklyn, N. Y., claims the name of Tom, Jr., for his black and tan setter, whelped August, 1880, out of Gee, E. Brownie's Nellie Horton (formerly Dr. Ateris) by Doan's Tom, presented to him by Dr. H. F. Aten.

Penhoe—Paymaster L. G. Billings, U. S. N., Annapolis, Md., claims the name of Ivanhoe for his red Irish setter, whelped July 2, 1880, out of F. N. Hall's Rose Bradwardine by A. E. Godeffroy's Rover H.

Queen Elizabeth—Mr. F. N. Hall claims the name of A.

Rover II.

Queen Elizabeth—Mr. F. N. Hall claims the name of Queen Elizabeth for his red Irish setter, whelped July 2, 1880, out of his Rose
Bradwardine (Elcho-Bess) by A. E. Godeffroy's Rover II. (Rover-Panula)

Bradevardine (Elcho-Bess) by A. E. Godeffroy's nover In. (Anyel-Pamels).

Bessie B.—Daniel J. Duffy, of Chaltanooga, Tenn., claims the name of Bessie B for red frish bitch seventeen mouths old, by Champion red Irish setter Bob, imported by E. T. Stoddard, of Dayton, Ohio, out of Dr. Geo. Hall's Gyps.,

Pilot—Daniel J. Duffy, of Chaltanooga, Tenn., claims the name of Pilot for red Irish setter dog, one and one-half years old, by imported Don (imported by Clas. Turner, Secretary of Mutual Kennel Clab, St. Lours, Mo.), in December, 1873, from C. Cooper, Esq., Limerick, Ireland, out of Maud, and Mand is out of Waddell's Pilot and Grosse. Esq., Limerick, 1 Pilot and Gypsy.

Pilot and Gypsy.

Sales.

Ruby—Mr. Robert Walker, Franklin, Delaware County, N. Y., has purchased from F. F. Pitcher, Charemoni, N. H., has batch Ruby (imported Saip, Feather).

Bebe II.—Mr. Robert Walker has purchased from Mr. Chas. E. Lewis, Suspension Bridge, N. Y., black and tan bitch Belle II. letter Lewis, Suspension Bridge, N. Y., black and tan bitch Belle II. letter Pauline (Waddell's Bell-Beau).

Ruby and Rose—Mr. Robert Walker, has purchased from Mr. D. F. Slade, Franklin, Delaware County, N. Y., ceckers Ruby and Rose (Plusher-Pannie II).

Joseph—Mr. F. L. Sheldon, Rahway, N. J., has purchased from Mr. Jerry Cockerell, Memphis, Tenn., setter dog pup, whelped June 27, 1880, out of Lady Clare by Joe, Jr.

Miss June—Mr. F. L. Sheldon in Suprehased from Mr. Jerry Chies deno—Mr. F. L. Sheldon is purchased from Mr. Jerry Chies deno—Mr. F. L. Sheldon is purchased from Mr. Jerry Chies and Sheldon in State of State

Cockerell setter bitch pup, whelped July 23, 1880, out of Juno by Giad-tone.

Little Lady—Mr. Isaac Yearsley, Jr., has sold to Mr. L. D. Rumsey, Burlalo, N. Y., setter bitch Little Lady (Dash; III. Howey).

Trim and Trouble—Dr. P. E. Day, Bristol, R. I., has sold to Mr. Alex. Taylor, Jr., New York city, the brace of pointers Trin and Trouble.

Rode-Madean M. C. E. Henderson, Almonte, Ont., a brace of Ranger—Datasy Whelps—Mr. Geo. D. Macdougall. Lacine Kennels, has sold to Mr. O. E. Henderson, Almonte, Ont., a brace of Ranger—Datasy Whelps—Mr. Geo. D. Macdougall, Lacine Kennels, has sold to Mr. J. O. Donner, four white and orange ticked Ranger—Daisy whelps—Mr. Geo. D. Macdougall, Lacine Kennels, has sold to Mr. Jr. Whelps—Mr. Geo. D. Macdougall, Lacine Kennels, has sold to Mr. Ferry R. King, New York city, a liver colored dog (white frill), and a liver and tan dog (white frill), Wildair-Cora. Rackel—Mr. Geo. D. Macdougall, Lacine Kennels, has sold to Mr. J. T. Hulise, Circleville, Ohio, a black dog with white breast and toes, Wildair-Cora.

Ress—Gramby, Ct., Dec. 18, 1880.—I have just loop ht from Geo, Pownall, Christiana, Pa., his well-known prize whining English pure beggle Bess. She arrived the 16th in fine condute, end is in whelp by Yetor—will whelp the 22d. She was shown at Locton, 1878, and easily won first prize, and Fonest axis Syntaxia in report of show said. "That fir, Formall, of Christians, showed has beagle Bess, which was by long odds the test dog in the lot." N. ELMORE.

### PRESENTATION

Elcho II.-Bell Whelp-Dr. J. J. Jennelle, Du Quoin, Ill., has presented to Mr. J. W. Wilkinson, Vermont, Ill., a Litch puppy out of Dell by Elcho II. W. Wilkinson, Vermont, Ill., a Litch puppy out of Dell by Elcho II. A. E. Godeffoy, Guymard, N. Lecine Kennels, has presented Mr. A. E. Godeffoy, Guymard, N. Y., a chestnut and tan bitch with white rill, Wildar-Cora.

Prairie Rose to St. Elmo on December 9.

Fronk—Mr. P. A. Huffman, Thorntown, Ind., has presented Col. Samuel Goodman, of Philadelphia, with his fine quail deg

### A SAD ACCIDENT.

A LAMENTABLE accident occurred week before last in New Jersey, which resulted in the death of a valuable pointer deg. The circumstances, which were peculiarly distressing, are as follows: Mr. K., the owner of the dog, with a companion, had been shooting, and had killed several birds. A bevy having been flushed Mr. K. killed two birds with one barrel, and, after leading, the dog was sent to fetch the birds. As he appreached with one of them, his master took a few steps forward, and, catching his foot in a grapecine, fell forward upon his gun. The stock was broken and the gun discharged, the entire charge passing through the dog, which was now within a few feet of his hander. The brave animal, without uttering a sound, continued to advance, dropped like bird at his master's feet, lecked his hand, looked up into his face with an expression of fondest affection, and fell over dead."—Forest and Stream, Nov. 18, 1880.

Farewell, my dog! A last farewell I say to thee, a friend so true. Words can never, never tell The thoughts that in my bosom swell Toward one I loved as vou.

Forgive me, dog, my sad, sad lot! Your eyes look love and try to say "Forgiven you are; I blame you not.
You did not mean this fatal shot Should harm your friend who dies this day."

Your master knows your love so strong: Your acts, the last so sadly test, When, bleeding fast, you crawl along To lick the hand that caused you wrong-To die by friend you knew your best.

Wellsville, N. Y., Nov. 27. CLARENCE A FARMER

ONE AMONG A THOUSAND—Buyfinto, N. Y.—Editor Forest and Stream: Several weeks ago a friend from the East had been on an extended shooting trip in Illinois. He took with him several fine dogs. Upon his return here he left one with me to breed to a valuable bitch I own, and which will shortly be in use. After the dog had been with me a few days I discovered he was ailing. He soon became so had as to cause great anxiety upon my part. I had but little faith in our "vets," as I had previously had sad experience with them, as also had some others whom I knew. I was at my wit's end, when finally an old horseman and a great lover of dogs happened in my office. I stated the case to him, when he recommended Dr Roht. C. Hutchings to me. I called on the Doctor and plainly told him my lack of faith in vets for dog practice. We went up to see the dog. The Doctor gave him a thorough examination from the tip of his nose to the root of his tail, watched and studied his every movement for a long time, asked numerous questions and finally diagnosed the case as being inflammation of kidneys and bladder, extending also to penis, which proved to be correct, and a very bad case it was, too. The Doctor took him in charge, and in about four days he had the dog about cured; in fact, so much so that I shipped him to his owner (nearly five hundred miles away) the other evening. Of course you can imagine how pleased I was in being sible to do so. ing. Of cou able to do so. Of course you can imagine how pleased I was in being

ling. Of course you can magnic now preased 1 was in using able to do so.

Should this neet the eye of any in my immediate vicinity who has a sick canine friend he may have no fears to place him in the hands of Dr. Hutchings, where he will not only receive proper treatment and care, but will at once feel that he is in the care of a true friend. Since my experience with Dr. Hutchings 1 have learned of several critical cases that he has been successful with. I will give you two. A gentleman here has an old pet bull terrier of large size. He is very old. This summer a fire engine ran over him and broke his foreleg. The gentleman called in an eminent physician and surgeon, who pronounced him beyond aid and recommended him destroyed. Dr. Hutchings was called, set the limb, put it in splints, and to-day the old veteran wags his gratitude every time he meets the doctor.

A Lover of THE Dog.

For Sale.—A grand liver colored pointer bitch, Flora out of Lady II. by Flash; one and half year old; has had some field experience; a careful ruffed grouse dog; is fast and retrieves properly. Flash, the sire, is a noted dog, being out of Peg by Dr. Strachan's George. Address Fointer care of this office,

### ANENT THE POT-HUNTER.

BROOKLEN N V NOV 23 Editor Forest and Stream :

BEING a reader and lover of your excellent paper I frequently come across articles written by

DEING a reader and lover of your excellent paper I frequency quentity come across articles written by self-styled "true sportsmen," who take it upon themselves to abuse and sneer at certain individuals whom they term "pot hunters," Now, Mr. Editor, I wish to say right here that it would be well for these "gentlemen sportsmen" to cast an inward glance at themselves and sit in judgment upon their own practices before condemning and abusing others. Perhaps two-thirds of the visitors to the more secluded and remote lakes of Maine are so-called "gentlemen sportsmen"—if membership in a gun elub and a high sense of personal importance and superiority go to make up that unknown quantity—and yet it is a notorious fact that there is more game killed out of season on these lakes than there is during the lawful months.

killed out of season on these lakes than there is during the lawful months.

Now, sir, who is responsible for this base work? It is not the "pot-hunter," for he never visits these lakes during the hot months. It is the "gentleman sportsman," who, fresh from the town and intent upon securing trophies of his skill, blazes away at all sorts of fur and feathers, without regard for law or license. Numbers of deer, and even moose, are "jacked" and shot during July and August in the interior of Maine, and the very persons who are guilty of doing so return to town and relieve their consciences by abusing the

pot-hunter.

1

pot-nunter."
It occurs to me if the class of sportsmen (?) to whom I re-It occurs to me it the class of sportsmen (?) to whom I refer would take pains to practice a little of what they preach, and devote the time spent in condemning the "pot-hunter" to carnest endcavors to keep themselves within the limits of the game laws—in fact, to do more real personal work and less talk—there would not be such a marked decrease of game generally, and especially in the very sections visited mainly by members of gun clubs.

"Top f.ever."

### STRIPED BASS. (Labrax lineatus.)

DOIS'D on some brown and weedy rock Pols D on some brown and weedy re That trembles to the surges' shock, With weighty rod and lengthen'd line The angler's eye surveys the brine, And sees at last the sudden sweep, The downward plunge, the upward leap, Then casts afar his gleaming baits And breathless for the struggle waits.

The quick-ey'd bass beholds the snare, So tempting and so seeming fair, And with a flashing leap secures The false, deceptive, barbed lures Then, pricked with hook and mad with pain, Darts off all bleeding to the main, Till check'd by the revolving reel, And anguished by the cruel steel, It stops, it pauses, turns once more Tow'rd his termenter at the shore. Again, again, the strifes begin, Exhausted is each flapping fin; Wearied and spent, and bleeding still. He yieldeth to the angler's skill, And, panting, dying, brave no more, Is drawn impassive to the shore Stretch'd on the rugged rock it lies A beauteous and glittering prize; Its silvery scales, its striped side, Most lovely, though with life-blood dyed; So lovely that no painter's tint Its lines on canvas may imprint,

Its lines on canvas may imprint.

Isaac Molellan.

Winter Trangeling in Colorado.—The train discharges its freight into a dozen coaches, which set off for the mountain pass that lies between Norton and Leadville; they rattle off through the whirling snows toward the range of mountains, which is already thick with storms. Our own way lies across the South Park toward a lower part of the Arkansas Valley; for ten miles the four horses hurry the light open wagon over the snow-covered plain, through the bilinding snow that flies before the blasts rushing down from the mountain ravines. Then we find our way upon the regular freighting road that leads in a devious course through the mountain gorges to Leadville. It is a way for which little has been done except by the wheels of the endless trains of wagons; but nature meant this land for roads; the scant foliage and slight rain-fall leave each of the ravines a natural road, and the frost has now bound mud and stones together. Every mile of this trail is occupied by a long caravan of the freighting teams that earry in provisions and take out bullion. The ordinary train consists of many teams, each composed of two wagons, the hinder one being without a tongue, and the two coupled together as closely as two railway cars. Sometimes there are three wagons in the string. Eight or ten mulcs and a single driver supply the motive power. With this "outfit" one dexterous driver will drag about ten thousand pounds of freight at the rate of twenty-five miles a day. Some of these trains are individual ventures, but commonly a dozen teams are under one wagon-master, who fixes the marches and determines the places where the train shall halt to pass the tides of wagons that set the other way. These caravans give us the most picturesque aspects of this mountain life; the drivers are a strange selection from the vigorous frontiermen. The labor is extremely arduous and the life of the rudest, but the profits are very large; many of these teams earning from thirty to fifty dollars per day

man to another, and I was indebted to them for many considerate acts. They are a marvelously profane lot, but their swearing has a coriously impersonal character. In his diffi-culties with the teams a man will lift up his voice and ad-dress the Infinite in diabolic homily that would befit Milton's dress with the teams a man will fit up his voice and address the Infinite in diabolic homily that would befit Milton's Satan, and then, subsiding like a geyser, remain silent for the rest of the day. At night, when they gather around the fire, in the low-walled, turf-covered ranches, they are perfectly mute: they sit on the benches as still as munmiles, until they slip down upon the floor and snore until morning. They seem wrapped up in their own thoughts, or in the place where their thoughts ought to be. They often camp alone by the roadside; indeed, many of them seem to prefer the absolute isolation that they find in bivouacking in the scrub woods ten miles from neighbors. One night I sought directions from one of these solitary men. He was a huge, griz-zle-bearded fellow, whom I surprised cooking his supper by a little fire in a niche in the rocks near his team. His ugly visage stood out in the blaze of his bacon, which he was toasting on a stick. He gave me sufficient answers without looking up to see who it was shouting at him out of the darkness.—January Atlantte.

BEDFORD -Ohio, Noz. 15.—I send you enclosed a short article on the catish. It has been a long time since I wrote anything for the FORST AND STREAM, and I have written this partly to pass away the dreary hours of my illness. I read your paper with great interest, sick as I am, for it is decidedly the best sporting journal ever published in our country, baseluse being a wood family namer, and it has steadily imly the best sporting journal ever published in our country, besides being a good family paper, and it has steadily improved in your hands. I sincerely wish it success. You have done good service to the sporting fraternity by your exposure of the dangerous character of that villainous compound, the Dittmar powder. Please excess pencil and unsized paper; I have to write lying on a lounge, and pen and ink are very inconvenient. I often feel like writing out some of my sporting experiences, which have been somewhat extensive and interesting. I have every number of your paper preserved from the time it was first sent to me by the Parker Bros., if I am not mistaken.

WE requested our office-boy to note down, in alphabetical enumeration, the occupations and professions of the writers of letters to Forest and Stream which came to us in one week. After a close scrutiny of the envelopes the boy handed us the following curiously compiled, but scarcely complete, estalogue:

Artfully angling artists.

Buccaneering boatmen. Campaigning canoeists.

Doughty deer-dogging doctors. Errant Englishmen.

Friendly farmers, fatalistic fishermen.

Gentlemen gunners.

Harmless hermits.

Incorruptible import inspectors.

Joyish jokers.

Knaves and knights.

Laconic legal lummaries.

Mutinous mariners, manly marketmen.

No nonsensical newspaper novelists.

Ophidian cologists, ornamental ornithologists. (Preposterous patent powder pamphleteers properly prohibited.)

Quite a quota of queer questioners quieted.

Roaming romancers racily recounting redskin rencontres.

Sundry subscribers speedily settling, subsequently sending sen

sible suggestion Trouting tourists, talkative toxopholites

Urbane 'untsmen. Veracious and verbose veteran voyageurs.

Wretched wardens wearily watching whales, XXX-traordinary xploiters.

Yellow yachtsmen, young yagers. Zealous zoologists.

The man who thinks that he can afford to pay the farmer's boy more for quail than the boy is paid by the baggage-master: is invited to send his address to this office.

CAN some of the older readers of the Forest and Stream tell us where and when the expression "true sportsman" was first employed?

Don't physic, for it weakens and destroys, but use Hop Bitters that builds up, up!

# The Bifle.

## RANGE AND GALLERY.

Our Rifle Prizes.—The admirable gallery practice, which we re port in our columns from week to week from our Boston correspondent, has roused many inquiries from readers in other sections, and led to a general adoption of this most excellent indoor winter amusement. The scoring as recorded is little short of perfect, amusement. and, as the result of such careful drill during the cold weather, the Walnut Hill Range is enabled to show a finer shooting average than any other shooting ground in the country.

To stimulate practice, and as a holiday gift to our Boston friends, To stimulate practice, and as a nonday give our boston income, the FOREST AND STREAM has prepared two elaborately carved mecra-cision in off-hand shooting. One of the prizes will be placed as a leading prize at the Mammoth, and the other at the Magnolia Gallery. We have drawn the conditions with the utmost simplicity, and, should any disputed points arise, will try to decide them according to common sense and the N. R. A. rules. We will keep our readers posted from week to week with the scores made, and at the close hope to see a good gathering of highest possible

scores at the tic shooting.

Conditions—Pipe to be shot for in gallery with gallery rifles: to be awarded to marksman making best aggregate of five scores; cach score to consist of ten shots, off-hand, at reduced Creedmoon targets. Ties to be shot off; best three out of five scores, Com-Competition open to all comers from January 1 to April 30, inclusive.

Boston, Mass., Dec. 25.—The riflemen of Walnut Hill cave Santa Claus a grand ovation of noise and smoke to-day, and all day long the winter shed was filled with devotees of the sport. while out from the shooting posts poured an incessant fusified. All the trains brought additions, and during the afternoon the partiion was even overcrowded. The day proved a gray one, the leaden clouds produced a good light, and the wind, which came steady and unbroken in its velocity from the northeast, indicating 2 o'clock, was easily handled. At the 200-yards ring target, it will be remembered, the bullseye is only two inches.

The holiday match did not fill largely, owing to the attractions a the novelty matches. Captain Jackson took first place with 32 out of the possible 35, and Mr. Tyler with his military rifle was second for 31. The latter gentleman making the most entries, as per conditions, took first money. The novelty matches will close one week from Saturday next. Following are the best scores out of the 150 entries made : 

E. F. Richardson

MAMMOTH RIPLE GALLERY.—Boston, Dec. 24, 1880.—The third

week in the any-rifle match at the Mammoth Gallery has shown the best shooting this season, and the gallery has been well filled both day and evening. Mr. N. W. Arnold, of the Massachusetts Rifle Association, was successful in getting a clean score of eight consecutive bullseyes and receiving \$16 in gold for the same. He made eleven consecutive bullseyes—a clean score of eight, and, starting a new score with three more bullseyes, missed on his twelfth shot. Last May new targets was put in the gallery, and this is the first clean score that has been made. All the crack shots of this section have essayed this feat, and none of them have succeeded in accomplishing it. To Mr. Arnold is awarded all praise for his skill and accuracy, and the management wish to anpraise for his skill and accuracy, and the management wish to announce that they are ready to pay \$15 in gold to any one making a clean score of eight consecutive bullseyes. The competition is still very strong, and several aspirants for clean scores follow very closely in Mr. Arnold's steps, who is in the lead with 193 out of a possible 200; Mr. U. A. Pollard is second with 192; third on the list is Mr. J. Merrill, of the Massachusetts Ritle Association, with 192; fourth on the list is Mr. J. H. Brown, of the Empire Rifle Club of New York, with 192. Ranking in the order named, Mr. E. F. Richardson, of the Massachusetts Ride Association, is fifth with It, and sixth is Mr. S. Camicrbury, of the Massachusetts Rife As-sociation, with 189. This is the bost shooting that has ever taken place on the new targets. On January 1, 1881, will commence a new rife match with six cash prizes as follows: \$7, \$6, \$6, \$2, \$2, 31. Also an extra prize of \$15 in gold to any one making a clean score of eight consecutive bulleyes. The conditions of the match are: Any .22 cal. ritle, three pounds pul; position, off-hand; rounds, 8; possible 40; five scores to win or possible 200. There are only five more days remaining in the month for the any-rifle match, which closes on Friday evening, December 31. The fol-lowing are the leading competitors to date; 50 yards; rounds, 8;

Pistol Practice,-The pistol match, which closes on the 31st of December, has been very popular during the three weeks past, and, if the competition is as lively for the remaining few days, it will be hard for any one to name the winners. Mr. Elihu Wilder remains in the lead with 109 out of a possible 120. Second on the list is Mr. J. Ames, of the Massachusetts Rifle Association, who is show-ing good shooting and capital holding, with 107. Third on the list is Mr. H. E. Armstrong with 106, followed closely with several who are 105. This range has been lively, and this little arm is proving itself very popular with many who avail themselves of the opportunity offered to practice. On January 1, 1881, will commence a new pistol match with three cash prizes as follows: 55,  $\pm 3$ ,  $\pm 2$ . Also an extra prize of  $\pm 5$  to any one making a clean score of eight consecutive bulleyes. The conditions are: Holding the weapon at arm's-length; rounds, 8; possible 40; three scores to win or possible 120 : distance, 50 feet,

Following are the leading competitors to date; 50 feet; rounds,

BROOKLYN. - The Brooklyn Long Range Ride Gallery, 381 Fulton street, opposite the City Hall, has two 100 ft. ranges, and is patonized by the best Ridemen from New York and Brooklyn. Mr. Pors, the proprietor, pays \$1 every week for the highest score (200 vds., Creedmoor target, 10 shots) made in his gallery, and to show what kind of shooting is made in his place sends us the following

score fr m last month:

score fr m last month:

F. W. Holton, 48, 49; A. H. Anderson, 50, 59; T. B. White, 50, 40, 50, 46, 50, 50; M. B. Hall, 50; T. P. White, 50; M. B. Hall 50; P. P. Roncidson, 50; A. H. Anderson, 49.

There is a shooting match every Saturday night open to all comers, German ring target, 5 shots for two valuable prizes, and the following goutlemen have won prizes by making the following

scores:
A. H. Anderson, 115, '115, 114, 116, 116, 116, 114, 119, 115, 117, F. H. Holton, 114, 116, 111; T. S. Case, 113, 115, 118, 113; F. Rondston, 111, 113, 117, 119; T. P. White, 118; T. F. Descoug, 115, Measrs, T. P. White and P. Roneldson both made remarkably good shooting last week by making 49 out of 60, 300 yds. target.

ARRON, Ohio, Dec. 18 .- The directors of the Akron Rifle Association held a meeting last week, and decided to make an effort to revive interest in this aport. The organization was started in the winter of 1877-8, and for two seasons there were from ten to twenty-five scores made on the range every week, and a large number of the members procured guns of the best make. From various causes the interest has died out during the past season, the scores growing fewer until the weekly meetings were alto-gether discontinued. As a result of the meeting of directors the targets were put in shape, the stove in the sheeting house at the 200-yard firing point warmed up, and three members put in an appearance. Their scores were as follows ;

J. R. Criss. C. R. Knight U. B. Wing	4 4	3 3 5 1	1 4	5 4 4-43
It was very good work for	men who had	not bee	n on	the range

There are favorable indications of a general revival of interes There are lavoratic indications of a general revival of interes and a large attendance at the annual meeting for the election of officers on the second Friday evening in January, prox. I hope to be able to send you occasional items of interest, for we have better equipments than any club in Ohio, and good material in the men,

### WIMBLEDON MARKING.

THE special committee, appointed after the exposures of last July in the matter of false scoring at the Wimbledon meeting, have reported to the council, and that body have made public their scheme of checking any fraudulent practices. Secretary E. St. John Midduay writes for the information of the volunteer force and of the public generally that :

their scheme of checking any fraudulent practives. Secretary E. St. John Mildmay writes for the information of the volunteer force and of the public generally that:

"A variety of schemes for the prevention of collusion between competitors, register-keepers and markers, having been brought under the notice of the Council of the National Riflo Association, have received their most careful attention. The objects to be attained for the prevention of fraud appear to be the establishment of adequate checks: 1. On register keepers; 2. On markers; 3. On competitors themselves, It is essential that neither register-keepers, anchore one competitors with know beforehand to what when the control of the property carried out, and therefore the most likely to prove effective. With the above objects in view it is suggested that the following rules be adopted:

"Register-Keepers—Black boards, visible to all, to be provided at the bring points, whereon the seores should be recorded as well as on the telects. The scores on the boards and tickets to be compared by an officer, and the tickets to be attamped by him both beween the property carried out, and therefore the most "Butt-Sergeants—Register-keepers—Rules to be recorded as well as on the telects. The scores on the boards and tickets to be compared by an officer, and the tickets to be stamped by him both beween the property of the

ANOTHER FAVORED HUNTING RIFLE, -I see in your issue of the ANOTHER FAVORID HUNTING RIFLE.—I see in your issue of the lath inst, an article on the above subject. I notice also that this is the second article on the aforesaid theme, the first being a plea for the Winchester, and the last a plea for the Kennedy. Now, though I do not favor this special pleading for certain arms, I presume I am not out of order when I add a few words under the same caption. The author of the second of these articles, "Otto," while "knowing it (the Winchester) to be a good weapon," thinks the Kennedy better, and seems inclined in general to suppose the last thing out the best. When the Winchester was first brought out no one claimed "that all improvements in that line ceased." But so many decided improvements appeared in the model of '73 that there was little room for any in that of '76, which brings it as near to perfection as any repeater made. In short, the Winchester as improved has borne the tests of experience and is still at the it. The Kennedy and the Burgess are closely modelled after Winchester; the Kennedy to the extent of adopting its cartridges. And if "the fact that it has been along time upon the market, well known and introduced," does not make it a superior weapon over all others that may come after, these facts do not prove it to be inferior.
"Otto" speaks of "faults and imperfections" in the Winches

Would it not be well to specify these faults and imperfec-? I am not claiming absolute perfection in the Winchester, for I see at least a hint of imperfection in the fact that even the model has not been adopted as the repeating arm of the U. military service, though it exceeds all except the Lee in number of shots, and exceeds them all in rapidity of fire.

Of course all repeaters may be improved, but when some such

system as the Lee is adopted and so improved, but when some sten system as the Lee is adopted and so improved that there is noth-ing for the marksman to do but to pull the trigger, it may be safely said that the limit of improvement has been reached. Judging by the inventions and improvements in firearms the last fifteen years, such a limit does not seem far in the future.

I began this article with the intention of putting in a plea for the single breech-loader, but I find I have exceeded my intended the single breval-roader, out 1 ind 1 have exceeded by intertext limits, and will only add that if one innst choose a repeater for hunting large and dangerous game, why not take the Winchesto Express rifle? If that ritle were used on a grizzly he would have no occasion to ask whether one meant it or not, nor would the said grizzly have much chance to step over and "investigate" the hunter. Besides, with this rifls and its naked bullet there would be no trouble with sticking shells or torn or creased patches. Though the patched bullet is just the thing for target practice, I believe it will generally be admitted that the naked bullet is the most satisfactory for hunting. A. G. B.

## Bachting and Canocing.

THE ANTHRACITE'S FAILURE.

The antheracties on the subject of steam yachts the London Feder produces some instructive data which incontestibly show the Perkins bother and engine to be much interior in all principal requirements to the confinery varieties. The Field conducted by saying: "So far as can be understood, the Anthractic made her vivage to America and back to prove the advantages of the Perkins system for long and short voyages; but, without some further explanation, those who understand the present position of steam yachting will be disinclined to admit that there are any advantages in that system." This is very moderate language, but nevertheless amounts to a decided verdict against the claims of the Perkins Engine Co., and this over after acceptant the more chiral questionable data furnished by the Company increaselves, but nevertheless amounts to a decided verdict against the claims of the Perkins Engine Co., and this over after acceptage the monest, the failure of the Anthractic would have spaceral in much stronger relief. We submit that such a course would be perfectly justifiable. The experiments at the Brooklyn Nay Yard were carried out with scrupplous exactitude by a disinterested and fully competent Board of Naval Engineers and we accept their figures in preference to the unsupported and doubtful information furnished by patentees desiring to dispose of their franchics. We moreover question whether the Anthractic really did make the voyage across and back on about twenty-two tons, and have reason to believe that, could the truth be got at, the actual ingress would rive in the production of the productions bleedade runner, the reliability of whose statements the public may well doubt in view of the deception attempted by him and others while in this city, seeking to sell out to some enthusiastic and plethoric "Yankee." The following figures we have from the London Field, substituting for the Authractie waythicat LSibs, the actual consumption of 2.7lbs. obtained at the Booklyn Nay

	Consumption	Weight of	Engine
	per H. P. per hour	Engine and Boiler	Sugge
Anthracite	2.71bs	25 tons	221/sft.
Bulldog		915 64	16 "
Marchesa	1.3 1		20 14
Design by K	emp1.6 "	40 ''	19
W1	*		

ity of keeping the steam gauge within a margin of a hundred pounds.

The more the facts brought to light, the more grotesque do the claims of the Perkins Engine Co, become, and the more discreditable the scheme they cherished of inveighing American capital. Why this journal arrayed itself in opposition to the generality of the puress, and retraced to countenance what we took to be humbing from the control of the property of th

## SHARPIES AS CRUISERS.

Editor Forcel and Stream:

Some forty years ago the oystermen about New Haven and along the Connection those were in the labit of carrying on their hudges with the aid of cances cut from a single log. These cances, many of which were very large, answered are aby well, as they sore easily propelled and carried a good load.

So the oystermen paddled on until the supply of high trees began to fail. This bothered the dredgers, and but fair to seriously interfere with their trade, when about that time along came a "Down-East" genius to the rescue. He set up a stem and a stem, with one temporary section anidships to shape his carft, sprung around two long planks to form the sides, and spiked his bottom athwartship.

Book-reast genus to the rescue. He set up a stein and a stern, with one temporary section amidating to singe his cardt, sprung the state of the steep and the addition of a pair of leg-of-mution sails, has she been fashioned multi about two years since. It had often been noticed that while the Sharpie, as a rule, displayed only medium sailing qualities, an occasional boat of this model astonished her builder with a wonderful burst of speed. Some of these boats, less than 50 ft. in length, have recorded a rate of over fifteen nulse per hour. The Sharpie astonished the fogies in another direction. She proved to be an exceptionally fine sea beat, and yet did most of her sail-tended to be an exceptionally fine sea beat, and yet did most of her sail-tended of the season of the sail that without proved the sail that without proved the sail that without a substantial state of the sail that without an onne of builsat a Sharpie has been known to captaize. It has been intimated in Foruser and Stream of the sail and that without an onne of builsat a Sharpie has been known to captaize. Let me ask my strictly scientific friends, will a deep, narrow section cutter stand up without bullast? This charge of capaizing as made against the best type of Sharpie (the Nonparell mode), was unfair, and unadviced. Por it is well known that she not only deep and the state of these beats against any deep, narrow built yacht has remained unsuswered.

more than eighteen months a published onalienge to suit at see 6.1 of these boats against any deep, narrow built yacht bas remained unanswered.

I could at once prove by the aid of a few diagrams why the Non-pared Sharpie cannot be capsized (of course cabin yachts are meant), but the value of your space would not admit of this. It is my desire to keep abreast of the times, and if there is to be a demand for "eight handed cruisers," I wish here to say that a 40 ft.x101.x35/g ft. "Nonpared!" Sharpie will confortably accommodate six persons, can be casily handled by one, and will go to windward in very rough weather with any other hast not exceeding her in size. She is admirably adapted to the use of either centreboard or keel. With the latter her extreme druight of water does not exceed 3 ft. 6 in. She will cost less than any other yacht, and will be found as dry when turning to windward in a seaway as ordinary yachte are while lying to.

\*\*Roselya\*, L. I., Dec 22, 1880.

## CANVAS AND CEDAR CANOES.

Forest and Stream:
no fault to find with the article of "Canvas Back," only I
other cance men prefer cedar to canvas or metal. I adt the good qualities of the canvas enone on small lakes, byons,
g.-holes and some river work, such as ducking, trapping, etc.
t take won't float you in case of an upset, and she is slow and
c msy when on open water in a wind. As to the air-bags that

she might carry, but most likely will not, they would be unhandy and troublesome, let sione that they would probably be in a lateral doubling on the lateral doubling of the lateral doubling a canoe trip where carries are frequent. I ordered my canoe clear on the inside from stem to stem, there does a tripped rations, pooket institute and the light lateral was load, all told, of 28 lbs. I could make a good enough seat with the tent and blanket. A very light neck yoke is a good thing, and carries a given weight as lightly as any other mode. The guides of the North Woods always carry on the yolk, and the average of their boats is between 80 and 90 lbs.

I want no air-tight compartments or air bags, nothing but a light, pottable canoe of cedar. There are many good canoe builders in the States, but Rusthor's models suit are better than any others I know of.

In making a long trip through a wilderness where different river

crs in the States, but Rushton's models suit has better than any others I know of.

In making a long trip through a wilderness where different river systems introok each other, and carries are rather frequent, no man's load should be more than a third of his own weight. One-fourth is better, but that is getting if down light. Of course I speak of the solitary canocist who goes through by the map, such knowledge as he can obtain by proper inquiry and his own judgment. A 39 lb. Rushton is large enough for a man of 170 lbs. A light weight nay well take a lighter cance.

Any man who tries the boxfacing ears on long trip by river, take and earry, will be apt to sigh for the double paddle before he comes out. They work well on open water, but badly over the carries. And remember that any man in a strang forced is liable to got lest. Then weight counts for something. NESSMUK.

## LOG OF THE CANOE MISFIT.

Editor Forrst and Stream:
Having lately received so many letters from canosists and other seeking information with regard to my canoe voyage of last summer that Lanunsale to answer them individually, and being loth it disappoint gentlemen who have homored me with their correspondence, I have determined, in preference, to give the "log" kept by

denie. I have determined, in preference, to give the "log" kept by me during tranternise.

My object in undertaking the arduous voyage of 300 miles from New York to Lake senses was to prove to certain practical gentile-men that canoeing 14 not simply a pleasant recreation, but often attended by great danger and scientine discoveries, and also that it by possible for man to paddle a canoe 300 miles and survive the ex-

attended by great danger and scientific discoveries, and also that it is possible for man to pathle a canoo 300 miles and survive the excitement.

The Loo.

June 14.—Having taken the precaution to have my hair parted in the middle, in order to prevent any premature capsize, I repaired with expedition to the pier at foot of Twenty-second street, where my transport lay. I opened the campaign by launching my canoe on board the eteamer Drew and buying a two-dollar ticket for Albamy. The capta n of a little tug-boat offered to take me there for one dollar, but as the stipulations were that I should paddle only, I conscientiously stuck to the paddle-wheeler. 10 a. M.—one has my Highland lassis gone," written, as guide book says, by Oliver Greenlead Longtellow when wandering, lost among these hills. The lassie was his guide, which accounts for his anxiety as to her whereabout. Since 103.0 have made the wonderful run of five degrees. Shouldn't wonder if the Hudson wont to North Pole after 31. 6 p. M.—Arrived in Albamy. Received with great enthusiasm by the peop—porters and hotel boys. (Price of enthusiasm, twenty-twice cents apiece.) 730 p. M.—Bene examining map. Find I have paddled one hundred niles in ten hours. Never heard after paddling so far.

June 15.—10 a. M.—Weighed anchor. 11 a. M.—Saw fish. Thought it was a whale. Clapped on all sail in pursuit. Crew much excited. Turned out to be a nimnow. Crew discouraged and in low spirits. Gave a glass of grog to all hands. Pat them in good spirits, or, rather, put good spirits in them, I e. M.—Examined thermometer. Eighty-nine degrees. Very hot.

June 15.—15 and M.—Hughed anchor. 11 a. M.—Saw fish. Thought it was a whale. Clapped on all sail in pursuit. Crew much excited. Turned out to be a nimnow. Crew discouraged and in low spirits. Gave a glass of grog to all hands. Pat them in good spirits or, rather, put good spirits in them, I e. M.—Examined thermometer. Eighty-nine degrees. Very hot.

June 15.—16 a. M.—Bay and the man and and full of scientife discovery. I have p

men in their brass coats and blue buttons had an imposing effect—
on the ladies. 5:30 r. M.—In spite of the ride practice in progress I escaped from Syracuse unharmed.

Jane 21.—Saw sea-serpent, anaconda, or something, and immediately gave chase. That is, the snaconda did. I paddled vigorously for a quarter of an hour, when, becoming exhausted, I found—
may be the last. Suddenly discoster still pursuss." Every moment may be the last. Suddenly discoster still pursus." Every moment for a quarter of an hour, when, becoming exhausted, I found—
may be the last. Suddenly discoster still pursus." Every moment for howing astern. However, I had the attribute of knowing astern. However, I had the attribute of howing I had gone over a great deal of ground, but discovered, too late, I had been paddling in the wrong direction!

June 22.—Being weary of paddling I chartered a "mule steamer" to carry me to my destination, and the Misfit proudly rested upon the deck of a cansilier.

June 23.—Lake Sencea in sight at 8 a. M. Seeing the crowd collecting on the docks of Geneva to receive me, I quietly launched mo cance from the side of the canal boat, hidden from view to those on shore, and rounding the sten of the canaller, paddled the little Misd trimuphatily to the what.

It was a summary of the sten of the canaller, paddled the little Misd trimuphatily to the what.

It me, I my little cance, most carriable voyages of modern funes. In my little cance, most carriable waters in the world.

In my little cance, man and nature threw in my path—or, rather, canal—and my croise will go into history as a crowning achievement. Will any no longer dony that the canocist is useful as well as ornamental, or doubt that he can go 300 miles in his cance all alone?

L. N. O., Louisville, Ky.—The famous reply made by the fisher-men to Homer, when he asked them, in modern parlance, "What luck?" was this: "As many as we have caught we have loft; as many as we have not caught we take with us."

M. S. B., New York City.—For Chesapeake Bay dogs address Mr. O. D. Foulks, Chesapeake City, Maryland. For Lish water spaniels address Mr. J. H. Whitman, Chicago, Ill. See notice re-garding Messrs. Whitman & Olcott in another column.

MIDDLE PARK .- Books on trapping are: "How to Hunt and Trap," by J. H. Batty, \$1.50; "Trapper's Guide," by Newhouse, \$1.50; "Complete American Trapper," by Gibson, \$1.75. We will send any one of these books postraid on receipt of price.

DETONATION.—We have never examined any of the guns which were employed by Carl Dittmar in the alleged tests of his powder in former years; but we have been told that he had one g to order, weighing fourteen pounds, and e-pecially fitted for the "Dithnar Sporting Powder."

M. V. L., Carson City, Nev.—What is the difference between the M. V. L., Carson Cuty, Awx.— or at is the unsertance between the duck and drake of the cinnamon teal? Ann. The differences in plumage were noted in our issue of Dec. 9, 1850, which see. The female is much plainer in coloring, and is almost without chestnut, but has the bright blue wing marks which will serve to distinguish. it from any of our ducks except the female blue wing.

J. D., New York.—I would like to ask your advice on the subject of ritles. I would like to purchase a rife that will be effective or any game in the United States. Have thought about getting a Winchester Express, but am at a loss to know the extreme accurate range of this arm, which, to my eyes, is a very poor weapon over 150 yards. Ans. See article on "Hunting Rifles" in recent issues.

Tono, Brooklyn, N. Y.-Will you be kind enough to inform me about how much I will have to pay for a brace of Laverack or Llewellyn setter puppies, from two to four mouths old, as breeders who advertise puppies for sale in the columns of the Forest and Stream only state prices of Irish, Gordon and native setter puppies? Ans. From \$75 to \$100 will secure you a first-class bra-

S. S., Pottstown, Pa.-You will find in the vicinity of Aiken, S S. S., Pottstown, Ps.—1ou will find in the vicinity of Alien, S C., deer, trukeys, woodcock and quali, squirrels and fores. Sister's Ferry, on the Savannah, is the favorite resort of the sporte-men of that section. At Alken you may inquire for the "Old Gang," a club of sportsmen who have been organized some twenty-

eight years. They have excellent packs of hounds and some good inters: you will receive all courtesy from them,

E. M. G., Solon, Me.-Will you please give me directions for preserving birds with the Wickersheimer fluid? Where can I get an injecting needle and what will they cost? Ans. We presume that birds can be injected in the heart the same as fishes (see our article in Forest and Stream, of Nov. 4, 1880), but they always remain flexible, and the immersion necessary may destroy the plumage. Injecting needles can be had of surgical instrument makers; they may cost half a dollar, more or less.

G. H. D., Watertown, N. Y .- Rodman's Belle, a red bitch, was whelped in 1874, and given by him to Mr. Geo. H. Wild, Red Bank, N. J. We think there were five in the litter, one of which is Dassford's Chris, a black dog, which was entered in the first West-minster Show, 1877, and also in the fourth. We have it that the pedigree of Belle is as follows: Belle by Rodnan's Dash, out of Pentz's Nellie (a black and tan bitch imported by him, pedigree not known); Dash was by Paul Mead's Dash, owned by Mr. F. H. not known); Dash was by Paul Micad's Dash, owned by Mr. F. H. Palmer at the time of his (Dash's) death, out of Palmer's Belle, given him by Mr. Talbot of Dublin, Ireland (Belle was of the Hutchinson strain, pedigree not known). Paul Mead's Dash was by Bash, brought to the country by a British officer who was stationed in Canada, out of a bitch called Maggie, and known as the Kent bitch; but Mr. F. R. Ryer, of this city, informs us that the owner of the bitch was the late Mr. Andrew Johnson. Belle, now owned by Mr. Wild, is said to be a very good working dog. She was abid over this autumn in Marchaul. was shot over this autumn in Maryland.

-Any subscriber or reader of Forest and Stream in want of any kind of carpetings, oil cloths, rugs, etc., etc., etc., can be sure of fair treatment at the hands of John H. Pray, Sons & Co., Boston. or correspond with them, and get their prices before buying. It will pay you to try them .- [Adv.

Answers to Correspondents :-

## FOREST AND STREAM.

NEW YORK, THURSDAY, JANUARY 6, 1881.

\* The Forest and Stream goes to press Wednesdays. Correspondents are requested to mail their communications se that they may reach us before that day,

The Annual Session for 1881 of the Michigan Sportsmen's Association will be held at Lansing, beginning Jan. 25. ---

IT GIVES US MUCH PLEASURE to present to our readers this week, from advance sheets, one of the chapters of a new book by Mr. T. S. Van Dyke, on sport in California. Those who are acquainted with his numerous contributions to the FOREST AND STREAM need no assurance that Mr. Van Dyke knows his subject thoroughly, and the chapter published by us is sufficient earnest of a most readable book. We shall notice the volume as it deserves, immediately upon its ---

SQUIRREL Shooring is not by any means the highest refinement of sport, but there is something about it that does have more of a charm than any other shooting—and that is the recollections it brings of the days when squirrel shooting, like every other sport, was the best-the days when we were boys. Something of how these memories cling in after life is shown in the pleasant letter on the subject on another page, written by a long-time correspondent, and one of the staunchest of the many thousands of friends of the FOREST AND STREAM.

THE GULL ISLAND CLUB.-With the exception of Capt. Johnson, who still remains at the club house, all the members of the Gull Island Club have returned from their trip to Messrs. B. Payne, Thos. Hall and Al. Pindico Sound. Heritage came back a week ago; F. Harrison and R. Hinich followed a few days later, and the rear was brought up by N. E. Nash, F. M. Thomson, E. Wright and G. B. Eaton. The pleasure of the trip was somewhat marred by the tempestuous weather which has prevailed on the Atlantic coast for a fortnight past; but the Jersey boys report themselves well pleased with their adventures. We have a full account of the doings of the club, from the pen of "Jacobstaff," which will be published next week. Messrs. N. S. Nash, D. Toffey and Al. Heritage will probably return to the shooting grounds in the latter part of this month.

## THE FOOD OF YOUNG FISHES.

WE print this week, in the proceedings of the Central Fishcultural Society, a paper with the above heading from the pen of Prof. S. A. Forbes, of the Illinois State Lab oratory of Natural History at Normal, to which we commend the attention of all thinking fishculturists. It is not enough to stock streams and lakes with fish in a promiscuous manner, trusting to their getting a living "out of the water." near future fish culture and science will go hand in hand, and the fishculturist who best understands his business will be he who follows up all the side branches and knows what influences are brought to bear upon success, or the reverse.

Prof. Forbes' investigations have been made in a hitherto untrodden field, and if they are not complete, or if but few individuals of a species, genus or even family have been examined, it must be remembered that he has just begun. His valuable work on the food of birds and insects has been recognized as of value, and his work is bound to be of practical benefit to agriculturalists and others, as we predict it will be to fishculturists. He is not a fishculturist, nor a farmer, but a man of science, pure and simple, who works for knowledge for knowledge's sake, and it is for practical men to apply his discoveries. He joined the fishcultural society merely to be of use to it-it is of little use to him-and we hope that his work will bring him the only reward he expects-the appreciation of those for whom he works.

The great struggle for existence, as all fishculturists know, is in the early life of the fish, and here Prof. Forbes shows that fishes whose food is widely different in adult life feed on nearly the same food in their infantile period. Who imagined that a sucker ever competed with a gar for its food? And yet it seems that the young gar feeds upon those bug or shrimp-like forms upon which the adult sucker lives. so with other fishes of whom some have said their presence does no harm, but which, from the light shed by the paper in question, we incline to think that the good they do by serving as food when older may be more than compensated for by their presence in their younger days.

It is too soon to draw positive conclusions on this subject, which is a vast one, including the struggle for existence and the survival of the fittest, i. e., the one which gets the most food, but it is a beginning, and we hope that this work will continue until we have as full and complete knowledge on the subject of fish food in the dawn of fish life as well as in the adult stage, and the intelligent fishculturist be able to know how to balance the value of fish life and to form an idea whether the food which the young suckers furnish his trout is all clear gain when bred in his ponds, or whether the minute animal life devoured by them does not deprive his troutlets of a needed article of diet worth more than the food the adult trout get.

The paper makes no claim to be more than a record of what little has been done, but contains many germs of thought for the practical man, and we would call special attention to the last three paragraphs of the paper as of especial importance.

## HARD TIMES FOR THE QUAIL.

THE heavy snow and bitter cold of the past week will make sportsmen tremble for the fate of the quail. The earth is covered with a thick mantle of snow, which effectually prevents the birds from reaching the food on the ground, and all that they now have to depend on are the few buds and berries that they can obtain from the trees and berries, and such seeds as are left on the tall weeds that still project above the deep snow. At such a time as this the sympathics of all are felt for the birds, and unless these sympathies take some active shape the prospects for shooting next fall are by no means encouraging. Every sportsmen who is so situated as to be able to give assistance to the half-starved bevies should now do what he can to keep the birds alive through this terrible weather. It is food that they especially need, for as long as their bellies are full they can withstand the We killed birds about the middle of December which were, it seemed to us, as large and as fat as any we had ever seen. They were then well prepared to endure the hardships which were in store for them. But under the stress of such snows and cold as we are now having their surplus fat must soon disappear, and unless the ground becomes bare large

numbers must perish of hunger. The man who killed a quail December 31 found it, we venture to say, a very much lighter bird than those captured two weeks earlier. No on should shoot the birds in this weather.

In an editorial in Forest and Stream, published four years since, we advocated the feeding by sportsmen and farmers of the game birds, which, during severe seasons, have so much to contend against. Some of the remarks are so applicable to the present situation that we transcribe them almost without change:

The question now arises: Can we not alleviate their sufferings and save some of their lives? The baiting of game has long been practiced for purposes of capture, and with just as small trouble and expense the quail may be fed and saved through this severe and expense the quait may be fed and saved through this severe weather. On the afternoon of the 80th uit, we dished a bevy of twenty individuals. Having secured one bird, and finding it unfit to eat on account of its emaciated condition, we desisted from fol-lowing the bevy. If these birds are saved through the winter there will be, say, eight pairs breeding next spring. Quait will, on ners will be, say, eight pairs dreaming next spring. Quan will, on an average, raise twenty birds in a season to the pair, there being two nests of eggs of about fifteen each. The eight pair will giv in this way 160 birds, or about eight bevies in the following fall. This rate of increase is not placed at too high a figure.

Weather like this will account for the alternating scarcity and

neather like this will account for the alternating scarcity and plenty of birds in different years. But it seems to us that a great many quail could be preserved through the water if those inter-ested would make an effort in this direction. ested would make an effort in this direction. A spot should be cleared at the border of some swamp which the quail are likely to frequent for food or shelter. On this clearing, buckwheat, corn, oats, or the screenings of wheat and rye should be scattered, together with hay and hayseed; leading from this in various directions grain should be sparsely scattered to some distance, forming paths, which the birds coming upon will follow up. During the weather that is now upon us quail are forced to travel over a great deal of ground to find a living. As soon as the baiting place is discovered they will remain near by until long after the supply of food is exhausted, and if it is occasionally replenished they will settle in the immediate locality, and probably breed near by in the spring; one would be surprised to know how little the birds can eat and yet live. We must exercise foresight and take a little trouble in this matter, and those of us who love the golden days of October, and their accompanying delights with dog and gun, should try now to help the quail survive the rigors of these Litter winter months.

## THE UNITED STATES FISH COMMIS-SION REPORT FOR 1878.

NOTHER large volume is added to the valuable litera-A ture of American fishes and fish culture, making the sixth of the series, in the report now before us, whose title page merely gives the lines "Inquiry into the Decrease of Food-Fishes," and "The Propagation of Food-Fishesin the Waters of the United States," as a key to its contents, which are so varied as to include, in the appendices, many subjects either under or related to these headings.

The report proper includes an account of the operations of the United States Fish Commission for the year 1878, although the work on the salmon extends to the disposition of the fish in the following spring. The work of inquiry into the decrease, and research into the character of fishes was placed in charge of Prof. G. Brown Goode, assisted by Dr. Tarleton H. Bean; the collection and investigation of marine invertebrates by Prof. A. E. Verrill, assisted by Mr. Richard Rathbun, Mr. Sanderson Smith and Mr. Warren Upham. The propagation of food-fishes was under the superintendence of the late Prof. James W. Milner, assistant commissioner, aided by Frank N. Clark and Mr. T. B. Ferguson.

The fact that the beam-trawl, which is the main reliance of the English coast fishermen, is practically unknown on our coast as a means of taking the bottom fishes, is referred to and a belief expressed that its introduction would add to our facilities for procuring food all along our sandy coast south of Cape Cod; and attention is called to the fact that in the Loffoden Islands cod are taken in gill-nets, whereby the expense of bait and the vast amount of labor expended in securing it is saved. The Commissioner recommends the establishment, either by the General Government or in connection with the States, of a thoroughly reliable and exhaustive system of recording fishery statistics for the future, to be combined annually and published by some of the public departments of the government, as it is very difficult to establish data upon facts furnished by one State, and it is only by considering the subject in its relations to the whole country that an equitable system of legislation can be made concerning close seasons, the size of fish to be caught, the enforced use of fishways, regulations pertaining to the pollution of

waters, etc.

The season of 1878 proved to be the most productive, so far, in the bistory of the U. S. salmon-breeding ranch on the McCloud River, California, the superintendent, Mr. Stone estimating that 18,000,000 eggs could have been secured if they had been required, but the take was limited to the num ber applied for by the State Commissioners and others. The first eggs were taken August 20, and from that date until October 5, when the last car was loaded, the men were very busy, from seven to nine thousand salmon were several times taken in a single day, and two cars were loaded with eggs. one with 4,000,000 and the other with 3,250,000, while 2,500,-000 were hatched and planted in the river. Mr. Stone also hatched 1,203,000 at the Clakamas station, on the river of that name, which is tributary to the Columbia, and turned

Of the station for hatching the Atlantic salmon at Bucksport Mc., in charge of Mr. Atkins, it is recorded that each fish, after being stripped, is labelled by a metallic tag with an identify ing number upon it, which is recorded with the date of cap ture, weight before spawning, weight of eggs taken, etc Mr. Atkins has in several instances captured these fish a second time. One instance is as follows: No. 768, stripped on Nov. 1, 1875, weighed 21 lbs. 7 oz., and yielded 5 lbs. 7 oz. of eggs; when turned back it weighed 15 lbs. The same fish was recuptured at Lincolnville, Me., June 14, 1877, weighing 26 lbs. Another fish, No. 1.010, which, on the 9th of Nov., 1875, weighed 18 lbs. 2 oz., had 4 lbs. 10 oz. of eggs, and when dismissed weighed 13} lbs., was retaken June 13, 1877, weighing 304 lbs., showing an increase of 124 Very encouraging reports of increased catches of salmon in Maine rivers have been received, and large numbers have gone up the fishway at Lowell. The winni-"schoodie" and "land locked salmon," has nish, called also also been bred in limited quantities by Mr. Atkins at Grand Lake Stream, Me., for the General Government in connection with the States of Maine, Massachusetts, New Hampshire and Connecticut, a total number of eggs taken and distributed being 1,723,000, the parents being returned to the water uninjured.

There was also good success with whitefish (Coregonus) by Mr. Clark, and with shad by Messrs. Milner and Ferguson all the particulars of these, as with the salmon and other fishes, being found in special papers, by those in charge of the work, in the appendices.

Experiments at Gloucester, Mass., on the sea herring were satisfactorily conducted by Mr. Clark, also at Noman's Land by Mr. Vinal Edwards, so that it has been demonstrated that it is possible to increase this fish if thought necessary. The carp receives attention, of course, but our readers are familiar with the details of the propagation of this most valuable fish down to a later period than the report treats of

The modes of increasing the supply of fish food are detailed; the history of fish culture, from the discoveries of Remy and Gehin in France to Garlick and Ackley in America, and the appointment of the Fish State Commissioners is glanced at, and the improved methods hinted at as subjects for future report. The appendices contain: "A List of Patents Issued in the United States, Great Britain and Canada, up to the end of 1878, Relating to Fish and the Methods, Products and Applications of the Fisheries." This includes fish hooks, fish traps, fishways, floats, harpoons and spears, nets and seines, oyster culture, pisciculture, reels, rods and sinkers, preservation of fish, paralyzing by electricity and manures, some of which are illustrated by figures. "Report on the Department of Fisheries in the World's Exposition in Philadelphia, 1876," by Joakin Andersen, translated from the Norwegian by H. Jacobson. "Report of the American Fisherics," by Frederick M. Wallem of Norway. " A Short Introduction to the Proper Care and Management of the Baltic Fishery," by H. Widegrin, of Norway. Salt Water Fisheries of Bohuslaen and the Scientific Investi-gations of the Salt Water Fisheries," by Axel Vilhelm Ljungman, of Sweden. "The Great Bohuslaen Herring Fisher by the same. "The Society for Promoting the Norwe gian Fisheries," from the Bergensposten, a daily newspaper grant Fisheries, from the official report of the Loffoden Fisheries for 1878," from the official report of the Superintendent. "Report on the Norwegian Deep-Sea Expedition of 1878," by Prof. G. O. Sars. "On the Scientific Investigation of the Baltic Sea and the German Ocean," by G. Karsten, translated by Dr. Oscar Loew

Appendix E opens with a "Report on the Marine Isopoda of New England and Adjacent Waters," by Oscar Hurger, which, with list of authorities quoted, covers 184 pages and is embellished with 91 figures. "Report on the Pycnogonida of New England and Adjacent Waters," by Edmund B. Wilson, 42 pages and 42 figures. Appendix E has "The Enemics of Fish," by Baron de la Valette St. George, Professor of Anatomy and Director of the Anatomical Institute at Bonn, which was read before the German Fishery Associa-"The Purification of Refuse Water," by E. tion, Berlin. Reichardt, of Jena. "Notes on the Fungus Disease Affecting Salmon," by A. H. Stirling, Assistant Conservator of the Anatomical Museum of Dublin; also "Additional Observations on the Fungus Disease Affecting Salmon and Other Fish," by the same. "Sickness of the Gold Fish in the Royal Park, Beriin," from the Deutsche Fisherei Zeitung,

Stettin. "The Economic Value of the Norwegian Lakes and Rivers as a Field for Fish Culture," by N. Wergeland, of Norway. "What Does a Fish Cost," by Christian Wagner.

Appendix G has "The Propagation and Distribution of Shad in 1878 " by James W Milner "Riological Observa tions made during the Artificial Raising of Herrings in the "The Propagation Western Baltic," by Dr. H. A. Meyer. and Growth of the Herring and Small-Herring, with Special Regard to the Coast of Bohuslan," by A. V. Ljungman, "The Introduction and Culture of the Carp in California," by Robert A. Poppe. "On Carp Culture, Chiefly in its Relation to Agriculture," by Eben Banditten, read at a meeting of the Prussian Fishery Association at Elbing. Carp Ponds of Nether Lusatia," by Dr. Edm. Veckenstedt. "The Carp Fisheries in the Pietz Lakes," from a Berlin "Mr. Christian Wagner's Establishment for Raising Gold Fish, at Oldenburg, Germany," from the Fischerci Zei-"A Report on the History and Present Condition of the Shore Cod Fisheries of Cape Ann, Mass., together with Notes on the Natural History and Artificial Propagation of the Species," by R. U. Earll. "Report of Operations at the United States Salmon Hatching Station on the McCloud River, California, in 1878," by Livingston Stone. "Report on an Attempt to Collect Eggs of Schago Salmon in 1878," by Charles G. Atkins. "Report on the Collection and Distribution of Schoodic Salmon\* Egys in 1873-'79," by the same. "Do the Spawning Salmon Ascending the Sacramento River all die without returning to Sea?" by Horace D. Dunn, with notes by Livingston Stone. "Present Stage of the Salmon Experiment in Tasmania," by Morton Allport. "Correspondence Connected with the Transmission of Eggs of the Quinnat Salmon and Whitefish to Australia and New Zealand, 1877, 1878 and prior years.' "Correspondence Connected with the Transmission of the Eggs of the Quinnat Salmon and other Salmonida to European Countries in 1878 and prior years." "Summary of Reports for 1878, by State Fish Commissioners Respecting the Increase of Food-Fishes by Artificial Propagation." "Cheap Fixtures for the Hatching of Salmon," by Charles G. Atkins, illustrated with 15 cuts, and, appendix H, "On the Nature of the Peculiar Reddening of Salted Codfish during the Summer Season," by W. G. Farlow, M. D.

It will be seen that a variety of subjects are treated of in the appendices, which to do justice to would require them to be printed entire, but as all who take especial interest in these matters will obtain the volume and read the portions which interest them, we forbear giving more than the titles of the papers, hoping to refer to some of them again from time to time

Where We Stand .- For reasons, which seemed to us good and sufficient, we declined to publish a communication from Mr. M. P. McKoon, of Franklin, N. Y. Having so informed that gentleman, we are now in receipt of a letter from him which contains the following extraordinary sen

Now you doubtiess know something of my financial circumstan ces, and how I became heir to my property, etc., and that I am not breeding dogs for a living by a long ways. Now, I have \$1,000 loose at present, and more if needed, to spend in defense of our brothers and our case in this matter, and not bother me much either: and should you not publish this letter of mine I shall of course be obliged as a duty to expose you through the other sports-man's journals; and also in pamphlet form to every known sportsman in the United States and Canada. I shall make a clean exposure of the whole thing from the time it first started. Now I certainly hope you will not oblige me to injure you in the matter, and upon your giving it a second thought 1 am certain you will publish dialely and not curtail them at all.

Mr. McKoon has threatened the Forest and Stream. We do not know anything about that gentleman personally, nor are we specially interested in his financial circum-It is, however, evident that he is somewhat irascible and disposed to jump at conclusions. Still we think that on consideration he will see that, in writing as he has, he has done a most foolish thing. Other people have once or twice tried threatening Forest and Stream, and have discovered after a little while, somewhat to their surprise, that they had got hold of the wrong end of the stick. They found, when they attempted to coerce us by this means, that we did not scare; that when we believed we were right we would go ahead in our course whether it pleased the parties interested or not. They found, in short, that the Forest and Stream was being managed in the interests of sportsmen, man-fashion, and not merely in a politic way to try to curry favor with and cringe to everybody that chose to find fault with it. The FOREST AND STREAM is not to be dictated to. course is directed by an earnest desire to serve the best interests of the sportsmen of this country, and from this course it cannot be turned.

We have none but the kindest of feelings for Mr. McKoon and we are not particularly disturbed by his threats. We would suggest, however, that it would be well for him to consider whether in attempting to dictate what shall appear in our columns he has not, in the rugged but forcible language of the Persian Sage, "bitten off more than he can chew.

The letter will not be published.

""Selago salmon." "Schoodie salmon" and "Land-locked salmon" refer to one fish, also called "Wininish," or Onininish, as some spell it. It is now called Salmo salar var. Sebago by

# The Sportsman Tourist.

THE LOG OF THE PAVORITE

THE LOG OF THE FAVORITE.

STEAMER FATORITY.

CHATHAM STRAITS, ALASEA, Aug. 26, 1880.)

In y last, from Pyramid Harbor, I promised to send you such extracts from the Favorite's log-book, as with variations, should seem most likely to prove interesting to my For-Bay And Stream friends.

While still in the mids: of the grand scenery and novel surroundings, which have during the last ten days furnished to me more new sensations than I had thought could ever again come to me, I will start the redemption of the promise. I find myself embarrassed at starting, with riches, and undeeded whether to leave the present for a future description, and, beginning systematically with my notes, avoid the risk of thatology, or to let the notes lie idle for a bit and trust to my surroundings for inspiration. For nearly a fortnight I have been cruising about in but slightly known waters, and have been enjoying the pleasures which are incidental to the exploration of hitherto almost, and in some cases, quite unknown country. I have steamed for miles into great bays, where by the charts dry land appears, and have tramped the beaches of islands and bayous, where, but for the knowledge thus obtained, I should have been justified in considering that no land existed.

I have been in pleasant and friendly contact with tribes of Indians, who, but a short time since, were supposed to beunsafe to venture among, and have in studying their customs employed my time pleasantly while our hydrographer, armed with sextant and compass, has made the pleasure profitable by securing for the future use of others the locations of these bays and islands, shoals, reefs and inlets.

I have gazed until fairly satiated upon magnificent scenery made up of great mountains such as Fuirweather, Perouse and Crillon, all over fifteen thousand feet in height, rearing their eternally snow-crowned heads and shoulders from foot-hills which are most justly named "Alps;" for as far as the eye can reach they furnish a horizon from six to ten thousand feet above the sea; up

which are most justly named "Alps;" for as far as the eye can reach they furnish a horizon/rom six to ten thousand feet above the sea; upon glaciers of the most majestic proportions and of bewildering variety of form and hue; and upon great icebergs which, becoming detached from the advanced foot of these glaciers, drop into the sea and go solennly drifting to and fro with each change of tide, hemmed in by the precipitous shores of Cross Sound and Ley Straits, upon whose beaches in certain bays they stop at times to rest at high tide, and remain there slowly yielding to the influence of the sun's raysuntil, with the dense green back ground of its forest, they resemble, especially by moonlight, cities of ruined marble palaces.

But for these glaciers we of the Favorite would have been unquestionably the discoverers as well as explorers and surveyers of unknown bays, but they had drawn to their vicinity that mighty Nimrod in glacier hunting. Professor John Muir, of whose previous visit to and sojourn among the ice rivers, the Indians told us.

A visit to this strange country would be worth all it would cost to those who have already exhausted the resources nearer home.

cost to those who have already exhausted the resources nearer home.

At times the sensations are decidedly exciting, for instance when from two or three directions at once great icebergs come drifting toward you, and the problem which way to steer presents itself; for of the two, in case of collision, the berg would be sure to get the best of it, and reaching as they do far below the surface, and in different depths, they are affected by eddies and currents, which present no surface indications. Then shoal water is the refuge, for the least of the dangerous bergs would ground sooner than our little steamer.

Littl very lately the interior of Alaska has been a "terra incognita." Spasmodic attempts have been made by missionaries, miners and traders to effect an entry, but all have returned disgusted by failure. Along the coast are bays and harbors occupied by villages and hamlets of warlike coast tribes who have for ages claimed as their right—to be maintained, if necessary, by force of arms—the trade with the tribes (the Stitels) who inhabit the interior, and whose industry consists in the capture of the fur-bearing animals, whose pelts are by the coast Indians, purclassed for oil, dried fish, and a portion of such groceries and dry goods as they may obtain, or expect to, from the white traders to whom they sell them.

These tribes, the Hoo-nahs, Takus, Sum-dums, Kootz-noos, Chilcats and Chilcoots, have stood sentry over the portels and "thus for shell then cove each of further" we are

may obtain, or expect to, from the white traders to whom they sell them.

These tribes, the Hoo-nahs, Takus, Sum-dums, Kootz-noos, Chilcuts and Chilcoots, have stood sentry over the portals, and "'thus far shall thou come and no further" was the rule, and the coming thus far was attended by difficulties and dangers which deterred all but the most enterprising and courageous. But this state of affairs has, I trust, been permanently changed for the better—better for the whites and the Indians; the doors have been opened, and at this date miners and prospectors are distributed throughout the country searching for precious metals, which rumor has asserted were to be found there. Missionaries are working their way in, establishing schools at each outpost to which the Indian parents gladly send their children, and a small unarned trading steamer cruises about in perfect safety and is welcomed at each village as a returned friend. To the traders, however, the welcome reaches no further than to the door.

The Indians of the coast are not deficient in shrewdness, and they fully appreciate the value of a monopoly.

Stras, August 14, 1880.

Denotes that the Situ Sime who are Desteit Universe.

and they fully appreciate the value of a monopoly.

Pill begin that log:

SITKA, August 14, 1880.

Reports that the Sim-Sims, who are English Indians from Port Simpson, were trespassing upon the sea-otter lunting grounds of the Hoo-nahs, who are Alaska Indians, and that a war between the two tribes was imminent; also that throughout the inland waters filegal traffic in spirits and firearms was taking place, and much sanuggling going on, and that at various localities on the coast slight troubles were springing up, which vigorous steps would check, but which, if allowed to increase, would involve seriously the safety of the few whites who are strolling about Alaska, induced Major Morris and myself to pay a visit to those various places and give to the Indians a little advice and instruction, which, if heeded, would 'greatly decrease the dangers to the pioneers, and would serve also the interests of the Government.

The only means of transportation that we could obtain was the Pavorite, which little steamer I described in my last. At 10 a. m. of the 14th, with flags and pennant proclaiming her new character, and amid the cheers of the male and handkerchief salutes of the female population, the Favorite steamed out of Siska harbor on a mission which to every one in Sitka was of greatest importance. The weather was bright, but anrkened us we passed through Olga and Nevski Straits, and

it was only the importance of the work, which justified our delay in seeking harbor during a coming south-easter, by stoppage at the Whitestone Narrows, long cough for the hydrographer to make a fair survey of the reals, which torm the only obstacles to a clear passage into Sitka Sound from the Pacific on the west, and from the inland passage from Wrangel. At now we reached Peril Straits, which are so called on account of five or six miles of reef-sprinkled rapids, which at about the centre, where the tides meet, flooding to the eastward from the Pacific and to the westward from Chatham Straits, form dangerous whirl-pools and eddies.

poors and eddies.

Peril Strait is about twenty miles in length and is the northcarl boundary of Baranoff Island on the southern side of
which is Sitka. The strait separates Baranoff from Chichagoff, and on both shores are good harbors during heavy
weather.

off, and on both shores are good harbors during heavy weather.

By slowing down a bit we struck the rapids with the last of the flood, and on our arrival at the middle we found the young ebb with us, and as a consequence those of who were responsible for the navigation of the vessel, were well pleased with the escape from the strength of the rapids and the influence of the whirlpools, while those of us who were on the lookout for adventure and excitement, damned Peril Straits, and pronounced the stories as to the dangers frandulent. At the worst, though I do not think that the rapids and whirlpools exceed either in rapidity or dangers those of the St. Lawrence, although it times there are formed whirlpools and eddies fully as formidable as are those of Seytha and Charybdis. At least so they seemed to me, but perhaps the fact that my first encounter with Peril Strait's whirlpools was in an open launch while I passed near the mackstrom at a comfortable distance, in a comfortable steamer may influence my judgment.

fortable distance, in a comfortable steamer may influence my judgment.

Brisk S. E. gales forced us to find anchorage, which we did under the fee of the high hills of Baranoff, and forty-eight precious hours were wasted at this spot. At first we did not wholly regret the delay, for miles to the east and west stretched a beach, and behind it flats which we felt sure must be productive of birds, for they had begun to come in Sitka, and why not here, nearly a degree to the northward and in an unhunted section?

why not here, nearly a degree to the northward and in an unhunted section?

But a two-lours' tramp by the Doctor and myself resulted in the staughter of but one 'dicky brd,' as in Sitka is termed the little semi-palmated sand-piper. A heavy rain-storm drove us first into the shantly of a prospector, Professor Moore, who, with pick and drills, was examining the many "stringers," and pieces of 'float' quartz with which the beach was speckled, as yet with no success; and afterward, during a temporary let up, we got shelter in the camp of a band of Hoonah Indians, of whom about thirty—men, women and children—were comfortably enseanced in good canvastents and well built bark shanties.

This party like ourselves was awaiting the termination of the gale before venuring into Chatham Straits on their way homeward. They had left Sitka the day before in four cances which lay hauled up on the beach, and were en route home after disposing of their furs to, and procuring their winter supplies of dry goods and groceries from the Sitka shopkcepers, and they expected to make the journey of 150 miles in about five days unless detention by bad weather prevented. Their, leader 'Hoonah Dick,' is wellknown onthe coast, to be an intelligent; enterprising man, speaking considerable Prairies

coast to be an intelligent; enterprising man, speaking consid

coast to be an intelligent; enterprising man, speaking considerable English.

Among the fors which they had sold were seven sea-otter skins which brought from seventy to one hundred and fifty dollars each, in trade. Dick invited us to sup with him, a business which was at the time going on. The principal dish was an iren pot full of a white soup, which I learned was made of hit hulbs boiled, enriched with minced snoked salmon. Around this pot several Infrains, men and women, each provided with a large spoon made from the horn of the mountain sheep, were squatted, all dipping into the pot at pleasure. We declined with thanks.

mountain sheep, were squatted, all dipping into the pot at pleasure. We declined with thanks.

Acoust 15.

Gale broken. Weather still thick and rainy. Under way Straits with a fair wind, but without being able to enjoy the seenery, which on the north side of Barnnoff is said to be very fine glaciers and immense snow fields covering the ravines and hill tops.

Kot-eo-sok.—At 10 a. m. we let go our anchor in this snag harbor, which is on the western side of Admiralty Island. The island is about 83 miles in length, north and south, and about 25 miles wide, is well timbered and stocked with fur bearing animals. The natives say that in the interior the land is low and boggy, with many little ponds where wild fowl and deer congregate. It is inhabited by the Kootz-noo Indians, who have several villages on the coast. At Hood's Bay is their principal village. At Kot-eo-sok, about two miles south of Hood's Bay, the North-west Company has established a trading-post, and as we rounded the point and stood in the report of our howitzer brought to the door of a very comfortable looking frame building, flanked by piles of cord-wood and Indian huts, the post-trader, Mr. Edward De Groff, looking as fat, hearty and contented as could be expected of a young man separated for months from his sweetheart and reduced to the society of Suwishes alone. Mr. De Groff, looking, and in the land not wasted his time by the exhibition of sundry bales of skins, and by acting as interpreter in the Ohinook jargou so luently that I suspected his teacfier must have been a very good one.

The Kootz-noos differ both in appearance and dialect from

bales of skins, and by acting as interpreter in the Chinook jargen so lucently that I suspected his teacffer must have been a very good one.

The Kootz-noos differ both in appearance and diadect from most of the other Indians of this Archipelago. According to their traditions they are descended from a people who came from the westward, possibly China or Japan. I failed, however, to find in them any trace of either origin. They are quite warlike and a few of them have given the missionaries and Stickiene Indians at Port Wrangel considerable trouble, a pious Stickiene having by direction of a ditto doctor, raided upon a distillery which the visiting Kootz-noos had set up at their end of the beach—result, a killed Stickiene and hadly wounded Kootz-noo, who, being of higher grade than the defunct Stickiene, will, if his wound proves mortal, have to be paid or fought for until the parties are even. That is, so it stood before we had a bit of a talk with them. Now their promise to me stands in the way, in spite of which, though, I must hope for the restoration to health of the wounded chief.

There are about 800 of this tribe living in several villages on Admirally Island, of which the principal one is just north of us at the entrance of a deep bay, at the head of which are coal mines, discovered and worked in 1868 by Lieut. Commander Mitchell in the U. S. steamer Saginaw. The coal is of very little value for steaming.

At this village the liquor called hoochenoo was first made on a discharged soldier from our army; the Indians learned

the art, and it is now made in every ranch in Alaska. The village consists of about forty well-built houses, a large number of which are provided with neatly kept gardens, in which they raise every year fair crops of good produces, turnips and cabbages, which do get ripe, and do head, and are produced from seed of the year before, so they say at least, therein differing from Billott. These gardens, and the superior cleanliness of their houses, give to the village a much more attractive appearance than Sitka, and the Indians are far superior in their personal eleanliness and clothing. The fact is, they as yet are not suffering to the same extent frem con tact with low class whites. Their cemetry indicates in these people a superiority to the Sitka Indians. With the latter the dead house, or tomb, is in each cascadjacent to and in the rear of the dwelling-house of the deceased. The Kootznoos have a very neatly kept cemetery in a little grove about half a mile from the village. In it there are a number of sightly tombs, among which one in particular is guarded by an immense "Hoody," or wooden nan, and another sumounted by a cross and dog-vane, and painted white. I learned this was the tomb of an American named Simmons, of whom the Indians had been fond, and over whose remains they had of their own accord erected this structure.

learned this was the tomb of an American named Simmons, of whom the Indians had been fond, and over whose remains they had of their own accord erected this structure.

The Kootz-noo trade in furs of land animals, and De Groff had on hand quite a stock of bear, mink and fox skins, and considerable oil. They are generally quite peaceable and well disposed, but the imprudence of a white man has started a trouble between them and the Stickienes, which I hope is ended. It so happened that the chief who came to consult with us was Jake, an Indian, who eleven years ago was in San Francisco, and while there had been so situated that it came into my way to do him an important service. This he had not forgotten, and in his promises of restraining his tribe from future molestation of the Indians at this Wrangel settlement, gave as his reasons, or rather as one of them, his tride from future molestation of the Holans at this Wrangel settlement, gave as his reasons, or rather as one of them, his desire to repay me for the kindness he had received at my hands; which demonstrates, that however stolidly these Indians may receive a favor, they have gratitude in their composition.

In the vicinity of Kootz-no there are cod and hallbut banks,

In the vicinity of Kootz-noo there are cot and haibut banks, from which, with salmon streams, the natives derive most of their support. Another fruitless tramp by the Doctor and myself demonstrated that the birds had not yet come south and we began to despair of our expected shooting.

On the 17th of August we left Kot-co-sok and ran across Chatham Straits for the entrance of Cross Sound—the place we longed for, for then we were to see our first glacier and landown.

In my next I will tell you of our trip to this little-known

### THE MOUNTAIN QUAIL.

[From advance sheets of "The Rifle, Rod and Gun in Californ by T. S. Yan Dyke. Published by Fords, Howard & H burt, 27 Park Place, New York.]

burt, 27 Park Place, New York.]

Let us follow Belville and Eveline as they start after breakfast one morning to go to the top of the Cuyannaca. It is only a short walk, not over a thousand feet of elevation, and we will see where we are.

Half a mile up a pin-covered slope and we reach a shoulder upon which rests a tocky, pyramid-shaped head, about three or four hundred feet high and easily climbed. A few minutes' time brings us to the top of this, and we stand upon its loftest rock. A vast sa lies tar below on the west, with tumbling waves of snowy white rolling like great masses of carded wo d; with long shafts of golden light, touching, as they are shot through the eastern mountain-goges from Apollo's fiery bow, the cress of three billows; with its hundred islands of different heights looming up here and there, some in a full blaze of light, others just tipped with gilded spires, others standing dark and sember in the shade of greater peaks. Even as we gaze upon this sea its masses begun to brank. Great rifts of bluith green with edges of gold and pear begin to yawn along its rolling surface, and through them appear the dark blue chaparal of the hills, the long green winding strips of river bottoms and canyons, and the silvert-gray heads of rocks and cliffs. And now through the silvert-gray heads of rocks and cliffs. And now through the farthest ritts shimmers the distant Pacific, with its high recky islands looking like small ant-hills. Soon the great whit is sheet is entirely broken up and is scudding away to sea in a thousand rolling clouds, the whole western slope is bathed again in sunlight, and the far ocean shines like a lake of quick-silver.

Kising thousands of feet below, in the yawning gulf in

whit's sheet is entirely broken up and is sendding away to sea in a thousand rolling clouds, the whole western slope is bathed again in sunlight, and the far ocean shines like a lake of quicksliver.

Rising thrusands of feet below, in the yawning gulf in front, the San Diego River winds, its green way to the san through immense rocky walls. Far to the right the screenine bottoms of the San Bernardo and San Luis, and on the left the verdurous trails of the Sweetwater and Tia Juana rivers, gleam among plains of brown or yellow, or thread the left the verdurous trails of the Sweetwater and Tia Juana rivers, gleam among plains of brown or yellow, or thread the gorges that lie between the dark bluish hills of chapteral and the bare, drary heaps of rock and boulder. Toward the south roll in wild confusion the ragged mountains of Mexico, and for hundreds of square miles the eye wanders over a tumbing sea of rock, cliff, chaptaral, boulder-studded peaks, all cleft with deep valleys, and canyons shining in their winding courses, with bright green timb r. Here and three the eye rests upon a brieth little valley like the one-midd lake of Pine Valley, sunk in the mountain's back and eternally areas with tumber and grass or the golden stubbles of Viejas; but tines-enths of it at 1s primeaval wilderness that will remain so forever, broken only by the trend of the herdsman's or the hunter's horse.

Westward, the eye rests upon more pleasant scenes, though here, to o, it is nearly all boulder, chaparral, towering heights or the hunter's horse.

Mestward, the eye rests upon more pleasant scenes, though here, to o, it is nearly all boulder, chaparral, towering heights or the hunter's horse.

As the eye naturally wanders around to the east, it ronges over more crag and e iff and scar, with a few fine valleys between, descriping the fair meadows of Treat's reach almost beneath, until in a few miles the country tumbles ra; dily away in dismal desolation, without a gl am of green or bue or golden yellow, or cher sign of life, into the wide-reaching, ghastly gleam of the Color-do De-ert.

., In all his vast circuit of the eye, sweeping a seace larger than Massachuse ts, Rhode I-land and Gomnee ic. I combined, it is over the far-off town of San Diego and the dittle pile of culled humber struck by a single city, town, or even hunter, except the far-off town of San Diego and the dittle pile of culled humber struck by a whirtwish it is less the pile of culled humber struck by a whirtwish that these sending of Julian. No clutches, no railroads, no anything a seen except a tow ranches at wide interests and little school-houses still more widely scattered, with here and there an Indian rancheria, or group of huts. Yet nowher he in all this country are property and life safer or health and comfort more secure. The judiciary is not excelled in the State; in tew places are taxes as low; nowhere less stealing among officials. And many a day, and far and wide over the United States, may one travel before he will find people more cultured and refined or better educated than the upper half of the white population of this country. Few indeed they are, and seattle, different of the country. They middle with a seature scribble who writes of California life.

What mellow tones are these, like the taps of the leather hummer on the glass plates of the harmonicon, that arouse character of fielion, or the "galoot" of the Eastern scribble who writes of California life.

What mellow tones are these, like the taps of the leather hummer on the glass plates of the harmonicon, that arouse Laura from her novel, and her husband from bis after-breakfast. The more approached the property and the sund, which greas have the sund, which

both of ponteness and impudeance, as the dead leaves rustled to the patter of their little feet and they began to fade in the grass and brush.

"Hold on?" came a voice from behind the smatteurs, as they raised their gons to shoot before the birds should get away. "We'll have better fan than that with them. Put up that murderous gun and bring forth the plaything of the immortals, Mrs. Norton. You, Norton, keep your gun, but don't shoot at anything until it flies."

"Why, when did you—"

"Just dropped," said Belville. "And just in time to prevent sacrilege," see. I'll show you some sport, however, for compensation."

Old Prince stood by his master's side as he spoke, the very incarnation of business. His teil no longer hung, but projected. Stiff as an icicle, it fairly quivered at the tip with rigidity. One fore-leg was bent double, and the other three trembled with his efforts to keep still; while his body was firm as a garden statue in a Minnessta wint r. On his ag, do brow sat grave importance, and mighty wisdom shone from his staring bright eye. His nose was wrinkled with seriousness, while his chaps quivered and watered like those of ye city epicure what time he beholded no one of Delmonico's plates a June woodcock, killed while feeding its helpless a June woodcock, killed while feeding its helpless

city epicure what time he beholdelth on one of Delmonico's plates a June woodcock, killed while feeding its helpless young.

The bow and arrows were soon brought and the party moved on, Mrs. Norton ahead and Prince waddling along in the rear with the anxious solemnity of a circus elephant walking over his master. His legs rivated his toil in stiffness, and he looked up occasionally at his master with interess atisfaction, licked his chaps and snifled the air, which was laden with that fragrance the dog so loves.

The birds were soon overtaken, and as they huddled up with inquiring "quit-quit, queeah, queeah!" about fifteen paces before, an arrow decinated the feathers upon the brownish-gray tail of one of the number and sent half a dozen of his immediate neighbors toward the four points of the compass. They went hardly twenty feet away, however, just liying up and alighting again. One of them I tupon a stone, another on a piece of dead brush, while the others scole back to their companions who still mingled with the soft rustle of gently vanishing feet a stendy and dolorous "quit-quit, queeah," Whizz! went an arrow over the head of the bird on the Whizz! went an arrow over the head of the bird on the

queeah!"
Whizz! went an arrow over the head of the bird on the dead brush. He cocked his head, nodded his long dark plumes, and said "quit-quit, queeal, queeal," Zipi went another arrow through the brush just by his side. He said again, "quit-quit-quit-quit-quit-quit-puit!" hopped leisurely off the brush, and started off with a "queeah, queeah!" to join his companions. The bird on the stone also made some remarks

<sup>\*</sup>This country alone is about as large as these three States.

about "quitting," and was preparing to suit the action to the word, when another arrow skipped gayly from the string, and Mortality knocked at the lattice-door of his little ribs in a way that invited an inmediate response.

An arrow that scattered the pine-needles among the rest of the flock caused a decided increase in their pace, and as shaft after shaft, flying wild from the archer's now trembling hand, bissed over the birds or scattered the dirt around them, they broke into a run and some flew a few yards, alighted, will then ran again.

hand, dissed over the birds or scattered the dirt around meni, they broke into a run and some flew a few yards, alighted, and then ran again.

"Now we shall have to scatter them," said Belville. "You had better keep quiet and let me do it. Hold Prince back." Belville started on a run after the birds, while Norton collared Prince and tried to hold him. He discoursed most touching strains "to the rocks and rills, touching the tender stops of various quills," as his master ran ahead without him. The qualis quickened their pace as Belville charged on them, and stack to their legs with provoking pertinacity for a few moments, until Belville made a "spurt" and got within ten paces of them, when suddenly the air was filled with buzzing wings and wheeling and 'darting streaks of blue, white and cinnamon. Quickly his gun came to his shoulder and covered the dark green shrubbery of a manzanita behind which a bird had flown. The gun cracked; a shower of blue and cinnamon feathers puffed out from behind the bush; a dull sound of a falling body was heard; and Norton lay prone upon the earth!

a dull sound of a 1411ing body was heard; and Norton lay prone upon the earth!

As he picked himself up and brushed the pine-needles out of his sleeves, he amounced to the universe at large his intentions of sub-letting all future contracts to hold a dog which his master goes aloued to shoot.

Prince didn't seem at all inclined to object to this arrange-

White his master goes accent to shoot.

Prince didn't seem at all inclined to object to this arrangement, but displayed remarkable equanimity as, nearly wagging his tail off, he went in to pick up the fallen bird. He then trotted away over the ground ahead with his nose in the air and his tail vigorously whipping his sides. He had not gone a hundred yards when his pace slackened. So did his rill. The tail got slower in motion. So did the legs. The legs scenned to slacken the tail and the tail to react upon the legs, until he had settled down to a pace suitable for a fashionable mourner at a saall's funeral. Then he stopped altogether, stood for a minute with his eager eyes fixed in a stamy gaze; then, turning his head, he glanced at his master, "Come on quick, now, with your guns," said Belville. "These birds do not lie long."

As Norton came up, three birds rose from the dead brush altered of Prince, and almost at the first buzz of their wings his gun went off and rent the raiment of a flourishing young successarial about three feet to one side of them. One of the birds went to Belville's side and came whirling down out of birds went to Belville's side and came whirling down out of birds went to Belville's side and came whirling down out of birds went to Belville's side and came whirling down out of the side of the side of them.

monstanta about three teet to one side of them. One of the birds went to Belville's side and came whirling down out of a shower of feathers, while another plunged like a wet rag into a pile of rocks at the crack of the second barrel. The birds were soon picked up and the dog sent on. He at once began to stiffen and crawl, suiffing the air and straightening out occasionally into a dead point. But no birds rose.

The at once oggan to accessionally into a dead point. But no birds rose.

"Too slow for these chaps, Prince. You will have to go faster," said Belville, as he started ahead of the dog on a ragid walk. "Hie or! toy, or you'll get left!"

But Prince had not been trained upon California quails, and tellowed along behind as if he had a bag of shot on each foot and his tail was spliced with a poker. By running and cheering him on, Belville soon got him pretty well stirred up, and he overtook a little bunch of birds that had hidden in a fallen tree-top when they saw him coming. Belville went to cue size of the tree and Norton and his sister to the other, while Mrs. Norton was to look for the game and flush it with an arrow when visible. Carefully she looked into the brush, but there was no sound or sign of life for two or three minutes; then Laura suddenly drew back, and with a vigorous pull at the bow-string sank an arrow half way to the feathers in the white and brown mold on a rotten stump beneath the brush. As the arrow charged into it, a "quitfeathers in the white and brown mold on a rotten stimp beneath the brush. As the arrow chugged into it, a "quitquit, quee-ah." was heard within, and Prince, who had been sanding off at some distance run close up, turned his head to one side, erouched low, and, looking intensely anxions, settled down stiff as marble.

B-lyline kicked upon the opposite side, and out came four li ds, whizzing in various directions. One came down before the combined effect of a heavy battery opened by Norton and his sister, and another's machinery was deranged by a short rom Belville.

These birds were soon picked up, and the hunters started for the rest of the covey, the trail of which the dog soon struck. But Norton and the ladies were unable to follow at the rate required to overtake them with the start they had now gained, and Belville went swiftly on alone.

North—The momatin quail of the Pacific slope seems to be little known to sport-sinen. I have seen some very absurd statements about it by those who have attempted to describe it. It is not "vivice as large as holy White." It is not "very sine eating." It is not "extremely rule, I is not "extremely rule, I is not "extremely rule, I is not "extremely rule, I is not "extremely rule, I is not "extremely rule, I is not "extremely rule, I is not "eating but and difficult to shoot," It's not "found only in the roughest or most inaccessible places."

It is not "extremely wild and difficult to shoot."

It is not "found only in the roughest or most inaccessible places."

It does not "run faster than the valley quail."

I am fully aware that it would have made a far better subject for a good chapter if these things had been true. But while not average to good subjects, my main object is accuracy, and I describe fines bards just as I have from the member of the control them when describe these bards just as I have from the member of the place of the control them when described in the control them when described in the control them with a short-gun, but have time and again met them when deep hard have sat down and watched them until the last one brief short-gun, but have men then often so close and unconcerned that a good archer could kill half a dozen with a bow, and it is no trick for a good rilleman to decapitate three or four before they leave. I do not know what they may be in the North: but in Southern California, when not hunted, they are the very canodiment of guileless simplicity.

When the sould a mere trible larger in body, fat add. In thaver it is almost exactly like the valley quail, which is about equal to a tolerable grade of chicken. Though by no means plenty, it is not extremely are. In the Cuyanaca Mountain I once saw four excess without leaving the road, yet they are by no means abundant throughout the country generally.

It is not quite so swift a ther as the valley quail, although swift enough. I have found it in good casy ground to hunt, though it generally likes rougher ground than the valley quail, I have found if it altitudes as low as one thousand feet above the sea than although so the product of the control of

## DOMESTICATING QUAIL.

INFLUENCE OF THE LAWS OF HERBDITY.

Editor Forest and Stream :

Editor Forest and Stream:

I have taken great interest in all the articles I have read in your valuable paper on the various experiments at domesticating the American quail—Bob White, as he is familiarly called from Maine to Texus. I have hoped some one would appreciate the importance of the matters and study into the principal difficulties to be overcome, and give us directions in full for bringing to a successful issue this most interesting effort to add to our list of home pets the beautiful bird so universally admirted.

I have given the matter much thought, and am fully determined to make the experiment to I have given the matter much thought, and an into a cert-mined to make the experiment so soon as I can arrange to make a fair trial. In the meantime I hope others will make the trial, and by mutual aid it may surely become a success, and if we can once obtain a "strain" of fully domesticated quait that will live with our chickens and doves we shall add

and if we can once obtain a "strain" of fully domesticated quait that will live with our chickens and doves we shall add a very important and valuable member to our list. And the remuneration, aside from the satisfaction, may be well worth while, for I believe the demand would be unlimited for a great many years at highly profitable prices.

In many cases the effort to tame one or more specimens has been successful for one season. It has also been well established that quail may be kept under control and yet produce eggs and young, but I have found no well authenticated cases of raising any of the second generation.

Now all that I believe to be necessary is to raise and keep the birds under control for three to five generations, by which time the inherited wild instinct will be replaced by an inherited tame instinct. As bearing on this point let us note some of the facts in regard to the laws of heredity among other birds and animals.

Those who have repeatedly raised and kept a race of wild turkey stell me that birds hatched from the eggs of wild turkeys the metablish at heather from the eggs of wild turkeys the metablish shatched from the eggs of wild turkeys the metablish and then they will necessary to have part of the flock raised from tame eggs and then to watch most carefully against their getting into the forest. That if they do get into the woods and roost out one or two nights they are gone birds from that thine, and refuse to come or be driven back to a tame life, and in a few days are as shy and crafty as birds born and reared in a wild state. But if kept carefully about the premises with tame fowls, they will remain partly tame. When nesting time connects the wild instinct again shows itself in the flow to wander off are as shy and crafty as birds born and reared in a wild state. But if kept carefully about the premises with tame fowls, they will remain partly tame. When nesting time comes the wild instinct again shows itself in the effort to wander off and secrete the nest. If this is managed properly and the eggs of this inalf-tamed bird are hatched by a tame turkey, the second generation are much less like wild birds, and so by the third or fourth generation they become like any tame turkey in habits and life. It is also stated that birds that are half-bred from one wild parent of the first generation show unmistakable signs of inheriting the wild instinct of their nearest and need to be very correliably wanched to

tame trukey in habits and life. It is also stated that birds that are half-bred from one wild parent of the first generation show unmistakable signs of inheriting the wild instinct of their parent, and need to be very carefully watched to prevent their lapsing into a wild state.

The same experience has been met by those who have tried to domesticate the wild goose or the mallard duck from wild eggs. The first generation of these birds retain their wild nature, and in autumn show the strong migratory instinct inherited from their parents. But if kept under control and their progeny raised, by the second or third generation the nature is entirely changed, and tameness and dependence on the master, man, is at last fully established.

We see the same power of heredity among of our named. Notably, the characteristics of the mustang horse shows in the bucking propensity of his posterity to quite remote generations, and is even inherited by the mule which has any trace of mustang blood.

Livingstone Stone has noticed the fact that trout fry hatched from tame trout spawn are less shy than those from wild trout. So we might go on eiting many cases among all kinds of animals, where the inherited traits are entirely modified by a few generations of domestic habits; and it is not at all likely that the quill will prove any exception. But all we know of his habits under taming conditions lead to the conclusion that by persevering in keeping him under our care and protection for two or three or more generations, we may fully and completely change all his wildness into the most perfect tameness and dependence on his humane protector and providor.

They should have a mixed dict of seeds, green herbs and worns, or other kinds of animal food, and at or before the mating season should not be allowed to become too fat. They should have a provided of wire-serven fencing, which could be moved from place to place. Most of such deciais would suggest themestees to those who may be induced to try this experiment.

If not trespassing to

experiment. If any have made the trial, or think of doing so, 1 shall be pleased to hear from them through these columns. C. St. Jov., Mich.

## HABITS OF SNAKES.

WHITEWATER, Wis., Dec. 23.

Editor Forest and Stream:

Editor Forest and Stream:

I have read with much interest the various articles in your paper about snakes cating fish, as I have myself witnessed some such incidents as have been reported to you.

About twelve miles from this place is Lake Koshkonong, an expansion of Rock River. The lake is ten miles by four in its largest dimensions, and is known as the greatest resort for canvas-back and other ducks in the West. It also is well stocked with fish: wail-eyed pike, "pickerel" and several varieties of bass, being the most numerous. I belong to a club of fifteen, who spend the first week of June in each year, camping on the slore of this lake. We call ourselves "Fun-Hunters," and we never fail to have a happy time, sailing, rowing and fishing on the lake, and engaging in various recreations on shore. The bank on which we camp its probably twenty-five feet high, and a spring of good, cold water can be made any where by digging in the gravel at its foot. When we first put up our tents we dig a spring to supply the camp with water, and another at suitable distance, much broader and quite as deep, in which to put our

live fish as we come in from trolling. This last spring soon becomes a great resort for striped and water snakes, and I have repeatedly seen both varieties in the water after dead or dying fish. As the snakes were usually small, and the fish of fair size, the former would not be able to do more than seize hold of the fish and "yank" harmlessly at them.

Last June one of our number threw a small pickerel, about trainingless them, on the gravel by the lover lamping.

lair size, the former would not be able to do more than serve hold of the fish and "yank" harmlessly at them.

Last June one of our number threw a small pickerel, about ten inches long, on the gravel by the boat landling. A few hours afterward a water snake was discovered trying to swallow the fish. The snake was nearly three times as long as the fish, but not as thick though. A crowd of us gathered around and watched the proceedings. The snake seemed not at all embarrassed, but kept diligently at its task, pushing forward first one jaw then the other, and at times rolling ir-self and the pickerel completely over. It had got the fish more than a third down, and hers began to turn in its favor, when suddenly it stopped, rapidly disgorged the pickerel and hurried off to the water. It was the general opinion that the snake had become alarmed at the demonstration of its company; also that it would have succeeded in swallowing the pickerel if it had not been disturbed. The relative size of the fish and the snake does not seen to be regarded by he letter. Capt. Frank Barns, now for many years proprietor of the famous "Scattensweequen" is teamer, ful Madison, told nue once that he came in at Lake Koshkonong one day with a string of bass. He threw them out ahead of him on the bank. When he had lauded he saw a little snake, not over a foot long, which had exized the jaw of a three-pound haves and was making most desperate efforts to drag it off. The snake would wind its fail among the snall gravel stones, and then, contorting, would pull them up toward the tish. I am inclined to himk that snakes tent lish to picces that are too large for them to swallow. I do not this to they feed on decayed fish—at least I have never seen them do so. Turtles, however, are perfect servengers, and devour anything from a live fish on a set, line to one so dead and far gove a second second search and the monolight.

In your issue of Dec. 9 I saw a call for information in regard to snakes swallowing their young. I gladly respond to the call and hope all others will who have any information on the subject.

the call and hope all others will who have any information on the subject.

When I was a boy, one day working in the hay field, I killed a triped snake of the (to me) unusual length of three and one-half feet. I killed it by thrusting a pitchfork time through its head, and when I held it up for the other workmen to see something seemed to be pressed down toward the tail, and upon laying it down upon the ground it would seem to rum back toward the head. My curiosity was excited to know what it was in the snake, so I took it up to the house, which was near by, cut the snake open and found inside of it forty-nine young snakes, about six inches long. They were all fully formed and as perfect snakes as the old one, but they, were all dead, and I suppose they died from suffocation, as the supply "i air had been cut off from the time I thrust the fork time through her head until I opened her, which was about an hour and a half. The cavity in which the young snakes lay was dry, smooth and clean, the intestines lay outside of this sac or pipe and between it and the body of the snake. I did not see the old one swallow the young ones, but found then, not in the stomach of the old, one, but in a cavity evidently formed for that purpose.

But here is constitute link in the obuit of earlieup.

I did not see the out one some of the old one, but in a cavity evident, not in the stomach of the old one, but in a cavity evidently formed for that purpose.

But here is another link in the chain of evidence. My wife (who by the way is the "Ruth" who gave me and the rest of our cith such a showing up in the Forest AND STREAM SOME times one day picking strawberries near a sandy knoll, where she discovered a striped snake with several young ones on the sand near her. When she appreached them the old snake opened her mouth and the young ones immediately crawled in, one after another, and disappeared.

So, taking these two circumstances together, I came to the conclusion that striped snakes were provided with a cavity in their badies to which the young retire for safety in times of danger.

Nashra, N. H., Dec. 27.—When a boy I have often killed common striped snakes, whose bodies contained a large number of young ones from one to two inches long. I distinctly remember one occasion, when on my way to school, I killed a snake about four feet long and uncommonly thick, from the body of which I took forty-seven young ones. A. W. ----

Sharks Swallowiso Their Young.—Charlottespille, Ya Noc. 5. In your issue of the 28th dt. I noticed an article on the question of sharks swallowing their young. I thick I can throw some light on this curious subject, which I give

on the question of summs comments of the contribution of the contr

Medical Director, U. S. N.
Chickens Rethining to a Whild State—Cortland, N.
Y., Die. 27.—In looking over a poultry journal I noticed an account of whild chickens that are hunted as wild game in Comanche County, Texas. It was stated that a few years ago a barge number of domestic chickens were deserted for some reason by their owner, when they took to the brush, and the woods are now full of them. This reminds me of the somewhat novel experience—as related by himself—of a gentleman with whom I was out shooting partridges a few weeks since. Coming into a piece of woods, he made the remark that it was in this very same place that he hast fall shot wild chickens. It seems that a white Leghorn hen belonging to a farmer, whose hennery was near by, had stolen her nest, going into the woods and hatching out a brood of chickens. The hen and chickens came to the house a few times and were fed, but finally remained in the woods. As they matured they became, wild, hiding in the brush of flying into the trees when any one approached. The farmer not owning or caring to use a gun, my friend was asked to hunt them down, which he did, shooting five of them out of the trees. They were, as he expressed it, "as wild as bawks." It may be that the common breeds of poultry would have remained

tame, as my experience goes to show that there is no variety so wi',d as the Leghorn. Mio.

Canyas Backs in Rhode Island—Rodon, Res. 24.—As I am under the impression that a canyas-back duck is a rare bird in New England, permit me to record the killing of two of them. Myself and Mr. Ellerton Lodge of this city were shooting at Point Judith during the first cold snap of No vember, and one morning I floated down on four large ducks, getting within easy shot, but unluckly my trigger finger was so numb that both barrels of my gun went off before I knew it, and away went the birds. For instable they have been been seen to be a support of the burner of the support of the burner of the burner of the support of the support of the burner of the support of t gotting within easy shot, but unluckily my trigger finger was so numb that both karrels of my gun went off before I knew it, and away went the birds. Fortunately they flew by Mr. La, who had the honor of knocking over two of them. To my surprise I found them to be genuine canvas-backs. They seemed oblivious to any danger, allowing me to get within forty yards when I drifted on them. Is this per tunisma with those?

The canvas-back is not common on the New England const 'out we believe that a few are occasionally shot on the emetern shore of Connecticut

A THREE-LEGGED HEN.—The following curious story comes to us from the Releigh (N. C.) News of Dec. 15:

comes to us from the Reloigh (N. C.) Nors of Dec. 15:
Mr. John Stone, of Franklin County, has presented Dr.
Blacknell with a wonderful three-legged chicken, which is
certainly a curiosity, having three distinct legs, the third leg
coming out in the middle of the body between the other two.
Ig wasking the hen uses the two outer legs, drawing up the
orther, but when she stops she stands on the centre leg, drawing she other two up close to her body. Hundreds of people
have seen ker, and none have ever seen her like before.

Center's Buen's Head—Generalures, Ont., Dec. 14.—1 noticed in one of your papers some time ago a description of a hod's head that had over lifty peints to the two horns. I have lately obtained the nearest to it that I have ever heard of. It is a buck's head with a palmated horn 4½ in, wide, lakely a buck's head with a palmated horn 4½ in, wide, lakely and so a buck's head, but the deer, when alive, would weigh about 330 lbs. In appearance it is a counterpart of the cut I saw in your paper. I am satisfied that it is a different species from the common red deer, as I have a small head that I believe to belong to the same, but I am not certain. Perhaps you will know.

R. B. S. We pressume that the palmate horn is done.

We presume that the palmate horn is due to some injury eceived by the deer during the period of the antler's growth. There is no likelihood that it belongs to a new species.

California Quali.—Will you or some of your correspondents who "have been there" tell us all about the California quail, both kinds—the so-called valley quail and the mountain hird? We would like to know of their habits and their quaktics and value as game birds. Would they not be well worth bringing to the Eastern States to divide the burdens of "carrying off shot" with their cousin Bob White? If they are as desirable as their graceful carriage and beautiful plumage would indicate, and hardy enough to endure our winners, they should be as worthy of being introduced East as the migratory quail to be brought from his far-away home. St. Tee, Mich.

We call our correspondent's attention to the article on the Mountain Quail, by T. S. Van Dyke, to be published by us

AN ALBINO QUALL.-The Petersburg Index gives the following account of the killing of an albino quail in Prince George County :

George County:
Some days since, while a well-known gentleman of this
city was hunting with his dogs in Prince George County,
about four miles from the corporate limits, a covey of partridges was flushed, one of which was killed by the gentleman
alluded to. Tate bird was killed bout dark, and upon exminimion if was found to be a full-fledged white partridge.

THE CENTRAL FISHCULTURAL SOCIETY.

SECOND DAY.

FIGHE meeting was called to order by the President promptly at 9:30 A. M.

Mr. Douseman offered the following: Resolved, That the Executive Committee be, and they hereby are, directed to luy out a programme for the next annual meeting of this society, choosing for discussion such topics as to them seem timely and important, assigning papers on the different subjects to the members most competent to treat upon them. Resolved further, That such programme be decided upon at least three months before the time fixed upon for the meeting, the members to whom papers are assigned to be at once notified by the secretary of what is expected from them, and requested to forward their papers to the secretary in case they are prevented from attending in person. Carried.

THE SECRETARY then, in the absence of the writer, read the following paper:

ON THE FOOD OF YOUNG FISHES.

BY S. A. FORBES.

I cannot learn that anything has been recorded respecting the food of young fishes in this country,\* nor have I been able to find any evidence that this subject has been systematically studied in Europe, in such part of the ichthyological literature of Europe as is accessible to me. From the translations of papers published in the appendices to the report of the United States Fish Commissioner I learn that the artificial use of Entom strace for the food of young trout has been successfully attempted in France. I also find in the bulletin of the "Society of Acclimatization," of Paris, a statement to the effect that, in the Russian governmental

\*Perhaps exception should be made of a note relating to the oc-curence of diatoms in the stomachs of two young whitefales, pub-lished in the appendix to the Report of the U. S. Fish Cornuis-sioner for 1872-9, p. 57.

establishment for the cultivation of fishes, young trout and other valuable species are fed with beetles and insect larvæ obtained from stagnant water, by means of a small muslin act. Although the use of Entomostraca is not specially mentioned in this extract, yet they must, of course, be obserted in the case of ferrors.

tained in the search for insect larvie.

That this subject should not have been long ago thoroughly investigated seems a surprising fact, when one considers the vast amount of labor which has been expended upon fisher as a class, and reflects for a moment upon the interest to science and to practical fish culture of a knowledge of the food resources of fishes and of the competitions of the varispecies in the search for subsistence

us species in the search for subsistence.
Although I cannot yet treat this subject as fully as it derves, the results of such study as I have been able to make,
tring the past season, of the contonts of the stomachs and
testines of small specimens, seem to justify this preiminary notice.

was early apparent, in the course of the investigation, It was early apparent, in the course of the investigation, that the food of many tishes differs according to age; and it was soon found that the life of most of our fishes divides into at least two periods, and of many into three, with respect to the kinds of food chiefly taken. Further, in the first of these periods, a remarkable similarity of food was noticed among species and families whose later food-habits are widely different parts of the second families whose later food-habits are widely different parts of the second families whose later food-habits are widely different parts of the second families whose later food-habits are widely different parts of the second families whose later food-habits are widely different parts.

rient. The full-grown black bass, for example, feeds principally on fishes and craw-fishes, the sheepshead on modiusks, the gizzard shad on mud and Algre, while the cutilshes are nearly omnivorous; yet these are all found to agree so closely in food when very small that one could not possibly tell from the contents of the stomachs which group he was dealing with

with.

It is my purpose in this paper to give what facts I have relating to the foot of our fresh-water species during this first period of the fish's life, avoiding technical details, and mentioning only the general results of the investigation.

These facts were derived from the examination of one hundred and twenty-six specimens, ranging from three-eighths of inch in length up to an inch and a half, and in a few cases to two and three inches. These specimens belong to twenty-four genera and represent eleven families. In two or three genera no specimens were obtained small enough to be regarded as belonging strictly to this first food-period but the earliest food is nevertheless plainly inferable; and the general distribution and variety of the species studied is such that I think the main conclusions will be found to stand the test of full investigation.

### PERCH FAMILY

The food of a common perch, from an inch to an inch and a quarter long, consisted wholly of Entromastraca and the larver of Chirononus. The first of these names is applied to the minute crustaceans, which are found most abundant in lakes and other stagnant waters, but occur likewise, to some lakes and other stagnant waters, but occur likewise, to son extent, in running streams. The name of water fleas is son times given to a large section of this group. Chironomus a small gnat whose larva is familiar to all who have ev noticed the minute animals of stagnant water. It has a sppearance to the naked eye of a minute red worm, whi moves through the water with a violent wriggling motion.

## RASS FAMILY.

very small specimens of the bass proper (that is, of white bass and striped or brassy bass) were taken by us, the smallest being a brassy bass an inch and a quarter long. Half of the food of this consisted of Entomostraca, and the other half of minute gizzard shad,

## SUN-FISH FAMILY.

SUN-FISH FAULLY.

A group of 43 specimens of the sun-fish family (which includes the two species of black bass) was made up as follows: Of five specimens of black bass under three-fourths of an inch long, two of rock bass of the same size, two of gog-gle-eye from seven-eighths of an inch to an inch in length, ten of common sun-fish from an inch to an inch and a fourth, nine of pumpkin seed from one and a half to two inches, five of croppic one inch and under, four of from three-fourths of an inch to an inch and a half, and six indeterminable specimens, probably common sun-fish, from seven sixteenths to five-eighths of an inch long. Ninety-six per cent, of the food of these forty-three specimens consisted of Entomostraca and larva of Chironomus—seventy of the first and twenty-six of the second. The trivial remainder, consisting of the larvae of May-flies and other similar insects, a young ampliped, with traces of water-miles, water-bigs, water-bigs. young amphipod, with traces of water-mites, water-and mollusks—the last taken by the "pumpkin seed,

## SHEEPSHEAD FAMILY

A single sheepshead (Haphoidmotus), an inch and seighth in length, had eaten Chironomus larvae (seventy-fiv per cent.) and larvae of May-fly.

## PIKE FAMILY (Esselda).

PIRE Family (Esseida).

I did not have the good fortune to obtain any young of the common pike, and can only report on the food of a single salmon-pickerel) Esser salmoneus), an inch and a fourth in length. This specimen, taken at Pekin, Ill., on the 2d of June, had already begun its life labor of the climination of little takes, these making about two-fifths of its food. The remainder consisted of Crustacea, composed about equally of young Amphipoda, Daphnifde and Lynceidae. The presence of so large a quantity of these minute Entomostraca in the stomach of a pickerel of this size is sufficient evidence that they form the principal part of its food at an earlier age.

## HERRING FAMILY.

We come next to twelve specimens of the gizzard shad, whose minute fry swarm in countless numbers in the waters of our larger rivers in midsummer. These were taken in June and July, from the Illinois. River, from Ottawa to Petria. The smallest of the group were twenty mun, long by two mun, wide—as slender as evertraoids and nearly cylindrical, although the adult is a high, him fish. I was greatly interested by the discovery that the maxillaries of these smallest specimens are provided with teelt—a single row of nine or ten on the lower edge—although the month of the adult is entirely toolthess and smooth. The internal structure also dult'rs remarkably from that of the adult, especially in the much greater simplicity of the digestive apparatus.

ratus.

In a young gizzard shad, seven-upoths of an inch long by one-tenth of an inch high, the phertine was found to pass almost directly from the anterior and of the stomach to the vent; and at this time pyloric poeca were orthicly wasting. The intestine of this specime, of was filled with various species of Eutomostraca.

On the other hand, in a fish three and three fourths inches On the other hand, in a fish three and three lowers incense long, showing the general characters of the adult, the intestine passed upward and backward from its origin, running without flexure the whole length of the body cavity (this part being covered with an immense mumber of pyleric coeca), then turned forward to the stomach, and made a larce number of intricate turns and doublings from side to side and end to end of the abdomen, extending, in all, about eight times the length of the perivisceral cavity. This inside and end to end of the abdomen, extending, in all, about eight times the length of the perivisceral cavity. This intestine was well filled with mud with only a slight sprinkling of unicellular Algae.

These twelve fishes, all under two inches, had caten about ninety per cent, of Entomostraca, two per cent, of Chironomus larvae, and for the remainder, Algae.

### MINNOW FAMILY.

MINION FAMILY.

A single minute minnow, three eighths of an inch long, which I could not determine specifically, had eaten Antomostraca (twenty-five per cent.) and Chironomus larvae.

Three specimens of the common chub minnow (Semotilus corporatis), ranging from five eighths inch to one inch, indicate somewhat doubtfully an exception to the general rula respecting the early food of fishes. Only seven per cent. of their food was Entomostraca, and the whole remainder consisted of filmentous Algo. It should be noted, however, that twenty per cent. of the food of the smallest specimen, which was five eighths of an inch long, was Cyclops, and it may be that the chub minnow lives wholly on Entomostraca at first, merely changing its habit earlier than most of its allies.

### SUCKER FAMILY.

Thirty specimens, representing five genera of this peculiar family, were studied. A very curious feature of the food of the young is the frequent dependence of suckers of considerable size, six inches long or more, upon food still more trivial than Estomostraen, viz.: upon wheel-animalcules, Protozoa, and minute one-celled plants (Alga-). While only such Protozoa were found as are furnished with firm shells, yet the abundance of these in the intestines of these falses leaves little doubt that the more perishable Protozoa must also be taken in considerable quantity. It is an interesting fact that even here the smallest specimens were found feeding on Entomostraca only, and it is therefore possible that these form the first principal food of the family.

Ten specimens of the stone-ruller, ranging from one and three-cighths to three inches, represent two dates and localities. The four smallest, none longer than an inch and three-fourths, were taken from the Lower Fox, July 9, 1879. The others were from Mackinaw Creek, in Woodford County, Ill., in the latter part of August. The situations were similar, both streams being swift and rocky where these fishes were caught.

others were from Mackinaw Creek, in Woodford County, Ill., in the latter part of August. The situations were similar, both streams being swift and rocky where these fishes were caught.

Their food was chiefly the larvae of Chironomus (20 per cent ), the remaining ten per cent, being made up of various species of Entomostraca and Algue.

We trace in this a remarkable resemblance to the food of the darters, which frequent similar situations. Lacking the sucking mouth of Hypentelium, they do not take Protocon or unicellular Alge, but in other particulars agree elsely with this species. This curious fish is 'peculiar among the suckers in the unusual development of the pectoral fins—a distinguishing feature of the darters likewise—doubtless related in both cases to the constant struzgle with a swift current. We may also remark the darterlike glow of color in the young of this species—a very peculiar distinction among the Catostonidac. This is one among many facts which indicate that exposure to light has great primary effect on the color of fishes—an effect often suppressed, through natural selection, by secondary influences, but manifesting itself where these are not brought into play.

This species is in marked contrast with the darters, not only in the rapidity of its growth and the ultimate size attained, but in the form and size of the head, which in the darters is small and pointed, but in these fishes is unusually large, square and strong.

The principle of adaptation has here resulted in a different line of development. While the little darters have become fitted to fit and pry about beneath the stones for their food, the stone-roller has acquired the power of rolling the stones before it. As it grows larger, it resorts of course to deeper water, but always prefers the rocky reaches of the stream. The molding power of natural selection could scarcely have a better illustration than that afforded by the adaptive character, both similar and dissinilar, of these two widely separate I groups of fishes.

A single

ber, had eaten only Entomos, with a trace of Chironomus larvae.

Ten specimens of red horse, varying in length from an inch to two and three-fourths, taken in July and August from the Fox and Illinois rivers and from Mackinaw Creek, show no important differences of food.

In the shaller specimens taken from the Fox and Illinois, Entomostraca were relatively more important, sometimes constituting nearly the whole food; but no attempt was made to fix precise ratios.

In the four larger specimens from woodford County, shells of protozoa were estimated to form 85 per cent, of the contents of the intestine, the remainder consisting of aiga, wheel minalcules, Entomostraca, water-mites and the larvæ of Chironomus and other Diplers.

The small percentage of Chironomus larvæ shows that this species has not the habit of the stone-culler.

Two specimens of the common sucker, six inches and six and three-fourths in length, taken from Mackinaw Creek in August and June, had eaten food so similar to that of the receding genus that detailed description is unnecessary.

Two specimens of our commonest buffalo fish, called the "red mouth" in central Illinois, seven-eighths of an inch long, had eaten most tully of unicellular plants (2) per cent, yillong, had eaten most fully of unicellular plants (2) per cent, yillong, had eaten most fully of unicellular plants (2) per cent, yillong, had eaten most fully of unicellular plants (2) per cent, yillong, had eaten most fully of unicellular plants (2) per cent, yillong, had eaten most fully of unicellular plants (2) per cent, yillong, had eaten most fully of unicellular plants (2) per cent, yillong, had eaten most fully of unicellular plants (2) per cent, yillong, had eaten most fully of unicellular plants (2) per cent, yillong, had eaten most fully of unicellular plants (2) per cent, yillong, had eaten most fully of unicellular plants (2) per cent, yillong, had eaten most fully of unicellular plants (2) per cent, yillong, had eaten most fully of unicellular plants (2) per cent, yillong

<sup>\*</sup> A related fact is the bisached appearance of fishes taken from the along ( ) paque water of mud-koles in the Mississippi bottoma.

wheel animalcules were reckoned at 27 per cent., and the remainder of the food consisted of Entomostraca. These specimens were taken from the Illinois River in early June. Four carp suckers (Carpiodes), seven-eighths of an inch to two inches long, taken from the Illinois and from Clerr Lake in Kentucky, had fed like the preceding genus, except that the Entomostraca were in larger quantity (48 per cent.), while the rotifers were relatively few.

Reviewing the f-ood of these thirty young suckers, we see that they differ from the other families studied in the larger food resources open to them; for, while the structure of their mouths does not prohibit their taking Entomostraca, it enables them to draw upon the multitudes of minute organisms found upon the bottom. Evidently they have no means of selecting such microscopic structures from the mud in which these most frequently rest, and considerable quantities of dirt are consequently often found in the intestines; but from the "richnoss" of the contents I infer that they doubtless have the power of distinguishing mud containing a large percentage of organic matter from relatively barren portions.

less have the power of distinguishing mud containing a large percentage of organic matter from relatively barren portions.

\*\*CATEFAR FAMILY.\*\*

Numcrous specimens of the young of this family show that, not withstanding its many peculiarities of structure and habit, it is no exception to the general rule respecting the food of the young. The smallest of these specimens were from a little school of minute fry, taken in June from the friendly protection of an old oyster can in the Illinois River. These little creatures were coloriess and seemingly almost helpless, and only three-eighths of an inch in length. They had already began to eat, however, and their stomachs were filled with Entomostraca and Chironomus larve. These were certainly Amiurus, but it was, of course, impossible to tell the species.

Other specimens of this genus, making thirteen in all, none longer than an inch and five-eighths, were obtained from various places in the Illinois, and from mud-holes in the Mississippi bottoms, in Union Comity. These thirteen individuals were feeding almost wholly on Entromostraca and larve of Chironomus, the latter composing seventy-four per cent, and the former eighteen per cent, of their food. A few young Amphipooda and a few unknown inserts' eggs account for the remainder of the food.

Six specimens of Motrus stalls, varying in length from seven-eighths of an inch to an inch and a quarter, differed from the foregoing in the much larger proportion of Chironomus larve (forty-one per cent.) and in the twenty-six per cent. of young Allacockets dentate (a very abundant small amphipot), eaten by the larger specimens. These land also taken seven per cent. harve of May-flies. Those under un inch in length were peculiar only in the large raportion of Chironomus larve (forty-one per cent.), a fact peobably indicating that this species seeks its food chiefly on the much blottoms.

bottoms.

No specimens of the other genera of catfishes were taken small enough to show their earliest food, but as far as can be judged from the food of four specimens of Ictalurus, from two and a half to three and a half inches long, the other genera will not be found to differ especially from the fore-

DOGETSH FAMILY

DOGESH FAMILY.

A single dogish (Amia), one and three-fourths inches long, taken in June, had eaten seventy per cent. of Entomostraca and two per cent. of larvo and pupe of Chironomus. A few young Allorchestes and some water bugs (Corixas) complete the brief list.

the brief list.

Several specimens of Amia under one inch in length, whose anatomy I studied three years ago, I remember to have had their intestines packed with Entomostraca.

## GAR FAMILY

Here also I shall have to content mysoff with such hints of the food of the young as are given by two or three specimens, as the youngest are not yet common enough in our collections to supply more material for a study of their food. One of the two smallest gars examined, an inch and a fourth in length, taken in June, near Peoria, had filled itself with Scopholdberis mucronated (a minute Entomostracan) and the other had taken only a minute fish. A specimen two inches long and only an eighth of an inch in depth furnished a striking illustration of the voracity of this terror of our streams, as its stomach contained sixteen minute minnows.

The general conclusion from these observations is the supreme importance of Entomostraca and the minute aquatic larvae of a single genus of gnat as food for nearly or quite all of our fresh-water fishes — a conclusion that gives these trivial and neglected creatures, of whose very existence the majority of the people are scarcely aware, a prominent place among the most valuable animals of the State, for without them all our waters would be virtually depopulated. Ofter facts of emiment interest thus brought to view are the magnitude and intensity of the competition for food among the young of all orders of fishes, where a stream is fully stocked, and the injurious character of such a species as the shovel-fish, which feeds on Entomostraca throughout its life. It is probable that all fishes which are not especially adapted to the food requirements of the more valuable species are hurtful to them, that all fishes which are not especially adapted to the foodre-quirements of the more valuable species are hurtful to them, because they limit the food available for the young. The sun-fishes, whose shape protects them from many enemics, and the cat-fishes, with their armor of poisoned spines, are instances in point. While their young compete with the young bass and wall-eyed pike for food, they do not furnish the latter any important food resource in later years. On the other hand, such species as the herbivorous minows and the cylindrical suckers, which depend upon Entomostraca to a less extent when young, or take up other food at a relatively early period, are those which seem to promise best as food for the higher fishes.

less extent when young, or take up other food at a relatively cartly period, are those which seem to promise best as food for the higher fishes.

It is worth while to notice that the food especially taken by young 'suckers is ofthe same kind as that upon which many Entemostraca are dependent, and that these fishes thus actually come into competition with the minute crustacea. It might seem at a glauce that the suckers compete with the ordinary fishes by this appropriation of the food of Entomostraca not less than if they ate the Entomostraca themselves. We must remember, however, that every animal (Entomostraca not less than if they ate the Entomostraca themselves. We must remember, however, that every animal (Entomostraca not less than if they ate the Entomostraca themselves and that consequently fit less own bulk of food, and that consequently fit letter increase much less effectually than if it depended upon them strictly carnivorous and partly herbivorous. By its herbivorous hobit it would of course compete with, and limit the strictly herbivorous animals, but would check their multiplication much less stringently than if it were purely carnivorous.

If it is a curious corollary from part of the above reasoning that a prolific species having an abundant food supply, and the strictly herbivorous and partly herbivorous and partly herbivorous and partly herbivorous.

itself the most important food of predaceous fishes, may, by extraordinary multiplication, so diminish the food of the young of the latter as to cause, through its own abundance, a serious diminintion of the numbers of the very species which prey upon it. To put this statement into more correct form, it is not certain that the excessive increase of the gizzard shad, for instance, would be a benefit to the black bass and pike-perch which feed so largely upon it. In fact, it is clear that the great overstocking of a stream with gizzard shad would, by eventually reducing the supply of Entomostrace, cause a corresponding reduction in the numbers of all the species of that stream by starvation of the young; and this decimation, applying to all in the same ratio, would take effect upon the ordinary number of the other species, but upon the extraordinary number of the gizzard shad, would reduce the other species below the usual limit, but might not even cut off the excess of the shad above that limit. Consequently, important as is the supply of food fishes for the predaceous species, it is not less important that the predaceous fishes should be supplied to eat up the food. Here, as elsewhere, only harm can come from an imperfect balance of the forces of organic nature, whether the excess be upon one side or the total. rganic nature, whether the excess be upon one side or the

the efforts to increase the valuable fishes of a lake or

other.

In the efforts to increase the valuable fishes of a lake or stream, it is not sufficient that the food of these species should be increased alone, but at the same time special measures must be taken to secure a corresponding multiplication of the predaccous fishes themselves, otherwise precisely the reverse result may be produced from that intended.

As a further illustration of some of the practical bearings of these facts, it may be noticed that the free access of fishes to the ponds, lakes and marshes connected with a stream is a matter of the highest importance. Running wateris relatively destitute of Entomostraca, and hence fishes denied access while breeding to slow or stagnant water in which Entomostraca abound, have little chance to multiply.

Too little attention has been paid to the breeding migrations of our resident fishes. How many of our rivers are free from the obstruction of dams improvided with practicable fishways? Is not the relative scarcity of fish in such streams as Rock and Fox rivers largely due to the fact that a fish which enters the river from above cannot get back to the immense and swarming breeding grounds afforded by the lakes connected with its numer waters?

to the immense and swarming breeding grounds afforded by the lakes connected with its upper waters?

ABRIVAL OF FOREIGN FISHER—Mr. E. G. Blackford, of the New York Fish Commission, has just received from France six roach and six golden tench brought by Mr. August Briand, a retired Captain of the French line of steamers, known as the Trans-Atlantic Steamship Co., and running between New York and Havre. The roach is held in esteem by European anglers, but Americans like larger fish. The tench, is, like the former, a cyprinoid, but grows to a pound or more in weight. The common tench, Timea vulgaris, is esteemed for the table as well as for angling, and will thrive in waters adapted to the carp. Those now at Mr. Blackford's, in Fulton Market, are a golden variety, suitable for both food and ornament. They were sent by the Aquarium at Havre, in exchange for small terrapins and caffish. On the 5th of this month, yesterday, Mr. Blackford on the other carp to France, the grand-children of German fishes brought over by Dr. Hessela few years ago.

## FISHING IN THE GULF STREAM.

BY THE T. G. O. DEACON. (A. A. R.)

ID you ever fish in the Gulf Stream? I can guess your reply. It would be the same as that of the Captain of the trim little brig Olivia, aboard of which I had the good fortune to sail from Bagdad, at the mouth of the Rio Grande, to New York in April, 1863. He was a Connecticuter, an American citizen, like yourself, named Townley, and a good fellow withal, though a little strange at times: "Notody but a blamed fool of a Britisher would ever think of trolling in the Gulf Stream!" Before proceeding with my story proper, however, allow me to give you a bit of my personal history, which I am sure you will find particularly interesting, and to "show cause" why I happened to be on the Olivia at that time. that time

and to "show cause" why I happened to be on the Olivia at that time.

I was born among the fishermen on the northern coast of Scotland in 1819, the month and date may be surmised from what is about to follow. Whenever I could prevail upon the berring or ling fishers to let me accompany them the trips proved unlucky and on several occasions disastrous. These superstitious people at last refused me permission to go out in their cobles (boats), notwithstanding I was always willing to take my share in the toils without reward. They had made inquiries as to the day and date of my birth, and having learned that that event had occurred on a murky Friday inimediately following the 31st of March, bad concluded that I was a donsie de'il (unlucky devil) among the fishers. Loving the excitement of their rough life, and feeling more at home in a coble on the dancing waves of the wild Atlantic than in the dull and monotonous parish school, I carefully hearded every "hawbie" and "bit o' siller" that ever came lawfully into my possession (and some that didn't), delernined to lave a coble that should know no cartain but myself.

self.

By the time I had grown to ben good-sized callant I had garnered a pound or two. One day, while watching the boats come in with heavy loads of fish, I came across a battered old coble which the owner was in the act of breaking up for fire-wood. The rich freights at that very time being brought in, coupled with my yearnings to become the possessor of a coble, made me ejaculate, as I approached the boatman, something equivalent to 'O, boatman, spare that coble,' in a rather louder tone than softle cose. This attracted his attention, and the upraised axe that was about to fall and shiper its timbers into atoms, was stayed and is staying yet. I

asked if the boat was for sale. He answered in the affirmative. The price, a stiff one, was named. It was high for a rotten, half-broken-up coble; but I wanted a boat, had enough saved to buy that one, and felt pretty certain that I could never acquire sufficient funds to purchase a better. So I paid my money and took my choice. That was on the first day of April, 18—. But I was like the owner of the white dephant. I didn't know what to do with it. I could not be carried on one of the clumsy carts of the place, because the joilings along the strand would have shaken its internals and externals into inconveniently small pieces of punk, the supply of which article was far beyond the demand in that quarter, and to transport it by water was impossible, as there was no float in it.

When it became known by my neighbor callauts that the coof (fool) as they had nicknamed me, had bought a coble, they found their way to its resting-place (would that I had let it rest there to this day!) after school hours. Well, I'll not trouble you with the encondiums they passed upon my purchase, for all the Poreser And Stream in America couldn't contain them. At length, as with one voice, they asked, "What d'ye intend to do with it, cooffie?" "You'll see," I replied, 'mecessity's the mother of invention,' Taking a few of my young friends who were esteemed nearly as daity-like as myself into my confidence they were induced to aid me in repairing the coble upon the understanding that they were to share in the proceeds of our fishing expeditions. Fortunately, or otherwise, for us the fishermen were very honorable among themselves. They let their pitch and tar and onkum all exposed without the fear of any of their fellows wrongfully appropriating them. Pertunately, or otherwise, too, they were as hard dirulers as they were workers and consequently slept soundly o' nights. A little cakum from one's bundle; a pail of tar from another's harrel; a chunk of pitch from a third; a few nails and boards found here and there, and the coble was hau

pay and would have been happy at all 'times if it had not been for the birchings old spectacled pedagogues used to inflict hecause we never had our lessons. The old goose! how could we fish and study too?

In the spring we tarred and pitched the craft again, and committed ourselves to the deep. For a while "all went merry as a marriage bell." One day we got into the midst of a fine shoal of herring, and half filled the coble in a short time. We started for land with our load, singing as bys who think their fortunes made at one haul can sing, but presently a stiffer breeze than we had contracted for arose. The coble monand, and suddenly and sleenly the herring conspired to return to their native element, and in doing so took the entire bottom of the coble with them! My coupanions held on to the upper part of the boat, which the villainous herring in their hurry had forgotten to carry off, while I grasped an oar and floated off to leeward. Before long I had the pleasure of seeing my friends picked up by a couple of crews who had witnessed the catastrophe. I was not far off, and could see my boatmates pointing me out to their rescuers. But these inhuman, superstitions fishers, recognizing me as the donsie de'il, reasoned that I had been the cause of the mishap, and fearing that if they took me on board the bottom of their craft night fall out by the way left me to my fate. Several cobles passed me on their way to the harbor, and my appeals for help brought some of them quite near. But when they saw who it was that was in danger of perishing they shringed their shoulders, shook their fishe at me and bild me go to Davy Jones' locker with the curses of the sishers of Peterhead upo' me! Baffled by the wares, binded and sufficcated by the briny sea, numbed with cold, I clung to that our will the despair that makes a drowning boy scize hold of anything that comes within his reach, blankers of Peterhead upo' me! Baffled by the wares, bindeed and sufficcated by the briny sea, numbed with cold, I clung to that our will the

I felt myself gradually becoming unconscious, and my hold of the oar relaxing, and presently became insensible—as though I was dead! I knew no more till I awoke to find myself being carried by four men on a board up the shore bank to the nearest tavern—the imprecations of the fishers and the fishers' wives being vociferously poured upon the heads of my delivers as they bore me along. The usual restoratives of the fishers of those days were applied. I was rolled on a barrel, and rum by the gill was poured down my throat. I was too weak to resist, and could not be taken home till the following day. It came to my knowledge subsequently that a coble, manned by a crew of coble Samaritans that knew not Jonah, had, while making harbor, observed what they took to be the body of a dead boy and picked it up, thus carning for themselves and entailing upon their posterity the eternal curses of the fishers and their wives who knew how to curse in reality! That event took place on the first of April 18—, being the first anniversary of the buying of the cobie by me! I learned a moral from that fishing venture that has deeply impressed me throughout a somewhat eventful life, and which has been profitably employed on several convenient occasions since. I hope you and readers will pouder over and profit by its lessons as it becomes you. If I hadn't stolen that oar where would I be now?

Methinks I hear you exclaiming, "The Deacon's personal is becoming too long." Well, never mind; if it takes up the whole of your paper, I can assure you that you!! have one reader at any rate. Let me tell you how to make room of those who can't keep their hands out of the way. There:

In answer to your appeal, I'll be brief with the remainder of my personal. On the first of April; bome forty odd years ago, I left Scotland for this wooden country, to the girest py of the fishers and their wives. They would have prevailed upon the capitain not to permit me to board the remainder of those who can't keep their hands out of the way. There:

In answer

first of April I had ever known.

After residing many years in Canada, experiencing on every annual return of my natal day something like the usual

vicissitudes, I started on a journey to the republic of Mexico on the memorable first of April, 185-, which proved by no means a lucky one. Arriving in Cincinnal by rail, I went down to the Ohio to ascertain if any steamer was likely to start soon for New Orleans. Among an immense number advertised to sail to that port as soon as their cargoes were on board, I observed a small, unpretentious one named the Anglo-Saxon, placarded "Positively to sail in the morning." This was just what I wanted. Going on board, I was informed by the purser that there were only two berths vacant, and told that if I wished to secure one I could only do so by paying my passage money down. Here the simplicity entalled upon me at birth served the reacal's purpose. I believed him, paid the \$25 and walked the streets of that pigsticking city for more than two weeks before the Anglo Saxon positively sailed in the morning. Two weeks more were spent in "sparring" over the shoals of the Ohio and Wississiph, the vessel was on fre, the flame in grown to hybrid the was allowed to the caption of the caption and the Drescont City. On three different nights, see Garios and the Oreccord City. On three different nights, see Garios and the Oreccord City. On three different nights, see Garios and the Oreccord City. On three different nights, see Garios and the Oreccord City. On three different nights, see Garios and the Oreccord City of the passenger, evidently to the chagrin of the caption and sily steerage passenger, who had noticed some strange conduct on the part of those officers on the night of the lastifice, foolishly gave expression to his suspicions. That very night, shortly after the fire was extinguished, a splash in the water was heard, and nothing was to be seen of the talkative passenger in the morning. Doubtless he had been thrown overboard. Like myself, that man must have been horn on the first of April, 185-1, took passage on the costsing steaner Arizona for Brazos Santingo, near the mount of the safety of the safety of the passage on

as it wore, as it was being drawn in, and so preventing their escape.

At length the signal for sailing was boisted, and the patriots were rowed on board. They consisted of two or three veritable Yankee merchants, who, "before the war," had probably kept oyster or lager beer saloons, but who then sported massive gold finger rings, mounted with diamonds, heavy gold watches richly jeweled, fine clothes and linen, and carried an immense quantity of splurge; two Jews, who had doubtless dealt in "ole clo" just previous to the breaking out of the rebellion, but who had saddenly become high-toned sons of Abraham—who could talk of nothing less than cotton by the hundred bales, flour by the thousand barrels, and everything else in a similar Christian-like strain: and a low, common looking Irishman, whose mercantile ambition but a few short months before could not have ascended higher than peddling potatoes and fish in the back slums of New York, but who then could talk as big American as his brother patriots, albeit it was somewhat broguey, and, like them, could, while at the North, denounce the Southerners bitterly, but while at the South could furnish them with arms and ammunition for a consideration. From this group I formed a high estimate of the patriotism of a certain class of Northern merchants, by the weapons and missiles they were shipping, sustaining the war their fellow citizens were losing their lives in their efforts to bring to a close.

Well, our nuchor is weighed, the sails are unfurled and the Union Jack, that emblem of power and security in those

days, waved at the stern of that American built and owned vessel, to protect it from the Alabamas and Shenandoshs that at that time were sweeping American commerce from the sea. Notwithstanding we were a peculiar people on that ship, we got along pretty comfortably. The Jews could take a rasher of bacon for breakfast as readily as any of us, the law of Moses to the contrary, governed probably by the fact that they were not at that time in a Christian hand; but the Irishman declined meat on Fridays, and, there being no fish on board, he had to part up with potates and biscuit.

Always on either side of the vessel could lazy-looking non-sters of sharks be seen. They did not appear to move a fin while we were sailing at a good pace, and yet were never left in the rear, but constantly slyly peered along our deck with those cold, cruel, murderous-looking eyes of theirs. Hour ly hour the porpoises showed in an undulating manner their hog-like forms, and swept under our very tows, as if braving our anger and mocking our slowness. The flying fish, to avoid their enemies, darted in myriads from the sea, passed over the crested waves but a few feet above them, and then helplessly fell into the water again. The pretty little striped rudder fish lugged our rudder as closely as a well taught and obedient retriever does the leg of his master when with an inward move of the hand or a gentle "close" it is intimated that he is to take that position. And the pretty dolphins played around as lambs who had never heard of wolves or coyotes in a pasture field. I yearned to earth some fish and the Irishman longed to eat some, so I rigged up a stout line with a good-sized hook, baited with the memorable slice of fat pork, and was about to east it over the stern, when the Captain yelled out from the centre of the deck. "Stop that! No one ever caught a fish by trolling in the Guit Stream, than the entire navy of the United States would ever think of trying." "Softly, Captain. There's no knowing what a Britisher would ever think of tryin

sprit south of Staten Island."
"You darned subject"—drawling out the last word as contemptuously as one who has a patent for speaking through his nostrils can drawl—"of a dilapidated monarchy, Pli show you how to insult a citize of the glorious, free and independent United States of America on board his own vessel," and

"You darned subject"—drawling out the last word as contemptionsly as one who has a paient for specking through his nostrils can drawl—"of a dilapidated monarchy. Pil show yon how to insult a citizen of the glorious, free and independent United States of America on board his own vessel," and he rushed toward me.

Fortunately that vessel had a kind of rope ladders leading from the sides up aloft, up one of which I flew and was soon beyond hisreach, for he had a very sore leg and could not follow. Scated among the rigging I gave him several stanzas of "The flag that's burved a thousand years the battle and the breeze," which didn't appear to either edify or mobility him. He paced the deck in a kind of sullen, angry mood, till the other watch was called, when he went below and I came down. Whenever he turned his back for a few minutes that hook and fat pork went overboard and trailed in the Gulf Stream behind our vessel. As soon as he came on deck he'd glance toward the man at the wheel to see if I was near throw with the inevitable line in my hand. On spying me in my usual position at the stern, he'd make a bolt for me, with a "Didn't I tell you that nobody but a blamed Englishman would ever think of trolling in the Gulf Stream?" I always managed to escape him, though on several occasions I felt the tip of his shoe lightly touch a spot that is said to be more honored in the breech than out of if. In a minute he'd jerk the line on board and throw it, book, bait and all, contemptuously aside. Hour after hour and day after day I plied the forbidden avocation of trolling in the Gulf Stream, whenever opportunity served, in vain. Hopeless despair seized me, and even the Irishman lost hope, and avered that he was no great lover of fish. The captain swore and railed at me, laughed and ridiculed me. Nay, he even went so far as to awake me at midnight by yelling, "Hadn't you better throw out your hook, Englisher? There're as good fish in the sea as ever were caught!" With a warm blessing on his Yankee cuteness I'd turn me o

go. Quietly raising myself I peered over the stern, when to my great joy I beheld a monster dolphin fast on the hook! With a yell of delight I shouted, "I've got one! I've got one! Britannia rules the waves!" and began bauling in. The captain barrely turned toward the stern, and drawled out through his nose, which seemed to be his principal organ of speech, "You've got one! You dan ed English fool, you! If you don't guit that stupid trick of trolling in the Gulf Stream!" It mill you with a handspike over your thick skull!" I banled away, till "the man at the wheel" "cried, "He loss one, and a whopper, too," when he ran aft as quiekly as his sere leg would let him. "Hanl him in quiekly, or you'll lose him. Give me that line." And, seizing it out of my hand, he haulted away as if his life and not the dolphin's depended upon the latter's being landed upon the deck. In a second he was over the traffrail and at our feet. What a beauty! Rainbows I've seen in many climes, sunsets I've beheld on the prairies, mountains and the seas, but my first, any only dolphin, surpassed them all in the rich blendings of its variegated colors! Would that I could have preserved it as it came from the sea; it would have been a treasure, a wonder, a thing of joy for evermore. The captain called all lands to come and see the pretty creature ere its eye became diin, and its pristine splendors had faded away. Quickly the brilliant hues were dissipated, and ere the fish had ceased to live the ciric surface became a dirty, leaden hue. I had had my revenge of that Yankee skippor, and glanced about the deck singing, "Rule Britannia Tules the Gulf Stream," I'll the whiz of a marline-spike as it flow by my lug (ear) reminded my that no matter how completely the Union Jack protected the Olivia it was no protection to me personally. Next day was Friday, how I regretted that it was not the achieved and while he was inspecting things above deck I skipped into the cabin, unfolded the beloved old flag, and fastening it with a couple of forks in front

sprit.

Next day I parted from Captain Townley. He was an excellent sailor: a sober, careful commander, a really good-natured fellow, notwithstanding his little eccentricities, and possessed of nobleness of heart that distinguishes the genuin-American, both North and South of the imaginary division line. A week or so after my return to this city I received a X. Y. Heard containing a complimentary address the passengers—Jew and Gentile, American citizens and a British subject—had presented him with, and that was the last I heard of him. Should it ever be my lot to go to see again I hope it may not be on the first of April, and trust that I may find a worthy, generous soul like him skipper of the vessel.

\*\*Toronto Gran Club, 1880.

THE PARR OR SALMET .- English anglers are discussing the old question whether the parr is a distinct species or a young salmon in the columns of the Fishing Gaztle. The question was settled so long ago that we are surprised to see the answers called forth by some writer who displays his igrance of natural history by declaring them a distinct fish. There are just such men in America but no one heeds them.

Woodmont Rod and Gen Club—Washington, Dio. 29— Editor Forest and Stroom: I promised you that when our fishing season closed I would furnish you with our score. Our season commenced May 16 and closed October 20. It being our first season since the organization of the club, there were only occasional small parties fishing during the entire season. Yet we have scored as follows: Caught 41 black bass, weighing 286/16s.

A. H. Evans,

Pishing in Ongida Lake.—A correspondent says that notwithstanding the poaching with nets there are still fish in this lake of Central New York and that seven barries of "pike" (wall-eyed pike or pike-perch) were sent to New York in the middle of last month. The fish weighed from one to seven pounds, and they are still catching them. The trong put in the lake by the State some years ago have not bear borned from.

Large Black Bass—Galesburg, Illianis.—A few days since I was in Batavia, of this State, and had the pleasure of meeting your correspondent "Hix." Of course I reed not vouch for his eminent trustworthiness. In the office of B. Kindblade I saw an outline of a large black bass (small

mouthed) caught at North Aurora by Wm. Messenger. Its length was 23 inches, and it weighed 7 lbs. 11 oz. The outline was trawn and the size and weight taken at the Internal Revenue office, Aurora. This is the statement recorded upon the paper upon which the outline was drawn. My only observation is that the fish must have been in excellent condition or else treated with a does of pebbles. T. R. W.

# Game Bag and Gun.

## GAME IN SEASON IN DECEMBER.

Mosse, Also americana.
Caribool Rungifes caribou.
Elk or waptif. Cervise acadensis.
Red or Virghida deer, C. zirginimnis.
Squirels—red, black and gray.
Hares—brown and gray.

Hares—brown and gray.

\*\* Ray birds "generally, including various species of plover, and-pher, suite, curiew, dyster-earchier, suite, bind, phalaropes, accests etc., coming under the group Licanoide, or shore birds. Meny States permit prairie lowi (pinnated grouse) shooting after Aug. 15.

MR. SCOVEL TAKES A SHOT AT THE GRAY EQUIRREL.

CAMDEN, N. J., Dec. 25. CAMBEN, N. J., Dec. 25.

ANCHO PANZA" and "Border Rufflan," have through the brilliant and healthful pages of the Pouser asp. Stream, kindled anew in my pulses all the old love and the co-clistory ardor with which I bunded the gray squirrel along the Ohio Ever and the Kentucky hills, and around the hill sides and through the back woods of old

and around the hill sides and through the back woods of old Hanover theouty-flee years a 10.

My youthful Sydney, who never knew the wild sports of the West, may have field held his maiden rifle at a turtle dove or a chickee in J. rsey, but is profoundly unskilled in the keener pleasures of the Indiana forests, where twenty-flee gray Equirrels frequently rewarded the Reverend Docton—and myself for an afternood's sport, when we "skipped" the venerable but sweet tempered Surgis, professor of Greek, and if we were not 'up' "the next morning in accurate translation of how Xenophen's soldiers when they saw the ocean exclaiment. claimed:

of now Academics somers when they saw the ocean exclaimed:

Hallatts! Hallatts!

"Bethou greeted thou minite sea,"

we were smart, though to placate that most amiable and accomplished Greix scholer by sending him one half of our squirrels. He was a quest Rabelen, with all the ancient gournets love for the cleanit et bliendid, not without considerable meral force, and that Professor Sturgis could handle a birch rod a priori and otherwise, the Reverend Doctor—can tell with perfect truthfulness, if he will recall the days "when we went gypecying" at fifteen. But the most pleasing recollection I have of the Professor is as he smacked his lips at the story of the "Pions Zheess" as he cooked his fat venice of those festive if ancient days, Alast how changed. The Reverend Doctor in those days got his share of the lickings, but had the most of the fur. Now he preaches and I practice. He "Alluces to brighter worlds."

while I have followed the quiddets and quillets of the law, while I have followed the quiddets and quillets of the law,

"Allures to brighter works
"Allures to brighter works
And leads the way,"
while I have followed the quiddets and quillets of the law,
taking an occasional shy at politics, which have been called
the sum of all the sciences by Madame de Staal, while some
of the "latter day statts" of politics have made it look more
marvellously like the "sum of all the villatints". After
listening to my friend, the worthy Docter, for an hour, discoursing on the "exceeding sinfulness of sin," I could
lardly believe he was the same boy whose bide (like my
own) was so industriously tanned by the venerable but somewhit irascible Sturgis.

"Sancho" tells with great exprit how he tied his hat to a
bush, and, watching the willy gray squirrel, hied himself to
the other side of the tree and tweaked the bush with a string
till the animated rodent would rush into the very jaws of his
trusty Westly Richards. This is nester than any trick I ever
played on the mischievous but gamy squirrel. And I dislike to tell it, but if the truth of squirrel hunting must be
given I will admit in a kind of a plea of confession and avoid
ance that the Reverend Doctor has of late called me into his
study, and after we had spent a few hours in reading Rev. Dr.
Cox's admirable work on "Interviews, Historical, Memorable and Useful, from Disty and Memory Reproduced," or
after discussing some pages of "Butler's Analogy of Revessied Relicion." my Friend would gently intinate that it
had never dawned on him till recently why it was that I was
always so kind as to juste on his going around on the other
side of the tree to get the first shot at the squirrel. And with
observation and the same and the spent after that a secaring him around so you could
kill him first." Now, the moral of all this is, that a better
way than Sancho's idea of a bush and a string to it is to have
a fellow hunter scare the equirrel over to your side of the
resurral bas so much curies its as a woman. Many of the

All lovers of the woods and streams will admit that the All lovers of the woods and streams will admit that the equirel has as much curio-ity as a woman. Many of the benuties of Tennyson nee fresh in ny u.ind, lecause 1 first gaw the well remembered lines in my pecket. Tennyson as 1 rat beneath the leafy shade of the heach woods, near old Hanover at Buller's Falls, waiting for the game to come out of his leafy r.treat. Not as lucky as the "Border Rufflan," I have never had three squirrels to fall at the same time, but I have killed half a dezen squirrels to fall at the same time, but I have killed half a dezen squirrels to fall at the same time, but I have killed half a dezen squirrels to fall at the same time, but I have killed half a dezen squirrels to fall at the same time, but I have killed half a dezen squirrels to fall at the same time, but I have killed half a dezen squirrels in one morning from the same herech tree, by stiting down quietly and waiting to accurately distinguish the boust in quo by the peculiar and familiar "half" of the equirrel, or eaching the sound of the nimble rodeuts as they lesped from one tree to another. It was with a double barried up and at my shoulder and a saticle of books at my side that I learned my "teleasure in the modely wocks to take," and read of the days of William the Sil-nt, how the bitter Badavaro says of the Dutchmen of that day (and july drinkers trey were) that if one of them "woke up soher he falt suce he was sick." And awong the most freeh jyens, bong and and innecent plassures of my life I count those sweet, bright days when the "May sun shed an mahor light, the rew leaved woods at a dawns between," and not Byyant, nor Shelley nor Wordsworth, ever reveled in diviner joy or more solid comfort and communion with

nature than did I, alone with my gun and my books, no co panion save the frisking squirrel or the occasio pigeon

pageon.

Now and then a companion student would share my joys on some fortunate Saturday, and one of these old friends has just written from far off Missouri in these words:

Now and then a companion student would share my joys on some fortunate Saturday, and one of these old friends has just written from far off Missouri in these words:

"Dran S.: If you were only seated at my side I would pour into your cars much of the poosy of my life since we drank in the pure air of the Hanover Hills, richer and better than the 'wine divine of Zansovine."

"I have tasked something of fame since last we met; known something of what the world calls love; but now, when I have seen treatly-five summers 'since we went Cypsying. I often wish at highfall that you were coming known to me, and if my arms are my heart quivers with yourning to see that woll remembered orm and hear again that stately read of thine. And yet how few, the nearest and dearest constantly around me, ever suppert that the calmly practical business manis other than perfectly satisfied with his daily surroundings. But ah! we must not forget that the affections only are immortal. And the heart needs daily nourishment as well as our bodies. But alsa! how our days are shredded into fragments and our neights into frivolities, and there is little left to no but the fragrames of the proken was, go sweat, it is true, if only with the perfune of a passing memory."

But I will quote no more. Ah! dear friend of my yout, I say let us hope that we may neet again and renew our youth like the eagles, and it may be in the forestsend streams of far off Missouri we may revive and kindie over again the memories of other days. Priend of my yout! hall and farewell! and I will at least every day breathe an aspiration that I may, ere the day when the grasshopper becomes a burden, he locked in thy embrace, for it is Emercon who saith that such an hour as that come seven in this world to every concein seven in this world to every concein lead. But why do I wander from the gray sequirre! And it is the full of "Sancho" and the "Rufflan" if I have crown more didactic than the Reverend Doctor, my well beloved brother.

The young sequirrel, as I remember, cam

was my anomination; two men make a complement, and the fall is the better season of the year.

Instead of being hesitant about it fathers had better teach their children the use of the rod and gun.

Walter Scott says he who loves field sports hates to do a

Walter Scott says he who loves field sports nates to uo a mean thing.

At d Gov. Hawley says you need not be "afraid to drink to the dark" with the man who insists on putting a covey of qualit on the wing rather than kill them on the ground.

I would like to see the Poisest and Stream more frequentity read in our rehool rooms and colleges.

But, Mr. Editor, my Christmas dinner is over, though our turkey was not as wild as Maj. Merrills, and my cessay is certainly like Montaigne's in one thing, it is discer ive. My household gods are backing before the wood fire in a low-down grate in the parlor. Kriss Kringle has been more than kind to the boys and girls and I must room with the children the rest of the evening; squirrel hunting makes me a boy again.

J. W. S.

## COWEEN SHOOTING.

COWEEN SHOOTING.

Sr. Davids, December 9.

I PROMISED that I would send you some account of our feebly it is true) to present a description of our fured and feathered friends of the past and to-day, which may perhaps prove of some little interect to those of your readers who have visited this, "the old Niagara district," rendered somewhat famous, historically, as a frequent battle ground in the early history of Canada. Our little village is situated a short distance from Queenston Heights, the scene of the memorable battle of that name which was fought between the Americans and British in 1812, during the "little umpleasantness" which existed at that period.

Through the village runs what, yoars ago, was a romantic front stream of clear spring water, but long since converted into a mill race. At its source, about a mile above the village, are numerous little woody dells and black boggy swales, favorite haunts of the woodcock; and here, every spring, some eight or ten couples repair to rear their broods and live in luxury and security until glorious October. Forty years ago this little stream, bowlered on either side with plentiful cover, literally teemed with cock for three miles from its rise, while the (at that time) but imperfectly drained meadows below afforded grateful resting and feeding grounds for immunerable super in their spring and fall migrations. Amid the rocks and thickets close by hundreds of rabbits make their homes; and here in the full a covery or two of partridge can generally be found. In this connection let me just say that here, after October, we find partridge as often in the trees as on the ground; indeed this year the tree appears to have the preference, and it don't tend to lessen the exaction usually attendant on such uncertain shooting as partridge in even their happiest moods, to have several "white" out of the trees some twenty yards away, of course taking the opposite skieleful the pread and rendering a shot impossible.

Twenty years ago the wild rabbit was a total stranger in thi

ceptive. When wounded they dive like a flash, and swim

ceptive. When wounded they dive like a flash, and swin long distances under water. Great numbers of them fly nightly over the village on their way down from the river above the Palls to Ontario Lake.

The most comfortable and favorable method of pursuing this sport is to procure a good sized, roomy fishing boatfor, unlike ordinary ducks, they do not seem to fear a beat, so long as the hunter uses ordinary caution in keeping himself out of sight—a pipe and tobacco and some decays. Start about 7 a. M., if the weather is favorable, from Nitgara to the mouth of the river, anchor the boat and "lay low." Resting on the lake, a short distance out, thousands of birds will be seen, and their peculiar, musical cell, "Itok Huk! Cowen!" clerly tells us why they are so named. Soon a flock, the advence guard, get under way, and head up the river for their "first course," which in this case will be flish, more or lees, as they have luck; and prastign near the heat the ball opens. If our friend, the sportsman, is a novice it will surprise him how many fancy shots he will make without taking anything into camp. We will surprise him bow along the water. He knowingly fondles his Greener, and mindful of the boatman's caution to "put it sheed of them," lays her on, follows carefully, and publs; after which he smillingly looks over the barrie's to see if he heavit, killed both. "Two feet belind the last one," quietly remarks the punter. The smile fades away, and as he stares after the diminishing birds. Although he doesn't say anything, a blood/birsty look comes into his eye, and he grits his teeth and makes up his mind that the next one won't have a chance to grin at him like the last outple. And now book after flock, single pairs, over him, right, left and behind him, cone thick and fast; and our bewildered sportsman, growing excited, makes the other ond of the boatman busy dodign the revolving gran muzzles, of which the air appears to be full, as he swings them from side to side.

He bangs away both barrels into a flock, and seei

side to side.

He bangs away both harrels into a flock, and seeing one fumble out, thinks: "Well, there's one fellow won't fool me any more." But as the bird sirikes the water the spiny the single and down he dives the instant he strikes; the ruffled surface smoothes over, but no dead coween decorates it. "Hello! well, now where the deuce did he go?" And our friend's mouth flics open so far that the punter feels a trifle

"Hello! well, now where the deuce did &c go?" And our friend's mouth flies open so far that the panter feels a trifle nervous.
"No use looking for him; he's only wounded, and'll come up somewhere near Toronto Bay," says that worthy; for unless killed dead—and they are about as hard to kill as a buil—it is almost useless to follow them. Perhaps, after a couple of hours, the tyro may lave killed twelve or fifteen birds, and fired fifty shells to do it with. The sport is glarious, but none but the initiated may hope for good counts.

"The only regret one has after a good morning among the cowers is, cut bear? It is simply 'love's labor rost," as the game (2) he has secured is not at all a palatable dish, for it is notither fish, flesh nor good red herring, although partaking largely of the nature of all three, being exclasively a fish feeder; and while one might keep Lent on them, yet as an entre I think I should prefer even the 1ed herring. Still, they do find their way into market, denuded of their plumage, and transmogrified into wild ducks by the fishermen, who catch them in their gill nets, ser deep in the lake for whitefish, when, as the birds are in hot pursuit of some of the smaller fishes, they run their loads into the meshes, and being mable to extricate themselves, are drowned. They are generally purchased by conditing strangers and recently imported boarding-house keepers, who think to secure wild duck for their guests at bull beef figures. When, however, the aroma of the roasting fowl begins to thoroughly permeate the premises, the long suffering boarders, with one cord (nem. cen., as it were), move out into the woodshed. A few ducks, principally blue bills, are killed in the river camp in the back yard funds succeined and fish like smell." A few ducks, principally blue bills, are killed in the river leaven Queenston and Nigaara, ancient and fish like smell."

the eddies below.

The Old Squaw on Fresh Water—Niagara, Dec. 27—Your issue of the 23d says, in speaking of the "old squaw, that they are seldom seen on inland waters. The old squaw, or as we cell them here, coaveen, are common on the Niagara River its full length. A few years ago a friend and I shot fifty-six in a day's shoot, over decoys, and on any good day we could kill from ten to twenty. We shot them from a boat in open water, with no kind of a blind—just threw out our decoys and waited for them to come within shot. They decoy best in the spring, after they have paired. We consider them the hardest duck to kill that flies. They not only fly swiftly, but are very tenacious of life. They have regular flights in the morning up the river and about 4 r. m. they commence to fly down and stay in the open lake all night. Niagara.

## DUCK SHOOTING AND GAME LAWS IN CANADA

DUCK SHOOTING AND GAME LAWS IN CANADA.

I HAVE read with pleasure the many reports of your game laws throughout your States, and they are declifedly as near perfection as one could wish. The only trouble, or I might use stronger language and say curse, is the keeping of them, and to do this overy nerve must be strained and proper penalties inflicted on the law breakers.

Alas! for the true sportsman in fulls part of the world; he is to be pitied. With game laws as prollife of penalties as a dog of feas, yel he has no redress. I was unfortunate enough to dwell for a day on the thoughts of duck-shooting at Grondines, about sixly miles west of this place, on the strength of an assertion made by two sportsmen (2) as they landed from the cers with two game bags full—"Any amount of duck"—and next evening saw me on my way to the fruitin shooting grounds. I landed from the cars at a station about twelve miles east of Grondines, intending to try tor suipe on my way up, and as I had a good dog anticipated at least half a dozen brace. "Blessed is he who expects no lining." I ramped my twelve miles without seeing the frether of a snipe and reached my destination pretty much "down in the mouth." Afoot an hour before daybrenk, with everything prepared for a day on the beach, and a hight drizzling rain with moderate easterly wand, my spirits were a little lighter than the previous evening. I started, walked two unites for the punt and paddled as many more till I reached, the duck ponds, put my deceys in order, arranged my ambush, and expected. I might be expecting there yet. Saw a flock of five passing about half a mile to the north of me, and that was all the wild duck I saw that day. On my return to the house, raised a brace of some and brought them home with

me. That night at supper I asked the "maitre de la mai-

nnc. That night at supper I asked the "mattre de la maison" if any sportsnien had been up this way lately. He replied in the affirmative. "And did they get any game?" I asked. "No, but they bought a lot of ducks before leaving." So my two hotel sportsmen had been shooting with the mighty dollar, and I did not miss telling them so.

Previous to retiring for the night I took a walk around the house, and in the direction of the beach I heard a continual housing for which I could not account, but was soon enlightened by the fandlord. "They belong to hunters around here who shoot at night." This was eleven o'clock and the moon was commencing to put in an uppearance.

Next morning a trio of those midnight poachers inquired if I did not want to buy some ducks to take home. They were acquainted by the landlord of my luck. The had sold a lot to two gents that had been up there a few days previous. I did not buy.

did not buy,

I hired a team and drove about eighteen miles to an old did not buy.

I hired a ream and drove about eighteen miles to an own woodcock shooting ground and left the boy with the horses, and with a cocker, that much-talked-of log lately, bagged six and one partridge, after tramping about four hours. I afterward learned that two of those same poachers had killed twenty-three cocks on the same grounds about a week

afterward learned that two of those same poachers had killed twonty-three cocks on the same grounds about a week previous.

Now as I mentioned in the foregoing part of this letter, the protection our game gots is simply ridiculous. The two would-be sportsmen who bought the duck from those ponchers knew perfectly well they were killed at night and that it was in contradiction of the laws, yet they countenanced the offence. There is little or no note in loging complaints with the authorities, as such would end where they were laid. The public market is stocked with partridges, some farmers bringing in as many as sixty brace for sale. Not one of those birds were ever touched with shot, every one of them were shared and then taken and pricked with a sharp fork to show where they were short.

The only one of the game laws looked after here is that respecting 18th, and that is easily accounted for. Some gentlemen having an interest in a lake so worried the authorities that they at last named a fish inspector, and he does his work thoroughly, as we often notice in our papers the scizures he makes during the unlawful seasons.

On looking over some old files of our duly papers, dated Muy, I came across a copy of the game laws, on the one side, and among the daily items on the other, "First woodcock of the season, killed by Mr. P.;" and back for several years it has been a persistent course of rivalry between Mr. P. and the law reads, woodcock, etc., etc., not to be killed bofore August, yet they were always killed in May.

I am afrant there is no hope for us, unless some of the true blooded aportsmen chib together and worry the life out of the authorities until they do some definite good.

S. F.

## FISH AND GAME IN TENNESSEE.

THE autumn of 1880 was not so good for anglers as was the autumn of 1879, for the reason that the warm weather and drought continued so late and the rains set in so heavy and the cold weather followed so quickly. Nevertheless, we had our usual fall trips of angling, commencing about the 10th of October and continuing until frozen out. Our first trip in October was an unusually pleasant one, and although our catch was not so large as we anticipated, it was well divided among our party of six. Nor were our fish as large as usual, running all the way up from one pound to fourteen pounds. fourteen pounds.

Itige as usual, running all the way up from one pound to fourteen pounds.

After equipping ourselves with the best tackle, good teams, good wagons and tents and a good cook, we struck out for the Buffalo, a beautiful, clear stream in Perry County, distants eventy-five inles, over a very rough country road. We made the tity very pleasantly in one and a half day's travel, and located on the edge of the stream at noon of Thursday. The afternoon was spent in pitching our tents, resting, locating and providing for our stock. The forenoon of Wednesday was spent on a trip to Cane Creek, five miles off, for minnows. Having procured a thousand fine minnows, and partaking of a good dinner prepared for the minnow, and partaking of a good dinner prepared for the minnow eatelers, we were ready to lash our reels and go at it all right. The clouds were threatening and a high wind blowing. We did not venture out far from camp that evening. The result was about fifteen black bass, two jacks and a fine blue forked tail cat. We continued fishing until the next Tuesday might, taking, all told, eighty-live fish, the largest black bass being four pounds, the largest pick eight and a half pounds, and the largest blue cat fourteen pounds—many more than our party could consume, and as many as we deemed sufficient to carry home. Much of our time was interrupted by storms and rain. We had our guns along, and from them the party feasted daily upon mallard and teal ducks and squirries. We found the natives generous and as kind as could be, furnishing us with everything needed. A more hospitable people do not live than the people of Buffalo, nor does a finer stream run for fine fish.

Another party followed us a week later, and striking the

A more hospitable people do not live than the people of Buffalo, nor does a finer stream run for fine fish.

Another party followed us a week later, and striking the stream eighteen or twenty miles lower down, had much better luck and weather than we had, one of the party alone taking twelve black bass, all averaging over four pounds each, and one jack welghing sixteen pounds, besides many other fish. He was on a deeper part of the river, and nearer its confluence with Duck River, a famous fishing stream.

Another party went out later to Reelfoot Lake, 140 miles distant, and reached it just as the snow and ice set in. They had a rough time, but captured in one-half day's time sixty black bass, running from three to six and a quarter pounds each. They killed ten geese and a large number of ducks.

Now that angling is cut off by the rough weather, hunting

ducks.

Now that angling is cut off by the rough weather, hunting is the order of the day. Quali are numerous. A few pheasants and a few wild turkeys are the game sought with the gun. Squirrels, opossums and the red and gray fox are also abundant, with the gray hare, for the dogs. The summer was favorable for the qualt, and large numbers are being shot. I suppose now it would be an easy day's work for a good shot, with his dog, to bag fifty per day. We have a colored boy, Charley, who is an inveterate hunter, has a first-rate pointer dog and a favorite gun, improvised by himself. He takes them on the wing in true sportsama style, and his gun is an old army musket, with rifle bore, about one-half of the barrel cut off, leaving him a very short gun. He took a little walk round this evening for a couple of hours and brought me in ten as fine, fat birds as you ever saw in the New York market. One evening last week he came in with forty qual, and it is common, every day's work to bring in two or threedozen birds. We find from one to a half-dozen coveys on every farm, and the farmers are very liberal, all allowing hunting is Now that angling is cut off by the rough weather, hunting

upon their farms without objection if the hunters will keen upon their farms without objection if the hunters will keep away from the reports in your paper I am inclined to think we have as good country, and game and fish as fine and abundant as any county reported. We have good hunters, good guns and tackle as anybody, as hospitable people and as cheap living, and as good as can be found. The expenses total of our party, stove and cook, and for fourteen days, cost us, all told, \$5.16 each, and our county is as easy of access as any. We have splendid railroads leading to the hunting, grounds and the hunter can always find willing hunters to go with them, free of cost.

J. B. M. Franklin Tenn, Kor. ers to go with them, free of cost. Franklin, Tenn., Noc.

## REYNARD'S WILES.

REYNARD'S WILES.

"TOR ways that are dark and tricks that are vain" a red fox will compare favorably with any living creature, not excepting "Ah Sin" himself. Among the many resources at his command to outwit his natural enemy, the hound, Reynard prizes most dearly a rail fence, a road and the frozen surface of a river, and in these days of deep snows will rarely fail to avail himself of one of these means of safety. The rail raises the line of scent too high for the hound's nose, the frozen river and the well beaten road, besides the good forbing they afford him, retain not a particle of the tell-tale scent so dear to the pursuer.

On two occasions F, and I, as well as my keen-scented old hound Jeff, had found our fox vanish into thin air at one particular point, and though the snow lay deep on the ground, and by it we could see that the fox had come into the road, no amount of perseverance on our part revealed to us what had become of him after that. In vain we walked up and down the road in search of the tell-tale track; not a break in the even surface of the snow could be found, and we were obliged to return home and own ourselves outwitted, while Reynard, no doubt, sat watching us from some safe distance, and saying with Puok, "What fools these mortals be?"

But every fox no doubt, set well as every doe must.

usuance, and saying with Puck, "What fools these morials be?"
But every fox, no doubt, as well as every dog, must have his day, and the mystery was solved on the next hunt. Enseanced on a high piece of ground, and while the hills echoed with the mellow voice of the old dog, I saw the fox slip into the road, follow it for a hundred rods, then by one high leap land on top of a mil fence which ran at right angles with the highway, and bounding along the uppermost rail nimbly, reach a piece of plowed ground which the wind had blown bare of snow, run across the plowed field to within about ninety yards of me, when, jumping on a big rock, he curled himself up and deliberately lay down to watch the effect of his little game and enjoy the discomfuture of the hound. I dared not move, so opening my breech-loader I slipped in a long-range thread-wound cartridge, took careful aim, and sent a charge of double B shot through Reynard's handsome fur.

But foxes know more mischierang tricks then this exist.

bound. I dared not move, so opening my breech-loader I silpped in a long-range thread-wound cartridge, took careful aim, and sent a charge of double B shot through Reymard's buddened for.

But foxes know more mischievous tricks than this, and dear to the heart of every old fox is a scamper down the smooth surface of a frozen river, which, besides offering an opportunity of escape, often permits him to take die reverenge on his troublesome enemy the hound. For Reymard is versed in physics and knows full well the difference of weight between himself and his pursuer: instinct teaches him to a nicety the exact thickness of ice required to bear his light fur-covered body, and that on such ice his more ponderous enemy may not venture safely. If you doubt all this stand, as I often do, so as to look down some swift stream shoost frozen over and covered with light snow, and note how the trail of the flying fox gracefully curves toward every hole and invariably skirts the very edge of every piece of swift open water. Many a good hound has ended his days by venturing to follow where his tricky enemy did lead, and I imagine if foxes ever laugh, and they certainly look as though they did. Reynard must laugh as he hears the echo of the hound's deep bark suddenly die away and knows his game has been successful. But we did not laugh, F. and I, when all at once silence settled over the hills, but a minute before musical with the cheery notes of old Jeff's voice, for we knew the dog was on the treacherous river, and without losing a second F. hurried toward a piece of open water not far distant. On reaching it our fears were at once realized. Caught in the swift current, benumbed with the cold and exhausted by the attempts he had make to save himself, old Jeff lay with his head on the ice, his limbs almost motionless, and whining piteously. There was no time to be lost, and unable to resist the dog's mute appeal for help, F. stretched himself on the treacherous cie, esized the animal by the neck, pulled him out, and in animute

## OUR DETROIT LETTER.

OUR DETROIT LETTER.

DETROIT, Dec. 31,

IllE next meeting of the Michigan Siate Medal Association will be held here on Tuesday, Jan. 4, when there will be an extremely lively contest, if one may judge from the present state of feeling of the prospective concessants. The medal is now held by Edward S. Barbour, an amateur, who does comparatively little trap-shooting, but who sometimes steps to the front with an astonisher. He won the medal by killing eleven straight birds, and they were fast flyers too, wresting the honor of its possession from that splendid shot, Ed Gillman. This Association works under English rules, but it has a sort of managing committee who insist on handicapping many of the recognized good shots, sending them back to thirty yards to pull against their less eminent opponents' at twenty-one yards. This is not a matter in which I have any personal concern, but I cannot help hearing a good deal that is said about it. The fact is, there is considerable dissatisfaction with the action of the committee in this respect, many believing it to be unnecessarily arbitrary, and a hardsalip for those who channer to be skillful shots. The committee is composed of John E. Long, J. V. D. Eldredge and Wm. J. Mason, all irreproachable sportsmen and gentlemen, whose motives it would be presumption to impugn; and yet they are severely criticised for their official conduct. One prominent member of the Association, who lives in the interior of the State, has practically withdrawn on account of the handicapping regulation. He asserts that inasmuch as the Association's prime object is the promotion of field shooting, there is not only nothing to be gained by such a regulation, but that it breeds rebellion and a sense of injustice on the part of those at whom it is directed. I only echo sentiments which I have repeatedly heard expressed,

and I give them to the readers of Forest and Stream as a wholly disinterested spectator of the doings of the association. I do not think there is much room to doubt that the management is a little primitive in its methods and that a decided change is imminent. It may be of interest to those not acquainted with the fact to be told that the medal over which there have been so many spirited and spleadid contests remains the property of the association until some member shall have won it three successive times.

This day ends the game season, and I assure you it has been a lively one in these parts. The hunters have had merry times and the dealers and commission men lave had their hands full of business. and I give them to the readers of FOREST AND STREAM OF

times and the dealers and commission men have had their hands full of business.

A small party of Detroiters went down to Maidstone Cross, in Canada, last Monday for a week's frolic among the game, but with the thermometer at twenty-two degrees below zero they found rather indifferent comfort. They ran upon plenty of quait, participes and wild turkeys, but the twenty-two degrees childed their ardor and drove them home with a bag composed of forty-three quait and fifteen participes.

E. H. Gillman was presented yesterday by James Moore, of Toledo, with a Gorden setter puppy, now five months old, sired by Grouse; I do not know the dam. Panciers herealout affect to see some mighty promising points in the puppy.

bout affect to see some migray promising properties. The Point Mouillie Shooting and Fishing Club will hold its annual meeting here next week, and on the 12th of January the State Sportsener's Association will meet at Lansing, under the nose of the Legislature, which body will be asked to make some needed amendments to the game laws of this State. I shall keep the readers of Folest and Sturzam informed of everything of interest or importance in that consection.

## THE SILVER LAKE STAND.

Editor Forest and Stream:

Editor Forest and Stream:
In your issue of December 23 I see that a Mr. "X." has
delivered an opinion on the wild geese shooting at Silver
Lake, an account of which you published in the preceding
number.

He is entirely welcome to his opinion. There are others

number. He is entirely welcome to his opinion. There are others whom I think might differ from him, and I should like to be allowed a chance to say a little in regard to this shooting, but not for "X." whose article is written in such a manner as to make it undesirable to state anything for his benefit.

The writer had been shooting all tridges for the benefit of health and for sport, and was very kindly invited to take up his quarters at the before mentioned stand at Silver Lake while inmuling the vicinity for qualks, and the interest and pleasure he took in seeing the manner in which the live decoys were handled was very great.

To be able to turn geese from their flight far overhead, and then light them—birds headed by a shy old gander that most likely has traveled the route back and forth from the far north for years—seems to me to require great skill, and I think that no man, sportsman or not (unless we except Mr. "X."), can be present at such a time and not enjoy the excitement. The number of birds usually shot at, as near as I can learn, varies from five to eight, and the shooting is usually thying, as well as in the water where they are often scattered as not exceed of the crosse billed etc.

can learn, varies from five to eight, and the shooting is usually liying, as well as in the water, where they are often scattered, and several of the geese killed of the number mentioned in the last article were shot down at handsome distances. The "butchery," so called by "X," as nearly as I can see, consists in now and then getting a chance to decoy, and shoot at a bunch of goese—a small part of the thousands upon thousands which fly by, far overhead. Why, the whole number killed hat year's fall and this at this stand amounted to less than seventy each season an average of little more than one each day during the fine the stand was occupied, and I believe this number may be killed in the West in three or four days, and no doubt, perhaps, by some of the readers of your paper.

paper.
I happen to know that the owners of this stand are men who go there for real enjoyment and for rest from hard work

who go there for real enjoyment and for rest from part work and care.

I would also say that of the many with whom I have talked in regard to the shooting in question, perfect gentlemen and good sportsmen, not one has put forth an opinion like that from "X.," and I believe there were none of them who would not have enjoyed being present.

B. C. M.

I have long been a reader of your paper, and am pleased to say I like it better and better. Its typographical appearance is very much improved, and the tone of its editorial and correspondence tend more and more to the elevation of a sound moral standard among its readers. The term "Gentlemen Sportsmen" was suggested to my mind by reading the well-timed reply of "X" in regard to the Silver Lake performance. Why, Mr. Editor, the pot hunter, who hunts for the market as a means of support for himself and family, is a prince in comparison with some "Gentlemen Sportsmen" we read about.

prince in comparison with some "Gentlemen Sportsmen we read about.

Not long since your paper contained an account of a party who made a trip through Maine—among them a notable author of works on sporting—where it was stated they bagged fourteen deer, closing up their performances Oct. 5. They had commenced the 15th of September, but they did not state how many of them were shot during that month—the close season. It seems improbable the deer should have been all killed in October. If not, were they "gentlemen sports—one?"

Men go out upon the prairies and shoot buffaloes for their Men go out upon the prairies and shoot buffaloes for their tongues, leaving the carcasses to rot or to be devoured by wolves; others enter into a competitive arrangement to see how many ruffed grouse, ducks, squirrels, woodcock, etc., they can bag in a given time, slaughtering indiscriminately everything their eyes rest upon. Are these "gentlemen sportsmen?"

everything their eyes rest upon. Are these "gentlemen sportsmen?"

I have known members of a Game Protective Association to shoot coots by the score for the fun of the thing, and bring them home to rot, sometimes making Sunday their special gala day for this purpose. It would seem that the birds should have at least one day's rest in seven, even during open season. Are these "gentlemen sportsmen?"

But I will not weary you or your readers. As I before said, I am glad something is being done to elevate the moral tone of our people in regard to game. Let us all see to it that good laws are enacted and enforced, and frown upon and denounce, so far as our influence extends, the ruthless butchering of game that is not utilized for the food of man.

Deta Vosiscem.

We have received the Constitution and By-laws with the Rules for Trap, Rifle and Pistol Shooting of the New York State Association.

## THE GAME LAW REVISION

THE final meeting of the committee on game laws of the

THE final meeting of the committee on game laws of the Long Island Association was held at the Pountain Gun Club reoms Tuesday evening, January 4, Mr. Abel Crook in the chair. Mr. Geo. A. Chappell read the following statistics: Fish annually frozen in N. Y. City, 950,000 lbs.; fish annually frozen in Boston, 200,000 lbs.; fish annually frozen elsewhere, 5,700,000 lbs.; total, 6,850,000 lbs.

The speaker recommended that the following should be the minimum weight of fish caught for market: blue fish, 3 lb.; striped sea and black bass, 4 lb.; weak fish, 3 lb.; porgies, 4 lb.; striped sea and black bass, 4 lb.; weak fish, 3 lb.; porgies, 4 lb.; striped sea and black bass, 5 lb.; weak fish, 3 lb.; porgies, 4 lb.; striped sea and black bass, 5 lb.; weak fish, 3 lb.; porgies, 1 lb.; willett, 4 lb.; butter fish, 4 lb.; flounders, 4 lb.; Spanish mackerel. 1 lb.; eels, not less than 2 inches in length. A close season for shad from June 1 to March 16, and the smallest caught must not be less than 3 lb. weight; yellow perch, 4 lb.; sum fish, 3 lb. Salmon and brook trout—the close seasons remain as they are and no fish weighting less than 2 oz. to be caught, and in the counties of Kings, Queens, Suffolk, New York and Westchester the limit to be 6 oz. This was Isid over for future discussion. discussion.

discussion.

The game laws were taken up and the following changes recommended: Deer—Open season from September 1 to December 1, and marketmen be allowed to freeze all that comes in before January 1, provided it was killed in season, and then to furnish an inventory of what they have on hand to an officer appointed for that purpose; and also to make an atilidavit every month of the amount sold. Hounding of deer to be strictly prohibited. Sourrels—Open season from November 1 to February 1.

Quall—The open season to remain as it is, but the market—men to have the same privilege of preserving as with deer.

to be strictly prohibited. Squirrels—Open season from November 1 to February 1.

Quall—The open season to remain as it is, but the marketmen to have the same privilege of preserving as with deer.

Woodcock—Open season from September 1 to January 1.

Grouse—Season to remain as it is, with the same privilege of preserving as with deer.

The following suggestion by Mr. Furey, of the Concy Island Rod and Gun Club, was adopted:

"No person shall use a drag net of any description in the waters of Coney Island Creek or Gravesend Bay between the first day of February and the first day of October. No nets, seines, gill-nets or fykes shall be set within five hundred yards of low-water mark along the land known as Coney Island, from the mouth of Coney Island Creek to the westerly end of said land, and known as Coney Island from the mouth of Coney Island Creek to the westerly end of said land, and known as Coney Island Point, said land bounding Gravesend Bay southerly and westerly, from the first day of May until the first day of October. And no nets, seines or gill-nets shall be used in the waters of Coney Island Creek or Gravesend Bay the meshes of which shall be of a less dimension than two inches square. Except for cel and flounder fishing, hoop-nets with sultable meshes may be used within said Gravesend Bay between the first day of October and the first day of May.

"Any person violating the provisions of this section shall be deemed guilty of a misdemeanor, and in addition thereto shall be liable to a penulty of first dollars. Also all nets, seines, traps or other devices forbidden by this section are hereby declared contraband, and any person finding the same in any place where they are forbidden is hereby authorized to destroy such contraband articles, and no action for damages shall lie against him for said destruction."

A committee of three were appointed to draft a complete bill and to bring it before the Long Island Association at an early date. The following gentlemen were appointed: Messrs. Purry, Chappell a

## OUR PHILADELPHIA LETTER.

T is very evident that we are to have a winter of unusual severity and one particularly trying upon all game birds of the gallianceous order. Already three snows have fadlen, and at the present writing a fourth is adding to the depth of he white mantle which now completely covers the country and renders it difficult, if not impossible, for either the pinnated grouse, rufled grouse or quail to obtain a scanty livelihood. The open season is not yet closed, and we hear of quail being killed by the sportsuma, and whole coveys, or what remains of them, are daily trapped or snared by the country posacher and sent to market before the law prolibits their being offered for sale, advantage being taken of the snow; and the traps and snares set in cleared and baited spots, to which the quail is lured by trails of chaff and straw which are engerly followed to where the grain has been deposited. Unless great effort is made to protect and help them through the winter it will be found that, as it was eight or ten

through the winter it will be round that, as it was eight of ten years ago, we will have little or no shooting for two or three seasons following. As it is we doubt not that the wisest rourse to follow (certainly the most humane one), would be for the sportsmen to abstain from quail shooting next autumn: indeed if we are to have a continuance of the present weather, and all our wise ones predict many more snows during the winter that has just begun, it will be absolutely necessary.

snows during the winter that has Just beguin, it will be absolutely necessary.

Sportsmen's clubs and game protective societies should house and feed all the quali they can purchase, at the same time persuade the furner to care for the birds that will most certainly seek the barnyards for food. Not only has the poor quali to weather a severe winter, but this season we are told quality to weather a severe winter, but this season we are told. quail to weather a severe winter, but this season we are told there is an unusual number of hawks, which will add to their

there is an unusual based of persecution.

We have no doubt you will receive many letters on the subject, and we trust Forest and Stream will be prominent and pay particular attention to the matter, which is one of vital importance to the preservation of the quali from almost attention.

and pay particular attention to the matter, which is one of vital importance to the preservation of the quail from almost total extinction.

Prairie chickens by the car-load are coming into our market, frozen birds, by cheap freight, that sell for a song. It is always so after cold weather and heavy snows, when the poor bird can be casily slaughtered. Trappers are triumphant now and reap a harvest. This is a season when we may expect cheap and poor game all crowded in on the market to be disposed of before the middle of January, when our Pennsylvania hav prohibits the offering of most varieties.

There has been little or no duck-shooting at Havre de Grace, Bush and Gunpowder rivers for the past ten days or two weeks, owing to the closing up of the feeding grounds with ice. On the Jersey coast we learn of poor fowl shooting, brant being both wary and scarce.

BRIGHT AND HEALTHY—Philadesphia, P.A.—The FOREST AND STREAM is bright, healthy, and keeps alive the generous spirit which like the light "hever yet on some or a few in a part of the genuine sportsman's character. John Committee of the genuine sportsman's character.

## MICHIGAN SPORTSMEN'S ASSOCIATION.

THE Michigan Sportsmen's Association for the Protection of Game, Fish and Birds, will hold its sixth annual session at Lansing, commencing Tuesday, Jan. 25, at 2 r. M., and continue one and a half or two days. Headquarters at the

continue one and a half or two days. Headquarters at the Lansing House. Every local club or society organized in the interest of game and fish protection or propagation, improvement in markmanship and outdoor recreation, or the study of the natural history of game animals of the land and water, in the State, is earnestly desired to send delegates to the number of five (or less) to this meeting, and individual sportsmen and citizens interested in the objects of this association are invited to attend and become individual members of the State association, and be entitled to all the privileges of elected delegates.

association, and be entitled to all the privileges of elected delegates.

Contributed articles and essays upon any subject of interest to sportsmen, naturalists and students of nature on laws for the protection of game animals of fur and feather and insectivorous birds; on fish laws, including propagation as well as protection; on trespass laws, and the mutual rights of sportsmen and land-owners; on enforcement of game, tish and trespass laws; on nomenclature, both popular and scientific; on sporting dogs; on hunting, angling, guns, powders, projectiles, experiments, observations, etc., are requested from every source without further solicitation. Contributors who are unable to attend will please send their articles to the Secretary at Lonsing, care of Lansing House, who will read them at the meeting. This will be one of the most vital as well as interesting meetings ever held by this association. The wanton slaughter of deer for the hides only, and the fact that not less than 15,000 deer, killed mostly by professional market hunters from other States, were shipped out of the State to Eastern

ter of deer for the hides only, and the fact that not less than 15,000 deer, killed mostly by professional market hunters from other States, were shipped out of the State to Eastern markets during the three months just closed, should rouse our citizens to a sense of the importance of preserving this valuable game animal in particular, for present and future generations, before it is too late. A large attendance is expected and desired.

E. S. Holmes, President, Grand Rapids.

H. B. RONEY, Sceretary, East Saginaw.

Indiana Quali. Shooting—Fairland, Ind., Drc. 25.—I am a life subscriber, for I could not be satisfied not to be abreast with the best thought of the day concerning matters pertaining to field sports, of which I consider the Forset and Stream the best exponent, by all odds, published in this country. Quali shooting has been almost unlin this part of Indiana this season. The snow has covered the ground almost uninterruptedly since the 17th of November, and previous to that time the grass, weeds and corn, together with the hear rendered anything like a good bag a matter of impossibility. The season closes with a fair number of birds to remain over for pronougating purposes should the snow. impossibility. to remain over impossionity. The season closes with a tair number of innes to remain over for propagating purposes should the snow, which is now fulling steadily, not be of a sufficient depth to cover up their food, thus rendering them much more liable to fall a prey to the pot-hunter, the trap and such vermin as usually prey on them during a hard winter.

usually prey on them during a hard winter.

I, in common with every other sportsman and dealer in the country, owe you thanks for the able exposition of the Dittmar powder. For some time previous I had refused to sell it on my customers, although using it myself carefully, and mixed with black powder: a shock not unlike, I imagine, a mild stroke of lightning admonished me not to use it too freely alone in a breech-loader.

C. W. W.

Another correspondent writes from Thorntown Ind : Another correspondent writes from Thorntown, Ind:
Mr. E. H. Goodman, of Philadelphia, his brother, Col. Sam.
Goodman; Mr. T. H. Ely, of Altona; John Cable, of Jersey
City; Gen. G. W. Russ and Russell Elliott, of Indianapolis,
and myself, of Thorntown, Ind., have just returned from quite
an extensive quail shooting trip in central Indiana We
found game picinty, but the early cold weather coming on deprived us of some sport. However the party was well
equipped, having a Pullman dining car, brought from Philadelphia by Mr. Goodman, the Superintendent. The weather
was so extremely cold, however, that we lad to quit. We
succeeded in bagging several hundred birds. Heffman.

Fox Shooting .- For the express benefit of our English exchanges we reprint the following from the New Haven, Conn., Union:

"Not for some years have the foxes been so plentiful along the line of the Shore Line road as this winter. It is no uncommon thing for the fox hunters to get four or five foxes, and they can't go out from Clinton, over through Madison, without starting up several. Thanksgiving the Stony Creek shooters went out and bagged several, and didn't go far. The Clinton shooters have been over the ground made famous by the Stannard murder and have also shot Reynard as he has been found along the shore. Morgan Pierson, Leander Stevens, Asa Watrous, Captain Albert Hubbard, George A. Ol-cott, Henry Stevens, Eben Buell, Warren Doolittle, Gilbert Woodstock, George Buell, W. S. Grimell and Hiram bee are among those who have hunted. Mr. Doolittle, it is said, recently killed a fox near his house in open ground. Henry Stevens got two shots without moving out of his tracks. Charles Lewis shot a fox down off Farm Island. He didn't kill it and it was afterward shot in the water, but it drifted away. Thanksgiving day Dr. Stevens shot his first fox at the west end of the town, and Charles Dee had the same kind of luck. A peculiarity of the season's work thus far is that some of the best shots have made bad misses and the auacturs have bagged their game." " Not for some years have the foxes been so plentiful along

teurs have bagged their game."

Was I'r A Dieram?—In the spring of 1877 I was attached to the Eighth U. S. Gavalry, Col. Shafter commanding, stationed at that time at Fort Clark, in Texas, near the Rio Grande River. It was often my duty to carry dispatches to the adjacent posts. On the occasion of the incident which I am about to relate I was on my way to Lieut. Van Vleet, in command of a small post on the Frio River, about seventy-five miles distant. It was on my return trip and I rode late to get to water; had picketed my horse, eaten my H. T. and coffee, lain down with my saddle and blanket, no shelter but the starry canopy above, with my carbine lying across my lap ready for an Apache or anything else. It was nearly 11 r. M. when I fell asleep. I must have sleep soundly two hours, when I commenced dreaming (2) that a panther was approaching me I secend powerless to move or defend my-self. Thus I lay on my back until he was within a few feet of me, when suddenly I awoke and sprung up into a sitting resition, grasped my carbine and put a bullet through the paint of a very large panther not more than fifteen feet dis-

tant and in exactly the place where I dreamed (?) he was. No more sleep for me that night, and as the gray of dawn was appearing in the east I was on my way with his skin to earry into camp.

Sam.

carry into camp.

Curry into camp.

Curry into camp.

Curry into a discovery and the carrick has been written any, so I will merely tell the measure of our success. Biggest bag any one day, about thirty-five, including everything, from canvas-backs to scoots. Though this number is small, yet we averaged well, getting more or less every day, according to the weather. Visited Knott's Island and found quail in abundance. I think a dozen bevies a day could be flushed there. Dogs worked well. F. A. Copeland has a rare one in Gyp—staunch and under easy control. Snipe not as plenty as usual. No trouble picking up a fairbag, though, whenever the appetite demanded a change from duck, pork and yam.

RIGHT AND LEFT.

West Florida—Clear Water Harbor, Fla., Dec. 19.—I have read in your valuable paper an account of the West Coast of Florida by the able pen of Al. Fresco. Having spent two winters and one summer on this coast I can indorse all he says about it to sportsmen, and would add for the information of parties who visit this section and do not wish to ship a boat that they can take steamer, or take passage on a schooler at Cedar Keys for Clear Water, where if they inquire for M. C. Dwight, who has a fine wharf and nice place, they can find the conforts of a home at reasonable cost, and also a boat and man acquainted with the coast down to Key West, which will enable them to visit the southwestern coast at little cost and with comfort.

Gun Trials—Editor Forest and Stream: Please allow me space to report trial of gun made by W. R. Schaefer, 61 Elm street, Boston, weight, 7½ lbs.; barrels laminated; 28 in., 12 bore; right, nodified choke; left, full choke; powder, 3½ dr.; soft shot, No. 8, 1½ oz.; distance, 40 yards; 30 inch cirals.

cle:
Right—211, 236, 271, 246, 261, 273, 243, 230, 253, 227.
Left—287, 284, 351, 332, 303, 360, 287, 325, 343, 300.
The gun was handicapped with poor powder, it being too quick and foul, the residuum forming dry, hard scales. Not laving regulation pads, did not test penetration, but the pellets were well driven in the boards supporting target.

Hillsborough Bridge, N. H., Dec. 24.

WARFIELD.

A Demoralized Fox—Clay, Pa., Dec. 23.—A fox chase brought together here about fifty good dogs, with fifteen or twenty ridors, all anticipating a good time, as the fox had been lately caught and was expected to make a good run. When turned loose, however, he ran only a short distance and then lay down. On being chased up three times he did the same thing. The dogs were then turned loose and soon came up with and killed him. The fox was caught in a nuskrat hole and supposed to bave been hurt in pulling him out. The sport proving so poor a good part of the company went to Brickerville, where twenty-five turkeys were "shot out."

Derayque, Iowa—Dec, 28.—Mr. J. Green and J. G. Peterson, each killed a large wild turkey within a few miles of the city a few days ago. They followed a bunch of seven through the woods and finally got a shot together with above result. A party of rabbit shooters killed a full grown wild cat but a short way out of the city limits, and a huge timber wolf was also bagged. Prof. Dangerfield, our taxidermist. has the two latter in hand.

WE SHOULD TRINK HE DID.—The Newton, N. J., Herald

As the hunting season is about closed, we hear the sport-"As the numing season is about closed, we hear the sport-ing men tell of the crack shots made during the season. We venture to say that Linden Tranger, of Walpack, has out-stripped them all on quall, he having killed a whole flock of fifteen in one shot, not a single one escaping."

Texas - Indianola, Dec. 23.-Since writing last the TEXAS — Indianola, Dec. 23.—Since writing last the weather has been dry, and now as good shooting as my one could reasonably desire can be had. Took a forenoon's hunt the other day—result, one fine goose, eleven fine ducks (of six different species), two Wilson snipe and one yellow legs. Started after breakfast and was at home for dinner at noon, and did not walk over 1½ miles.

WYOMING—*Chepenne*, *Drc*, 10.—Large game is plenty here this season. I was out last month on a hunt and bagged twenty-two deer and five antelope in five days. This is my first and only hunt of the season.

NORTH CAROLINA .- Ridgeway, Dec. 30 .-

NORTH CARGINA.—Raggeray, Dec. on.—The smooting mis-been good and the weather fine until yesterday, when snow fell to the depth of six inches, and the themometer now stands at 2 deg. below zero—colder than was ever known here. T. W.

The shooting has

Mr. Arel Crook (Bennett Building, N. Y. City), President of the New York State Sportsmen's Association, is ready to receive bilds from pigeon trappers for birds for the next State fournament.

## SHOOTING MATCHES.

Massachusetts Pigeon Shooting-Concord, Dec. 29.-Editor Forest and Stream: I see by your issue of the 23d inst. that the sportsum of Connecticut are to attempt to repeal the law against pigeon shooting. Would not such an effort on the part of the many sportsmen of Massachusetts lead to the repealing of the same law in this State?

DENTER'S PARK—L. I., Jan. 3.—Tenth regular monthly contest of the Long Island Shooting Club, for a gun presented by the club, shot for at 7 birds each, from 5 ground traps, handicapped rise, 80 yards boundary. Long Island Shooting Club rules:

## THE COCKER CLUB.

A T the solicitation of numerous correspondents, who are interested in the proposed formation of a Cocker Chib, seconded by the request of Mr. Geo. D. Macdougall, who has found the necessary correspondence much more voluminous than was anticipated and a serious tax upon his time, the Forest and Stream will undertake to do the necessary work preliminary to the actual formation of the committee.

The purposes for which the Cocker Club will be organized have already been set forth in these columns.

What we propose to do is this:

1. To receive the names of all persons who will express their willingness to join the Club. Having secured these,
2. To forward the list to each individual, that from it he

may select ten candidates for a committee of seven, who shall then take entirely into their hands the further work of organization; the seven men receiving the highest number of votes to be declared elected.

It will be understood that we are the passive agents to fa cilitate the progress of the Club, and will have nothing to do with influencing its character or membership. We shall attempt simply to perform the labor so laudably undertaken at first by Mr. Macdougall, and had not that gentleman declined to act further we should not have assumed the task.

We trust that our call for the names of all sportsmen who are interested in the subject will be met by early and numerous responses.

Send us your own name and the names of those of your friends who are interested.

## MORE ABOUT THE COCKER.

S the "Cocker-Spaniel" is justly becoming the fashion-A sine "Cocker-spanie" is justly leccoming the tanion—
able dog, and as every one seems interested in obtaining some standard by which they may be properly judged in
the future, the opinion of an unprofessional, though a lover
of good dogs, may not at this time be out of place.

For several years past I have been interested in spaniels,
which were diversely extraction to them, both in the kennel

For several years past I have been interested in spaniels, and have given some attention to them both in the kennel and the field. As a result of this experience I am satisfied that a spaniel will do as much work, in Ohio, on turkeys, grouse, quail, woodcock, snipe and ducks as a dog of any other breed. They can be taught, according to the preference of the hunter, to point like a pointer or give tongue when they approach game, and arc, withal, such busy little beings that it is a great pleasure to shoot over them.

A dog of the kind I have mentioned above I would call a cocker-spaniel, in the absence of a better name. Cocker spaniels I would have divided into two classes. 1st. Dogs that give tongue.

2d. Dogs that point.

cocker-spanied, in the absence of a better name.
Cocker spanieds I would have divided into two classes.
1st. Dogs that give tongue.
2d. Dogs that point.
The weight of these dogs should be: For males in good condition, from 27 to 33 pounds; for females, from 25 to 39 pounds. The color should be liver black, temon, or a combination of white with any of these colors. The constitution of white with any of these colors. The constitution of white with any of these colors. The constitution of fine. What I consider a model dog, in time Hesh, measures as follows: From tip of tail to nose, 37½ inches, tail, 7½ inches; chest, 22 inches, tape tightly drawn; height, 16 inches; chest, 22 inches, tape tightly drawn; height, 16 inches; com the tip of one cart to tip of other over the head, not counting feather, 15 inches; distance between centre of pupils, 27 inches; from tip of nose to beginning of forchead, 3 inches; coat, dark liver, rather course, but very glossy; length of hair along the back, from 1½ to 2 inches; ears, legs and tail only moderately feathered. His weight is even 30 pounds. His chest is large and hind quarters light. Such a dog has the endurance of a hound, and beauty unsurpassed by any member of the canine family.

In the parlor or the field such dogs are equally at home, and for general purposes "take the cake." Let the admirers of smaller and larger dogs hunt classes for their pets, or abandon them. My object with the modern cocker spaniel is to obtain the smalless possible dog that can and will do the best possible work in the field. I do not believe bench shows can ever create a standard for a hunting dog, nor can limited field trials do it. A compilation of the opinions of sportsmen competent to judge will be the only means of arriving at a solution of this difficult but Important subject. M. D. Circleville, O.

field trials do it. A compilation of the opinions of sports. men competent to judge will be the only means of arriving at a solution of this difficult but important subject. M. D. Circlecille, O.

Now allow me to say to all that just so long as this feeling of distrust and jealousy exists you will waste both your time and patience, and eventually you will be carried out to sea by the undertow. It is all folly to think you can make a standard to suit the fancy of any particular strain of cockers: for who has a strain that he can claim as his own production? In fact, to make it more plain, I will ask the question openly oyou all, Is there a breeder in America or elsewhere who has a breed of cockers that is easily identified among an open number of ten or more spaniels as belonging to any man's kennel, or is the acknowledged fruit of any breeder's careful study and unceasing labor? When you all 'hink the matter over candidly, I believe you will agree with me in saying its there is not. Breed your spaniels to the high standard of perfection, which is shown in the Lavarack setter, and neither yourself nor the world at large will find a standard or other guide to mark out its redeeming qualities. We need more good spaniels far more than we do a standard to judge them by. You will find by experience that a standard will not improve your dogs any. That must be done in a far different way, and I belteve you will agree with me in saying it is much easier to make a list of rules to follow than it will be to follow them. At least I will venture the assertion that many of you who are so enthujusatic in hurrying up the matter of making a standard will lose all interest in the cause you are so nobly defending now if you were to try for a couple of years at producing some particular marking in order to establish the above-named title to a strain. That is the labor and worry of a lifetime not to be gained in a day, no matter what your starting point may have been. The works of nature are fielded individual and the produce of th

After having read all the letters that have appeared in your paper relative to cocker spaniels and the proposed standard for judging them I think the letter of "Senex" in your issue of the 2d inst, has solved the problem. The majority should rule in all cases, and if the proposed committee is appointed as he suggests, the said majority should be satisfied. The proposal of "Leam" would only make matters much worse than they are at present, because the opinion prevails that the whole thing would be managed by a few interested parties in your city, and the consequence would be that if his idea were carried out many noted breeders and others would not only object, but would hold aloof from the proposed club. I hope, therefore, that the duty of issuing a circular in each number of your journal will not prove too onerous a duty for you, and we all will, of course, pony up to meet the expenses. My share is ready whenever it is asked for. Perhaps it would be advisable to publish a list of all the best breeders with their post-office address in the Forest AND STREAM, so that we can post our-selves as to who is the best qualified to act on this committee.

Toronto, Dec. 8.

As breeders we feel deeply interested in the controversy going on in the columns of the Forest and Stream on the modern cocker. We need not give our opinion on what constitutes a cocker, as there has been enough already said on that point for the present, but would take the shortest possible cut to bring about a permanent standard for this, fast cumning dog, and to bring this about would indorse "Seneye" plan, which was to have circulars gotten up by the editor of Forest and Stream, and sent out by him with his paper to every breeder and every man interested in cockers in the United States, and the three men that got the most votes to be the committee of three to establish the standard. This seems to us a fair and just way to bring this matrix about Would recommend that we deter our that good junges of the breed in question.

Would take Stonehenge's "Dogs of the British Islands" for a guide, and improve from that as best we can. We hope and trust this good work will go on and give this most beautiful and useful of all sporting dogs an equal chance with other breaks of dogs. breeds of dogs.

South Accorth, N. H., Dec. 23.

South Jeworth, N. H., Dec. 23.

I was very much pleased with the pictures of the dogs in your last issue, and have often wondered why there are not more of them. It is a good way to educate the readers up to the standard of the breeders. We cannot all reach the bench shows, and now that the little cocker is before the bouse for discussion, why don't the breeders of this useful dog give us the pictures of their ideal cockers, and let us pass judgment on them? We are all interested and anxious to see the different shapes advocated by the several breeders. I always supposed that the cocker spaniel was a well defined breed, and was really a miniature setter or a secter on short legs, but it would seem by the letters written upon the subject, and by the dogs I have seen in the bench shows, that almost any small spaniel would pass for a cocker. I have seen them with Blenheim heads and water spaniel coats, and all sorts of mixtures and crosses between the field, water and King Charles breeds, classed as cockers, and I begin to think that I do not know much about the breed. I always had the impression that the true field spaniel in color should be white and orange, like the clumber, and that the liver showed previous crossing with the Water spaniel, and the black some distant cross with the English retriever. I should very much like it if some one who has the ability would just take hold and straighten out the business through the columns of your paper, if you can give the space. the columns of your paper, if you can give the space

I think your correspondent is going too far when he wants to har out of the "Cocker Club" all sportsmen not breeding or owning cockers, for there are a great many sportsmen like myself, who own a few setters and pointers, that would like to join a club of this kind to become better acquainted with these little fellows. And are we all to be fired out simply because we own no cockers "and do not know one from a mongrel bull-dog?" C. E. S. Schencetady, N. Y.

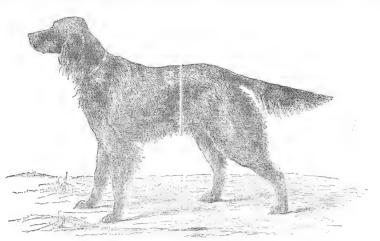

mongrel bull-dog?"

Schencetady, N. Y.

Editor Forest and Stream:
In answer to "Cave Canem," and to defend my expressed wish to have two classes for spaniels, large and small. I have a few quotations from English fanciers, breeders and judges. In a general letter on spaniels in "Dogs of the Day," of September, 1889, "Surefoot," known to me as the greatest living breeder of spaniels, having won everything the last few years, says, after naming the several divisions of the spaniel family: "....they are divided into two classes. large and small—the large are termed springers, the small, cockers; both sizes may be preduced in one litter by the same parents." And again: "The small spaniel, or cocker, may be almost any color, black, black and white, liver and white, lemon, lemon and white, or only mottled. The head should resemble that of a small setter and have no tuft upon it: the ears should be moderately long and lie well to the cheek. The legs should be strong, well feathered and short, the feet round, and each too should be protected with hair, a plentiful distribution of which on and between the toes is important; the chest tolerably broad, the body long and barre-like, the stern should come out on a line with the backbone." From "British Dogs," by Dalzicl, I take the following: ".....if the present fashion is to be maintained—the prejudice in favor of black color, long backs and setter-like heads—I plead for two classes at all shows. One class for other than self-colored dogs, representing the old springer, and weighing over say twenty-five pounds, and a corresponding class for cockers weighing from eighteen pounds to twenty-five pounds. Small-sized spaniels weighing from twenty-pounds, or even less to twenty-five pounds, and a corresponding class for cockers weighing from eighteen pounds to twenty-five pounds, since plack, white with liver or black, and in these flecked or mottled on face, legs, etc., are still pretty numerous. I think we should have classes for liver colored cockers to include the Welsh or

Hornelisville, N. Y., Jan. 1.

I wish to say a few words to the friends of the cocker. I have given the subject much time and have read all that has been written, and I find that no two authorities agree on what a cocker is or should be. Don't be jealous and by so doing spoil all chance of having a standard. If we do have a standard have you should be able by careful selection to breed to it in three or four years: and if the standard does not happen to fit your stock it surely can dotten no barm. By having a standard you will know what you must have if you wish to exhibit with the chance of taking a prize. All men who have a horse or dog think they have the best, no matter if the horse is only fit for the crows. They think if they should let him go he could do a mile in 2:30. It is just the same with a dog. If they exhibit and get heat they rush into print, cry. 'Fraud!' "Poor judges," etc., 'Vour neighbor may have 'foodbes," 'bullfoundlands," etc.; they may weigh fifty pounds and have topknots like Barney and Sinbad, but he calls then cockers, exhibits them and takes first prize over your pride and ideal cocker. Now if we have a standard the best dog according to the standard must win. Nearly all of your correspondents are of the same opinion, that we do need a standard, but at the same time seem to be afraid that it might not fit their stock. If it is a pertinent question I should like to ask why is all this opposition to Geo. D. Macdongall'! I think can answer it uvself. It's dollars to buttons, simply because he has none of the Bestor stain and did not see it to buy of those that did have them. You will observe that all that are named to a standard was that at the standard that are named to a standard have have have he bestor stain or dis variations. I filling it was a kind act of "'Iddo'' to accept the office,' very tow would take the trouble without being paid for it, and certain. would take the trouble without being paid for it, and certain-

MR. EARLE'S NATIVE SETTER SMUT

ly he can do the clerical work as well as an octogenarian. His vote only counts one.

In he can do the clerical work as well as an octogenaman. His vote only counts on.

Your correspondents should remember that boys are the stuff that men are made of. Two-thirds of the dogs in the country are owned or controlled by boys. The standard will surely be a fizzle if they keep putting obstacles in the way and throw cold water on the subject. How are we to have a just, sound standard unless breeders and others interested are put in communication and a club formed. Schemers, propagandists and intriguers, etc., cannot control it. The majority rules in this country if it don't in Michigan. Stonehenge was considered a fair standard, but what one of our old and experienced breeders ever bred a log that would scale 75 points according to it?

There is too much said about old and experienced breeders; what have they bred in all these years? certainly nothing to astonish the cocker world. In five years, with the knowledge they have gained and the experience they have had, they should be able to breed a blue dog. If for one should like to see this thing settled. Lown a few dogs and should have sent some to Pittsburgh, but I dislike to be beat by a water spaniel or settle.

sent some to Tustanga, as pood pedicree as any in the country, but I do not call them perfect and want them set up as a criterion. Whatever the majority says shall be standard will suit. Yours fraternally, J. Orrs Fraknows.

## MR. GAUSE'S KENNEL.

WILMINGTON, Del., Dec. 50.

Etitor Forest and Stream:

At your request I histen to reply to your communication asking for full particulars about my kennel. My present kennel is not very extensive, but in quality they are far ahead of anything I ever owned before. I send you photographs of some of my dogs—namely, Warwick, Olie and Fire-Fly—that you may form some idea of the dogs. The pictures do not do them justice.

At the head of my kennel stands Warwick, whelped April. 1877. He is by Leicester out of Petrel; color, lemon and white ticked.

Among the bitches comes, in my judgment, first, Ollie, a litter sister to Champion Gladstone, and in marking almost a counterpart of him. The above brace I consider second to none for field work.

Champion Fire-Fly, red Irish setter, whelped August, 1875, by Champion Rufusout of Friend. She is a thoroughly broken field dog and a clipper, with as much siyle as any English dog I over saw.

In addition to the above, I bave two dog puppies, viz: Kildare and Blaze, whelped September, 1879; by Champion Eleho out of Champion Fire-Fly. Both are rich in color as either sire or dam, are large, strong and exceedingly handsome dogs. I have reports from their breaker, Mr. E. J. Marrim, that they are doing fine work. These two, with Fire-Fly, are for fale.

Please send me another picture of Dashing Monarch. He is an exceedingly fine young dog and reflects credit on Mr. Higgins for importing him and on Martin for the way he bandled him. He was broken last fall, with Warwick for leader.

It is with pleasure that we publish the above letter from whe had ever as Mr. Ganse and we congatilyte him noon.

It is with pleasure that we publish the above letter from such a dog-lover as Mr. Gause, and we congratulate him upon having in such fine training so many really splendid dogs. Of the photographs, that of Ollic is remarkably well taken, and Messrs. Schreiber & Sons, of Philadelphia, deserve credit for this "Study from Nature." The one of Fire-Fly is but passable; red dogs never appear to advantage when repre sented by photography. That of Warwick is not good, not does the picture do him justice in any way. Mr. Gause has rightly placed this perfect animal at the head of the list; he is a grand dog, and, we hear, a wonderfully good one on snipe. His work in the heat with St. Elmo at the late field trials showed the perfection of training, and although it was decided that he was beaten, he did not commit a fault.

It is Fred 4th .- There has recently been published in the columns of a contemporary a very faithful reproduction of the setter dog Fred 4th, figured by Mr. Laverack in his excel-lent work on the setter. The ascuracy of the reproduction will be appreciated by every one who is familiar with Mr. Laverack's work. Our contemporary has, however, got the wrong name appended to the portrait, so that it purports to be the

picture of a dog now owned in this country. This is more surprising as it might have been supposed that any one familiar with the literature of the setter would at once recognize the likeness of Fred 4th, as we did when the picture was

## SMUT AND NAT.

FINIROUGH the kindness of the owners of this brace of merry little setters we are enabled to give to our readers in this issue two very creditable portraits of Mistress Smut and Master Nat. These dogs are typical of an old breed of native setters that has been very carefully preserved many years in Rhode Island, the "Sam Scranton" blood being predominant, and as will be seen, the subjoined pedigrees go back "pretty well for natives." To our mind the old maxim, "Handsome is that handsome does," is one that practical sportsmen should cling to most closely. Here are a brace of dogs that had to face many of the best cracks of imported blood that ever turned up in one field in this country. They were not placed, to be sure, but it is acknowledged by uninterested spectators who saw the trials that they should have been. Fortunately for them their owners were game, and before they were allowed to retire into winter quarters, the fairest kind of a challenge was offered to the owners of the dogs that had been accredited with Leating them, and the challenge was not accepted.

These dogs represent the best type of our native stock, and the pedigrees here given are correct, although they belong to America, and this is more than can be said of many of those sent over with somewhat recent importations. Of course, it is well known that there are dozens of breeders in England who are honorable gentlemen, and who would think it a crime to even dream of "cooking pedigree; but it is not all of our countrymen who deal only at fountain head, and the go-betweens for the most part are but a sorry lot, and this unfortunately often leads to placing the blame on the wrong shoulders.

The native stock has been run down entirely too much of late, and there has not been enough backbone in our native breeders. The invasion of foreigners had a weakening effect on those that breed for profit, as it became a fashion in dog flesh, like in many things else, for certain decades to become entirely "English." Now, be it known that, to our knowledge, there have been just as good strains of pointers bred in this country fifty years ago as can be now found in England, and these American strains were kept pure for years with judicious interbreeding, and in consequence such dogs as Colonel William De Peyster and Mr. Herman Bancroft (and a dozen more, we dare say,) used to breed were healthy, plucky, most beautiful to look upon, untiring and a pleasure

But to return to our canines. Smut is owned by Mr. Newton Earle, of Providence, R. I., and is a very pretty little setter bitch, her color being pure black. She is five years old, and has had a vast quantity of game killed over her in She weighs but 37½ pounds when in condition, but the following measurements will show that she is finely proportioned:

Length of head, 9} inches; spread of ear, 18 inches; from end of nose to end of tail, 51 inches; girth of chest, 22½ inches; length of tail, 12½ inches; from eye to end of nose, 4 inches; height of shoulder, 20½ inches.

The little bitch has been very favorably mentioned on the bench, and year before last with Grousedale won second in the braces at Robin's Island. She is untiring in the field, has a wonderfully keen nose, backed with a brain which tells her how to use it. Her size enables her to slip through the briars, which caunot but severely punish larger dogs; and considering that she has been made an indoor pet for the last year, her performance in such good company is highly creditable to her

Nat is the property of Mr. Horace T. Bloodgood, of Providence, R. I., to our knowledge an accomplished sportsman and excellent shot. Nat is a black and white little setter dog of 3} years, and when in condition weighs 35 pounds. He differs but little in size from Smut, as the appended measurements will show: Height of shoulder, 194 inches; length of head. 10 inches; spread of ears, 17½ inches; from end of nose to end of tail, 49 inches; girth of chest, 223 inches: length of tail, 12 inches; from eye to end of nose, 4 inches. It will thus be seen that the brace is very evenly matched. Nat like Smut is an excellent field dog, is possessed of the best of noses, and for such a small animal has great speed and endurance. He is wonderfully well trained, and shows that not only his trainer but those who have subsequently handled him must be thorough sportsmen. We cannot do better than refer those interested in his performance to turn to our account of his heat with Champion Glad-

We sppend the pedigrees:

DR. LYMAN'S POINTERS.

TINO of the finest pointers that have been imported to this TIWO of the finest pointers that have been imported to this country during the last year belong to Dr. C. P. Lymn of Springfield, Mass. The brace consists of a dog, Bob, and a bitch, Ruby, own brother and sister. They arrived here about September I, 1880, and had the Brace Stakes been run at Itobin's Island Bob would have fallen in with Sensation, and been handled by Mr. S. T. Hammond. Both dogs are said, from the trials that have been given them here last autumn, to be rare field dogs, and it is with pleasure we subjoin the pedigree and certificate of their trial in Eagland. Ruby is very much like her brother, Bob, in every particular, and we congratulate Mr. Lyman on his purchase.

CERTIFICATE OF TRIAL.

CERTIFICATE OF TRIAL.

BRANSDALE LODGE, Kirby Moorside, York, England, )

September, 16.

Professor Vaughan, Edinburgh:
Sur—1 beg to say I have given your pointers, Bob and Ruby, a thorough trial before three well known sportsmen, Lord Helmsley, Lord Castlereigh and Lord Arthur Sommersett (who have shot grouse over them). They were pronounced by us all to be thoroughly broken and in every way a capital brace of dogs. I have the honour to be, sir,
Your obedient servant,
(Signed.)
G. Holding,
I lead Keeper to the Rt. Hon, the Earl of Faversham.

Exclisit Pointer Dog Bob.

Rej'd K. P. R. 68.

Sire. Champion Dow (K. C. S. B. 4201).

Dam. Mr. Alisworth's Beatuy, by Lord Standord's Hunter, out of the Duke of Athol's Rose, by Drake out of the Duke of Arzyle's Ruby.

Whelped 1877, own brother to Ruby (K. P. R. 136).

Whelped 1877, own brother to Ruby (K. P. R. 136),

COLOR AND MARKS.

Bob's color is medium liver and white. He has marks on checks, forchead and cars, the Mesian line of division being waved. There is a separate mark on right side of nose extending to nostril. A patch behind shoulder on each side, the right one higher up than the left, also one on the loins toward the right side. A patch at root of stern extending down right haunch. He is ticked on back and limbs.

## THE IRISH SETTER.

[Reprinted from advance sheets of Vero Shaw's "Book of the Log," furnished to the Forest and Stream by the author, through Cassell, Fetter, Galpin & Co., publishers, No. 596 Broadway, New York

The origin of the Irish setter is, like that of other breeds, buried in an obscurity from which it will never emerge, in spite of the many theories which have been propounded concerning it. The peculiarity of its coloring renders this dog distinct in itself, and it is more than possible that it is in some way descended from the liver-hued setting &bg which is referred to by Gervase Markham in his "Hunger's Prevention."

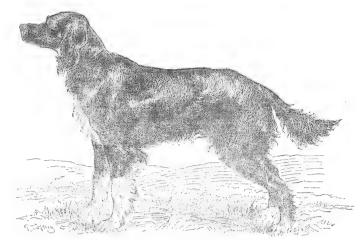

vention."

As a mitter of fact the earliest mention that we have been able to discover of any setter peculiar to Ireland is in the "Sportsman's Cabinet," where, in the chapter on English setters, direct allusion is made to this breed of dog in the

able to discover of any setter peculiar to Ireland is in the "Sportsman's Cabinet," where, in the chapter on English setters, direct allusion is made to this breed of dog in the following words:—

"The sporting gentlemen of Ireland are more partial to setters than pointers, and probably they are better adapted to that country. The fields in many parts of Ireland are large, very rugget and stony."

This clearly proves that at the beginning of this century the setter, in some shape or other, was identified with the Emerald Isle. It is greatly to be regretted that no mention is made of the appearance of these does, as, if there hid been anything of the kind, a good deal of light might have been thrown upon the Irish setter as the breed at present exists. It is somewhat remarkable that in the cases both of the Irish setter and the Gordon setter so great a difference of opinion should exist among their supporters on the subject of color. The controversy on the Gordon setter question has already been done justice to; but, on approaching the Irish setter, we are met with almost identical difficulties. As in the Gordon so in the Irish, opinions are mainly divided on the question of white. Whether this color is permissible in a purebred Irish setter or not was, at one time, a very important feature in discussions on the breef, and we have of latery years even heard it maintained that white marks should disqualify an Irish setter in competition on the show bench. Naturally, such extreme opinions as the above are shared by only a very limited number of breeders, as it is more than questionable whether any strain of Irish setters is entirely free from white. Solitary specimens of the breed are, of course, prevalent in great numbers, but it can never be taken as a certainty in breeding that the offspring of pure bred. dogs will themselves be of that color wholly unnived with white. A very large number of experienced breeder have written from time to time most strenuously in support of the introduction of white into the bree

MR. BLOODGOOD'S NATIVE SETTER NAT

just as likely to throw pure red puppies as the self colored clogs/themselves, and, in addition, they are just as handy in the field. We, therefore, are strongly in layor of due encouragement being given to the red-and-whites by the comittees of dog shows throughout the country.

Mr. Maddona certainly seems to share our opinions on this subject, for he writes as follow:—

Subject, for he writes as follow:—
"In Ireland, America and Germany, at the great 'dog
shows, there has grown up a strong inclination to mark the
Irish setter as an exclusively red dog, and to allow no white
whatever to appeur. This is all very well if it is thought
desirable to establish it as a new breed and to frame modern
rules for judzing flein, etc.; but some of the finest types of
the old breed had a fair share of white on the face, neck and

the old breed had a fair some or white on the feet.

"For endurance no setter can compare with the Irish. They are quick as lightning; but their pace never gets beyond their nose. True, unless they are extremely well-bred, they are so wilful and headstrong that they require much breaking, and often to be broken a little every war, but when well-bred not much breaking is needed. (By-the-kye, I much prefer the American term "trained" to breaking, as it implies a much more rational treatment of dogs to train than beach them.

implies a much more rational treatment of dogs to train than ble ik them.)

"The Irish setter has certainly more desh and go than the Gordon, but for this reason he is the more headstrong, and therefore more difficult to control, and hence it may be his victories at field trials are as few and far between as the Gordon, even lees, for I find only one Irish setter a winner at field Irials; this was my young dog, Plunket, in the spring of 1870, when he won, as a puppy, second in the Shrewsbury stakes, and was imme lintely afterward sold for £150, to Mr. Llewellin, considered a long price in those early days. Mr. Llewellin, I believe, sold him afterward to an American for 2302."

Llewellin, I believe, sold him afterward to an American for 2302."

Another powerful argument in favor of the red-and-white color is to be found in the illustration of the three setters which has been given before and affunded to in the Gordon Setter chapter. The middle dow in the old plate is colored red, with a distinct blaze of white up the face. This must prove that there was a red-and-white setter in existence somewhere in 1805, as no artist such as Mr. Sydeoham Edwards, who is responsible for what appears in "Gynographic Britanica," from which the illustration is taken, would be likely to invent a color for a dog he was portraving. The dimensions of the blaze, too, are so consic able as to exceed the amoun permitted by some opponents of white markins, who, though strongly objecting to the presence of any while a tail, admit that they would not absolutly (i qualify an otherwise good dog be can is he had a fail of this in 19 of 19 is blead, chest or feet. Having thus drawn full attention to the question of white in the Irish setler, and given it as our opinion that, though the wholly blood-red is the more preferable, the particelored dogs should not be discouraged, but rather the reverse, we will proceed to the discouraged, but rather the reverse, we will proceed to the discouraged, but rather the reverse, we will proceed to the discouraged, but rather the reverse, we will proceed to the discouraged, but rather the reverse, we will proceed to the discouraged, but rather the reverse, we will proceed to the discouraged, but rather the reverse, we will proceed to the discouraged, but rather the reverse, we will proceed to the discouraged but Asheromitine to time evoked correspondence in the public press.

The desirability of a tinge of black along the back and around the edges of the ears has been keeply argued by \$eve-ral writers and experienced breeders supporting the introduction of these features, which the a fill mins every frequently to

around the edges of the ears has been keenly argued by seve-ral writers and experienced breeders supporting the introduc-tion of these features, which they affirm is very frequently to be met with in many principal strains of firshs extens of un-doubted purity. The vast majority of admirers of this dog, however, unite in deprecating such fancy markings, and their views, backed up by common sense, must certainly command

Detractors of the Irish setter are accustomed to make much capital out of the dog's headstrong nature, and no doubt there is a considerable foundation for their hostility to him. In comparison with the other breeds of setter the Irishman is impetuous, and if not kert in constant work often requires rebreaking, and on this account has made many enemies of those sportsmen who, under other circumstances, would have gladity given him their best support. As it is, be must be constantly worked or he will soon be useless in the field; but if cane has been taken with his education—and he is naturally a generous dog—an Irish etter is no mean companion to the sportsman. He is active, in elligent and possesses great pace, and is not at all of a featow disposition. His constitution, too, is, as a rule, far superior to that of the Laverack, with which he has often been crossed. The advantage of this cross has been recognized by many eminent authorities, and even the great E. Laverack himself spoke of such an experiment as follows:
"So highly do I value the true blood of the Irish that I ect. etractors of the Irish setter are accustomed to make much

ment as follows:

"So highly do I value the true blood of the Irish that I have visited Ireland four times for the express purpose of ascertaining where the pure blood was to be found, with a view of crossing them with my Beltons. I very much regret to say that, after all my troubles and efforts, I found that this fine and magnificent old breed had degenerated, owing to the

carelessness and negligence of the Irish in not having kept it

errelessness and regigence of the Irish in not having kept it pure."

In our opluion, it was chiefly from a desire to improve at strengthen the constitution of his breed that Mr. Laverack was in fevor of an Irish setter cross; for it is more thin probable that his practiced eye was beginning to see traces of that deliced of the firsh setter con. No finer cross for such a purpose could be possibly devised, for the hardy upstanding Irishman would most certainly correct the weakness of the Laverack in this respectingly correct the weakness of the Laverack in this respect, In spite of the disclaimer on the part of Mr. Laverack, it is almost beyond a doubt that come of the followers of his setter have really crossed the Laveracks with the Irish, as urmitakable signs are often seen in so culled pure bred Laveracks. These dogs, for the most part, seem stronger in constitution than the others, though it is more than probable that the introduction of Irish blood has caused the Laveracks to be becostrong and hard to break. Mr. Laverack, in writing of a famous setter of the former breed which he saw at Cocker mouth Caste, alludes to the dog as follows: "The most magnificent specimen of an Irish setter I ever saw. This deg was very long in the head, particularly low, very oblique in his shoulders, whe led or rouched back, very deep and brord in the chest, remarkably wide behind the shoulders, and very short in the back and legs, more so than any Irish setter I ever saw; he has an immense profusion of coat, with a tinge of block on the tip of his ears. I should have bred from this dog but for the following reason, and I link I was right: no one was able to break him, and his stock were frequently black."

This brings us to the consideration of another cross to which

black."
This brings us to the consideration of another cross to which the Irish setter has been subjected, though it is one which has almost certainly failed to improve this useful and handsome breed of dog. It is an unquestionable fact that Gordon setter. almost certainly failed to improve this useful and handsen.e breed of cog. It is an unquestionable fact that Gordon-setter blood has been largely introduced into many strains of Irish setter, and the result has been muchinjury to the latter breed. The presence of Gordon blood has, we have no doubt in cur mind, done much to impress upon certain breeders the importance of the black or deep-colered fringe to the ears or trace down the back; but this is nevertheless, in our opinion, a dec ded fault, as being indicative of Gordon setter blood. Another feature in this breed of dog, in which the Gordon cross is very wont to claim its presence, is in the ears, it e heavy "sadule-flap" car betokening the lar sinister beyond a doubt.

TO BE CONTINUED

TRANSPORTATION TO PITTSBURGH .- Mr. L. P. Farmer, General Passenger Agent of the Pennsylvania Railroad, has exerted himself to afford every possible comfort for traveling sportsmen on their way to and from the Pittsburgh Dog Show. Men and dogs fare well on this well-equipped line.

Notice.—Will the gentleman who purchased a red Irish setter dog of F. A. Chester or J. C. Fowler, Modus, Conn., please send his name and address to this office?

Lost, —Mr. Fred. Raab. of Hoboken, N. J., lost, three months ago, his black, with white spot on breast, setter dog Tanner, aged five years. Any information regarding him will receive a suitable reward from his owner.

Mr. Wyman's Cocker Flo.—We have received here from the owner a very spirited photograph of the very pretty little cocker bitch Flo, the property of Mr. T. H. Wyman, Sebec,

Rattler.—Mr. C. H. Goodman, of Springfield, Mass., has been offered and refused three hundred dollars for his pointer dog Rattler.

Mn. R. M. Livingston's Bull Buren.—We had a very pleasant call from Mr. Livingston, of this city, who brought with him his recently-imported bull bitch. She is all that has been claimed for her.

Pennstlyania Dog Show.—From the large number of applications we have had for premium lists and entry blanks we should judge that the show will be larger than at first anticipated. Remember the entries close to-morrow and that Mr. Lincoln's address is Box 303, Pittsburgh, Pa.

Massachusetts Kennel Club.—At the annual meeting of this organization, held at Boston last month, the following gentlemen were re-elected for this year: Mr. John Fottler, Jr., President; Mr. T., T. Sawyer, Jr., Treasurer, and Dr. E. J. Forster, Secretary, 22 Monument Square, Boston, Moss

Lost.—Mr. Will H. Atlee, Fort Madison, Iowa, has lost his liver and white cocker dog pup, four months old. He has four white feet and white belly; cyes, light. Mr. Atlee purchased the puppy from Mr. McKoon last September, and ashe values the dog very highly trusts that this notice may lead to

How IT Works—Centreport, L. I., Jun. 3.—Editor Forest and Stream: Please withdraw my advertisement from the paper, as I have already received answers enough to fill the number of dogs I intend taking South with me. I expect to go to North Carolina on Wednesday. W. W. Trus.

A Sceare Report—Boston, Miss., Inc. 19—Editor Fortot and Stream: The reason why I now subscribe to the
Forest and Stream: The reason why I now subscribe to the
Field Trials. I have never had much faith in the justice of
either bench shows or field trials, believing that as a general
thing they have been guided and controlled by a clique as an
advertisement for their own breed of dogs, and not in the interest of the public. As long as we can have upright reporting like yours let field trialscontinue. Though Sensation got
a place, the glory is with Smut. Though Gladstone took
away the prize, the honor is with Nat. Right and Left.

### KENNEL MANAGEMENT.

41 C. A. S., Sloansville, N. Y .- I have a bound two years old attlicted with worms. Please send me a remedy. Ans. No one me-dium is a sure cure for all kinds of worms. For stomach and round worms give twenty-five grains of freshly-powdered areca unt with four grains of santonine, after fasting dog for eighteen hours. Re-peat dose in a week, and several hours after each dose give half ounce of clive, or castor oil. For pin worms give injections of salt water, and give internally for three days a dessert spoonful of table salt once each day.

42 A. P. S., Boston, Mass.—Your dog has rheumatism. Give as much Rochelle salts, two or three times a day, as the dog will bear without purging. Keep him out of the snow and wet, and have a warm and dry bed for him to sleep in.

43 T. G., Erie, Pa. From your description your dog has worms. Give the following vermifuge in a little milk after twelve hours fasting: Powdered area nut, one and a half scruple; santonine, three grains. Repeat the dose in a week. Each dose to be followed several hours later with half comes of caster oil. Also give desser spoonful of cod liver oil twice a day.

## KENNEL NOTES.

\*\* Breeders and owners of sporting dogs are invited to send memoranda of names claimed, bred, whelps, sales, etc., for insertion in this column. We make no charge for the publication of such notes.

The ICL YACHTS.—The ice north of Poughkeepsie Ferry is covered with five inches of snow, interfering with sailing. South of the ferry there is a fine track with snowth surface, and it is hoped that the next frost will materially enlarge the field. A number of yachts of the P. I. X. C. have been under way. Next week we will publish some further details and this season's racing fixtures.

publish some further details and this season's racing fixtures.

Lightning—Mr. W. W. McCain, Rush, Pa., claims the name of Lightning for his leuon and white pointer dog, whelped August 1, 1889, ant of Gardner's Mats by owner's York.

Joe. Jr.—Mr. John Labatt, London, Ont., claims the name of Joe, Jr., for Irish terrier dog puppy out of Noah by Joe, purchased from Dr. J. S. Niven, London, Out.

Gold Elaie: -Mr. Richard Dorman, Cincinnati, Ohio, claims the name of Golt Elaie for red Irish setter bitch, formerly Rylla, out of Magenta by Hory O'More.

Mr. Dew -Mr. J. Samuel Ved, Rome, Georgia, claims the name of Mr. Dew for his settor puppy out of Daisy Dean by Lincoln.

Zip—Mr. C. H. Goodman's Gyringfield, Mass.), pointer bitch Zip—Sup. C. H. Goodman's Gyringfield, Mass.), pointer bitch Zip Sunjshot-June, whelped, Dec. 9, seven pupples by Rattler (Ranger-Bess), five dogs and two bitches, all dark liver and white. None for sale.

for sale.

(Proce—Mr. N. Elmore's (Granby, Conn.), pointer bitch Grace.

(Sensation Juno), whelped, December 25, eight pumples, four dogs and four bitches by Gay (Snapshot-Fanny II). Four of the pupples are liver and white, and four lemon and white—all finely thatked. SALES

SALES.

\*\*Joon Justin-Mr. Robert C. Cornell, of this city, has just purchased from Mr. L. H. Mayott, of Springfield, Mass., the lemon and white pointer dog Don out of Peyche H. by Sensation. Don was whelped August 7, 1878, and we hear that he is an excellent field dog.

\*\*Riylla, now Gold Elsie-Mr. Richard Dorman, Cincinnath, Ohio, has purchased from Mr. W. H. Pierce, Peekskill, N. Y., the red Irish setter bitch Rylla (Rory O'More-Magenta).

\*\*Match-Mr. Robert C. Cornell, of this city, has purchased from Mr. John White, Bridgeport, Conn., liver and white pointer dog Match out of Grace by Sensation. Match is a well built dog, very much like his sire, and is litter brothen gloid, Mass., has superhased Ranger Bess.

\*\*Tom Nellie Horton Whelp-Mr. G. E. Browne, of Dedham, Mass., has sold to Mr. P. Aldrich, Readville, Mass., a Gordon satter dog puppy, whelped August 11, 1880, out of Nellie Horton by Donne's Tom.

\*\*Tom Nellie Horton Whelp-Mr. G. E. Browne, of Dedham, Mass., has sold to Mr. P. Alarshy, Readville, Mass., a Gordon satter dog puppy, whelped August 11, 1880, out of Nellie Horton by Donne's Tom.

THE GUN TRAVELER'S DINNER.

THE Holiday season had one affair of festivity which was certainly novel, for the like of it had never been seen before, and tamy novel, for the like of it had never been seen before, and its occurrence betokens a very near approach of the millennium; it was the dinner of the "Gun and Revolver Travelers," In other words, a baker's dozen of the drumners who go up and down the face of the land, intent on scattering things of heauty in the shape of fine guns and those beastly little varmints yelept pistols, forgot business for a time, forgot that they were bitter rivals, forthat there was any such purgatory on earth as "the Road," and spent a jolly evening together and parted wishing for many and spent a jony evening together and parted wishing to happy returns of the same.

The suggestion that it would be a good thing to have a

time together came as a happy thought to one of three or four of these commercial travelers as they met in a haphazard fashion at St. Louis. "We'll do it," was the response, and on the 30th uit. these commercial travelers as moy mee in a mapmania manus as St. Louis. "We'll do it," was the response, and on the 30th uit, they did indeed carry out their plan, and at the establishment of ye host Emile Heine, 47 E. 10th st., they sat down. It was not a large assemblage, Heaven be praised, for many more of these pur-veyors of empty guns that go off and bring sure death would leave no fools to be counted at the next census. But there were enough of them to be responsible for the scattering of half a million pistols and revolvers over the land each year and set statisticians to won dering where all these bits of mechanism go to. "After the pins, says somebody; but that is only dodging the question, and we pro pose the conundrum now as a tough nut for the next dinner of the Associated Travelers, when the Lyon may try his teeth on it and the Rice Bunting peck at it.

The Travelers made a very good beginning on what may prove an endless series of annual reunions, and while showing themselves the very best of attention did not forget to invite a representative of the Forest and Stream to enjoy their frugal fare and sip the nectar from the same decanter. There were fourteen of the Travelers around the board, "Eh! Gad," said the ancient of the party, "how lucky it is I am not absent, for you never could have dined with thirteen at this table." Not one of them had a have dined with thirteen at this table." Not one of them had a brace of horse pistols thrust under the flap of his claw-hammer, and some of them might have passed for theological students. They were voluble, of course, and almost as noisy as the wares they dealt in. The shot now and then popped up and there was no end of trade jokes, while a drummer for Dittmar powder would no can't trace jokes, while a tritimmer for Diffurar powder would no doubt hare been welcomed as a peg on which to hang all the thrusts of the evening. No such spectre came to the board, however, and for five hours it was all fun, feed and frolic.

The list of diners included H. F. Rice and Wm. Fischer, represented the property of t

The list of dimers included H. F. Mico and Min. Engener, representing Shoverling, Dally & Gales. Wm. Bunting and S. Gorton, representing T. G. Conway. J. Maltby, J. Henlgy, J. W. Cartis and M. Herzog, representing Maltby, Curtis & Co. Mr. Sylvester, representing Hartley & Graham. W. M. Calhoun, representing representing Hartley & Graham. W. M. Calhoun, representing Herman Boker & Co. Chas. Fraser, representing John W. Hutch inson. P. Lyon, representing Merwin, Hulbert & Co. Ed. Struller, representing Struller, Law & Co. and Frank Gutterson, representing Graham & Haines

The menu was a novelty in its way and we reproduce it entire. leaving our readers to laugh over it with as much gusto as the gun drummers themselves when each of them saw it for the first time at table and began to run over the items. It has a strange gingle as though a cook book and a small-arms catalogue had concluded to amalgamate, and some of the offspring will be recognized as having a pun-gent flavor, and some of the party, we fear, found more truth than fiction in the names of central-fire champagne, back-action Burgundy, swell-head whisky and solid-striker beer.

The coffee reached, speeches were in order, and one brave fellow had evidently been coquetting with the muses and broke out in verse and then had a sudden attack of modesty (greater wonder still), but our readers and our space are spared. One of the toastframers went one step beyond the sublime and may have hit very near the truth when he wished for the time to come whon every man should have his gum; and displayed a blind trust in Providence when he added "and may there be birds enough to go round." There was no end of stories of travel, for the men had just gathered in from Maine on the one side and Oregon on the other, while one of the party had just been outlining fun for the alligators by negotiating a sale of pea-shooters with Florida firms. It was resolved to form an association to be known as "The-

Gun-and-Revolver-Travelers-once-a-year-square-meal-Association" of which Mr. Rice was elected President, Mr. Haltby Socretary and Mr. Calhoun Treasurer, with Mr. Bunting as Sergeant-at-Arms.

### HINTING RIFLES

PAGOSA, Col., Dec. 12.

OME very interesting articles have appeared in your valuable paper reconly on the Hunting Rifle. I notice many very different ideas as to the best rifle, and I think the very wide discrepancy arises mainly from the writers advocating the best rifle for their hunting locality, overlooking the fact that the gun for one section may not be the one for another, where the topography of the country and the game to be killed may be entirely different from the first. The best game-killing rifle I suppose ever used was the large bore rifle, 16 to 12 shot-gun gauge, with round bal and four to five drachms of powder, used by the British sports men in India twenty years ago, the spherical ball producing more "shock" and killing deader than the same amount of lead in a conical form, and the trajectory being very flat for shooting in forests. But ritles like these are not made in the United States, Rides for hunting in the United States can be generally divided

into three classes, according to where they are to be used:

1. A rifle for hunting in thick timber, especially in the South
(though this ritle will do for all forest shooting in the United
States). The range in the thick woods of the South will not generally be more than 100 yards, and rarely 150 yards. The came nunted are deer, wild turkey and black bear. The best cal., .44; I prefer the latter. From 50 to 60 grains of powder I think ample for this rifle; more powder only makes the recoil greater, and I must confess a great dislike for a kicking rifle. Again, 50 or 60 grains of powder will kill just as quick at the short ranges men tioned as 100 grains; and with a light bullet, 250 grains to 300 grains, will give a flat trajectory, which is so important in a hunting rifle, especially one of this kind, where such a small object as a turkey's head is so often the mark. I dislike greatly heavy bullets turkey's head is so often the mark. I disting greatly heavy builds of 450 grains, with their high trajectory at short ranges, causing such frequent missos. It's not the weight of the lead that kills What we want is high velocity. For a rifle of this kind clevating sights are hardly required, but it's not amiss to have a 200-yard leaf for occasional use. I prefer in this rifle a short barrel, about 26 inches. A short rifle can be got on game, especially running deer, much better and quicker than a long barrel, as in shooting in thick timber there are not many opportunities to get more than one shot at a time. I like the single shooter better than the re-peater. It's simpler, can be loaded quick enough, and, having fewer and simpler parts than the repeater, is not so liable to be in-jured by the rust which so quickly attacks a gun in the South.

2. A rifle for hunting on the plains; the game antelope and buffalo. The typical game of the plains is the antelope. No nui-mal is so wary and shy as antelope where they have been much hunted, and no animal that I have killed is generally shot at such long ranges. I have known them to be killed at 500 yards, and from my experience think fully one-half the antelope killed are shot between 200 and 300 yards. For such long-range shooting a from my experience think fully one-balf the antelope killed are shot between 200 and 300 yards. For such long-range shooting a powerful accurate rifle is needed with a flat trajectory, as distances are hard to estimate correctly on the plains—a barrel not less than 30 inch, cal. 44, 77 grains powder with long bullet, or cal. 40, 90 grains powder. Many of the plainsmen prefer the 40 cal., 90 grains powder to any other calibre.

3. A ritle for hunting in the Rocky Mountains. Here the shooting partakes of something of both of the two preceding classes as deer at 100 yards away in the pine timber, or again you may have to shoot at a mountain sheep perched on some bare rock 300 yards distant. The game is the elk, black-tail deer, mountain sheep and grizzly bear. I have found that a rifle of this class should be more powerful than the first two described. A .50 csl., 70 to 90 grams powder I would prefer, though many use .44 cal. or .45. Many of these animals are tenacious of life and take much killing. In this kind of shooting, more than in timber or plain shooting, a In this kind of shooting, more than in times of plan shooting, a repeater is desirable. I have often got several shots into a band of elk before they were out of range with a single shooter, and of course with a repeater could have done better. The Winchesters have brought out a .50 cal., 100 grains powder, 500 grains lead, Express repeater. I have never seen the gun, but from descriptions it must be an excellent weapon for dangerous game. Personally I prefer a single shooter for general hunting purposes, but for dangerous game, or in a country where it's so cold that to load a rifle with half-frozen hands becomes a task, a repeater has ad-

The three foregoing classes represent, I think, generally the

hunting rifle for the various parts of the United States. I have not alluded to moose hunting in Maine, knowing nothing personally about it. But for the moose, being an inhabitant of the woods, I should think the rifle described in the first class would be suita-

I will not enter into the comparative merits of the numerous breech-loading rifles made in this country. Many of them are sive, bunding rifles nearly through courtesy, being nothing but a mile | pistol: hunting rines mercy through courtesy, temp rotting out a mil-tary rifle with fine sights put on it; that is, a rifle made to shoot at immense distances, which are not needed in hunting, and which carry charges giving "low angles of arrival" at the distance of half of a mile, but have not the flat trajectory at short ranges so much needed in the hunting ritle.

The breech action should be strong, simple and safe. The car-

The breech action should be strong, simple and safe. The car-tridge shell should be easily ejected. The straight shell is much preforable to the bottle-shaped shell. The native ball for hunting I consider better than the patched ball. I do not like hammerless guns, though I may be considered old-fashioned, as I think the hammer much the safest. I also like the hammer directly in rear of the breech, instead of on the side of the rifle, which when falling knocks the breech down and to the left, throwing the muzzle and to the right, more or less according to how firmly the rifle

up and to the right, more or less seconding to now many the line is held when shooting off-hand.

Well, I have "said my say," and though many much better sportsmen than myself may differ from me, yet the foregoing is the result of my experience and what I have noticed in the expense. rience of others; and there's hardly a thing men differ so much in as the proper weight, calibre and charge of rifles and guns.

## Опасніта.

## RANGE AND GALLERY.

PISTOL TOURNAMENT.—James S. Conlin, the shooting master, announces that in order to gratify the wishes of a large number of gentlemen who take a lively interest in pistol practice, and feeling that its large and repidly increasing popularity fully warrants the inauguration of a competition which will tend to improve and encourage legimners, and also decide who can claim the honor of being the champion pistol shot of New York, he will institute at his cellow 1, 292 Broadyes a great bright thousand which will his gallery, 1,222 Broadway, a grand pistol tournament, which will commence Monday, January 10, and continue for ten weeks, endcommence anomary, standary on, and commence are the vari-ous styles of pistol shooting will be contested for during a speci-fied week, and the winner of the largest number of champiouships at the expiration of the tournament will be declared the champion of New York for the year 1881.

THE BOSTON GALLERIES .- At the Mammoth Rifle Gallery the The Boston Gallemers.—At the Manmoth Rifle Gallery the any-rifle match for December is ended, and in the closing week the shooting was of high standing. Mr. N. W. Arnold wins the first prize, in addition to the extra prize of \$15 in gold for his clean score of eight consecutive bullseyes. Mr. W. W. Newton, the proprietor, wishes to acknowledge the receipt of a beautiful New Year's gift from the Forest and Stream Publishing Company of New York city of an excellent meerschamp pipe of next design, and inscribed as follows: "Forest and Stream Publishing Company of Gallery, 1881." The carving is a fine piece of workmanship, representing a large deer coming from the woods followed closely by resenting a large deer coming from the woods followed closely by a dog in hot pursuit. It will be shot for during the months of January, February, March and April on the following conditions: Match to be called the Forest and Stream Rifle Match; any .22 cal. rifle, three-pound pull allowed; prize to be awarded to the marks-man making the best aggregate of five scores, each score to consist of eight shots off-hand at our reduced Creedmoor targets; ties to be shot off, best three out of five scores; competition open to all comers. This is to be a separate match from the others, and each contestant must state which match he is shooting before firing the first shot, as all scores shot in the gallery are of eight shots each. For January, 1881, the New Year rife match has begun, conditions noted in last Sunday's Globe. Following are the leading scores during December in the any-rifle match, 50 yards, rounds 8, possible 40, five scores to win or possible 200:

Boston, Jan. 1.—There seems to be no season of rest for the Bosros, Jan. 1.—There seems to be no sensou of rest for the marksmen at Walmit Hill range. To-day the advent of the New Year was recognized by each rifleman with as much noise and as many bulls as possible. The pavilion was well filled and the shooting capital, considering that the heavy mantle of snow which lay before the butts produced the most disagreeable impressions and seriously affected the eye-sight of the participants. The wind was northwest, very strong and unreliable, and the riflemen were often beaten by it. The cold was intense and its effect upon the rifles was in many cases democralizing. The Novelty matches will close next Saturday. To-day's work will be found in the summary:

Creedmoor Match.

The gold-badge match, now being shot under the auspices of the Medford Ritle Association, will close January 12, and a new silverware match will be open, with prizes valued at \$200, January 17.

GARDNER-Mass., Dec. 31.-The Gardner Rifle Club added another to their victories this afternoon in a match with the Saratoga other to their victories this attention in a macon what the saladaga Ritio Club, of Saratoga, N. Y. A few weeks ago the club received a challenge from the Saratoga club to shoot a friendly match on their own grounds. The afternoon of December 31 was selected as the day for the match to take place, the conditions being as followed. lows: Each team to shoot on their own home range, the match to be shot under the rules of the National Association (excepting weight of gun), 200 yards off-hand, ten shots to constitute the score, ten men only to shoot and the eight best scores to count; total result to be telegraphed to each competing club as soon as possible after the close of the match, and the ten targets to be exchanged the next day. At about 2 o'clock ten "shots" faced the enanged the next day. At about 2 o clock ten "shots 'laced the butts at Hack matack range, and after an hour's shooting the eight best scores figured up a total score of 603, which was telegraphed to Saratoga, and the contesting cub returned a score of 499 as their best figures, naking a victory for the Gardner club by 104 points. After the completion of the Saratoga match the club commenced shooting on its winter match, making the following scores at 200

THE OLD AMERICA.

VERY once in a while what purports to be a history of the old E YEAR once in a write what purports to be a history of the old America's career appears in print, and generally with con-siderable variations from the truth. In order to preserve her actual record we republish the following from the London Field, which probably gives the best authenticated narrative of her which probably gives the best attributed at the probable in England. We may add that subsequent to her being raised from the muddy bottom of the St. Johns she was used as a dispatch vessel till the close of the war, and then attached to the U. S. Naval Academy, at Annapolis, Md., as a practice schooner for the midshipmen. She was bought at auction in 1874 by General Butler for \$5,000. If the English yachts of the present day are Bullet for \$5,000. If the English yacins of the present day are unable to make a successful race with the old schooner the same can be said of the modern American fleet, for we have produced nothing equal to Steers' handiwork since his day, and a fair mutch would be but a stem chase over the whole course for any of the uncenth centreboard boats whose hideous models are displayed. unconth centreboard boats whose interests modes are universelved with mistaken pride upon the walls of many a club room. Since the Cambria and Livonia made their numbers in our waters the public has learned much in a nuntical wax, and we are confident that public sentiment would compel equitable treatment and sportsamalitie terms to any foreign yacht contempting wish to

more sentences. When the contemplating a visit to "We are glad to find that English yachtsmen are again taking in interest in the cup won at Cowes by the America in 1819. We have been asked several times of late concerning the conditions under when a challenge has to be made, and we feel prefly since if the concerning the conditions when the content of the concerning the conditions when the content of the concerning the conditions when the content of the concerning the conditions when the content of the concerning the conditions when the content of the co

other competitors were Wildfire, schooner, 59 tons, Mr. Turner-Turner, and Galatea, 124 tons, Mr. Thomas Broadwood. There was a moderate breeze, and Camilla beat Wildfire twenty minutes, and Galatea thirty; thus, as sho only had to allow Wildfire seven and a half minutes, she won easily. Camilla made the voyage to transport the control of the contro

New York Yacht Club:

7 to the Servedary of the New York Yacht Club:
Sur—The undersigned members of the New York Yacht Club, and late owners of the schoner yacht America, beg leave, throught you, to present to the club the cup won by the America at the regatta of the Hoyal Yacht Supadron at Cowes, Aug. 22, 1851.

This cup was offered as a prize to be sailed for by yachts of all nations, without regard to difference of tomage, going round the I-laje of Wight (the usual course for the annual regatts of the Hoyal Yacht Squadron), and was won by the America, beating eight cutters and is offered to the New York Yacht Club Subject to the following conditions:

The cup is offered to the New York Yacht Chin subject to the following conditions:

Any organized yacht club of any foreign country shall always be entitled, through any one or more of its members, to claim the right of sailing a match for this one with any yacht or other vessel of not less than 30 nor more than 300 rons, measured by the Custom House rule of the country to which the vessel belongs.

The parties destring to sail for the cup may make any match with the club in the possession of the same that may be determined upon by mutual counsent; but, in case of disagreement as to terms, the match shall be sailed over the usual course for the animal search of the value (table in possession of the cup, and subject to the same than of the yacht club in possession of the cup, and subject to the same than of the yacht club in possession of the cup, and subject to the same than the sailed over the usual course for the animal search of the yacht club in possession of the cup, and subject to the same than the properties of the cup and subject to the same than the properties of the cup and subject to the same than the properties of the same than the properties of the cup and subject to the same than the properties of the cup and subject to the same than the properties of the same than the terities, the made beated over the teach course of the am-nual regatta of the yacht club in possession of the cup, and subject to its rules and sailing regulations, the challenging party being bound to give six months' notice in writing, fixing the day they wish to start. This notice to embrace Custom House measurement,

wish to start. This notice to embrace Custom House measurement rise, and name of the vessel. It is to be distinctly understood that the cup is to be the property of the club, and not of the members thereof, or owners of the vessel winning it in a match, and that the condition of keeping it open to be sailed for by vacht clubs of all foreign countries, upor terms above laid down, shall for over attach to it, thus making it perpetually a challenge cup for ricently competition between for China China and the conditions of the condi

J. C. Stevens,

Epwin A. Stevens,

(Signed) J. C. STEVENS,
HAMILTON WILKINS,
EDWIS A. STEVENS,
A copy of these conditions was sent to all yacht clubs in 1957,
and published in English periodicals: but no challenge was made
until 1960. The challenger was Mr. J. Alchbury, of the Cambria,
Schwolmer and State of the Cambria State of the Cambria State
and the State of the Cambria State
Schwolmer and State of the Cambria State
Schwolmer and State of the Cambria State
York Yacht Club decided to send as many yachts as would enter
squants the Cambria. This was in direct opposition to the wish of
Mr. Schwyler (the only surviving donor of the cup) who wrote to
the commodor of the club in March, 1870;
"I can state with certainty that all the signers of the letter to
the New York Yacht Club presenting the cup won by the America
in 1551 considered the word "match" in connection with the conditions proposed by them, as meaning that but one vossel could
start against the party challenging for the pessession of it."
However, the Cambria neighbly motion of the conditions proposed by them, as meaning that but one vossel could
start against the party challenging for the pessession of it.
However, the Cambria neighbly motion of the conble considered. Sho had been generously given the weather station,
but just before the skart the wind shifted right round, and Cambria was on the lee end of a line three-quarters of a mile long, with
sixteen vessels on her wather, there being only one to leeward of
her. The yachts had to beat down a narrow channel from Staten
Island to the Sandy Hook Lightship, chifteen miles distant, and
Cambria had to work her way through the whole fleet. In doing
this in the Narrows it was very close quarters, and some of those on
hoard the American yachts knew so little about the "rule of the
road" that the Cambria was rule to give way three or four times
when on strabanch makes a size the America. A curious indenting
connection with this match was the feet that Commodor Stebbins
withsequently caused a notice to be posted in the club house,

impossible to win. Five races were actually sailed, and, as the Columbia won twice, and the Sapphe twice against Livenia's once, the cup was declared to be still the property of the New York Yacht Club.

the cup was declared to be still the projectly of the New York Yacht Chib.
In 1887 the cup was again challenged for by a Canadian owner of the schooner yacht Countess of Dufferin. The American press, almost without exception, declared that the Cambra and Livonia had been unfairly treated, and demanded that one yacht should be selected to do battle against the Countess of Dufferin, and the result abided by. The New York Yacht Clab agreed to his, and the Madeleine was the selected vessel. Three matches were decided upon, but only two actually sailed -one over the inside course, and one outside—as Madeleine won two "right away."
We may state that the New York Yacht Chib, in case of the Livonia and Countess of Dufferin, waived the six months' notice, and no doubt they would do so again if they were satisfied that they had a yacht capable of making a good ight with the challenging yacht.

### THE OLD AMERICA.

Edilor Forest and Stream:

I road with much pleasure your account of the "Old America," I road with much pleasure your account of the "Old America," the more so as I happened to be in England at the time of the international race (1851), and of course went to Cowes to see the fun. To say that the exteinent ran high would be begging the point. There is an episode in that race which I think has never been published. The yachis being placed for the race, and the time for starting at hand, the gun sent torth the signal. It was a moment of intense excliencent, and withat a beautiful sight to see the men of intense excliencent, and withat a beautiful sight to see the men called the property of the sent of the section of the sent to the sent to be sent to be sent to the sent to be sent to ce was hers withou St. Louis, Dec. 24.

## EXTRACTS FROM LOG OF GUINEVERE, R. C. Y. C.

EXTRACTS FROM LOG OF GUINEVERE, R. C. Y. C.

August 8. Left Niagara at 2 p. m. for Toronto. Becalmed three or four miles ontside the mouth of the river for three hoors. Picked up a fine breeze from southwest at 5 p. m., and carried everything, using the second jib as a watersail. Were near Toronto by dard, but lost the wind at sundown and did not reach our moorings till 10 p. m.

Aug. 16. Started for Hamilton at 3 p. m. Brisk north wind. Set out under lower sail though some other yachts had a reef down. Lost half an hoor at harbor's custrance through having to down. Lost half an hoor at harbor's custrance through having to down. Lost half an hoor at harbor's custrance through having to Bronte the galf-top-ail. The rind lessening toward only ground a little less than forn hours. In this trip, which lasted three days, the yacht accommodated a crew of seven, all sleeping on board at might—not bad for a seven-tonner.

September 18. Stated for Fort Dalhousie 3 p. m. Winh had been light from southwest till starting hour, when it suddenly shifted to cast, and weather became rather thick. As the wind was getting up we kept to lower canvas. The Oriole, 55 tons, and Alarm, 35 tons, passed out of the harbor alsed of ne for a seal in the lake. The wind now freshend to a strong breeze, and when a healt shifted of the shand the Alarm was descovered through the lake. The wind now freshend to a strong breeze, and we were dragging our sails rather than carrying them. The crew of three, therefore, turned to and took in a reef in mansail and shifted jibs. With the fine beam wind we reeled off the miles at a good rate, and expected to make a quick run across. There was a great deal more sea than there should have been, seeing that the wind had link that he abeen bowing hard lover to hear the row of the content packed on our return, belon, see that the wind, and took for hours to cover the last three of four miles, having and took for hours to cover the last three of som uniles, show one wind next day on our return, but that deep t

Seawannaka Yacht Club.—The annual meeting will be held Monday, January 10, at Delmonico's.

Ockay Chulsys, —The thirty-five ton yawl Falcon has been heard from at Bahla, Oct. 22, having made the fastest passage from St. Vincent this season, twenty-two days. It will be remembered that she left Southampton, Eng., in August last, bound for the Pacific via Capo Horn, with a crow of Corinthians only.

the racine via Capo Horn, with a crew of Cornillians only.

Hoses River Xacur Coles.—The following officers have been elected for the coming year: Commodore, R. V. Freeman; Vice-Commodore, J. E. Grafney; Secretary, E. R. Wilson; Treasurer, J. Stitger; Trustces.—T. Muller, T. Ende, Charles Van Glahn, Jamies Carolin and J. Kelly. The club is about to creet a new house at the foot of West Seventy-fourth street.

James Crolin and J. Kelly. The chib is about to creat a new house at the foot of West Seventy-fourth street.

Fortrake Errosus.—It is very generally supposed that American yachts are of very much less displacement than English boats of the same isze, because the former carry as a rule less ballast, and man the samption much ink is spilled in exalting the supposed benefits assumption much ink is spilled in exalting the supposed benefits and correspondingly pre-supposed benefits and control of the same size of the same six and correspondingly pre-supposed benefits and the English craft is prone. The Columbia is, for instance, an example of a buoyant American schooner. She is 80% [17, water line, 25% [17, beam, with only 5ft, 10 in, draft and in the public estimate light as a coxt, for she carries only 35 tons or ballast. On the other hand, the English schooner Scabelle is 90% [17, water line, 15ft, beam, 11], ft. deep and has 11ft, draft. Both are practically shike in size and also in displacement, the Columbia displacing 150 tons and Scabelle 157. Yet the latter carriers 37 tons of ballast, days the former's 35, showing that the Americani's not at all the lighter or more broyant, but exactly the contrary, the saving in Scabelle, represented by her excess of ballast, being due to smaller spars and rig, superior construction and less material in hull on account of the contrary of the same supplies of the same spars and rig, superior construction and less material in hull on account contractions. It is a question whether the slight difference between the two is not well worth sacrificing for the sake of much smaller sails, safety, far superior qualities and speed in open water. The difference in ballast, 40 tons, taking the whole of it as lead, represents a difference of say, \$4,800 against the Seabelle, a sum counter-balanced, however, by the greater cost of hull and equipment of the Columbia, quality for quality.

## PUBLISHER'S DEPARTMENT.

HOLABIRD Shooting Suits, Upthegrove & McLellan, Valparaiso, Ind.

THE NEWSPAPER WORLD,-We find much valuable information about newspapers in Messrs, N. W. Ayers & Son's "American Newspaper Annual," published at their office in the Times Building, Philadelphis, Pa. From the pages of this very complete volume it appears that there are in the United States and Canadas some 10,674 newspapers and periodicals, of which 1,241 belong to the State of New York alone, The weeklies number 8,221, and the

dalies 973. The publishers have collected the fullest possible intermation respecting each publication's circulation, politics, age, rate of advertising, etc. The book contains very full lasts of class paor advertising, etc. The book contains very full lasts of class pa-pers, geographical distribution and a useful index. It is a most complete, useful and, so far as our examination shows, reliable in formation.

About Parrots — A notable fact in relation to the peculiar food giving a flavor to the flesh of animals, such as muddy werds to that of fish, fish to wild ducks, acorns to the flesh of pik, and many other instances, is most remarkable in the case of parrots. We are assured by those who, living in South Africa, have frequently eaten of parrot, that the delicacy of the flesh varies from a luxury to positive rejection during certain seasons of the year. When the delicious guava is ripe, they are sapid and fat; the seed of the acajou mare as pid and fat; the seed of the acajou mare as pid and fat; the seed of the flavor but an aroma of cinnamon, cloves, etc., and all berries give a peculiar quality to their flesh. They are, moreover, wine-bibbers. We had a parrot which had contracted that habit at the passenger's dinner-tables on board one of the Paninsula and Oriental steamers. He would watch the guests retire, and go round and "heel-tap" every gleas asty as any serving man. The seed of the cotton tree is the parrot's especial weakness, and will intoxicate it in the same manner as alcohol does man. Dealers are said to give parrots a like stimulant previous to showing them to a customer, as it has t'u effect of making them loquacious. In oppositi n to a contrary notion, parrots will and bave been known to breed in captivity in different parts of Europe. They lay three or four white eggs each time, and incubate several times in k year, sitting from 2) to 25 days, according to the reason. The most successful results appear to have been attendant upon cases in which the birds have been provided with nesting places suitable to their habits. In one case a small barrel was procured and pierced toward a third of its height with a hole about six inches in diameter. In the bottom was placed a quantity been provided with nesting places suitable to their habits. In one case a small barrel was procured and pierced toward a third of its height with a hole about six inches in diameter. In the bottom was placed a quantity of sawdust three inches in thickness. On this the female laid her eggs and sat until they were hatched. Recent works question the fact that parrots breed in domestication, but there exist too many trustworthy evidences to the contrary to allow the denial to obtain. Indeed, so long ago as 1883 a writer upon the subject said: "All experiments which have been tried at Caen and Paris in this interesting subject "have been attended with the most favorable results."—All the Year Round.

Year Round.

A TRUE STORY ABBUT A CROW'S ROOST.—A gentleman who lives about six miles Lorth of our city reports what is probably the most stupendous thing in the way of a crow roost that has ever been seen. The roost is in the magnificent woodland of Mr. Inksheep, and our informant estimates the number of birds at 150,000,000. He says the largest oak trees have been uprooted and smaller ones crushed into kindling wood by their weight; that the noise made by them is so great that the people for three miles around have to stuff cotton into their ears, and are only enabled to cammunicate with each other through speaking trumpets after the crows begin to assemble. Cattle weighing 1,500 pounds have been killed by the birds and their bones picked clean, and the skeletons of hogs and sheep which weighing 4,500 pounds are dangling from the trees where the crows have carried them, and the whole country is strewn with bones, as in the prophet's vision of "the valley of Jehosaphat." Shooting at them is exceedingly dangerous. A gentleman in the employ of Mr. Inksheep fired two shots into one of the trees and narrowly escaped suffocation from falling birds.—Lexington (S. C.) Press.

#### FOREST AND STREAM.

NEW YORK, THURSDAY, JANUARY 13, 1881.

IT SOMETIMES occurs that a subscriber receives an imperfect or mutilated copy of the paper. By returning it to us a perfect one can be secured in its place.

EVERY READER OF THE FOREST AND STREAM CAN Show his good will by sending us the name of a new subscriber.
The paper is one which each man who reads it can with good grace recommend to his friend.

THE COMMERCIAL ADVERTISER.—We notice with pleasure the prominent position held among the evening dailies of this city by our neighbor, the Commercial Advertiser. That journal, having just finished a prosperous season, is now entering on the eighty-seventh year of its existence as fresh and young as ever. Its circulation, we understand, and we can quite believe it, is growing weekly, and the clean appearance of the paper and the neat press-work reflect great credit on the business management. The columns of the Commercial are never heavy, but always cheerful, spicy and We congratulate our contemporary and wish it well newsy. in the future.

STATEN ISLAND GAME LEAGUE.-We congratulate the sportsmen of Staten Island on the formation of a game league for the protection of the game and fish of Richmond County. Mr. Francis Endicott is the President and Mr. Robt. W. Hopkins (P. O. Box 4,277, New York city) the Secretary. The new society has already begun the real work of a game society by securing two hundred quail to supplement another hundred presented to it by one of its members. The society hopes to have a thousand birds by the middle of February to turn out in the spring.

Carp have already been put into several ponds, and it is proposed, if the fish can be secured, to stock every pond on the island. There is abundant field on Staten Island for just such a society as this new organization, and the manner of taking hold of the work gives good promise that the members will devote their time to something besides dinners and trap

#### THE REFRIGERATOR AMENDMENT.

THE improved construction of refrigerators has introduced a new agent into the traffic of game and has very materially affected its destruction and consumption. Refrigerator cars convey tons of venison and other game from the localities where it is captured to the great market centres. Here huge refrigerators are prepared to receive and store it, or steamship refrigerators convey it to foreign markets. Where formerly pounds were carried it is now possible, by means of such cars, storehouses and steamships, to transport tons. In providing due protection for game it will not do to overlook these improved appliances for its marketing. The refrigerator is aggressive; it refuses to be ignored. The ice-box has just come to the front in this State; and it will be well to understand exactly what it is and what it means.

Among the proposed amendments of the New York game law are clauses legalizing at all seasons of the year the sale of venison, quail, partridge and woodcock. The only proposed limitation upon this all-the-year-round market season is that the game shall have been killed and stored in the refrigerators of the dealers within the prescribed legal season for killing the same.

Such a provision, it is claimed by those engaged in the attempt to put it through, "would revolutionize the game law." We think that it would most decidedly. law."

The movement is instigated and controlled solely by the game dealers of this city and of the West. The circumstance of its being fathered by a game association should not be a blind as to its true nature. The proposed amendment is wholly and only in the interests of the pockets of the men who own large game refrigerators.

This proposed amendment is of the New York law alone, but it does not alone concern the citizens of this State; if passed, its evil effects would be felt equally in Michigan, Minnesota and the other game States of the West. movement on the part of the dealers is a national one; it is then of national interest that it be defeated.

A market all the year around means killing all the year around, in season and out of season; and that means speedy game extermination. To guard against this illegal traffic it is proposed to provide a system of market inspection, affldavits by individual dealers as to the amount stored during the open season, and a record of each sale thereafter, etc By such machinery it is claimed that any traffic in game killed out of season can be detected and effectively punished. We most decidedly doubt that any system could be devised and put into operation which would meet the requirements of the case. The continued and defiant violation of already existing game laws by certain dealers in this city, gives little promise that they are to be relied upon for a scrupulous observance of the refrigerator-affidavit system and the apathy of public feeling on the subject, as manifested by Gov. Cornell's failure to provide New York city with a game protector, gives still less assurance of the requisite vigilance on the part of officials.

But even if this control were provided, so that the sales out of season should be confined to game killed in season, the plan would still be utterly bad, for it is a premium on the unlimited killing of game during the open season, without regard to the current market demands. In short, it means the wholesale slaughter of game, unrestrained save by the limit of the strength of the butcher and the pocket of the dealer.

This brings us to the only argument advanced in favor of the law, namely, that the quantity of game killed in the present open season is largely in excess of what can be sold in that period. This is the root of the whole matter. The dealers have set to work to remove the restraint upon their Instead of conforming to the law and being satisfied to confine their purchases to such amounts as can be disposed of within the proper season, they are now trying to regulate the season to their own interests by making the time conform to their purchases. The simple fact is that if the game dealers of this city can sell only a certain amount of game in the prescribed season, they have no business to buy more than that amount. They have it entirely within their control to regulate the supply. We fail also to recognize the pertinency of the argument that a vast capital is invested in the game business, and that those interested must secure a sufficient return therefor. If the capital is greater

than can be used to advantage when the trade is restricted to conformity with the existing law, let the surplus be withdrawn and be put somewhere else.

This home consumption of game is only one part of a traffic which is assuming tremendous proportions. The export trade to Europe is constantly increasing, and domestic dealers complain that they cannot sell here the game which comes from the West-it must go to Europe. The sufficient answer to that is that we cannot afford to supply the European markets with American game. The contract is entirely too large. The supply will not long be equal to the demand. Exporta-tion of American game should be prohibited by national enact-

In the absence of such legislation the only remedy lies in non-export laws passed by individual States. We call the attention of Western game societies to the importance of early movement in this matter. We understand that the subject is to come before the Michigan Association at their meeting. The time has come for decided action, and we hope to see the Michigan Association press such a law-

Respecting the proposed amendment to the New York law, we submit that game laws should be framed for the due protection of game, not to time-serve the interests of the mar-

We invite expressions of opinion on the subject.

#### NEXT FALL'S SHOOTING.

THE severe weather with which the present winter opened threatens the destruction of all our quail. From New York down through New Jersey, Pennsylvania, Delaware, Virginia and the Carolinas the same sad story comes to us that everywhere the quail are freezing and starving to death. Not quail alone suffer, but ruffed grouse as well, though these latter are better able to endure the snow and the cold than the quail. We have had snows upon snows until now the ground is covered to the depth of a foot or more. There are no bare places and literally no opportunity for the birds to feed upon the ground. In addition to this, the cold has been intense, and in many localities has for days ranged between zero and twenty degrees below. Cold is hard enough to bear when food is plenty, but the starving animal has no resources to draw on when the fatal chill makes itself felt, and soon succumbs.

Judging from our own observation, which is confirmed by the reports constantly reaching us from all quarters, the shooting next autumn will be very poor, worse probably than for a number of years. The efforts of sportsmen and farmers may do something toward keeping over a part of the birds, but even with the best-directed and most energetic efforts, there will not be enough quail saved to more than keep the stock alive. We feel confident that the wisest step that could be taken

would be to prohibit absolutely next year, and perhaps the year after, the shooting of quail and grouse. It would be some hardship, no doubt, to most of us to be obliged to re-frain from the sport that we love so well, but it surely would be the wisest economy to forego this pleasure for a year or two if by that means we can render it reasonably certain that during the following years birds will be plenty. We are inclined to think that if the States of New York, Pennsylvania and New Jersey would pass such prohibitory laws, and see that they were enforced, the succeeding autumns would see such an abundance of game birds as have not been known within their boundaries for many years. It is a well-known fact that in many parts of these States ruffed grouse have been almost all killed off. It is said that in Sussex County, New Jersey, there are absolutely no grouse left; that they have been so closely followed up that one may now work most conscientiously through the best covers, where they formerly abounded, without finding a bird. Of course this has not happened all at once; for years the grouse have been annually growing fewer in numbers. Words of warning have often enough been spoken, but they have fallen on ears that refused to hear. The work of destruction has gone steadily on. Each fall the number of hunters has increased. Each year the number of birds left to propagate their kind has diminished. The grouse fly has done its part in the work of extermination. And now what was once one of the best counties for grouse in all New Jersey is, we are told, absolutely without birds.

It is an old story and a sad one. We have seen the same thing take place in so many localities that we feel that the prospect for this State is very discouraging. Prompt action is all that can save New Jersey, which, it must be said, has until recently furnished better shooting than any other place so near New York, from a terrible dearth of gallinaceous

We hope that the sportsmen of the Middle States will give this matter their serious consideration. Let them think the matter over carefully and weigh it well. We believe that a law prohibiting shooting for one or better two years would be followed by the best results. What do our readers think about it?

#### THE N. R. A. CRISIS.

THE Secretary's report to the life members of the Na tional Rifle Association has its sting in the tail of it. where the retiring officer hits the keynote of the general feeling touching the old Board. It has been packed with officers of the National Guard, and yet a freak of a narrowminded Commander-in-Chief decides practically that there shall be no more ball-practice by the National Guard. amateur marksmen-those who shoot for the love of it, and who enjoy the keen excitement of a sharp competition, have been gradually frozen out of the Association. The Secretary himself has been about the only representative of this class, but he has had great odds to fight against, and it is but little wonder that he gives up his thankless task in despair.

Creedmoor is the house that is big enough for a day but too big for a year. It is a fine place for a prize meeting, but for the ordinary every day and weekly practice of hundreds of marksmen who would gladly patronize it, there are scores of objections to be urged against it. It might after all be a sort of god-send to the Association that the military incubus may be cast off.

The practice of the regiments should be kept up, and it is a matter for which the officers in charge will be held to an acccountability by the public if they neglect it. But apart from this, and in no wise dependent upon it, is the body of shooters who shoot for the love of it. They can be self-sustaining, and the N. R. A. can better afford to dismiss from its attention everything connected with soldier work, and build up a great army of gentlemen shooters, cater to their demands, discover and meet their wishes, and keep ever in mind the "fostering of rifle practice," which is its published object in existing.

The annual meeting of the Association on Tuesday evening last, of which a very brief notice only is given in our rifle columns, was an important one, and in our next issue fuller details, with comments upon them, will be given. It was virtually a period of renaissance for the Association, and it will depend on very careful nursing for some time to come whether the infant can be brought back to life or no.

Doc Mun, Beware. - An individual signing himself J. C. Fowler, F. C. Fowler or F. A. Chester and dating his letters from Moodus, Conn., has by means of an advertisement in our columns made himself well known to a number of our He has sold and traded an alleged setter dog called readers. Turk, said to be by Elcho out of Nell, to a number of people, none of whom have as yet received the animal. Any information in regard to this many-named individual and his present whereabouts will be gladly received at this office. The polynomial person having stated to all his correspondents that he was about to start at once for the South, it is conjectured that he may be now in Canada. We are of course sorry for the losses sustained by the individuals who have had dealings with this person, but they could scarcely expect anything better. If they were buying a horse, a house or a yacht would they pay for it by mail or express without seeing it or knowing with whom they were dealing We think not. People must buy their dogs as they would buy anything else, and if, as we have more than once said before, they do not exercise ordinary business care they must expect to be victimized.

TROUT AT TEN DOLLARS PER POUND .- To bring ten dollars a pound trout should be very fine, plump and finely flavored, and yet some that recently cost Mr. Ellsworth D. Hayes that sum are not especially extolled for their table qualities. It happened in this way: Mr. Hayes loves trout and has been in the habit of fishing for them in Lake Placid, Essex County, N. Y., at all times in season and out, so dearly he loves them. Lake Placid is in the Adriondacks, in a locality which is not usually haunted by game protectors and notwithstanding that Mr. Haves must have known of the new "protectors," as their appointment was published in the Forest and Stream, yet such is his ardent appreciation of the delicate flavor of Salmo fontinalis that he thought he would risk it. Game protector John Liberty also likes trout, but only in season, and hearing that Lake Placid was placidly yielding up its trout out of season, wandered that way and found a box containing ten lake and three brook trout, and then sought the owner and invited him to an interview with his friend who was a Justice of the Peace. The Justice also loves trout, and as he was called upon to place an estimate on the worth of these, he fixed it at \$175, which Mr. Hayes added to the assets of the State of New York and departed to spend New Year's Day in the bosom of his family instead of the house kindly offered by the justice in case he declined to contribute the sum named to the State. We do not know whether Mr. Hayes

had the fish for his New Year's dinner or not, but hope that he liked the peculiar green back flavor, if he did.

WE HAD A PLEASANT CALL last week from Ned Buntline. whose sketches have so often graced the Forest and Stream, as in years past those of Porter's Spirit. Our friend rightly claims to be one of the oldest of our sporting writers. In fact Ned Buntline was an expert shot, a crafty woodsman, and an enthusiastic angler so long ago, that man's memory runneth not to the contrary. Advancing years appear to have brought little diminution of the ardor with which he pursues his favorite sport, and in the mountain streams near his "Eagle's Nest" no one knows so well as he the pools where lurk the monarchs of the brook and the ripples where the leap of the trout flashes brightest.

THE BLOOMING GROVE PARK ASSOCIATION have been singularly unfortunate in the loss of their large and well appointcd club-house in Pike County, Pa. The building was to tally destroyed by fire Wednesday morning, January 5, the loss being between \$8,000 and \$10,000. The members of the association have shown much enterprise and pluck in their recent conduct of the affairs of the society, and will not be daunted, we presume, by this calamity.

NOT OUR AGENT. - We are informed that certain gentlemen in Buffalo, New York, have been victimized by an individual who has been collecting subscriptions to Forest and Stream, and has failed to send the money to us.

Some of our readers appear to think that Mr. John Brev ter is an agent, for FOREST AND STREAM. We wish it distinctly understood that he has no credentials from this paper and has never sent a subscriber or a single dollar of moncy to this office

IN ANOTHER COLUMN will be found a letter from Mr. M. P. McKoon. We may explain to our correspondent that we should not have taken the trouble of making a "public refusal" to publish his letter, had he been contented with the private one, and had he not first suggested making the mat-That suggestion admitted no other course than the one reluctantly adopted. It gives us much pleasure to print the present letter, because we think that it is decidedly more creditable to Mr. McKoon than was the communication to which it refers.

THE PIOTURE OF GLADSTONE which appeared in our issue of December 23 was produced from a pencil sketch (which, by the way, was the only one in the country) by the well known artist Mr. J. M. Tracy, of St. Louis. Gladstone had his sitting during the Vincennes trials in November, and never was he in better shape to be transferred to paper. Immediately upon Gladstone being awarded first at Robin's Island we telegraphed Mr. Tracy and secured the only correct picture of the dog ever made.

A HAPPY CONSUMMATION. -Mr. Alexander Moseley, the veteran retired editor of the Richmond Whig, congratulates the guild of anglers on the happy arrangement whereby the FOREST AND STREAM has the best fish editor in the United States, and whereby also that editor is where he can do the most good.

It is Reported that the recent storms have opened a new inlet into Shinnecock Bay. This, if true, is very good news, for although it is probably too late to save the fish it will no doubt have a beneficial effect on the spring shooting.

## The Sportsman Tourist.

GULL ISLAND

THE ONLY VERITABLE ACCOUNT TO BE PUBLISHED OF THE TRIALS AND TRIBULATIONS OF THE JERSEY BOYS IN SOUTHERN WATERS.

" And Jonah went with them."

"And Jonah went with them."

THE 4 P. M. train, Pennsylvania Railroad, found the second installment of the Gull Island Club en route for their possessions. The party consisted of F. M. Thomson, of 301 Broadway; F. Harrison and R. Hinich, of Newark; Ezra Wright, from Uitca, N. Y.—all sportsmen good and true—and your correspondent, each taking with him a trunk that caused serious and emphatic language by the baggagemen, and for which large extra freight was demanded. All this ammunition it was expected would result in a cur-load at least of game. We had a rapid trip to Baltimore, where we were immediately transferred to the Bay Line of steamers to Norfolk. The steamer Carolina is a fine, large boat, with a table that is not to be excelled in any hotel in the land. Every delicacy of the season in ample quantities and put on in good style. Capt. Whittle is a thorough sailor and a courteous gentleman. In Clerk Wardrop we found a gentleman attentive to his duties and pleasant in his attentions.

We arrived at Norfolk during the forencon, landing on the Portsmouth side, where we were met by that prince of porters, "George," of the Purcell House, to which place we had been recommended by the party preceding us. George had been recommended by the party preceding us. George is a jolly and very intelligent specimen of the Southern porter, knows his business and does it well. In Mr. R. T. James, proprietor of the Furcell House, we found a gentleman that knows how to keep a botel, good table, good accommodations and attendance. We cheerfully recommend those journeying that way to give him a call.

We expected to take the steamer Cygnet on Monday morning for Van Slack's Landing, there to strike the steamer Bonito for Roanoke Island, where we were to take a sail-boat into for Roanoke Island, where we were to take a sail-boat into for Roanoke Island, where we were to take a sail-boat into for Roanoke Island, where we were to take a sail-boat into for Roanoke Island, where we were to take a sail-boat into for Roanoke Island, wh

for our island. But here we were told that the Bonito had stopped running and that there would be no conveyance we could get from Van Slack's further south. It would not do to be tied up there. What should we do? Here we made the acquaintance of W. A. Graves and A. W. Chapman, two congonial fellow-sportsmen of the place, who suggested chartering a tug to take us to Roanoke Island. Mr. Graves immediately started in pursuit of a captain known to him, and the bargain was made for Monday morning. In the meantime that dismal rainy day in Norfolk that would have been so long and tedious but for the exertions of our new friends. They seemingly could not do enough for us. And we again were called upon to appreciate the large-heartedness of the Southern nature. We had a right good time, and we shall ever hold in affectionate remembrance the names of W. A. Graves, A. W. Chapman, George Walker, C. Owren and others of Morfolk eity. for our island. But here we were told that the Bonito had

Southern nature. We had a right good time, and we shall ever hold in affectionate remembrance the names of W. A. Graves, A. W. Chapman, George Walker, C. Owren and others of Norfolk city.

8:30 A. M. saw us bag and baggage on the tug Garden City, en route for southern quarters. We steamed out by the Navy Yard and through the canal to Currituck Sound, shooting now and then a dipper duck or gull by the way. Six o'clock r. M., and the wind blowing strong and cold from the north-west, found us on the west side of Roanoke Island, instead of the east, where we ought to have been. We lay here at anchor all night, when the captain informed us that owing to adverse wind and low water it would be impossible for the tug to go further. He went ashore at a fish-house and, having had a palaver with somehody and fixed things, came back and the tug was soon alongside of the dock. Here we found that a native, for a consideration, would take us in his cance around the north point of the island to Manteo. So we embarked, and about 2 r. M. reached that interesting locality, a village of some twenty scattered houses. We proceeded to the residence of Mr. George Bilven, having a letter of recommendation to him. We found him all we had been led to believe. Mr. B. is Register of the county, and although the section is largely opposed to him politically such confidence have the citizens in his character as a man and public officer that he has been elected and re-elected for a number of terms to the responsible office.

By bim and his kind wife we were well cared for. In the morning we engaged of one John Thomas Daniels a schooner to take us farther on. Here, previous to starting, friend barrels. Would have taken more could they have been obtained. These were to hold the vast numbers of geese, brant, swan and ducks that we were to find on and around our island.

Well, off we got, at last, and had proceeded about six

brant, swan and duese that we would be all branches our island.

Well, off we got at last, and had proceeded about six miles, or nearly to Hog Island Point, they said, when it was discovered that the wind was dead ahead, water very rough, they would be a support to gross Pimilico Sound under discovered that the wind was dead ahead, water very rough, and that it would be dangerous to cross Pimlico Sound under the circumstances. So back we went to dock at 10:30 and we all went sniping, there being good ground close at hand. Got quite a number, and your correspondent got a duck, nearly over his head in a ditch, ruining a new watch that he had purchased just before leaving home. Another night at friend Bliven's.

Friend Bliven's

An hour after sunrise the next morning found us again at the schooner and off. At 1 o'clock we anchored off Chicinoconico, a cluster of low bouses on the banks, and ten miles from the club-bouse. Here Capitain Daniels informed us that he must have a pilot to take us farther. Sent his man ashore and negotiated. Resulf—no water for schooner; must change to boat of lighter draft, etc. Engaged through said Daniels one Daly O'Nell and his cance—another job. About this time we were getting used to such things, and we made the transfer meekly and in silence.

At 2:30 r. M. Thursday, the 9th, we arrived at the clubhouse.

At 250 F. M. Hidsoly, the Shi, we arrived at the clubhouse.
Five days from Jersey City, lacking one hour and a half.
We were welcomed in true club style by the boys there—
Hall, Payne and Nash coming out to meet us in their skiffs, while the flaq was flung to the breeze at the gable, and Al. H——frantically swung the dish cloth from the storm window, Captain Johnson rung the bell and made the opening speech as we struck the sands: "Great head of the church! where have you been all this time?"
We found everything lovely. A substantial club house 17 by 27 feet; commodious kitchen and dining-room together and gun-room on first floor. Stairs to second story, where the fifteen cots were systematically arranged, with each man's chest or trusk at its foot. We gazed around, and the sixty or seventy brant hanging to the beams made us glad we had come.

Ah, club life is jolly, with such caterers as Al. Hsuch tun-loving and fun-provoking companions as Tom Hall and Nash. No blue hours when they are around. But disappointments will intrude. We soon discovered that the birds were not so numerous or getatable as we had

that the birds were not so numerous or getatable as we had been led to hope.

On Gull Island Shoals (our island), where but a few days before were millions of brant and geese, now but a few stragglers were to be seen.

We were told by Mr. Mann, the mail man, whose route was along the banks twice a week, that ten miles or more above, and near the inlet, the birds were rafting in large quantities. It was accounted for on this theory: Brant like a brackish water only to feed in, and the high tide through the inlet and the long northern winds had so raised on the bars at Gull Island and so salted the water that the fowl had left for above the inlet and fresher feeding ground. It was the first time in forty years, the natives said, that Gull Island Shoals were so free of fowl. You see Jonah was still with us.

After staying a few few days at the club-house with but mediocre luck your correspondent, with Nash, Thomson, Wright and Johnson, proceeded to Chicimecomico and the residence of Captain Benjamin Pugh. Hatl, Payne and Heriresidence of Captain Benjamin Pugh. Hau), Pavne and Heritage having left a few days before intending to stop a day or two at Nye's, where we learn they had a had a first-rate time with the canvas-backs. Harrison and Himinch left us after a day's sniping at Chicimocomico. Captain Ben Pugh is the gentleman who built our club-house for us, and has charge of our possessions in Carolina. Mr. Pugh is the most prominent citizen on the banks. Keeps the only store in the neighborhood, and has a very enviable reputation as a fear-less and judicious coast-man, having saved the lives of seven persons at the imminent peril of his own. He also rendered efficient service during the last war as General Burnside's trusted guide. trusted guide.

Here our stay was pleasant indeed, but the confounded

Here our stay was pleasant indeed, but the confounded northwest wind kept us confined more than we wished. But with the services of Edward Payne, assistant postmaster of the place, William and Daly O'Neil as boatmen and helpers, we had some good shooting. We found the bars and shoals above the inlet literally alive with brant and geese. Millions

and millions of these luscious birds were in the air scudding across from point to point or resting in long dark rafts of miles in extent. All these birds, we were told, or most of them at least, really belonged on Guil Island Shoals and that them at least, reany belonged on Gull Island Shoais and that they would gradually gravitate back there when the high salt tide should run out. We were told that we had been exceptionally unfortunate in our trip this year, that such a state of affairs had not been in forty years, etc., etc. Jonah! Well, we saw the fowl and know they are in sufficient quantities to suit the most extravagant desires, and another

Well, we saw the fowl and know they are in sufficient quantities to suit the most extravagant desires, and another year we propose to go down amply equipped and make it lively among them.

Jonah stuck to us this trip, as you will perceive, all the while. Owing to high winds, rain and rough water we only land one or two really good days for shooting. But amid all these clouds there were many sunshiny hours. In the captains and crews of Life-Sawing Stations 18 and 20 we found big hearts and right royal fellows. Captain Bannister Midgett and Captain John Allen Midgett are good types of the brave and successful coastunen of that dangerous locality. By them we were welcomed in generous style.

Did the reader ever shoot brant from a blind? Have out from fifty to one hundred decoys and, say, ten or twelve or more, if one has them, of live wild geese to do the honking? Did you ever? And as you lie snugly conceaded, to see in the far distance those long living lines approaching, while your stools give out their honk of invitation, see the gradual lowering of the wings and dropping of the feet of these delictious birds, amid the incessant honking of the geesee and the discordant note of the brant? When you can fairly see the white ring on the throat and just ere the great black feet touch the water you rise and pour in a broadside of No. 3, and as the vast number speed by you look over and see the white breasts of a goodly number within easy reach? Ah! that is sport, and when they come in pairs, by threes, by half-dozens, so thick and fast that your breech-loader gets too hot to hold in your ungloved hand, and you wade out in your high rubber boots and bring in all you can carry at one time of these queen of waterfowl, weighing from six to eight pounds apiece! Canvas-backs are good and their shooting affords good sport, but they are not a priming to black brant shooting on Pinilico Sound. No, sir!

Well, all pleasures have an end; so, with our birds nicely packed in barrels, with our trunks, we started for home on

Well, all pleasures have an end; so, with our birds nicely packed in barrel; with our trunks, we started for home on Thursday the 22d, in Capt, Pugh's cance, Daly O'Neil and Bannister Pugh as steersman and worker, N. E. Nash, E. Wright, F. M. Thomson and your humble servant—Captain Johnson only remaining until February, when another party proposes to go down. We reached Manteo toward night of the first day all right (guess Jonah had left us).

At the earnest solicitation of Mr. Lewis Mann, the mail carrier from Manteo to Kinnekeet, Mr. Nash and myself betook ourselves to his house, some two miles inland on the island. We found Mr. Mann very pleasantly situated, in Gen. Burnside's old headquarters, where he had charge of the island. M. Mann is one of the most intelligent and go-

Gen. Burnside's old headquarters, where he had charge of the island. Mr. Mann is one of the most intelligent and goahead of any of the citizens we have met in our trip South. He knows everybody in the two counties and all know him and speak of him as the right man in the right place. The next day, Jonah still being around, it rained heavily all day and no wind, until about 3°. M. it let up, and there being a slight wind, although in the wrong quarter, we decided to start for Powell's Point, about 30 miles, where we were told the steamer Harbinger would pass about 9 or 10° p. M. for Norfolk.

Notrolk. Well, we were off with all our stuff (four of us) in this open canoe, wind N. W. We wanted to go about north. We bowled along pleasantly for an hour or two, when the wind freshened up dead ahead. It was tack and tack; the sun went down; it grew colder and colder. With Croatan light over our left shoulder in the distance, we were taken to the control of th We bowled along pleasantly for an hour or two, when the wind freshened up dead ahead. It was tack and tack; the sun went down; it grew colder and colder. With Croatan light over our left shoulder in the distance, we were told that when we could see a light hack (the beacon on Powell's Point) we would be half way. Ye gods! how we watched for that light. Hour after hour passed by, higher grew the wind and colder the night air. We were chillled to the very bone; the gunwales of the boat at times running under water, the spray flying over us and freezing where it fell. Just before 9 o'clock the light appeared—only half way; we could not reach it in time for the Harbinger. Would we reach it it at all alive? Put on more sail. For God's sake help us, we are freezing in that open boat far out in Currituck Sound. Sound.

Sound

It really seemed that Frank T— would die before we reached the wharf. Prone in the bottom of the boat he lay, groaming as only a hearty man in pain can groam. Poor slink, fragile Wright, wrapped in his rubber coat, but chilled through and through, suffered in silence.

Nash forgot his joility in this hour of intensity. As for the undersigned, his lower extremities, from his hips down, were like clogs; they were past feeling. But he thought of home, of that cosey room with the fire burning bright, that tea kettle over the gas lamp and the sugar and the lemonand if this was all a dream—or that—or was this the last. Should he struggle more!

Should be struggle more!

All was still save the rushing of the waters by the gunwales: All was still save the rushing of the waters by the gunwales; we were fast losing our consciousness, when we were aroused by the thumping of the boat on the wharf—half past eleven—Powell's Point Dock, a house on stills a quarter of a mile from land.

But the man in the house refused to be aroused. Said he

wouldn't get up-boat had been gone hours and he didn't take

But the man in the house refused to be aroused. Said he wouldn't get up—boat had been gone hours and he didn't take in travelers, etc.

However, after the matter was explained to him he aroused himself and proved indeed a good Samaritan. He had no wood, but he broke up boxes and made a fire, and we crawled on our hands and knees (not one of us could walk alone) up that pier and into that 6 by 8 room, where we shivered for two hours, while our host, Jehu Midgett, God bless his kind heart, waded ashore in his bare feet and made arrangement with Mr. Newbern, a planter on shore, for a warm breakfast for us. About 4 P. M. we got ashore and were kindly received by Mr. and Mrs. Newbern; but not one of us could eat, we drank a little coffee and fell asleep in our chairs in front of the fire. At 8 o'clock Mr. Midgett had four of Mr. Newbern's boys, each with a pony and cart, before the door to take us and our lugages across country, 14 miles, to Coin Jock, on the canal where we would strike a steamer for Norfolk, some time.

And this was Christmas, 1880, and across country in a cart to the music of the darkies' guns and horns. But it was not a bad trip by any means, and we arrived at Hall's hotel. Coin Jock, about 2 r. M. Hell is a good host, keeps a first class hotel and one of the best tables we ever put our legs under. He is the proprietor of a large store. Has a good paying trade and seems to be doing well. He is a jolly good fellow, and our stay with him was made exceedingly pleasant.

We were aroused by six the next morning with the intelli-ence that the steamer Astoria was passing the bridge en route or Arofolk. Up we were and soon had all transferred. Now we were all right, we were on the thoroughfare, and onah might be blowed. We steamed away up the canal, furrah! we are homeward bound. But hark! that grating ound, that lurch and sudden stop. We were dead fast on a Jonah might be blowed. Jonah might be blowed. We steamed away up the canal. Hurrah! we are homeward bound. But hark! that grating sound, that lurch and sudden stop. We were dead fast on a sunken lag. (Jonah still with us.) An hour of backing, going ahead, poling, etc., and we were off.

We passed through the canal and into Currituck Sound. All

was going on pleasantly, we thought, although the wind was very strong and dead ahead. About noon we came to anchor, ary strong and caut anead. Mouth noon we came to inchor, to ecoptain saying that he could make no headway against that wind. It was blowing the water out of the Sound so that would be dangerous to proceed. (Jonah chuckling again.) o we lay at anchor all Sunday and Sunday night. Monday So we lay at anchor all Sunday and Sunday night. Monday morning about eight, the wind baving gone down, we up anchor and on our course again, and arrived at Norfolk in due time for the Baltimore boat. Captain Hudgins, of the steamer Astoria, is another type of those energetic Southern business men. Our two days and nights with him were very pleasant. He sets a good table and plenty of it, and the demands are reasonable. Well, we were at Norfolk. (Jonah.) But hold: the train was an hour and a half late; boat had to wait. Never unind. Arrived in Baltimore all right—but train behind hand again—but off at last all right. Bothered some around Germantown Junction and West Philadelphia, but off for Jersey City. Jonah dead now one at right—out fram behind hand again—but off at last I right. Bothered some around Germantown Junction and est Philadelphia, but off for Jersey City. Jonah dead now d gone to rest. But hold! passed Newark, crossed the

West Philadelphia, but our or Jersey Cuty. Johan dead now and gone to rest. But hold! passed Newark, crossed the meadows, drew nigh to Bergen cut, dead stop; delay of an hour in sight of home.

Who was the Johan! But all is well that ends well. Such is a plain and unvarnished account of the trials and tribulations of one party of the Gall Island Club on their first trip to their new possessions. We had cause hard times but was report by any ions. We had sor means discouraged. We had some hard times but we are not by

ions. We mad some mand times out we are not by means discouraged. Another year and we can reach Island in one day and a half from Jersey City. The railroad from Norfolk to Elizabeth City will be pleted and running by the fifteenth of this month. The steamer will be put on the route, contract with post office department made to carry the mail (and passengers) daily from Elizabeth City to Roanoke Island and farther south, from Enzageth City to Roanoke Island and latther south, thus passing by our possessions, and the best brant region on the coast if not in the United States will be within easy reach. Gull Island stock is still booming.

Jacobstaff.

## Aatural Distory

#### OUR WATERFOWL.

Erismatura rubida. Ruddy Duck. Male, neck and upper parts brownish-red; under parts silky white, watered with gray; chin and sides of head white; crown and nape black. Female and young, mottled dusky, darkest on crown and back, paler on sides of head, chin and lower parts; under tail coverts always white. Plumage, silky. Length, about fifteen inches. Bill and feet dark.

Of the two species of the genus Erismatura found in North America, the present is the only one known to sportsmen. It is moderately abundant and generally distributed throughout the country, though we have never ourselves taken it on the Atlantic coast. Audubon speaks of its occurrence in Florida in goodly numbers, and says that he shot forty there in a morning. Dr. Coues reports it moderately abundant during the migrations throughout the Missouri River region, and states that he found it nesting near Turtle Mountains and along Milk River, a tributary of the Missouri.

The genus Erismatura may readily be distinguished from any of the sea ducks by the peculiar character of its tail feathers. These are from sixteen to twenty in number and are very narrow and stiff and appear disproportionately long because of the shortness of the upper tail coverts. The webs are often worn off the extremities of the tail feathers, so that the shafts project like the spines on the tail of a chimney swift. The bill is broad and much flattened and the nail overhanging. The bright plumage ascribed to the male in the description above given is very seldom seen, at least in the United States, and almost all the birds killed wear the sober livery of the female.

Erismatura dominica-St. Domingo duck. "Male, head anteriorly and chin black; hind head, neck and breast deep ferrugineous; above, brownish-red, blotched with black; below, lighter ferrugineous; speculum white. Female similar, but less strongly marked. Bill smaller and less expanded than in the preceding."—(Key to N. Am. Birds, p. 295.) Length, thirteen to fourteen inches.

The St. Domingo duck is a South American and West, Indian species which has only been taken in the United States on two or three occasions, and is purely accidental here.

#### MERGIN.E.

The Mergina constitute the third sub-family of small ducklike birds inhabiting North America. They are readily distinguished from any other ducks by the bill, which is almost cylindrical justend of being flattened. Its nail is hooked and everhanging, and the lamellæ are produced, in several forms, into distinctly tooth-like processes directed backward. birds of this group feed to a very great extent on small fish, which they are readily enabled to capture and hold by means of their greatly modified bills. They are thus fishing ducks and of course, gastronomically considered, not particularly excellent. There are only about eight species, of which North America has three, only one of which, however, is peculiar to the new world. It should be said, however, that Audubon stated that he took a specimen of the European smew (Mergellus albellus) on Lake Barataria, near New Orleans, and Wilson speaks of it as abundant, but the latter probably confounded some other species with the one in question, and as no second specimen has ever been taken it species.

is conjectured that Audubon too may have been mistaken.

Mergus merganser, Goosander, Merganser, Fish duck Male with head somewhat puffy; glossy green in color; upper parts black and white, the latter crossed by a black bar; lower neck, all round, white: under parts white, tinged with salmon color, which, in the dried skin, soon fades out, leaving the under parts plain white. Length, about two feet. Bill and feet red. In this species the nostrils are near the middle of the bill, and the feathers from the forehead project further forward on the bill than do those at the side. Female has head and neck reddish-brown; upper parts ash-gray where black in male; under parts white.

The Goosander is distributed throughout the whole of North America and is extremely abundant in winter on the Atlantic coast. When the weather is so severe as to have frozen up almost all the onen water, these birds concrerate in considerable numbers on the open spots on our rivers. where the swift flow of the water prevents the formation of ice, and in such places they are sometimes shot in great numbers. The flesh is very fishy, however, and the birds, as a rule, are not fit for food.

Mergus serrator-Sheldrake, Red-breasted Merganser. Male with a thin crest; head glossy green; upper neck white; upper parts somewhat as in M. merganser, but with less white; a small white patch in front of wing; forebreast reddish-brown, streaked with black; flanks waved with black; under parts white. Female colored much as in M. merganser, Smaller than the preceding. In the Red-breasted Merganser the nostrils are decidedly nearer the base of the bill than in the goosander and the feathers of the forehead do not reach further down the bill than those at the sides. The laminæ of the bill in this species are tooth-like in shape and very sharp, but, as can be readily seen by removing the horny covering of the bill, the resemblance is merely a superficial one, and the so-called teeth are nothing more than unusually developed laminæ.

The red-breasted merganser is almost everywhere a common bird. We have frequently found it breeding in the Rocky Mountains, and during the migrations it is found all over the United States. It is no better as a table bird than its larger cousin.

Mergus cucultatus—Hooded Mergauser, Saw-billed Diver. Male with a very conspicuous semicircular crest; that of the female much smaller. Male black, including two crescentshaped marks in front of wing and a bar across the speculum; lower parts, centre of crest, speculum and longitudinal stripes on tertiaries white; flanks reddish-brown, waved with black. Female has head and neck brownish-gray, chin and lower parts white; upper parts and flanks darker; less white on the wing than the male. Length of male, eighteen inches; female somewhat smaller. The Hooded Merganser has the bill shorter than the head, while in the two foregoing species it is longer. The nostrils are near the base of the bill and the frontal feathers reach beyond those on the sides.

In appearance the male hooded merganser is one of the most striking of our ducks. It is rather a solitary species, and we have never found more than two or three together. More often you may start a single bird, or perhaps a pair.

The Saw-billed Diver, as it is called in Connecticut, does not seem to frequent the salt water nearly as much as do the goosander and red-breasted merganser. We have found them most frequently on little pond holes far from the shore, or on the expansions of trout brooks that pass through the swamps. We have taken this species in Western Nebraska and on Heart River, in Dakota, but have never seen it in the Rocky

The species mentioned in the preceding articles include all the Anatide known to inhabit this country. It is hoped that the descriptions may prove of practical value to gunners and may call their special attention to the different kinds of wild fowl inhabiting the sections where they shoot. Two interesting notes have already been called out by the articles, namely: the great abundance of Harelda glacialis on the Ni. agara River and the absence from the region about Winnipeg of Ross's Goose (Anser Rossii), which had by some writers been supposed to occur there during the migrations. now know that it is the snow goose (A hyperboreus), which is there called the "wavie."

Partial List of Minnesota Birds.—The eighth annual report of the Geological and Natural History Survey contains an interesting list of the birds of St. Louis and Lake counties, Minn. Mr. T. S. Roberts, the author of this list, is well known to our readers from his valuable contributious to the columns of Forest and Stream, and the Geological Survev of Minnesota is to be congratulated on having secured the services of so energetic and competent an ornithologist. The region to which the observations made in the list relate consists of a strip of country along the shore of Lake Superior about one hundred and twelve miles in length. Devil's Track Lake was also visited. The country is everywhere thickly timbered, the continuity of the dense and sombre forest being broken only by occasional "burns," which admit the sunlight and afford the collector an opportunity to find some of those species which love the open country rather than the dark woods. An interesting account of the habits of the mourning warbler (Geothlypis philadelphia) appears in the present paper, extracted from a contribution by Mr. Roberts to the Linnean Society of this city, read in February, 1879. There are also a number of valuable notes on other

Mr. Roberts' list includes 105 species, and his collections amounted to 125 specimens representing 55 species, certainly a very fair showing for the length of time, about four weeks, spent in examining the region.

PINE GROSBEAK IN MINNESOTA. - Our correspondent, W. P. M., whose note under this heading appeared in our issue of December 30, writes us further in regard to the capture as

I have since been informed by Mr. Benson that there were fifteen or twenty birds in the flock, and that he secured three at one shot.

The Wayy of Winniped the Snow Goose—Winnipeg, December 20.—Editor Forest and Stream: In the article on "Our Waterfowl," in yours of the 25th ultimo, referring to Anser rossii, Ross' goose, horned wayy, you state as follows: "Accounts have occasionally appeared in Forest and Stream from some of our correspondents near Winnipeg of shooting of wayis on the lakes which dot tout region. It is said that these birds are quite abundant in that section during the antunnan and that they afford good sport." I would say that your correspondents have misled you in this matter, the mistake arising from the fact that only the Anser hyperborous, snow goose, is known here as the way. They appear here on their way to their breeding grounds about the 15th or 20th of May in countless numbers and return Sonth about the 1st of October. Var. albatus, or lesser snow goose, is also often seen here, but they are not common. I have never heard through any reliable authority that Ross' goose or horned wavy has ever been seen in this province.

How the Ruffed Grouse Leaves Her Nest—Lawrence, Mass., Jan. 2.—I saw in last week's issue Harry Woodland's question concerning ruffed grouse. Now, these birds have been my friends from boyhood and I have been after them lots of times; and also found their nests, and to my knowledge they always flew off. But once, I think, on coming near the nest another time, the old one ran off. One fine morning in spring I female, not any with a spring I female, not any with a spring I female, not any with a spring I female, not any with a spring I female, not any with a spring I female, not any with a spring I female, not any with a spring I female, not any with a spring I female, not any with a spring I female, not any with a spring I female and a spring I female and with a spring I female and edge they always flew off. But once, I think, on coming near the next another time, the old one ran off. One fine morning in spring I found a nest, and having some time to spare, made up my mind to watch it. The nest was at the foot of a pine, among some dead limbs, and a few yards from an old stone wall. So one day as I was taking a walk through the woods I hunted up my nest, but to my surprise the old grouse did not get off at once, and when I got up close the bird got up and started away on foot from the nest, her wings trailing and acting as though hurt. As long as I was near the nest she kept within a few feet of me, but when I had followed her thirty or forty yards, she just keeping beyond my reach, the noble bird took wing and started off like a skyrocket. She wasn't lame then. I went back to the nest and found it full of yellow, downy little things, one or two of which were dead. I took one of the little ones in my hand and after looking at it to my satisfaction put it back in its nest. I then went behind the old stone wall and watched. It was not very long when I saw a grouse coming along, stopping to look at every few steps. Although this grouse walked within a few feet of me, I do not remember whether it was a cock or hen. This one passed within a foot or two of the nest and walked out of sight. I waited a little longer, and when looking in the direction the hen grouse had flown I saw her walking very slowly, stopping every little while. In this way she came within a few feet of the rest and the little longer, and when looking in the direction the hen grouse had flown I has hear and walked out of sight. and when looking in the direction the hen grouse had flown I saw her walking very slowly, stopping every little while. In this way she came within a few feet of the nest, and then she seemed to forget all caution on seeing her little ones safe and rushed on the nest, where she at once settled herself, the little chicks peeping and climbing all over her, making the prettiest sight I ever saw. I went off in another direction, so as not to disturb them. Grouse are very scarce here now. I think there have been five smarted to one shot in the right way.

FRED. O. NEWDERT.

think there have been five snared to one shot in the right way.

An Experience with King Birds.—Like most New England youngsters, I lived on the old farm, of course. After the fashion of other embryo Daniel Websters I liked to hunt bird's nests. At the proper season I used to know the whereabouts of something like twenty-five nests. I knew the number of eggs, their color, the kind of bird that laid them, and their probable time of hatching. Growing out of a too great fondness of this business I visited these nests at every opportunity and much oftener than the parent bird wished a visit or than my parent was willing I should leave my work. In the orchard near our house a pair of king birds (Typaranse accorlinenss) used annually to build their nests in the same tree and on the same twig. In the course of a few years the birds and myself got up quite a familliarity. Despite my frequent—nearly every day—visits I failed to get into their good graces, and every time I scrambled up that tree I was saluted by that plucky ferocity which this little bird knows how to exhibit. At the time of which I speak there had been two eggs laid. I climbed the tree quite leisurely one day and noticed that the birds were busily at work in their nest. When I arrived there, behold there were no eggs visible, but two large bunches of long hair, such as their nests are usually lined with. On examination I found the two eggs were within, done up much more nicely than I could have done it with a paper bag of the proper size. They did not touch each other, but were separated by hair and a few hairs tied around just above them. If I remember correctly, I did not take them out of their wrapper, but the next day I found them in the nest as usual. I omitted to say that in addition to being done up, they were fastened to the nest. Now, no person had the opportunity to tie them up so near the house and not make an outcry that we should have heard; moreover, no person in that vicinity, at least, could have done them up so neatly; in addition to ti

FIGHT WITH A SEA LEGUARD.—I send you the inclosed cutting from a late Boston Herald: "Newmarker, N. H., Dec. 6, 1880.—Walter O. Shuto and Herbert Caswell killed a sea leopard in Great Bay late Saturday afternoon, that weighed over 700 pounds. Shuto first saw it on a piece of floating iec, pearly a mile distant, in the main channel. He took a small sculling boat and gave chase, emptying the contents of a double-barrelied shot-gun into its body near the neck. With open jaws it made for the boat, tearing pieces from it with its teelt, trying to overturn it. Their gun was empty and they had no chance to retaliate. The water was

crimson with gore. Shute and his companion, with an oar and club, managed to keep it clear of the boat for about twenty minutes, when it died through loss of blood, and was towed ashore. Another was seen soon after, near by, doubtless its mate. The species is rare in these waters." Great Bay is an enlargement of the Piscattaqua River, near Portsmouth, and some twelve or fifteen miles from the ocean. The mouth, and some twelve or fifteen miles from the ocean. The sea leopard, or, perhaps more properly, leopard seal, given by Wood as Leptongz weddellif, is said by him to have been taken only in the southern hemisphere, but to have been seen off the Orkney Isles. The Cyclopedia gives it as Stenorhynchus leopardinus and says it is found in the Shetland Isles. These are all the authorities I have at hand and both rather ancient, and for aught I know it may have been frequently taken along our coast of late years. Perhaps you can enlighten us on that point:

Framingham, Mass.

As our expresentable reports:

As our correspondent remarks, the true sea leopard is not found in our waters, and from the meagre description given in the extract quoted it is difficult to determine to what species of seal the account refers. It seems probable, however, that the species referred to is either the hooded seal (Custophorus cristatus) or the gray seal (Halichaerus grypus). former species is often found along the New England coast, the latter rarely, if ever,

ANTIDOTE FOR SNAKE BITES.—In looking over the "Southern Medical Record" since last writing you I came across an article by Dr. J. Hendree, of Alabama, in which he gives the ern Medical Record "since has writing you't came across an article by Dr. J. Hendree, of Alabama, in which he gives the best antidote for all rep-ile and insect poisons "known to him." The suitidote I was familiar with, and it struck me it would not be amiss to give it to your readers. It is the animoniacal preparation, "Eau de Luce," which should be carried by every camping party visiting sections of the country infested with poisonous snakes. The wound should be profusely bathed with it and a leaspoonful given in brandy or any strong spirit every ten or fitteen minutes. This makes an active and not di-agreeable amm-ni ylulep. Dr. Hendree stat's the preparation is kept on hand in the zoological gardens of Europe, and refers to Fr-nk Bucklands' "Zoological Recreations." Some years since one of the keepers of the coloras at Regents Park, in a state of complete intoxication, entered the eage, and handling one of the serpents roughly and carelessly was bitten. His intoxication and the proper use of spirits, without an alkali, did not save him, and he died in a few hours. The "Eau de Luce" may be had at any druggist's. How.

DEATH OF THE MONTREAL CAGED WOODCOCK.—Mr. Hall's woodcock was found dead in its cage Sunday morning, 2d inst. It appeared to be well on Saturday evening (when it was seen boring for and cating worms), except that the skin around the neck was much inflated. During its confinement the bird had become much attenuated. It lived eighteen days from the time it was picked up.

Montreal, Jan. 7.

Liate Migrations—Cleveland, Jan. 1.—The reason that snipe, woodcock and many other migratory birds, in the fall season, do not obey the supposed general law which governs bird migration is readily explained. The lack of food is the principal cause of their change of locality. As long as food abounds in their favorite haunts they are loth to leave, especially the older birds. I once shot a Wilson snipe on Christmas day while quail hunting, the thermometer being about down to zero. The bird was fat and undoubtedly for many weeks had lived on the food the warm spring furnished, from which I flushed him. The first of January the year following, in the same locality, I started a woodcock, but missed the bird, as he towered up several hundred feet and then shot off like a meteor toward the south. I watched for him several days after in the same locality, but he never returned.

Habits of Snakes .- I was speaking, a few days ago, to a Hadris of Snares.—I was speaking, a few days ago, to a patient of mine (a farmer) about "snakes swallowing snakes." He is a man who has had abundant opportunities to observe their habits, etc., and he says he has repeatedly seen black snakes who had young, when alarmed, open their mouths and the little ones would run down their throats "like a shot," as he expressed it. My father tells a rather curious snake story that happened under his observation. One day he was driving over one of our country roads when he saw a large grater snake that had what appeared to be four feet. After watching it for some time and seeing that the feet moved, he killed the snake and cut it open, when out hopped a live toad. The snake had swallowed it, and the toad hed scratched its feet through the belly of the snake. Doox. catched its feet through the belly of the snake.

scratched its feet through the beily of the snake. Dock.

A Thy Bear.—We have received from Mr. A. B. Dodge, of this city, a mounted speciment of \*Ureus Americanus that is the snallest we have ever seen. It is a female and is about as large as a six weeks' old setter puppy. The history of the specimen is given in the following note from the donor, to whom we beg leave to return thanks for this unique curicosity. Mr. Dodge says: "I send herewith a specimen of natural history, which I trust you may be prevailed upon to accept, for the reason that it is (so far as I know) a rarity. See is very small, and when captured was considerably small-sole of a family of three—one male, two females. I, with a party, went to an island between Crystal River and Homossusa, Pla., three winters ago and killed the mother, taking away the three cubs. The two I brought home died after about a mouth here. This one was mounted by Wallace.

month here. This one was mounted by Wallace.

Recent Arrivals at the Philadelphia Zooloogal Garden.—
By purchase—Two common mucaques (Macacus cynomolgus).
Two brown capucins (Cebus fatuellus). One white pelican (Pelecanus trachyphysiculus). Two American magpies (Peta melanoleuca hudsonica). One green-checked parrot (Chrysotis viridigenalis). By presentation—One Esquimaux Dog. One diamond rattlosnake (Crotaus adamandeus). One water moccasin (Ancistrodan piscionus). One recoon (Procyon tolor). One Virginia deer (Cercus virginianus). Two red-tailed hawks (Buteo boroatis). One horned grobe (Podiceys cornutus). One red-billed tree duck (Dendrogyan autumnatis). One razor-billed curassow (Mittat tuberoas). #### THE CENTRAL FISHCULTURAL SOCIETY.

[CONTINUED.]

T the conclusion of Prof. Forbes' paper Mr. Shaw presented the law of the State of Iowa on fishways to the ciety, of which the following is a copy:

THE FISHWAW LAW OF IOWA. (Chapter 123.)

AN ACT to Provide for the further Enforcement of Chapters 80 and 188 of the Acts of the Seventeenth General Assembly, in Relation to the Construction and Attachment of Fish-Ways to Dams<sub>c+</sub>

Be it enacted by the General Assembly of the State of Iona: Be it enacted by the General Assembly of the State of Iona: Sedyon 1. That within thirty days after the passage and publication of this act, each clerk of the Board of Supervi-sors, in any county in this State in which there is any dam constructed across any stream therein, shall notify the State Fish Commissioner of the height of each dam in his county, the width of the stream where the dam is constructed, the character of the foundation upon which each dam rests, and shall give to him all other information necessary to convey to said Commissioner an intelligent understanding of the situa-tion and locality of each dam in said county.

said Commissioner an intelligent understanding of the situation and locality of each dam in said county.

Szo. 2. That within thirty days after the receipt of said notice, the State Commissioner shall acknowledge the same by mail, and within thirty days from that date the said Commissioner shall seed through the United States mail or by express, to the clerk of the said Board of Supervisors, plans and specifications, also one model for each county to be retained by the Auditor for reference, suitable for the construction of a fishway for each dam reported, as aforesaid, and the expenses connected therewith to be paid by the county receiving the same, and the said clerk shall, immediately on the receipt of said plans and specifications, cause a notice to be served in the same manner as required for the service of original notices and returned to the Auditor for preservation; which notice shall be directed to the owner, agent or party that model, plans and specifications are in his office, subject to his inspection, for the construction of a fishway to said dam, and that, unless he consult the same and comply said dam, and that, unless he consult the same and comply therewith within sixty days, the county will proceed to construct the same, the costs and penalties therefor will be made a tax lien on the entire premises on which said dam is situ-

a tax incin of the entire premises on which said dam is situ-ated.

Seo. 3. If, within sixty days after the service of said no-tice, the owner, agent or party in charge shall fail to con-struct and attach a fishway to such dam, as required by the Commissioner, then the County Board of Supervisors shall immediately proceed to construct and attach the same, and when so constructed and attached, the original cost and twenty per cent. thereon as a penalty shall be entered upon the tax books of the county, and shall be a lien on said pro-perty, to be collected in the same manner as provided by law for the collection of other taxes.

Sec. 4. To carry out any of the provisions of this act, the County Board of Supervisors may issue county warrants for the payment of such expenditures and expenses, and when the said taxes are paid the said warrants and all accrued inter-est thereon shall be refunded to the county, and the balance,

Sec. 4. To carry out any of the provisions of this act, the County Board of Supervisors may issue county warrants for the payment of surh expenditures and expenses, and when the said taxes are paid the said warrants and all accrued interest thereon shall be refunded to the county, and the balance, after paying the Clerk and State Commissioner and Board of Supervisors for their services and for the service of said notice, shall be paid over to the County Treasurer to become a part of the school fund of the county.

Sec. 5. Some one of the County Board of Supervisors, in the first week in April and September of each year, shall visit each dam in his county to which fishways are attached, and require the party in charge to keep the same in good repair, and if he fails, or for any reason shall neglect, to repair the same within ten days after notice so to do, the said Supervisor shall immediately cause the needed repairs to be made at the expense of the county, and the costs thereof, with a penalty of twenty-five per cent. added, shall become a lien on the premises, and shall be collected as other taxes are collected against the property.

Sec. 6. The said Clerk and State Fish Commissioner and Board of Supervisors shall keep an accurate and itemized account of their expenditures, and report the same under oath to the County Board of Supervisors at any regular meeting, and the said Board shall thereupon allow such reasonable compensation for their services as they may consider reasonable and just, to be paid out of any money in the County Treasury not otherwise appropriated.

Sec. 7. Any person who shall kill. trap, ensnare, detain, or in any manner molest the free and unmolested passage of any fish within one hundred yards of any dany on it their transit through any fishway attached or belonging thereto, shall be adjudged guilty of a misdemeanor, and upon conviction thereof shall pay a fine for each offense of not less than five nor more than firty dollars, and five dollars to the complaint of any person before any

The persion of the Attorney-General in reference to the constitutionality of the Fishway law:

Auditors's Optice, Ottornya, Jowa, October 20, 1880.

How. B. F. Shaw, Fish Commissioner State of Jowa;

Dear Sir-In the matter of constructing a fish ladder to the dam at this place, I wish to say to you that on the 7th day of August last past I issued a notice to the Ottumwa Water-Power Company, in accordance with the law, to construct a fish ladder to their dam and placed the same in the hands of Sim Chaney, sherilf of the county, for service. On the 9th day of the same month it was returned served. The said Water-Power Co. have employed counsel, and their attorney, Mr. Wim. McNatt, informs me verbally that they refuse to comply with the law and that the said fish law is unconstitutional. I am instructed by the President of our Board of Supervisors to sak you to procure the opinion of the Attorney-General of the State and transmit it to us in time for the November meeting of the Board, with any suggestions or instructions you may desire to give us in the premises.

Respectfully yours,

M. L. Godler, Auditor Wapello Co., Ia.

M. L. Godley, Auditor Wapello Co., Ia. The above was submitted to the Attorney-General and the

POTES."

MR. MATHER: "The paper so fully states both sides of the case that it may be of interest to many, and the agreement to publish all the proceedings certainly would oblige me to print it even if it was of no interest." The protest is as follows:

print it even if it was of no interest. The protest is as inlows:

Oxford Mills, September 20, 1880.

Editor Eureka—You will oblige me if you will give
me space in your valuable paper to express my views in relation to a law passed by the Eighteenth General Assembly
of the State of Iowe.

Chapter 123, Section 3, of said law reads: "If, within
sixty days after the service of a notice by the sheriff of the
county, the owner, agent, or party in charge shall fail to construct and attach a fishway to such dam, as required by the
Commissioner, then the county Board of Supervisors shall immediately proceed to construct and attach the same; and
when so constructed, the original cost and twenty per cent.
thereon, as a penalty, shall be entered upon the tax book of
the county, and shall be a lien on said property, to be collected in the same manner as provided by law for the collection
of other taxes.

of other taxes.

Section 4 reads: "To carry out any of the provisions of this act, the county Board of Supervisors may issue county warrants for the payment of such expenses, and when the taxes are paid, the warrants and all accrued interest thereon shall be refunded to the county, and the balance, after paying the Clerk and the State Commissioner and Board of Supervisors for their services, etc., the proceeds to be paid over to the county treasurer, and will become a part of the school fund."

ing the Clerk and the State Commissioner and Board of Supervisors for their services, etc., the proceeds to be paid over to the county treasurer, and will become a part of the school fund."

To this the Fish Commissioner adds, on his own responsibility, with al! the dignity that belongs to his office, in his notice to mill owners: "No temporizing or temporary work will do, as it will be at the mill owner's expense, as the law requires him to keep it in constant repair."

Mr. Editor, I am a citizen of these United States and desirous of showing willing obedience to the laws thereof. I derived my title to my land from the United States Government, clear of any and all encumbrance, without any reservation of erecting or upholding fishways for the benefit of other parties. Therefore I claim protection from the United States from imposition and onjust laws. Neither the State of Iown or any other State has any right to pass any law that will annoy, hannor, endanger, or depreciate the value of any man's property, without paying him in full for all damages he may sustain. If the people of the State of Iown want to preserve the fish, what chains have they on the mill owners to compet them to be at all the expense? Does it benefit the miller more than the farmer, or any one else? Do they consider the mill owner an intruder? Do they prefer eat-fish and wall-eyed pike to the manufacturing interests of the State? If so, why don't they pass a law that will give them the power to destroy all the mill dams in the State, and give the fish a chance? They have just as much right to pass a law of this kind, as they have to pass the other.

What benefit does the miller derive from this heavy expenditure of money? You rarely find the miller with a fishpole in his hand. It is not this class of men who reap the benefits of the fish law. For my own part I would give considerable money if there were not a fish in our rivers. They are the cause of bringing a prace of lazy loaders to our fishing rounds, from the country and the towns, who

well.

Heretofore the mill owners of the State of Iowa have been
well protected in their right, by the enactment of good,
sound laws on water privileges; and for this reason Iowa
stands second to no grain manufacturing State in our Union

—as the reports from the late Miller's Convention at Cincinnati will show. Is it possible that all the protection we have heretofore enjoyed is to be destroyed by some wild fish fanatic who cares more for a wall-eyed pike or a sun-fish than he does for all the manufacturing interests of the State? Let the millers of the State rise in their might and defend themselves against such unjust and arbitrary laws, as they have done heretofore in such cases of imposition, and they will undoubtedly come out victorious.

If this fish law is enforced, then the next law I expect to see enacted will be one requiring every farmer who gwas 160.

undoubterly come out victorious.

If this fish law is enforced, then the next law I expect to see enacted will be one requiring every farmer who owns 160 acres of laud on the line of any railroad throughout the State of Iowa to build, grade and lay a track the entire length of his farm at his own expense. Not only this, but the law will require him to keep it in constant repair, at the risk of losing the rest of his farm if he does not comply with all the requirements of the law, whether from unwillingness or inability. All these benefits he is expected to donate to the travel of the general public. Why not enact and enforce a law of this kind? One can be as easily enforce as another. I can see no difference.

If the people of the State of Iowa want to stock their rivers with fish, why not levy a general State tax for the purpose of creeting these fishways and keeping them in repair, at the same time giving the mill owner a guarantee that any damage he may sustain from the erection of such fishway will be promptly paid by the State, or the county in which the mill dam is located. The State has no more claim on the mill owner in this respect than it has on the farmer, mechanic, or any other class of men. I think it is the duty of the press throughout the State to come out boldly and denounce all such unjust laws.

[Mr. Shaw's reply will appear in our next issue, and the other discussions and papers will follow as fast as we can publish them.

## Sea and Biver Hishing.

TROUT FISHING IN THE CANADIAN WILDS.

A T ten o'clock on a bright moonlit. Saturday night, in the end of last month, a buckboard—bearing a flat boat filled with provisions, fishing tackle and a couple of fowling pieces with their concomitants, for the use and enjoyment of the young sportsuene, who after experiencing the many advantages of the different localities in the near and distant neighborhood of the city had carefully chosen their fishing ground—left the ancient city of Quebec by the Dorchester bridge, crossing the river St. Charles, where in the past century Jacques Cartier and his hardy followers wintered, worn out by disease and harassed by the warlike redmen of the forest under their chief Stadacona, for the far off lake, Jacques Cartier, situated in the distant wilds of the Laurentean ranges, whither it needed the strong Canadian pony, whose sires had bounded over the flows impassable roads and steep mountain paths.

We had arranged that the work should be apportioned to the swertal members of the party according to their adaptages.

We had arranged that the work should be apportioned to the several members of the party according to their adapt, ability and expeditionary talents. Alfred Déchine had to accept the outside work and Alexander Fraser and myself had to fulfill the inside work. The provisions consisted of ham, corned beef and a proportionate supply of drinkables. We traveled under the bright monlight through the vil-

We traveled under the bright moonlight through the vil-lages of Charlesbourg, whose church soires tower so proudly from its mountain site; St. Pierre, the immates of whose peaceful couvent lay in meonacious slumber; Stonchane and Tewkesbury, peopled by the hardworking farmers from Ireland, and at daylight arrived at the post, as it is called. This post, a species of log hut, is situated at the extreme end of the macadamized road which is about twenty-one miles from the city, and thence rommences the government road, recently constructed, to Lake St. John, and which was some time since represented as the best of highways, but which our bushumen and farmers from Lake St. John have de-scribed as almost wholly impracticable, a fact which is also proved by the many amateur fishermen who have passed over that route. that route.

over that route.

The first camp on the government road is situated at the distance of five miles, where we breakfasted and fed our horse, also providing ourselves with fodder, which could not be procured elsewhere on our journey, or at the various camps, although wood and provisions were kept on hand for the use of travelers. Mr. Lachance kept this camp, and was most obliging in his endeavors to please us. We could not but feel for his forlorn position, as he told us that but few travelers passed his camp, excepting those who desired to fish in the higher waters around the Laurentides.

After resting at Lachance's post for a short time we left at about eight o'clock and in a couple of hours reached the River Cache, a beautifulstream, filled with trout, and whose banks are fringed with the fir, the spruce and the cedar tree.

banks are fringed with the fir, the spruce and the cedar tree.

After mounting an extremely steep hill we, at half past eleven, arrived at the camp à Noel, which is without a guardian and is sixteen miles from the post settlement. Near this post are two takes, one on each side of the road, both pretty large and abounding with trout; one called lae a Noel and the other lae a Regis. At this camp we rested ourselves and our Canadian pony, who appeared to be impossible of fatigue. While in the vicinity we saw twelve men fishing, who seemed to be having good sport, as they were continually making catches of fair sized trout. Of course it must be admitted that the fishing in these lakes has been carried on for a long time, and that the waters are comparatively depleted. The same fact is the case with the two lakes which we reached a little further on—frand lae a tenante and Petit lae. Pepante. Both these lakes heretofore were famous for their trout, and unless the government interferes the water in the entire district must become entirely unproductive. unproductive.
On the twenty-fifth mile we arrived at lac Derreles, where

On the twenty-fifth mile we arrived at lac Derrokes, where we remained for supper and a night's rest in the hut provided by the Quebec government. Here we found no gnardian but there was a certain supply of food, and had we had scythes we might have procured any amount of fodder for our horse, providentially otherwise provided. A stove, with any amount of firewood, was in the establishment, and we lost no time in making ourselves comfortable. One can hardly over-estimate, especially those accustomed to forest traveling and who have now and then been driven to extremities, the advantages to be found in these solitary camps, where the weary may find rest and the hungry found.

At five o'clock on Monday morning, after a good breakfast, we were ready for a start, and continued the route till about two in the afternoon we reached liee a Len Marre, near which we touched the Montmorency River, along whose bank we drove for three miles and during the time shot three ducks. The upper waters of the Jacques Cartier are not, so wild and furous as when most frequently seen by tourists near its mouth, at what is called Natural Steps, although even there are fierce rapids and whiriting pools from which three and four pounders in the way of trout are taken by hundreds. At a place called the "Meadows," sportsmen from the city are wont to spend the holidays and never return without a satisfactory baskefful. From lae "is La Marre" weentered the bush, and on our route shot nine partridges before arriving at the camp, situated on the borders of lae Hune, which we passed, not without a lingering look at its beautiful waters and dark nooks, suggestive of numberless catches. At midday we reached the Jacques Bridge, our final destination being thirty-nine miles from the first post and over sixty miles from Quebies. Here we stabled our brave little horse, who had so dauntlessly carried us over the difficulties of the road, and put up out tent, as in the camp we found four borses and the impedimentation of an absent party. Anxiously and quickly we disposed of ourselves to hurry our movements in order to commence fishing operations; one to attend to cullnary arrangements and the others to manage the fishing-tackle and launch the flat; all which was rapidly executed. After dinner we paddled up the river for about two miles, and whipped down the stream with red and brown backle, and before arriving at camp had taken over three hundred speckled beauties of a large size, frequently capturing two at a time. In the camp wee found a party of eight, who had been very successful. In fact, or was a side, for this lake is at such a distance, and the approaches so difficult, that few attempt the venture; but the happy fe At five o'clock on Monday morning, after a good breakfast

pose in what Shelley characterizes as "the other rosy as the morning" sleep.

On the following morning (Tuesday) we started for the rapids after breakfast, a breakfast partaken of as only woodmen ean do on the wealth of the forest, stream and field; of, in fact, the results of forest and stream, rod and gun up the rapids which intervene between the camp and Lake Jacques Cartier, at which water we arrived in about half an hour

the rapids which intervene between the camp and Lake Jacques Cartier, at which water we arrived in about half an hour.

The lake is about fifteen miles in length and five in breadth, bounded on one side by high mountains, garnered by forest trees to the water's edge, and on the other side by woods, from which are wafted the delightful aroma of the cedar and pine. Near by is a sort of open ground, filled with boulders, wreathed in ferns, twining plants and mosses, fostered by the moist earth which surrounds them. In the lake are two islands, delightfully situated at a short distance from the shore, and to one of these we paddled our boat after fishing, and revelled in a real at pressor epast, which was in all respects truly bucolie: fresh trout from the surrounding waters, berries from the neighboring bushes and the vintage of Bacchus. In the afternoon the weather was unpropitious, and after trying our skill went down the lake and descended the rapids to the camp, which we reached at about eight ofclock in the evening, where we had a right royal Robin Hood supper of fish and game.

On the following day we again mounted the rapids, and at twelve o'clock encountered a violent snow-storm, which lasted for about an hour, and therefore returned to camp, where we found that the other party had left and had been replaced by another of three gentlemen from the city.

In the distance we saw a bear satisfying himself with a leisurely meal of blueberries. He was at a safe distance for our fowling-pieces, but could ensity have been brought to earth by a rifle. On sight of us he quietly retreated to his home in the woods. While snoking in front of our camp door an immense eagle performed several gyrations over our heads, and finally made a swoop upon the waters where were congreated large numbers of loon.

On Thursday morning we started for home, bearing with us as trophies of our hooty over fifteen hundred speckled trout, measuring from eight to fifteen inches in length, as also delicious memories of the sweet aroma of the

#### RANGE OF BLACK BASS.

Bedford, O., Jan. 1.

WILL you please allow me a little space in your paper, in reply to Dr. E. Sterling's letter in the last number of Folges and Stream in relation to taking black bass at the Sault de Ste. Marie? In his review of my communication of Nov. 15, I did not say, as Dr. Sterling states, that I had fished the waters of the Sault de Ste. Marie rapids and their "surroundings" for many years with Judge Potter, of Toledo, and had never caught any black bass there. But I did say we never caught any black bass at the Sault de Ste. Marie, and I repeat that we never did, nor did we ever hear of any being caught in those rapids.

In my communication I did not use the word "surroundings," but distinctly stated the Sault Ste. Marie, and referred to no other place.

ings," but distinctly stated the Sault Ste. Marie, and reterred to no other place.

One need not go twenty miles from the Sault to the Sailors' Encampment to catch black bass. This fish abounds in many of the bays and rivers of Lake Superior. They are found in the Ontonagon River, one of its branches being the outlet of Lake Agogebik, a distance of thirty miles southwest from the town of Ontonagon. That lake literally swarms with black bass. A the Portage mentioned by Dr. Sterling I have hauled in fish with a hand line and squid as fast as I could cast my squid by hand.

T. GARLICK.

TORPEDOES AND FISH.—A Newport correspondent tells of a torpedo station at that place which fires salutes, and asks about their effect upon the fish in the harbor. He says such a salute was fired on July 21 in honor of the French frigate Magicienne, when each torpedo sent huge columns of water into the air several hundred feet high. There can be no doubt about its effect upon the fish being instant death to

every one for a large distance around, as fish are very s ceptible to shocks, which often burst the air bladder. We know that there are many fish killed by the necessary blasting operations for the improvement of our rivers and harbors, but we do not see the necessity of torpedo salutes.

## Game Bag and Gun.

BUFFALO HUNTING.

DUFFALO lunting, or rather buffalo slaughter, is the most uninteresting pastime I know of. I cannot call it a sport, as there can be no sport in any such a tume, one-stided affair, the result of which is settled nine times out of ten from the very start.

One frequently flads men, vain-glorious and conceited in their own prowess, who depict a buffalo hunt as one of the most glorious things out, besides dwelling in a sickening, grandiloquent strain upon the peril and tremendous risks they have run in killing these big-headed and bearded cows. A buffalo looks feroci us, but his appearance is so at variance and in direct opposition to his nature, that he always reminds one of the fable in which the braying of the donkey frightened away the lion.

reminds one of the fable in which the braying of the donkey frightned away the lion.

A thousand buildo can be stampeded by a bunch of weeds drifting past them then they will go right straight alread, over and through anything, being far too bewildered to know or care for aught but escape—and the ground they cover, considering their weight and gait, is greatly to their credit, and shows that although deficient in pluck, bearing, eye-sight and seem, they possess predigious strength, backed by no end of wind, qualifies which, if combined with courage, would make them one of the most formidable animals of this

would make them one of the most formidable animals of this continent.

I plead guilty to having killed a few buffalo, never for sport but the first time, as I was so disgusted with myself that I never had the heart to do it again; and I must confess that now although I ache to kill something "big," yet I would not go out to-morrow on a buffalo hunt any more than I would go to a pigeon roost and slaughter pigeons by the sackful with a shough. Perhaps my early training on suipe and woodcock has rendered me unfit for this kind of

Introcer.

There are two ways of killing buffalo; one is by stalking after once sighted, and the other is running them down on horseback. It amounts to the same thing in the end, so far as the buffalo is concerned, for these two reasons:

as the bullalo is concerned, for these two reasons:

First—He cannot run away from a decent horse, and
therefore is caught and shot.

Second—He won't fight it out, can't climb a tree (Mark
Twain to the contrary notwithstanding), burrow, fly away,
or in any way dispose of himself. So he stands like a
statue and is killed.

Second—He won't right it out, can't climb a tree (Mark Twain to the contrary notwithstanding), burrow, fly away, or in any way dispose of himself. So he stands like a statue and is killed.

This is the fate that awaits him in any event; so I suppose he may as well be philosophical about it and die—not game—but sink on all fours and drop with a thud, the recollection of which even now makes me feel ashamed of ever having killed one of these harmless, good-tempered, easy-going fellows—unless indeed it were for meal—on the same principle that a furner kills a pig, etc.

In stalking the hunter need only be careful as to the wind, as a buffelo does not trouble himself much in looking about for his enemies, so that when they appear it is too late to save himself. When once you see the game, proceed as in antelope shooting regarding your mount—only a little more so, for remember this, a buffalo will strike mortal terror to a horse's heart, so that no ordinary lariat and picket-pin will hold him should one of these sheep in wolf's felothing happea to come near him. To avoid being left on foot, then, secure your horse with a strong rope and fasten him by the halter, as should be pull frantically, as he certainly will, if fastened to the bit, it will cut up his mouth, and he will generally break away by either pulling the bit out of his month or smashing his head-stall. To avoid all this, use a strong halter, long, stout picket-pin, strong rope, say thirty feet long; unbridded would hang heavily on his hands, and becoming impatient would the more readily perceive any buffalo that might chance to come in sight—and then good-by clores if not properly secured.

The stalking part requires no great amount of skill, and any man with ordinary common sense can approach, on favorable ground, to within seventy-five to one hundred yards, at which distance one shot behind the shoulder will settle the business—if not, he ready when he turns to findout "whu?s therow, and iet him have it between the eyes, et al. Hold of grains lead. So

magazine always full, if possible, as it is easier to load as you go; besides, you may be dismounted at any moment, and then a few shots at your fingers' ends are handy. If you find your horse is giving out, why make one last spurt, and then your loaded tube is ready to do good execution. Don't wound a dozen, and find them all scattered over the prairie, limping about in all directions. Kfill them outright if possible, as your horse will be pretty well blown after his chase and earl very well follow wounded game and then carry you to camp. So do your work in style; it is much more sportsmanlike, to say nothing of the suffering you can often so easily avoid.

If revolvers are used, change sides. The Smith & Wesson Self-extractor, cal. 45, is the best, but a Colt peacemaker, same callibre, shoots more powder, and will stand more hard knecks, and is much easier cleaned. Beware of the Smith & Wesson Schoffeld model a better contrivance to tear your thumb and break your thumb nail could not easily be conceived. This action is simply bad, but the original Smith & Wesson American or Russian models are excellent, and unsurpassed for accuracy and rapidity of fire. It is always better to have two or even three pistols, and to keep one in the belt in reserve; then if you are thrown (pardon me, I mean dismounted), or your horse falls with you, it may be convenient to have six shots, all ready to check any undue familiarity an old wounded bull might wish to bestow on you, although the poor brutes are glad conough to be let aleno as a general thing.

In connection with the chase, I will give a wrinkle that I

the helt in reserve; then if you are thrown (pardon me, I mean dismonnted), or your horse falls with you, it may be convenient to have six shots, all ready to check any undue familiarity an old wounded buil might wish to bestow on you, although the poor brutes are glad enough to be let aleno as a general thing.

In connection with the chase, I will give a wrinkle that I learned in South America, the land of horsemen, and although not a preventive yet it is an admirable antidote. When on the full run it is sometimes ruinous to stop; in fact, in some kinds of sport a halt would lose all. Still, if a mun drops his pistol or anything of value he is in a quandary. If he stops he loses his game; if he goes on he parts with whatever fell, and the chances are as twenty to one that he never sees it again. However good a rider you may be, you can't stop to pick up your pistol, for the simple reason that you are past it before it reaches the ground. So just fing off your had, or drop a good big handkercheir, either of these can be seen for a long way, and as your pistol is near then you can readily find it on your return—if you are in luck. I sometimes have lost both, but that seldom occurs, unless in the evening, in which case it is better you are in luck. I sometimes have lost both, but that seldom occurs, unless in the evening, in which case it is better you are in luck. I sometimes have lost both, but that seldom occurs, unless in the evening in which case it is better you are in luck; of your care in the proper way of the your return—if you are in luck. I sometimes have lost both, but that seldom occurs, unless in the ovening in which case it is better you are in luck. death.

A Texas steer or a South American bull has more "sand" and is far more dangerous than a dozen bull-do, but they cannot compare with him in getting over rough ground and scaling impassable walls, possibly owing to their being too heavy aft and not so powerful in the chest and legs.

Theador.

The Catawissa Clube-Catawissa, Pinn., Jan. 3.—The annual election of officers of Catawissa Pish and Game Protective Club, held in parlor A, Susquehanna Hotel, tonight, resulted in the election of G. W. Reifsnyder, Prest; Abel Thomas, V. P; William Eyer, Treas; H. B. Aldrich, Sect'y. The society has done some good work, and we hope to continue our influence in the protection of fish and game. We shall continue the practice of glass ball shooting. Should be pleased to meet any of our neighboring clubs who wish to shoot with us.

#### THE DEER LAW

Editor Forest and Stream

I have looked with considerable interest for the report of the hast meeting of the Long Island Association's Game Committee, to see what recommendations they would make for perfecting the law relating to "protection of deer," and any mery much surprised to learn, through your issue of 6th inst., that they recommend an open season of three months at a time of the year when deer can only be obtained through the agency of does driving them to water, and then close by a surprised to the control of th

law of moderation and one that will not cause renemon in the Adirondack region.

The first year the present law went into effect to hound deer the association that petitioned for it was very strenuous and watchful during the close season and succeeded in obtaining information that a certain hotel-keeper in the woods had killed deer for his table. They involved him in a law-suit, which naturally incensed the man whose interest it is to protect the deer. What was the result? His ideas are that the law shall not prevent his killing deer occasionally for his table and still allow the outsiders to come in at another time and kill as many deer as they please, before dogs and helplessly in the water, without a chance of escape. Naturally it is hard for such men to submit to the present arrangement. He is a determined man, an excellent still-hunter

and liked by everybody, one who appreciates a good act and

quick to resent injustice.

The result of hounding on "the cast side" is that deer are The result of hounding on "the cast side" is that deer are very scarce, and the advocates of hounding see that they have "killed the goose that laid the golden egg," As a consequence, the war upon hounds has been very disastrous, for many have been poisoned in camp. I learned of one party that lost six hounds in that way, another three and several parties with each a single hound were also visited with the same remedy. I know how the guides feel, for I have been enough interested in the subject to find out by talking with them.

enough interested in the subject to und out by easing methem.

The rush from "the east side" advocates of hounding to "the west side" during the past year shows that "the west side" beople must do something to save the deer. "The east side" has been notoriously lawless for years and hounds have been used there for so long a time that the advocates of hounding are jumping with joy at the gates being opened for them to go through and pursue their sport on "the west side," while "the east side" is partially protected by poisoning the faithful and innocent hound, who only obeys instinct in chasing the deer. However, that is a very efficacious

ing the faithful and innocent hound, who only obeys instinct in chasing the deer. However, that is a very efficacious method of protecting the deer.

The Long Island Association cannot hope to succeed with their recommendation, and I think it would be much better to still further consult with other associations before calling their petition "perfected."

Wollar.

No. 4, Adironhacks.

I notice that your St. Lawrence County correspondent complains of an undue amount of deer slaughtered by the use of dogs. This is only one of a hundred instances of the kind that have taken place all over the Adirondacks since the passage of the present obnoxious law making the open season for hounding deer two and a half months. There is no doubt but that that law has been the means of the destruction of more than two thousand deer during the past two years. Deer take very readily to water late in the fall. Pot hunters have taken advantage of this fact, spreading themselves on the numerous lakes of this region and literally filling the woods with hounds. Visit any part of the Adirondacks during October and you will hear the voice of the hound heralding the swift destruction of this noble game in our great New York wilderness. As this mode of hunting requires no skill, any one with an outit consisting of a boat and dog, an old musket or two-dollar fowling-piece, or what its considered an equally indispensable armanuent—a good club - can be as successful as the connoiseur sportsman with his modern skil, any biae with all other consisting or a boat and oog, an old musket or two-dollar fowling-piece, or what its considered an equally indispensable armanent—a good club—can be as successful as the connoiseur sportsman with his modern breech-loading gun or rille, his long experience and hard-acquired skill. It is true the pot hunter does not have a guide "to hold the deer by the tall while he shoots him through the head." But then when once he has been cut off from the shore the deer is entirely in his power. He can shout at him as many times as he pleases, or beat out his brains with his club. Now, right here, will you be kind enough to tell me wherein is, the difference between this mode of killing deer and crusting him, or killing them in the deep snows of winter on snow-shoes? In either case they are deprived of all the means with which nature has provided them to escape their enemies, and thus requires no skill on the part of the hunter.

I am of the same opinion of your correspondent. Unless the game laws regarding deer are so amended as to prohibit

of the hunter.

I am of the same opinion of your correspondent. Unless
the game laws regarding deer are so amended as to prohibit
hounding deer, the time is short when deer will to any
amount cease to exist on the Adirondacks. Or if sportsmen

hounding deer, the time is short when deer will to any amount cease to exist on the Adirondacks. Or if sportsmen require a short open season, let that be at a time when deer cannot be so easily driven to water, and also at a time sportsmen are most likely to be benefited thereby. Very few sportsmen visit the woods later than the middle of September, unless they go in for the purpose of slaughtering deer by hounding. Therefore I would suggest that if any open season for hounding deer be allowed, let that time be the first two weeks of September. This would accommodate the sportsmen, while it would prevent the great slaughter late in the fall by pot hunters and marketmen.

#### FOX-SHOOTING IN DUTCHESS COUNTY.

FOX-SHOOTING IN DUTCHESS COUNTY.

WE have been having gay times with Reynard this fall, and the remembrance of the last run, to say nothing of the astonishing good fortune that favored our little party, induces me to send you a description of the same. Isuppose, however, before telling you my story, that it would not be out of order to frankly apologize to our pink-coated brethren for the very unsportsmanlike manner in which we bagged our red game (of which they will surely accuse us). But when one has no alternative, what is one to do? Shooting foxes is not the sport "par excellence" of any country, much less our own—but enough! I'm in for it, so here goes!

Dutchess County, ten miles east of Poughkeepsie, presents an appearance not favorable to equestrians, to say the least, "off of the road," and I have yet to see the nag that will follow the hounds in that locality, much less the man, be he ever so bold or daring. The only way in which the red thieves can be brought to bag up here is by the trap and gun, and as the former method is only practiced occasionally by the farmer lads, we were forced (shall I say?) to adopt the latter.

One bright October morning, the frost lying thick and white over hill and vale, and the dir keen as mid-winter, found our party of shivering, good-natured Ninnods busily stowing away the dogs and guns and getting ready for the start. The horses were dancing and impatient to be off and we were soon bowling merrily along. A drive of several miles finally brought us to our destination—a long, low, old-fashioned farm-bruse, half buried in the grand old trees. So with many a whoop and cheer we drove into the old barn-mates, who probably thought a band of savage Sionx had arrived. mates, who probably thought a band of savage Sionx had ar-

Ived.

It did not take long to put the ponies under shelter and to get the breech-loaders out of their cases, and we were soon wending our way up the steep bill to the west of the house, preparatory to taking our stands on the different runways. Old "Lester," our guide and general-in-chief—than whom a better shot or more thorough woodsman never lived—was confident of being able to start a fox on this same hill. So, after a rather stillish walk, we were finally "told off" by the old man to our positions—one here, another there, until all were settled. Doe and myself being old hands, comparatively speaking, at the business, quiety slipped around the hill to were sented. But and myent reing out mans, comparatively speaking, at the business, quietly slipped around the hill to the meadow lands below and located ourselves behind the stone wall. The dogs were running high above us, through the woods and over the huge rocks, but save the angry caw of some startled crow at his breakfast, not a sound broke the stillness of the morning air. In a short time I saw Bugle

stillness of the morning air. In a short time I saw Bugle thrust his black and tan muzzle out of the dense underbrush, and I knew that the jig was up as far as that hill was concerned. So, calling to Lester, he soon had the dogs in and we three went on to the next ridge, about half a mile distant. Here the old man left us and plunged into the swamp with the dogs, cautioning Doe, and I to get to our places. The former, not minding the cold air in the least, perched himself up on the top rail of the fence, to better view the hand below him, while I chose a warm corner in the old moss-covered wall. The time hung heavily for upward of an hour, and I began to weary of the constant strain trying to began self up on the top rail of the fence, to better 'view the land below hin, while I chose a warm corner in the old moss-covered wall. The time hung heavily for upward of an hour, and I began to weary of the constant strain trying to hear the dogs, when the distant bay of a hound came musically to my ears, and sent the blood tingling through my veins like fire! Yes, I was not mistaken. The long-drawn howl again faintly quivered through the air, and I hastily drew out the shells to make "sartain" sure of my charge. It was with different feelings that I again glanced over the stone wall, I can assure von. Every moment now the poles of the pack can assure you. Every moment now the notes of the pack in full cry could be heard, and I judged from the direction of the sound that they were running a hill mites to the south

of the sound that they were running a hill mites to the south of us.

I was enjoying the situation exceedingly, and mentally going over the final scene if bis erafty lordship would only "meander" my way, when looking up the knoll toward Doc., I beheld that worthy gesticulating wildly with bis hat for me evidently to follow his example. Drawing back both hammers and glancing cautiously over the wall, I beheld his lordship trotting along, "kind o' careless like," his head well up and evidently suspicious, for as I glanced alorg the barrels in rising to a standing position, he saw me and was off like a flash. I knocked him over at full sixty rands, and was about to nake matters sure by giving him the second barrel, when Doc, yelled to me to look out. I was puzzled, to say the least, as the hounds were just within hearing and could not possibly have been trailing this one. Here the Doctor joined me, and we sat down to discuss the matter in the open field, when like magic the music of the dogs burst full upon us. To move was impossible, and so we remained Doctor joined me, and we sat down to discuss the matter in the open field, when like magic the music of the dogs burst full upon us. To move was impossible, and so we remained like two brown statues, our hearts in our throats, for in full view coming down the hillside a fox was running for his life and the dogs not seventy yards behind him. It was the finest chase I ever saw. On he came, no time to look altead, and in less time than I can tell it the Doctor's gun rang out his death-heell, and he, the cuuning scamp, was no more. Two pelts and the sun not four hours high was grand good luck indeed, and we were highly leated. The rest of the boys hearing the guns now came running in, and we were soon talking as only fox-shooters can talk over the result. Old Lester had not as yet put in his appearance, so lighting our pipes we sat discussing the run and "righting the battle o'er again." In a short time, however, the old man was seen striding along toward us, nuch to our amazement, with a fox dangling from his arm and a merry twinkle in his eye at our unfeigned astonishment. Muttual congratulations of course followed, and we learned that during the morning the dogs started the red imp almost under his feet, and he "cut loose" with the re-ult above stated. To say that we were not a happy lot of fellows over those three "varmints" dogs started the red imp almost under his feet, loose" with the re-ult above stated. To say t not a happy lot of fellows over those three would be unnecessary.

So ended our last hunt in Dutchess for 1890, and it is the

sincere wish of your correspondent that all who contemplate a day with "Reynard and the gun" will have as good a time and be favored with as good luck.

BLUE BILL.

#### ---WILD FOWL IN CONFINEMENT

I HAVE lately been inspecting the collection of wild fowl at our Philadelphia Zoological Garden, and cannot help remarking upon their excellent condition. Until this year all the geese and ducks indigenous to North America have been housed during the winter, which necessarily deprived them of the exercise which is requisite for good health. Now the society has inclosed a portion of these grounds, partly sheltered by trees, about an arc in extent, and I found the several varieties, without exception, in fine feather, and being present at feeding time noted their very healthy appetities. Barrels turned over on their sids as and partially filled with straw furnished a shelter for the birds in extreme cold weather, but as all our wild fowl are of a hardy constitution and accustomed to storms and ice, I learned they seldom took advantage of the cover offered them, preferring to sleep outside. sleep outside.

In the collection I noticed the black and white swan, the

sleep outside.

In the collection I noticed the black and white swan, the European gray goose, the Canada goose, the brant, the can-vas-back duck, the red-head, the widgeon, the black duck, the teal and summer duck. Six or seven years ago, while your correspondent was attending to some building on Long Beach, N. J., eight black ducks but a few days old were brought to me alive. They were purchased and given to one of the baymen to raise, with the promise that for every one reared he should have a dollar. Supposing the whole number had died I thought nothing more about them until the following September when I was about leaving the beach where I had been spending the summer. As the boat was about leaving the dock my hayman brought to me a huge box containing the eight black ducks, now nearly three-quarters grown. Hastily directing the box to the Zoological Garden, Philadelphia, and afterward writing to the society regarding them. I saw nothing more of the ducks until I one day visited the garden and found them quietly and contentedly swinding in the lake. They are now in their winter plumage ed the garden and found them quietly and contentedly swita-ming in the lake. They are now in their winter plunage and as glossy as an ibis. Two have died, owing to the hung-ling manner in which their wings were pinioned. The bal-ance are as gentle as barn-yard fowl, and it is known this species is one of our wildest and shyest. The canvas-back and red-head at the Zoo, are becoming very tame, and I wit-nessed quite a battle between a drake widgeon and a male

nessed quite a battle between a drake widgeon and a male canvas-back duck, the widgeon driving his larger opponent from the disputed food. I would here mention that the Zoological Society of Philadelphia would be much pleased to receive from sportsmen any wing-tipped game they may come in possession of, especially the wild geese, brant or ducks, for the collection at their garden.

The intensely cold weather we have been having, accompanied by the heavy falls of snow in the past two weeks, its playing sad havoe with our game in this State and New Jersey. Ruffed grouse and quail have been found frozen, and whole coveys of the latter bird discovered under the snow, huddled logether as they roosted, stiff and dead. In the wilder counties of Pennsylvania deer have been seen near the 'odder stacks in close proximity to the furm-house, being' odder stacks in close proximity to the furm-house. odder stacks in close proximity to the farm-house, being driven there to seek food. We must remember our winter has just begin and we will likely have as severe, if not more severe, weather in January and February. With this in view is it not necessary that something should be done for

the protection of our game (if there remains any) next authe protection of our game (it there remains any) next au-timin? What sportsman would not forego his quail shoot-ing for one season and devote his attention to the ducks, snipe and woodcock which are nigratory, while poor Bob White, decimated in numbers as he will most certainly be,

may increase in quantity?
While I write it is again snowing, with a prospect of a fourth heavy fail. Rest assured this is certainly to be the most disastrous winter on the quall we have had for many

years.
On the New Jersey coast, at Atlantic City, Tuckerton and On the New Jersey coast, at Atlantic City, Tuckerton and Barnegat, all the feeding-grounds frequented by the black duck are frozen over, consequently they are pushed to points where they are easily killed in numbers, but they are poor and worthless for the table. Great quantities were shot last week, uscless save for their feathers.

At Simepukent the sound is frozen completely over, and what fair ducks the prech fishermen, with their ness do not

At Simepuxent the sound is frozen completely over, and what few ducks the perch fishermen, with their nets, do not frighten off the shoals are obliged to go further south. We fancy these waters afford little perch-lishing, now that everything is frozen up.

We remember some years ago being at Sinnepuxent Sound

thing is frozen up.

We remember some years ago being at Sinnepuxent Sound goose-shooting and observed the effect the hotels and bridge had on the flight of fowl as they neared the objects mentioned. Not a goose passed within gun-shot, every bird crossing this capital shooting point much beyond range, when at one time, before the hotel was built and the bridge creeted, Messrs. Tabra and Stokes, who still own the point, enjoyed great sport whenever there was a tlight of either gress or ducks. Knowing it to be a waste of time to remain where we were, we made our way to the beach side of the sound and there, hidden in boxes sunk into the sand near the water's edge, with wild geese decoys (honkers, as they are called there), managed to get several good shots and to kill a quantity of fowl. But the day for all such sport at Sinnepuxent Sound is over, the best part of the beach being taken up by a watering-place hotel and outbuildings at Ocean City. And so it is all along the New Jersey coast, from Long Branch to Atlantic City, and soon will be to the capes of the Delaware. Capital grounds for bay-bird shooting in the summer and fowl and duck-shooting in the fall and winter are entirely destroyed by watering-place hotels.

Hoxo.

#### A TRUE PLOVER SHOOTING STORY.

WITH A MORAL.

T is said that "the best laid schemes o' mice and men gang aft a-gley," and thus must all those have thought who have tried upland plover shooting.

Of all the birds on the sportsama's list, the gray or grass plover is the wildest and most not get-atable. Unlike his wary uncle, the goose, he will be enticed by neither stool nor call, in fact his cry is so hard to initiate that we have only known one man who could correctly counterfeit it. This was an old bayman of Long Island, who used to say that when he first got it down fine, he used to fool himself, so much so that he would in an abstracted moment go and hide. Down in the East the good folks call this plover the Humility or Humilt for short, perhaps on account of his modest and retiring nature, but the Yankees used to circumvent him occasionally by shooting out of wagons or from behind a stalking horse.

casionally by shooting out of map when the painting horse.

Our story takes us back to many years ago, when the particular hands of Ocean County, N. J., were a favorite rambling place for piover. They came there in September in flocks of hundreds, filling the air with their plaintive call and

pasture lands of Ocean County, N. J., were a favorite rambiling place for plover. They came there in September in flocksof hundreds, filling the air with their plaintive call and straining the "long Tons" of the Jersey farmers.

It was upon a crisp, frosty morning that four of us crossed the bay from the beach to have a crack at the plover that frequented the rolling upland pastures of the mainland. The Honorable S. was of the party, a short, Jolly personage, of fifty summers, well grounded in all that pertained to sport, but extremely nearsighted. The prow of our skiif had but just grated against the sand, when the Honorable S. drew from under the gunwale of the boat a huge cow's skin, surmounted with a pair of huge horns. To don this and securely fasten it by knotting a short piece of fish line around his neck, was but the work of a moment. He then looked up, and with a Satanic smile said: "Boys, I've got them now." Away to the westward rolled the bills, dotted here and there with large herds of cattle, while from the wettish slashes between the knolls the flutt-like note of plover was born down upon the air. "Now, boys," said the gay deceiver, "you station yourselves behind the fences and PII start up the birds," On went the Honorable S., bent over in imitation of a cow, his gun in land, and his spectucles with demoniac luster gleaning on his nose. We, in silent admiration at his "happy thought," ensconced ourselves behind the fence and peeped through the rails with anxious feelings, waiting to see whether the ruse would prove effective.

At last the Honorable S, spied a plover light at the base of one of the bills, and bobbing after him he went. He had lessened the distance almost half and was within a hundred yards of his live, and a grand animal, and the airy background made him look larger to us than any bovine we had ever seen before. He was not angry, but pleased, as he thought his mind. One and all shook their heads, as if to say, "Wholepla's beking in him. One and all shook heir heads, as if to say,

The bull took one step forward, and, like Hamlet's ghost,

The bull took one step forward, and, like Hamlet's ghost, sniffed the morning air. There was a devil-may-care twinkle in his eye, and an exulting chuckle in his respiration, as he sent from each nostril a cloud of smoke, as if he had pulled both triggers at once. "Yam" said the bull, and began trotting toward the unconscious S.

We yelled "Look out!" waved our hands and were frantic with dread and wild with despair. The fraudulent bovine heeded us not, but went bobbing on toward the plower. It has been said that fifteen seconds sometimes appear like two weeks and a half; it was so with us. At the end of sixteen one seem said that afticen seconds sometimes appear like two weeks and a half; it was so with us. At the end of sixten seconds the Honorable S. was standing on his head and the bull standing over him, looking very much surprised. S's gon went off, and the bull, still more astonished, reared up, lost his balance and fell over backward. The Honorable S. resumed his normal position and started for the fence, the bull rolled over and resumed his and followed in pursuit. He

was fierce. It was a fearful race to behold—one of life and death. The suspense was soon over, however, for the Honorable S. went for the fence the same way François Ravel used to go through the clock—head first—and safely landed used to go inrough the cicck—head first—and safely landed on the other side after scraping, by the top rail, all the but-tons off his vest. The bull slowed up and the cows on the plain scened tickled to death, while from on high the plover, with outstretched wings, looked down and squeeked out: "Bless you, my children. Adieu!" Epriss.

#### SAVE THE BIRDS.

New York, Jan. 3.

Winter is again upon us in its fullest rigor. Snow covers the whole State to the depth of fifteen inches and the quali are gradually starving and then freezing. No game protective association, no Legislature, no prohibitory game law can be those winter the greater for the start of the help them; winter, the greatest foe, the greatest enem quail, is upon them, and if help does not come to the

quail, is upon them, and if help does not come to them soon a good muny of them will perish.

But where is this help to come from? From our sports-men individually, and all title expense. Every shooter, that is city sportsman, has his friends in the country, has his par-ties he goes out shooting with in the fall of the year. Let, then, each city sportsman write to his friends the following instructions: Take a horse and sleigh, fill up the sleigh with hay or clover cut pretty short, mix with the hay or clover a lot of luckwheat or cracked corn, and distribute the whole in patches large enough to be seen at a certain distance, so as to attract attention, along the edges of the swammer in our in parenes arge enough to be seen at a certain distance, so as to attract attention, along the edges of the swamp or in any field where the birds have been known to feed. Repeat this transaction every other week or after every snow storm. The expense will not be large, but thousands of quail will thereby be saved, as every shooter knows that a well fed quail can stand any amount of cold. nail can stand any amount of cold.

I have tried the experiment, and I am happy to state that works well.

GUSTAVE WALTER.

it works well

Pittsburge, Pa You ought to speak a word for the quail; you cannot be too quick about it. Only yesterday a man in my neighborhood picked up two nearly frozen, the balance of the covey were dead. He took them home, thawed them out and they

were dead. He took them home, thawed them out and they are now doing well.

This is the worst winter on them since 1855 and 1856, and unless we try to help them now we may as well quit shooting for five years to come. Why not try to get New York, Pennsylvania, New Jersey and Maryland to stop all shooting for two years. Ohio would join and it would be a blessing all round. Two years' rest for quall, grouse and woodcock would make birds plenty for twenty years to come, but if the few breeders that are now left are to be shot at from October to January of next year we may as well give up sport of this kind altogether.

J. S. B.

The Washington Reporter says: "Warren Brownlee and Wm. Mounts, formerly of this county, now of Missouri, have promised to send a thousand qualis from their farm in that State to this county. The birds are very abmount there, not being hunted as they are here, because the larger game is found in plenty. The Sportsmen's Club of Washington would be pleased to receive reports from farmers and sportsmen, by postal card, whether the quali have suffered from the severe weather, in order that the loss may be made up by sending them stock birds. Parties wishing birds for preserves can get them at net cost upon application to the club. Notice will be given whenever the birds from Missouri arrive."

ROCKINGHAM, N. C. Jan 3 ROCKINGHAM, N. C., Jan. 3.

The poor quail in our State are now having a hard time of it. In the northern and western portions of our State the snow I learn is, and has been for some weeks, about one foot deep. In 1876 the quail were almost externinated here, but since then have greatly increased in numbers, and are now about as numerous as before the cold snap of that year.

T. C. L.

The snows have done great injury to the qualt, which are the only bird left in any quantity in this section. Ruffed grouse are almost exterminated, and where several years ago hundreds could be found on our mountain for a year or two but very few could be found. Can nothing be done to save this bird?

Wilmington, Del., Jan 5.

I fear all the quail in the State are done for. We have over eighteen inches of snow all over the State, and reports are coming in that the quail are frozen and starved to death.

H. W. G.

HIGHTSTOWN, N. J., Jan. 8.

The sportsmen of New Jersey feel pretty certain that the qua'l have nearly all perished in the drifts or been devoured by hawks. A close season of two years is generally called for, and the Monmouth Democrat, Hightstown Gazette, Managuan Eas Stât, Lakewood Journal and other newspapers are indorsing the amendment of the game law to that end.

CENTREPORT, L. I.

Entire bevies of quall have been found frozen in the snow, and whole bevies have also been potted by one charge of shot from the wretches who sneak up and deliver their broadsides in the snow.

The snow and cold have committed fearful have among our birds, but didn't kill them all. The ground is still covered five or six inches deep, but the birds can run on top of it now, and if no more comes there will be some left for "seed."

JACK.

MACON, Ga., Jan. 4. MACON, Ga., Jan. 4.

The excessive cold weather has put a stop to our sport. this being the coldest spell since 1835; snow and ice on the ground for a week.

J. H. J.

MIGHIGAN—Monroe, Jan. 8.—Near Saginaw two of us recently bagged in two and a half days thirty-nine ruffed grouse and forty quail and as many hares as we could carry, and in hunting a portion of those four cold days I bagged twenty ruffed grouse, twenty-eight quail and four hares, nlone. Those were the last four days in December, and exceedingly cold.

#### FOX HUNTING AT KITTANNING.

FOX HUNTING AT KITTANNING.

KITTANNING, Pa., Jan. 3.

LINTING has peculiar charms which no one can appreciate but those who have engaged in the manly sport. The exercise which it affords is much more healthful from the fact that it is accompanied with delight and excitement. The chase has always been a source of anusement and delight to kings and nobles, and the gates of the forest in England and European nations are closed to all except that favorile few. But in America the forests are open to all of her citizens—not barred by caste or distinction—where the cares incident to an active life may be cast aside, and all may revel in the luxury of the chase, only restrained by wholesome laws for the preservation of game; the object of which indeed is to increase our pleasure.

In no locality within my knowledge is hunting extensively engaged in, and so successfully pursued as in this very county of Armstrong. Foxes and 'coons are the favorite game. The hunters are experienced. The hounds are blooded and well trained. The captain of the hunt was the old 'coon and fox hunter, 'Cou'n 'Nulton, weighing over two hundred pounds, and may be seen nost any day accompanied by a half dozen hounds. The captain and several others took with them five hounds: Old Jack, an imported English fox hound imported by Fox, of Foxburgh, Res-Lucy, a black and tan, Nellie, black and white, from Clearfield County, Rock, a black and tan pup from v aryland; Drummer, a black and tan from Join King's kennels. The chase must have been quite exciting, and as the excitement of a fox hunt can be conveyed only in the phraseology of a hunter and a participant we give his own account of it.

"At I P. M. we started for the old furnace property, two mules northwest of this place, a tract of land containing exercises."

conveyed only in the phraseology of a hunter and a participant we give his own account of it.

"At 1 P. M. we started for the old furnace property, two nules northwest of this place, a tract of land containing some two thousand acres of timbler, and an excellent place for fox hunting. Shortly after our arrival at the woods the pup struck the trail and gave tongue. Then Old Jack and the balance followed, excepting Drunmer who was held on the chain. Away they went down and across the run, the hounds giving tongue, and baying; the hunters, noisy and more excited than the hounds, shouting. There he goes; look, Is e him. Down the run the fox went—no time to trot, but six feet at every bound—until he came near the river, when he made a turn and recrossed the run, and ran along the side of the hill coning directly toward the hunters, not one hundred rods ahead of the hounds.

"As he came near us he struck our over the hill. 'He is making for Buttonwood Knob!" shouted 'Con,' and we all struck out for the Knob. The fox made good time and gained on the dogs some three hundred yards. When we got to the Knob he made one circle around it, and was on his second round when he came within some thirty yards where we were stationed.

"Here he comes,' shouted Alex. 'Look, Con, there he goes.'

"Here the kinn on saves 'Con,' and let Druwners loces.'

"Here the him go,' saves 'Con,' and let Druwners loces."

"Here he comes," shouted Alex. 'Look, Con, there he goes.'
"Let him go,' says 'Con,' 'and let Drummer loose.'
"Drummer struck ou 'full tilt."
"Hip, hurray,' says Alex. 'Two to one he puts him to earth or kills him in ten minutes."
"I take the bet,' says the lawyer from Pittsburgh.
"Away they went through the hured, and up the hill over Buttonwood Knob out of sight.
"If that King dog was worth a tinker's cuss he would have him; no use in depending upon anything except the pure blood,' says 'Con.'
"We recrossed the ravine, and wai'ed for half an hour, but no word of the dogs or fox.
"Con thinks they have struck out for Washington Loop. It was getting dark so we started for home, where we arrived at 6 F. M., having seen a fox chase but caught no fox. All of the dogs came home in the night time except the pup, and we found him yesterday about five miles from here. The afwe found him yesterday about five miles from here. The af-ternoons are too short for a fox hunt. The next time we will go out in the morning, and expect to bring in a fox. Our next venture will be after a black fox in Brunt's Hol-

low."

This is the account of the fox hunt. If any one of your many readers wish to have some sport in the way of fox hunting let him come to the Reynolds House in Kittanny, and inquire of Sheriff Henry. He will have a warm reception. A fox can be started at any time.

A HEXTER.

#### THE GUN TAX ON LONG ISLAND

THAVE read with a great deal of pleasure Mr. Nicholas Pike's letter to the farmers of Long Island, in last week's issue of the Forest AND STREAM, and although his letter may apply only toor in the neighborhood of the city, yet I modorse every word he writes in regard to the protection of insectivorous birds.

But in reference to his proposition that every gunner on

But in reference to his proposition that every gunner on Long Island should be taxed ten dollars for a license per annum, I would like to enter a feeble protest—not for myself, but in behalf of some very worthy sportsmen, who, not having plenty of lucre, could ill afford to pay such an amount. It is not the man who can hardly spare a few dollars to go a short distance on Long Island who kills off the game some distance away from the city; but it is the aristocrat (dressed in the latest stye of sporting suits), with a magnificent gun and a brace of beautiful setters, with a supply of money unlimited, on whose hands time langs heavily for want of occupation, who can go any distance on the Island and stay any length of time it may suit his lordship, who is the real exterminator.

minator.

The man who is tied down to business and can with great difficulty spare a day or two to enjoy some little shooting, but whose means will not enable him to go any distance or

out whose means will not cannot min to go any distance of stary beyond the short thus allotted him, even were he dis-posed to do so, is by no means the one who annihilates game. By placing a license fee of ten dollars on every sportsum it would give the exclusive right of hunting to aristocratic members of opulent gun clubs and debar any one else from enjoying this truly ennobling sport, genuine sportsman though

he be.

On the other hand, by not having some kind of license
there is danger of that part of Long Island within a radius of
twenty miles from Brooklyn being run over by an army of
pot-hunters and sportsmen, which is yearly being aug-

inented.

If it be fixed at \$2 or \$3 it will prevent "fledglings" of from fourteen to eighteen years of age from setting out on "scouting" expeditions from the clites of New York and Brooklyn, renturing just over the city limits of the latter named city and shooting not only insectivorous birds, but barn-yards fowls as well.

These are the ones who tend more toward destroying song

and game birds within a ten-mile radius of the city than any

and game birds within a ten-mile radius of the city than any one else.

There is another thing I would like to ventilate through I have it from a third party, I can implicitly believe him, and that is parties shooting from a battery in East, or Moriches Bay; and while spending a few days at Moriches I was informed that the men belonging to the life-saving station in the vicinity were in the habit of "dashing" for wild fowl at night. This tends more toward driving wild fowl out of the bay than a whole army of sportsmen could do.

What we want is better protection, and all the game laws of the State and all the license fees collected on Long Island will accomplish nothing if the game constables are in league with the unlawful battery shooters and share their unlawful profits.

Et Point Calabor.

EL POBRE CAZADOR

SCHENECTADY, Dec. 31.

Does Mr. Pike or any of his co-workers ever stop to consider if there are not some gentlemen sportsmen in the laboring classes, and that a ten-dollar license to them means the taking away of numerous conforts from their families? I know several laboring men in this vicinity as honorable sportsmen as ever carried a gun or rod (although the one may be of pot-metal and the other reed). They would not think of killing or catching game out of season, and their occupation and means do not allow of more than half a dozen days' hunting in the season. Will it be just to deprive them of these few days by putting on a prolibitory license? Be generous as well as just. Don't rob a sportsman, "'the' e'r sae poor," out of a few days' enjoyment under the false plea of protecting the game, and so perhaps drive an honorable hunter on to the criminal record by selfish legislation.

I have been a regular subscriber for Forest AND STREAM for over two years and can fully indorse the opinion that the paper is growing in excellence. I can assure you from experience that you have far more readers than subscribers. My copy is freely used in a class that can ill-afford to spare the price of any paper, and they take great interest in it and are watching the proceedings of the different clubs and associations with anxious minds. They are very expressive in their heartfelt graititude to you for the many recipes found in correspondents' column, which have often been of great benefit to their dogs.

#### OUR DETROIT LETTER.

DETROIT, Jan. 8.

Detroit, Jan. 8.

The event of the week in Detroit sportsmen circles was the contest for the medal of the Michigan State Metal Association. The meeting was beld on Wednesday at the grounds which have been fitted up for the use of the association within the Hunt-man Park inclosure. As I informed you in my last letter the costiy bauble which is the object for which the gallant men of the association so often and so fiercely struggle, was beld by E. S. Barbour, of this city. He was expected to appear to defend his possession of it but the holiday burdens had been too heavy for him, and he was downight ill. He accordingly placed the medal in the hands of a trusty friend, tegether with a letter explaining the cause of his absence. The day was clear and odd, but so admirable are the arrangements that very little discomfort was exprienced from the depressed temperature. For instance, the "home base" is in an inclosed shed, where a large stove and plenty of fuel made it possible for the shooters to quite domesticate themselves. When one was called to the hne he had merely to seize his gun, step out from his warm corner, toe the scratch, wiok, "pull" and blaze away. This may be regarded by some as rather an effeminate surrender to the borean blasts, but all such will have to be properly introduced to the "boys" hereabout before they can understand they are men in the broadest-shouldered sense of the term, hardy, sturdy fellows who have waded roaring for-rents and chased the bounding roebuck over long and tedious courses to get her. The fact that hone civilization is called on to contribute to the sportsman's luxury is, I take it, better proof of his level-haddeness than of his effeminacy. rents and chased the bounding rochuck over long and tedfous courses to get her. The fact that home civilization is called on to contribute to the sportsman's luxury is, I take it, better proof of his level-he adedness than of his effeminacy. It will no doubt interest many hundreds of readers of Forders AND STREAM to Know that this day's shroting was done over traps presented by the late and still lamented ference Smith, and that henceforth, as long as those traps shall last, the association will use no others. This in memory of one of the rarest and gentlest souls that ever grew big in mortal breast at the opportunity to do some suffering fellow creatures agontine kindness. The Detroit sportsanca miss him sadly, and his name, like that of poor Tom Davey, is seldom mentioud bere unless accompanied by the hearfest aspiration: "God bless him."

name, like that of poor Tom Dawcy, is seldom mentioned bere unless accompanied by the hearfelt aspiration: "God bless him."

Well, as I was saying, the day was brilliant, the shooters were in high feather, finger joints were in good playing order, good nature ruled the camp, birds were warm and lively, and every fellow had an air of determination as if resolved to win or die in the attempt. There was a goodly number of speciators present and a considerable sum of money changed hands on the result—chiefly by outsiders—together with sundry bottles of wine, game suppers, and 25-cent cigars. (It is astonishing how inxuriously the sportsman enjoys a good cigar after a day's shooting, apexed with a hot game supper done up in right style.) I do not need to fill space unnecessarily with trilling details, so for the purpose of this chronicle let it suffect that Goff Stenton won the metal by killing ten out of his eleven birds.

At the annual meeting of the Michigan Sportsmen's Association, at Lausing, on the 25th instant, essays will be read and topics of interest generally to the sporting world will be discussed as matters of subordinate concern. I say subordinate because the main point of this meeting is the proposed revolution of the game laws of Michican. The latest organization to appoint delegates to the State Convention is the Lake St. Clair Fishing and Shooting Club. Its delegates are Hon M. Dickinson, one of the most prominent lawyers of the West; Hon. Geo. H. Hopkins, Secretary to Gov. Bagley and now a member of the Michigan House of Representatives, and Wm. C. Colburn, President of the club. I shall next week have for your readers an interesting history of this famous gentemen's club, which, I think, might be accepted as a model by all the world of amateur sportsmen.

TRIGGER TRIX

New Hampshier—Nashira, N. H., Jan. 1.—The past season has been a dry one; but very few woodcock were shot in this vicinity, the usual feeding grounds being so dry as to offer no inducements to the birds to stop. Ruffed grouse also were hard to find, and were never so scarce, Squirrel hunting is the best sport of the season. Since snow has come fox hunting has given fine sport to those who enjoy

the chase and love the music of the mellow-tongued nounces. Rabbit hunting is gaining in favor, and some fine dogs are owned here. Mr. Frank Laton has the staunchest: he took him on Christmas day to hunt rabbits in the big swamp. He started an old "long-leg" and drove him till the 23th without tie up, when the rabbit was shot, and made the dog a well-earned Christmas dinner. Webs. the chase and love the music of the mellow-tongued hounds.

#### THE PROPOSED NEW JERSEY LAW

Tom's RIVER, N. J., Jan. 9.

Editor Forest and Stream:

Ton's River, N. J., Jan. 9.

Having read in your issue of Dec. 30 a communication from J. H. B., relative to the growing scarcity of game in the State of New Jersey, and advocating a two or three years' prohibitory law on woodcock, quail, rabbits and pheasants, let me say in reply that I am a resident of New Jersey and think that I may be considered a sportsman, as I have been shooting over twenty-three years, both in the East and the Far West, and am pretty well acquainted with the nature and habits of game birds generally. All sportsmen know that it is not the gun used in open season that exterminates game, but it is snaring birds, killing them in closesson, and our severe winters, when the ground is covered with snow, perhaps for several weeks, and the birds are starved and frozen out. There are plenty of men who call themselves sportsmen who will sit around their comfortable fires and talk of closing a game season for two or three years who would not walk one hundred yards in a snowstorm with a little feed for the birds if by so doing they could save a whole bevy. Let such as these, and all others who really desire to preserve shooting, feed the birds, now that there is a foot or two of snow all over the State, and do as I am doing—set the farmers' boys to work trapping, buy the birds from them, keep them over winter and put them out in the spring. This plan, if followed by sportsmen, will be more effective in preserving game than a ten years' close season. Those who are acquainted with the labits of quail know that when gunned some, the bevies broken up and a number of birds killed out of each, the remaining birds will mate and breed much better for it; for wh re a bevy is left undisturbed they will remain together. Few, if any of them, will pair off. Likely two or three hen quails will lay in the same nest, a constant warfare will be kept up, the nests destroyed, and no young birds when the season opens.

"J. H. B." also says that he finds that those who are best informed agree that the time has come when

three years. Now, sportsmen with whom I have talked relative to this matter agree fully with my views—that were it possible to get together enough non-sportsmen in our Legislature as would pass such a bill as ".]. H. B." proposes, the result would be indiscriminate shooting at all times of year, and birds would get no protection. I am positive that sportsmen generally would neither recognize nor assist in the enforcement of such a law. The laws of this State are sufficiently stringent as they are. Our quil season opens November I and closes January I, which makes a short one: besides, there are many days when the weather will not permit of shooting and the laws as they are cannot, or at least are not enforced. Then why talk of passing a law that would be universally disregarded? If the game laws of this State were rigidly enforced we should always have good shooting. As regards the growing scarcity of birds, let me here remark that we have had more quall this season in this vicinity than for a number of years past, and I think such has been the case throughout the State.

I do not think it would be a bad plan to close the season December 20, for up to that time we rarely have any snow. This would prevent port-hunters who are in the habit off reking quall in the snow till they come up to the bevy huddled together beneath a bush, where with one shot they will kill all. With the protection of game and the privileges of sportsmen at heart, I am, etc., tive to this matter agree fully with my views-that were

#### NEW YORK STATE ASSOCIATION.

THE Twenty-third Annual Convention of the New York State Association for the Protection of Fish and Game, and its tournament, will be held in the summer of 1881, under the anspices of the Long Island Sportsmen's Association. The place selected is the Brighton Boach race-course at Colon Palach 1881, under the Association of the Protection of Protection of the Protection of Pro der the auspices of the Long Island Sportsmen's Association. The place selected is the Brighton Bachi race-course at Coney Island. Clubs from all portions of the State, embracing the most influential residents of the various cities, as well as of the rural districts, will be in attendance. This section of the State, for the first time since the association became large; is chosen because of the incomparable advantages offered. It has been customary to offer prizes for competition at rifle, pistol and trap shooting and for fly casting. These prizes, consisting of money, guns, fishing tackle, ammunition and articles useful and necessary or ornamental, of every description, have always been donated by dealers and business men, who in return are advertised properly, and without expense to them, in circulars, programmes, pamphlets and the newspapers.

who in return are programmes, pamphlets and the newspapers.

It is proposed to make this the most important and successful event of the kind. To this end the undersigned have been appointed a committee to receive donations of suitable prizes and to arrange for the publication and distribution of the advertisements and acknowledgments. The circulars and programmes will be issued between March 1 and March 15 next, and sent to every club of the association throughout this State, and to other State organizations and the press. They will also be widely distributed at the time of the convention and tournament, which will continue for at least one week, during the season at Coney Island, and systematic publication in the newspapers will be assured. All prizes must be de ivered by March 1, 1881, and donors are requested to send a memorandum of the proposed gift at the earliest convenient date, as it is desirable they should before March.

All prizes will be exhibited, with the donor's name displayed thereon, for public inspection in a conspicuous place, for a reasonable time, and every practical effort made to thoroughly advertise the same.

Several valuable prizes have already been tendered and accepted.

All communications on the subject should be addressed to

cepted.

All communications on the subject should be addressed to some one of the committee, who will cheerfully furnish the desired information. Respectfully.

Charles W. Wingert (Fountain Gun Chub), 54 South Portland avenue, Brooklyn, N. Y., or care Nicol, Cowlershaw & Co., 743 Broadway, New York city.

A. Eddy (Long Island Shooting Club), 106 Sixth avenue, Brooklyn, N. Y.

F. C. Chamberlain (Nonpareil Sporting Club), 150 Sterling place, Brooklyn, N. Y., or care Lawrence, Taylor & Co.,

316 Broadway, New York city.

Chas. W. Rodman (Garden City Gun Club), 413 Eighth street, New York city.

Leslie W. Wilde (Washington Gun Club), 27 Fourth street, Brooklyn, E. D., N. Y.

We concur in the above: Abel Crook, President New York State Association; Geo. A. Chappell, President Long Island Sportsmen's Association; N. B. Cooke, Cor. See'y New York State Association; Jno. B. Sage, Rec. See'y New York State Association:

#### DELAWARE BAY DUCK SHOOTING.

O NE mild, sunny afternoon this fall during a duck shooting trip, I lay off in a blind overlooking a bunch of decoys. Not a ripple disturbed the ominous quiet of the broad bay, or moved the dead grass and recedsaround me; an oppressive hush pervaded the desolate marshes, broken only by an occasional screech of a passing sea gull.

I was thinking of "stilly nights" and home, when I awoke to remember I had built my cosy little nest almost over the "Waterman's Grave" (from whence the point derives its name) when I was rudely called to a chilly consciousness of a piercing northwester and a white-canned sea. The day

"Waterman's Grave" (from whence the point derives its name) when I was rudely called to a chilly consciousness of a piercing northwester and a white-capped sea. The day had been a storm breeder indeed, and when I arrived along side the yacht, long after sun set, wet and half frozen, all dreamy notions of poetic inspiration and creative imagery, fell limp and frost bitten before the stern reality of the situation. Next morning I took up my field glasses; ice and snow and a leaden sky met my eye, and I dive into the cabin to muse oratio.

a leaden sky met my eye, and I dive into the cabin to muse again.

Ben Davis Point, if we except Egg Island, is the most prominent in the Delaware Bay, the adjacent shallow cove, extending down to "Tuxet" Point, furnishing a large area of feeding grounds for waterfowl; and no better spot can be found in these waters for geese, brant and ducks, as they fly to and fro across the Point. A day or two of westerly winds bring them into the cove from all parts of the bay in countless numbers, and a good paddler with a first-class shooter ahead of him can illl his boat in a few days. During heavy southeast gales the birds are driven inland by the rough water, and take shelter in the Back Creek, the Tweed and their numerous tributaries and fresh water ponds. I have killed as high as thirty-nine black ducks singly with but forty-five minutes of daylight to do it in. True, it was during a bilinding snow storm, and I had the first whack at them. The latter part of February and March is the best time for geese and brant. Blue bills are so numerous then that over a hundred have been caught in a shad gill net in one shord drift, other nets ranging from twenty up, shad and ducks alternative the standards a seales. anundred have been caught in a shad gill net in one short drift, other nets ranging from twenty up, shad and ducks alternating in the treacherous meshes. An old fisherman tells me this with a long face. Every fall for twenty six years I have paid a visit to Ben Davis Point and the Waterman's Grave. An oil painting, done by young Peel just before he died from a sketch taken on the spot, and presented me, now hangs in my bed room, and it is truly a very lifelike picture of a very desolate spot.

Form yourself into a committee of one and feed the starving hirds, or pay some one of your friends in the country to do it for you.

A Kansas Incident.—Abilene, Dec. 28.—I notice quite a number of deer brought to town—seven or eight—one turned the scales at 190 lbs.—a fine buck.

Quail are very plenty here this fall and we are having fine sport with them. It is no unusual thing to find eight to ten large coveys in an afternoon hunt, and sometimes something else, as one of our boys can testify to. He was out with a friend lately for a quail hunt on one of our small streams and they had been quite successful, one hunting on one side of the stream and one on the other, only one dog, and he like a policeman, never around when wanted. C. noticed a likely looking bend in the creek, tramped down into it the long grass and bushes, when suddenly, with a snort and grunt that made him quake, he found himself attacked by a beast that savagely snapped at lis legs. No trees handy, afraid to turn and run for fear she would take a piece out of his back. With hair standing on end, he stood his ground like some Roman gladiator, and poked and punctured at her with what? with his gun, and was about to give up in despair, when he remembered it was a gun, and pulled both triggers. The charge of No. 8, backed by a good charge of powder, did the work. Just then B., a farmer, and the dog came, and they gazed upon the monster; the silence was broken by the farmer, who remarked thusly: "Yes; she was a fine one, and pure Berkshire, sold \$50 worth of pigs from her last year; would not have parted with her for any money, besides the pigs will be sure to die—but, boys, its yours, give ups 16 and we'll call it square." Infine.

yours, give me \$16 and we'll call it square." Dirigo.

Nebraska Notes—North Platte, Neb., Dec. 21.—The boys are having lots of sport now. R. Watts came in from the Dismal. Killed twenty deer, and they were first-class. As I had a saddle mys-lf I know. Game is very plenty this year; and it is a good thing for some of the farmers over on the Republican River who did not raise any crops this year. Any day you can see loads of game in our city going south. Mountain linos are plenty this year. A large one was killed Monday at Fort McPherson. One of my nequaintwnces saw four on the Medicine Riverand shot at them, but did not kill any. Dillon and R. Watts start to-night on a grant hunt up the North Platte, near Olfallin's Bluffs. There is a band of anticlope there, driven down by the storm, and as they are first-class shots they will make it a successful rip. The antelope is hard game to get. I have hunted them from Old McPherson to the Big Horn Mountains, and I find that if you get them you have to shoot from 100 to 200 yards of them, and there are more killed inside of 150 than over. But a 45 cal., with 100 grains of powder, will most always dothe them, and there are more killed inside of 150 than over. But a .45 cal., with 100 grains of powder, will most always do the work if any rifle will. But I think that a good repeating arm that would use 100 grains of powder would be the best, and I don't see why some gunnaker don't get one up, as it would pay. Men won't use a .50 cal. rille out tere. The bullet don't go as fast as they wish. If they would make a 12th, rifle, .45 cal., 100 grains, they would have the best rifle for deer and antelope.

GAME AND GUNS AT OMAHA.—Southwestern Minnesota GAME AND GUNS AT OMARA.—Southwestern Minnesota and Northwestern Iowa is a country but sparsely inhabited as yet, and embraces without doubt the best chicken shooting to be found. Chickens are found by the thousands and the numerous lakes afford, in season, splendid duck and goose shooting. The lakes abound in multitudes of fine fish, and all in all, for sport in the fall months, this region cannot be

surpassed. There is no use in naming particular localities, as the sportsman cannot go amiss. The sportsman should be prepared to camp out, and not depend on finding much, if any, accommodation at the best places. The present cold weather has driven the deer down from more northern regions, and fine sport is now had within a few miles of Omalia. Seventeen deer shot in one week on the Minnesota bottom within six to ten miles of this place. In shot-guns every make ever known or heard of is represented. Almost every-body uses heavy ten-gauge guns, with pistol grips—and almost every-body overheads their guns, the rule being to put in all the powder and shot the shoulder will bear. Of dogs, we have curs of high and low degree in innuncrable numbers and a fair sprinkling of really good dogs. Nautters.

and ne jowden as now the stonder win toean. Of togs, we have curs of high and low degree in innumerable numbers and a fair sprinkling of really good dogs.

A HINT TO GUNMARERS—Fernandina, Fla, Dec. 28.—In your issue of the 6th inst we read with much interest two articles by "Bedford" and "Dell," under the head of "Gun, Powder and Shot. They contain, without doubt, much practical information, and if every man who is an amateur sportsman had the time to thoroughly test his fowling-piece, as prescribed by these gentlemen, he very probably would be much more successful in the field. But just here is the trouble. Such experiments must not be conducted carclessly or hurriedly, but with such great precision and accurate registry of results as would consume nuch more time than many of us could command. Again, such trial would necessitate a convenient range for target practice, that to many would be inaccessible, except at remote distances. In view of these hindrances to the many who might otherwise make there tests for theuselves, we would suggest, with due deference to the manufacturers of guns, or at all events of the better grades of guns, that they would specially test each gun for the specific purpose of furnishing with each gun directions how to load said gun so as to attain the best results, viz.: number of drachus of powder to each number of shot; how to wad on both powder and shot; what make of powder was used in the tests as to mills and number, and the range of the piece according to the loading. We are sure that there are but few purchasers who would not be willing to give an extra price for a gun accompanied with this accurate information. There is no doubt that many an excellent gun is condemned and probably many a man branded as a "audt," who might otherwise be a very fair shot, on account of the want of this accuracy of knowledge of just how to load. We do not know that our suggestion is a new one, but we have never heard it advanced before, refther have we ever cen any directions of any kind accompany

The Proposed Revision—New York, Jan. 7.—Editor Forest and Stream: My attention has been called to the so-called measures for the protection of game as proposed by the Long Island Game Association. A number of sportsmen have called on me and asked me to use what influence I have toward exposing and preventing the passage of any such act as they contemplate bringing up at Albany. The meeting held seems to have been entirely under the control of the dealers in game and fish, and the proposed change is simply to allow them to sell game out of season, thus opening a market for prachers and encouraging them to break the laws. The bad features of such an act have been so thoroughly exposed that it is not necessary to discuss them now. It would The haf features of such an act have been so theroughly exposed that it is not necessary to discuss them now. It would prevent all further prosecutions in the large cities and destroy the usefulness of game protective scieties. The only reason they offer for this change is that the present law inteef res with their profits, which they could make were they allowed to pander to the apretites of the wealthy. I am sure, however, that with the growing feeling for the necessity of game protection such an outrageous law will not be passed. When will clubs and individuals stop tinkering with the game laws and learn that it is far better to see that their country friends keep their quali from starving this hard weather and enforce the present laws than to spend their time in urging the passage of new ones. People in the country get confused by the constant changes; they do not have time to get fully acquainted with the laws before they are altered. A few birds kept over and turned out in the spring and a few quarts of small grain scattered in the swamps will do more toward providing good shooting than all the game laws in existence.

laws in existence.

Florida—Madison, Dec. 30.—I came to Florida about a month ago in search of good shooting grounds. Thus far I have confined my attention to ducks and quali, which can be found in great numbers at almost any point between Live Oak and Tallahassee. I came here a stranger, but found hospitable gentlemen both ready and willing to direct me to the haunts of the duck and quali, and in many instances accompanied me into the field with their guns. From fifty to seventy quali is the ordinary bag of two sportsmen going out for one day and shooting from 9 A. M. to 4-P. M. The cover is good open broom sedge and the birds lie well to the dogs. Trust that you will direct inquiring gunners to this the finest game country I have ever seen. At Tallahassee Judge Westcott is the most enthusiastic sportsman in that section of country.

G. D. P. H.

Among the librars—Lover Brule Agency, D. T., Dec. 16.—This is quite a sporting country. We have the antelope and deer quite plenty here, and also chickens, though from some reason this year we have none to speak of. The general opinion of the employees and officers at Fort Ifale (which is situated about thirteen miles from here) is that the young broods were killed by a freshet of the Missouri River, just as the young broods were hatched out. As a general thing they are without number. One of our half-breeds has a fine stag hound, and every morning he makes a capture of a wolf by running him down. I learn that the buffal are within a hundred nules of us, and a party start out soon for a hunt. I do not expect to get much hunting till the spring, when the fowls fly here quite plenty.

Lower Berler.

Indiana, Hronksburg, Jefferson Co., Dec. 28.—A party of five from our town enjoyed four weeks' shooting last month along the Mississippi River, between Cairo. III., and New Madrid, Mo. We got eight deer, sixty-three turkeys, eighteen geese and a few ducks. As some of your correspondents seem to be interested in the weight of game birds, I

will mention that we secured several fine old gobblers weigning fifteen to eighteen pounds, and one extra large goose weighing fourteen pounds. We were in a little flat-boat fitted up especially for the trip, which is a pleasant way of going on a few weeks' hunt. The deer we found plentful at one lauding only. Turkeys in abundance at several landings. Geese and ducks unusually scarce, they being further T. S. M.

Tolland Cornty, Conn., Jun. 4.—The old year closed here with very severe weather for all kinds of game. The snow-storm of last Wednesday covered the feeding grounds of our partridge and quali, which were quite plenty. The several light storms since give us eight to ten inches of snow, with no dirfts, and therefore no bare spots for the birds to feed upon. The thermometer ranged from zero to 24 degrees below for the last three days of January; and this, with the difficulty of finding feed, will greatly diminish our number, which was good up to this severe weather, and bid fair for a goodly number wintering. Had this been a favorable winter for our game, shooting in this section next season would have been excellent. Ducks were quite plenty for this locality until the severe weather of last week closed our streams. Rabbits are very plenty.

A Massachtsetts Wild Car.—The New Haven Times tells a story of a man who went out rabbit shooting in the woods and swamps of West Granville, Mass., and came across a 22b. wild cat. He gave the cat both barrels together, loaded hearly with No. 6 shot, and the charge brought down both game and hunter. Lunny was knocked down by the recoil, and the cat was riddled through the breast, but it did not kill him, and Lunny rushed forward to save what was left of his dog and clubbed the cat to death with the breech of his gun. The dog, a fine hound, weighing twice as much as the cat, is so far disabled that he will never hunt again. And all in a confidential interview of three seconds with a Yankee wild cat!

New Jersey Game.—Morristown, N. J., Jan. 3.—I think J. H. B., of New Bedford, N. J., hits the "Nail" square on the head when he says the game in New Jersey is fast disappearing. I know some men near Morristown who would as soon shoot a bird out of season as to shoot one in season. A large number of birds are trapped near here, and so long as the birds are trapped and shot out of season how can we expect them to live? I think if a close period be established for two years we will have fine shooting in it. Yours truly,

Michigan—Essexville, Bay Co., Dec. 27.—I find great pleasure in reading your valuable journal Game not very plenty as yet, but in a few years I think quall and rabbits will be quite numerous. Ruffed grouse are quite scarce, and only a few are brought to bag.

L. E. R., Ju.

Brown Representation Western Massachusetts is excited over BRIN REDIVITS.—Western Massachusetts become the exploit of one of the oldest hunters in the State, who has just shot four bears in the Hoosac Mountains. Bruin has not been seen in that part of the country for many years.

X. J. F.

LIVE DREE WANTED .- A correspondent wishes to know there he can purchase a number of deer—both bucks and THE STONY CREEK, Conn , fox hunters have killed over

thirty foxes this winter. THE AUDUBON CLUB of Buffalo are coming to Coney Island

next spring forty strong.

FLORIDA-Monticello, Dec. 31.-Quail, snipe and ducks

#### SHOOTING MATCHES.

Рин.арев.рина, Jan. 3.—The following score was made by the Philadelphia Jag'd Club on December 30 at pigeons for a gold

match.

DEPROVE Town Dec. 30 .- The last shoot of the year of the Julien Gun Club took place last Friday, and, notwithstanding the cold weather, a most enjoyable time was had. The match was shot on the Mississippi River, and the boundary lines were marked out on the ice. We had a large tent erected, in which a good stove was put up and the bottom of tent laid with boards, and at noon a lunch was served of sandwiches, coffee, pickles, etc., which, it is needless to say, was thoroughly enjoyed. Read won the medal for the second time in succession, d. Mr. J. N now his individual property. Following is the score; 21 yards, 5 birds each:

S I COY0	1	1	4	*-2	J. Raup 1 1 1	0	1-4

VINCENTOWN, N. J., Jan. 3.—The Coaxen Glass Ball Club held their monthly shoot here to-day for silver badge. Card's trap, 18 yards rise, 10 balls :

Snow three feet deep on level.

PORT RICHMOND, Staten Island, Jan. 9.—The Holiday Gun Club of this place was organized Jan. 1, 1881, with the following named officers and members: J. A. Pearce, President; Gustave Sprenger, Vice-President; J. H. Butler, Secretary: E. C. Lisk, Treasurer : B. Mullin, R. Brown, E. Cruser. At the first regular shoot of the club on Monday, Jan. 3, the following scores were made, glass balls, single trap, 18 vds.

The Washington Gun Club, of Brooklyn, have leased the R wood Park for the term of four years for the purpose of holding their shoots there, and have also erected a club house on the grounds. The park is to be surrounded by a high board fence and all outside shooting will be strictly prohibited.

PALMYRA, N. Y., Jan. 4 .- A match took place here on the above date between Cannon, of Newark, N. J., and J. A. Oyster, of Camp Hill, Pa., at ten birds single at 31 yards rise, and five pairs double birds, 21 yards rise, which resulted as follows: 31 yards—Cannon 6; Oyster, 6. 21 yards-Cannon, 6; Oyster, 7.

CAPTAIN BOGARDUS says that he will accept the challenge of Dr CATTAIN DOGARDUS SAYS (DAT NO WILL accept the challenge of Dr. Carver to shoot 100 birds each, 30 yards rise, 5 traps, under the English rules, for \$2,500 a side. Now that both men are for once agreed on the conditions let them come together, and may the

Study Hop Bitters Book, use the medicine and you will be wise, healthy and happy.

## The Rennel.

#### THE COCKER CLUB.

So far as membership is concerned, the Cocker Club is already an assured success. We have received directly and through Mr. Macdougall more than forty names of those who signify their desire to join the club. The list will be kept open for receiving names two weeks longer, or until Jan. 27, when we will close it and call for the votes for the committee of seven who will undertake the formation of the club.

All owners and breeders of cockers, and all others who are in any way interested a the breed, are urged to send their

names to us within that time, that they may have a voice in electing the committee.

Our readers are invited to bring this matter to the attention of others who are interested in the breed but who do not read the Forest and Stream—if there are any such. \_\_\_\_

PITTSBURGH DOG SHOW .- The entries for this show, as noticed, closed on the 6th inst., and during the few days before the closing of the books Superintendent Lincoln had all he could attend to. The entries came in far beyond the expectation of the promoters of the show, and instead of having one hundred and fifty, as calculated on, about double that number have been booked. Mr. Lincoln, in writing us, states that for number and quality of entries of sporting and nonsporting dogs the show will rank fairly with any show held in the country. The Baltimore Kennal Club has made seven or eight entries, Mr. A. H. Moore, of Philadelphia, thirty, and many other celebrated kennels will be represented. Mr. Lewis M. Rutherfurd, of this city, has entered his famous fox terriers and expects to attend the show. In addition to Major J. M. Taylor, who will judge the sporting classes, we are happy to state that Dr. L. H. Twaddell, of West Philadelphia, has consented to judge the spaniels, hounds, foxterriers and all non-sporting dogs. ---

New York Show .- In all probability this show will take place on or about the first of May, at Madison Square Garden. It will be impossible to secure the Garden before that date and by that time the building will have been put in repair and thoroughly tested.

#### LARCENY OF A DOG.

GOOCHLAND, Va., Dec. 28.

GOOCHLAND, Va., Dec. 28.

THIS matter has been discussed in several numbers of FOREST AND STREAM. In your issue of December 16, page 391, is a communication from "Ritle," in which he substantially concludes that dog stealing is punishable as other larceny by the common law of England. In this, "Rifle," although apparently a subject of the Queen, is mistaken. It was well settled at common law that while on the one hand a dog is such property as that its owner may maintain a civil action for the unlawful conversion, destruction, or injury thereof by another person, it is not such property as to be the subject of larceny. But by Statute 10, Geo. III., C. 18, very high pecuniary penaltics, or a long imprisonment, or whipping in their stead, may be inflicted on such as steal, or knowingly harbor a stolen dog, or have in their custody the skin of a dog that has been stolen. This statute was altered, but not materially, by another passed during the reign of George IV. The common law distinction in regard to the nature of this subject still prevails in this State, with this exception, to wit, that any person who desires so to do can have his dog listed for taxation, and upon so doing and paying the tax of one dollar for the first, and fifty cents for each additional dog, such dogs are to be considered as other personal property, and the stealing thereof is declared to be petit larceny, punishable as a misdemeanor.

#### A LETTER FROM MR McKOON

FRANKLIN, Del. Co., N. Y., Jan. 10.

Editor Forest and Stream:

I have noticed your public refusal to publish my letter, addressed to all breeders and interested ones in the cocker controversy, also your stunning steps and terrible remarks in relation to the position taken by myself, as agent for or voice of others or most of our highest esteemed breeders. All lation to the position taken by myself, as agent for or voice of others or most of our highest esteemed breeders. Although I think they were directed against me too personally, and had much preferred to see the whole private letter without change rather than in parts, etc. I, will not try to defend myself in the least in relation to them or the position I wished to take in the matter, but let others decide that as may occur to suit themselves. But I busten to say that wherever my great zeal and deep interest for my brothers and our favorite breed may have caused me to err in the matter, or my enthusiasm caused me to see things in a wrong light, I wish to make immediately all apologies, and ask as many pardons as seems to be due from one. Facuowing as you do my enthusiasm, when any one is liable to err conscientiously, you will grant the pardons and accept the apologies, I hope and believe.

I desire also to say that as matters stand at present I believe it best for all directly interested to join the list for the suggested club. You may therefore add my name to that list. There has been suggested the formation of another Cocker Club, comprising the principal public and private breeders of this strain and those interested and in operation.

list. There has been suggested the formation of another Cocker Club, comprising the principal public and private breeders of this strain and those interested and in opposition to the New York club, to compete with the New York club. But this step I have hearitly discouraged, and with such success that the idea is now dropped I believe. With Forest AND STREAM to get the club into satisfactory forn for all connected, the objections some seem to have will now be removed. Now, as we are certainly to have a Cocker Club, one club is enough, and all public and private breeders of this strain should join it, and work with it and not leave it for a few to monupolize to suit their own views, but all work for the good of the breed, and breed to the standard, as near as is consistent with field qualities, health, intelligence and beauty. good of the breed, and breed to the standard, as deal as a consistent with field qualities, health, intelligence and beauty.

M. P. McKoon.

Duck's Winnings .- Dr. William Jarvis, of Claremont, N. H., has kindly called our attention to an error which appeared in our notice of Wenzel's Chief in a recent issue and we hasten to make correction. The notice stated that Duck, among other winnings, secured the special for best Irish setter bitch at St. Louis, 1879, when in fact the prize went to Dr. Jarvis' Rose. The following letter from Mr. John Fottler, Jr., explains how the mistake occurred:

Boston, Mass., Jan. 10.

Editor Forest and Stream:

Thanks for calling my attention to the error. I did not enter Duck in special class for best frish bitch, St. Louis, 1879, and Dr. Jarvis' Rose was the winner in that class. I

sent the record to Mr. Moore, and having made it up in hurry I made an error in copying. Please correct in an early number. I have written Dr. Jarvis concerning this correc tion. Very respectfully,

John Fottler, Jr., Pres't Mass. Kennel Club.

BEEF TEA FOR DOGS—Philodelphia.—In issue of FOREST AND STREAM of December 29 Dr. Sterling, of Cleveland, gives an admirable receipt for making beef-tea, and agrees with your correspondent that liebig's extract, in the feeding of puppies, will cause death sooner than starvation, and in the course of the article mentions Johnston's fluid beef as being a preparation which contains the entire nutritive constituents of the beef, but states that it is too expensive a food for dogs.

We average with the preparation he refers to (cloudston's) preparation which contains the entire nutritive constituents of the beef, but states that it is too expensive a food for dogs. My experience with the preparation he refers to (Johnston's) has been extensive, and I find it cheaper than any beef-tea prepared by the home process and likewise more economical and nutritious than that made by his method. In a pound of Johnston's fluid beef, costing \$16 per dozen, or \$1.33 per pound, there are sixty-four teaspoonfuls, which would make a single teaspoonful cost about two cents, and as it takes but two of these to a pint of boiling water, the pint of beef-tea would be but a little over six cents. This, compared with butcher's beef at eleven cents per pound, is certainly cheaper, as the rule (for making beef-tea, even by the process he gives) is "a pound of beef to a pint of water." I learn that Mr. Johnston first makes an extract of the soluble properties of the beef (which is more stimulating), then beef is dried and impalpably powdered and added to the extract, the combination making a food as nutritions as the solid beef itself. The powdered portion being microscopically fine, is readily assimilated by the weakest stomach and contains the fibrin as well as the albumen. I grant that any beef-tea, however made, is rather expensive food for dogs, but who would not go to the expense in the care of a valuable blue-blooded puppy, weak and run down from effects of distemper?

Assumment Paters Store, Ast this show (which is no

and run down from effects of distemper? Homo.

Alexandra Palace Show.—At this show (which is to open on Tuesday, Jan. 18, London, England) the following gentlemen are announced to judge, viz.: For bloodhounds, mastiffs, St. Bernards, boarhounds, Rev. W. J. Mellor; Nowfoundlands, Dalmatians, smooth-haired terriers, Vorkshire terriers, Italian greyhounds, toy terriers, Mr. Howard Maphebeck; decrhounds, Pomeranians, pugs, sporting and non-sporting puppies, Rev. G. P. Hodgson; greyhounds, English setters, Gordon setters, Irish setters, Beddington and black and tau terriers, Mr. S. Lang; pointers, Mr. J. H. Whitehouse; retrievers, wire-haired fox-terriers collies, bull terriers, Irish terriers, Mr. S. E. Shirley; spaniels, Major Wille t and Rev. A. H. Willett; smooth-haired fox-terriers (and puppies), Mr. P. Burbidge; dachshunds, bassets, Rev. G. F. Lovell; poodles, Capt. the Hon. F. Greville; bulldogs, Maltese, Blenheim and toy spaniels, Mr. J. W. Berrie; skye terriers, hard-haired Scotch terriers, Capt. V. Hatton; and Dandie Denmont terriers, Rev. W. Titdeman. The show will last four days and the schedule is, se usual, liberal.—London Field.

last four days and the schedule is, as usual, liberal.—London Field.

GLADSTONE—Joe, JR.—Columbia, Tenn., December 31.—Editor Forest and Stream: In your issue of the 23d instant, giving the pedigree and performances of Mr. Blyson's dog Gladstone, you state that "in the race against Joe, Jr., st Florence, Ala., December, 1870, his speed and botton were so apparent the judge for Joe, Jr., stated after the race that Gladstone was a third faster than Joe, Jr." Being the genteman in question, I rise to a privilege. I made no such statement; but in a conversition between Mr. Bryson and myself, on the afternoon of Tue-day (and after the race had closed by Joe, Jr., winning upon three legs), in which Mr. Bryson said that "he thought Gladstone a third faster dog of the two, and at two o'clock that afternoon he bold Mr. Campbell that he had his dog Joe, Jr., beaten." I replied that during the greater part of the first day Gladstone dia Joe, Jr. was in my opinion much the better dog, and at two o'clock was defeated in the race instead of the "victor," as he thought. The above is a true statement of the facts, and everything that passed between Mr. Bryson and myself or any one else relating to the race after its cloce.

Query: If the speed and bottom of the "peerless Gladstone" (as Mr. Bryson thinks him) were so apparent and so much greater than Joe, Jr., why was it that the score of the poor "br-ken-down, used-up, played out," Jee, J., going from eleven o'clock in the afternoon of the second day, unon three legs only, was one point greater over the great Gladstone thirty points; Joe, Jr., sex-paper notoriety" has been the cause of my long silence, but justice to the kennel of Capt, Geo. W. Campbell demands, I think, a notice from me of your article. My parting injunction to Mr. Bryson sile, "Flat justitia rust actum."

The Eastern Field Telas Club met at the Astor Tues dwar at the second and the statement on the statement on the statement on the statement on the statement of the statement on the statement on the statement

THE EASTERN FIELD TRIALS CLUB met at the Astor House, Tuesday afternoon and without having transacted any business adjourned to Thursday (this) evening.

THE MANCHESTER DOG SHOW.

(From the London Field.)

THE first exhibition of the Northern Counties' Canine So THE first exhibition of the Northern Counties' Canine Society began in the Volunteer Drill Hall, Stratford-road, Manchester, on Thursday, Dec. 16, and will end this evening. The hall is eminently suited for a dog show, but the rings were woefully declicient. They were in the open air, covered over with canvas, and the day being gloomy, the light was very bad, and the judging accordingly suffered. The judges were: For fox terriers, Mr. T. H. Scott; mastiffs, St. Bernards, Newfoundlands, bloodhounds, derhounds, greyhounds, Dachshunde, skyes, buildogs, dandie diamous and sheepdogs, the Rev. G. F. Hodson; pointers, spaniels, Blenheims and any other variety classes, Mr. W. Lort; setters and retrievers, Mr. Ed. Armstrong; and bluck and tan terriers, smooth terriers, Yorkshire terriers, buil terriers, Irish terriers, Bedlingtons, pugs and toys (rough and smooth). Mr. Peter Bden.

and tan terriers, subsold terriers, Torisame terriers, out terriers, Firsh terriers, Bedlingtons, pugs and toys (rough and emooth), Mr. Peter Eden.

The judging was started simultaneously in various rings, but Mr. Scott, after vainly trying to settle one of his classes of for terriers, was so crowded in his cramped ring that he

gave it up for the time being, and sent the dogs back to their

gave it up for the time being, and sent the dogs back to their benches, deciding upon waiting until Messrs. Lort and Ed. Armstrong and the Rev. Mr. Hodson had done respectively with their classes, when he had the terriers brought to one of their rings. The attendance, at one time, was very fair on Thursday, and we sincerely trust that the public will natronize the show heartily, as it deserves every success. Messrs. Spratt had the feeding, so that was well seen to, and the dogs were confortably benched and partitioned off, and they were attended to, in every way, in the style of our very best shows. The management itself left nothing to desire, and we must compliment the secretary and his working committee on their energy and business-like arrangements.

No champion Mastifis were entered, and in the open dog class, the brindle, Vulcan II, was rightly put first by Mr. Hodson, and Scalford King took second. The highly commended Colonel II. is of a poor, indifferent color; Carlo, commended Colonel II so if a poor, indifferent color; Carlo, commended, is rather bandy; and Leo, passed over, is too leggy and small-headed. In bitches, Duchess of Connaught, shown in capital form, had no difficulty in taking first over Venus, who wan's substance. Mr. Jaffray's Nell looked very well, but was out-classed, and Nancy is simply a weed. The puppy class was better than we expected. First went to Douardar, a very grand puppy indeed, with an excellent body and capital bone, but just a triffe bent in the forelegs. As he is, however, only eight months old, this doubtless will improve with age, and, on the whole, we think him a most promising youngster. Countess was rightly beaten by bim. The next best was undoubtedly Mr. Kenyon's Rossendale, who has a deal of bone, and Mr. Jone's Tyler is a good puppy. The same genileman's Janitor shows a lot of feather behind. Mr. Moor's Gauge is a smallish brindle, but nevertheless cheep at the catalogue price, 25.

ry. The same gentleman's Jamitor shows a 10t of teather behind. Mr. Moor's Gauge is a smallish brindle, but nevertheless cheap at the catalogue price, 25.

There were three St. Be-raard champions, viz., Barry, The Shah and Bayard. Bayard was looking certainly in the best form we have ever seen him; but his loins ought always to place him behind either Barry or The Shah, especially when these two look well. In the open dog class Olympus, placed first, had the best bone, but is of a bad color, has a poor head, and shows too much curl; and Kettle, with two second, is of a good color, but is too long-faced. Prigrim is a well-headed dog, with a nice coat, but a bit straight in the stifle. He, nevertheless, should have been in the prize list, as he is a good one; but he was passed over. Castar, who took third, is a most promising dog, his only defect being that he is not square enough in the muzzle. Mr. Macdona's Banco deserved a card; but Thor, very highly commended, is bad in the face. Hob, who took a prize at Birmingban, here was passed over altogether—a most extraordinary occurrence, especially considering that his kennel companion, Heffed, who is not nearly so good as he, was very highly commended, is not a bad dog, but has no dew claws; Meus, very highly commended, want blaze, Don's too small; and commended, is not a bad dog, but has no dew claws; Meus, very highly commended, wante blaze; Don is too small; and Snowdritt was not in form. In bitches Beatrice had no offliculty in winning over Morrysbrook Norma. Altona, highly commended, is of a bad color, and had a bad head; and Abbess, placed third, is pinched in the jaw. Newfoundlands had six entries, but only one turned up, and that one was only very indifferent, so that all prizes were withheld; but in the bloodhound class Mr. Tinker's champion Dido, who was the only entry, locked in splendid form, and took the prize on her own merit.

Deerhounds and greybounds were capitally blaced. Mr.

pion Didō, who was the only entry, locked in splendid form, and took the prize on her own merit.

Deerhounds and greyhounds were capitally placed, Mr. Sharpie's Seif Defence and his Hairspring winning in their respective classes, although the competition was rather close. Ponto was the only champion pointer dog shown. In bitches his kennel companion Fan took the prize; she looked in very excellent form. The open large dog class proved another win for Bang III, beating Karnac, who carries his years wonderfully well. The class was very good, and, we take the beautiful well. The class was very good, and well, although Young Ruby, who took second, would not show herselt at all in the ring, in spite of all George Helbewell's coaxing. Meg had a fair win. We liked very much Midge and Mite two of the proper sort; but one shows age and the other one is a bit throuty. In the small dog class the awards were rightly given; but in bliches we could not at all agree with Mr. Lort's list going in favor of Miss Bryon, as she is a weedy, small bitled with a bad head, and a complete absence of bone. This award created no small sensation. The bitch was certainly shown in good style; but, in the face of her patent defects, she did not deserve even a commendation, and Locket, Bona-Belle, or Bess were a long way

The bitch was certainly shown in good style; but, in the face of her patent defects, she did not deserve even a commendation, and Locket, Bona-Belle, or Bess were a long way her superior.

The champion class for English setter dogs only had a brace in it, viz., Old Rock and Emperor Fred, and it took Edward Armstrong nearly an hour before he could decide between them. Over and over again he examined them; but still he halted about his decision. In the end, however, he gave the cup to Emperor Fred. Rock has been a great winner, as every one knows, and, although he was shown in the pink of condition, he is getting stale, and doubtes this decision will be indorsed by other judges. Emperor Fred is truly a very fine setter. In is heat its simply beautiful, his neck is finely sprung, and his shoulders are all that one could wish for. He is, however, a tride out at chow, his fred might be better, and he is also rather hare-footed, but his feet are well covered with feather, and the celebrated trainer who judged on this occasion says that some of the best and fastest set, ere he ever knew had nad this peculiar formation of foot.

The champion class for bitches brought forth another brace

judged on this occasion says that some of the best and fastest secters he ever knew had nad this peculiar formation of foot. The champion class for bitches brought forth another brace of very excellent ones, and first went to Mr. Bowers's liver and white Maid of Honor; but here we could not indorse the decision, as Ruth looked very well indeed.

The open class for dogs brought together a mixed lot, and, barring the first, second and third, nothing very remarkable appeared in it. The winner is a very grand-bodded puppy indeed, barring his bead, which wants improving. Ranger, the celebrated Pield Trial dog, was passed over, athough he was well shown. The open class for setter bitches was far superior to the dogs, Mr. Statter scoring first with one of the nicest bitches we have seen for many a day. Bessie IV. and Moil IV. should have certainly been very highly commended, but they were overlooked.

In the black-and-tan class Bute had a clear win over Ranger; his flat coat shone like satin, and he was shown in the pink of condition. Three fairly good-looking black-and-tan bitches competed, and no one can cavil with the award. For Manchester, the Irish setter dog class may be called a fairly good one, athough we do not hink it would cut a very handsome figure in Dublin. Viscount Palmerston bad some trouble in getting placed over Dankettle, who showed a rare lot of quality; but Paddy, highly commended, is too thin, leggy, and poor-headed altogether. The Irish setter bitches formed a better class, and the two winners are very smart specimens.

The class for setter puppies under twelve months old wa

The class for setter puppies under tweive months old waone of the finest in the show, and we are sure the four selected by Ed. Armstrong will be heard of again. First place to Danger, a very good puppy indeed, and we fancied Wild Rose, Frank of the Border, or Jovial for next place, but Ruby took second. She is also very promising; and Dora, passed over, we thought deserved a notice

The curly-costed retriever dogs were an average lot, first going to Merry, a well-known handsome liver-colored dog, and a winner at many other shows. He was followed by Nimrod, a decent-looking black specimen. The curly-costed bitch class certainly had one of the most lovely-looking bliches in it we ever saw; a more expressive face one could not wish for; but Chicory must have been overlooked, as, in any way, she is better coated than Faith, who took second.

Nothing in the smooth or way-coated classes came up to our ideas of perfection; nevertheless, Twilight and Topsy are fair specimens, who deserved their places. Clumbers, Sussex, blacks, and any other variety were capitalty placed, barring that we would have wished to see Dur Pedro, late Fop, higher in the list, as he is a really good one, and should certainly have been placed over the puppy Foll, who scored second.

In water spaniels Mickey Free received first, and Larve

second.

In water spaniels, Mickey Free received first and Larry
Doolan second, but we would have reversed their positions,
as in coat and type Larry Doolan is vastly superior to the

as in coat and type Larry Doolan is vastly superior to the winner.

Respecting fox terriers, one thing, in justice to Min Scott, we must mention. The judging ring was so badly kept, and so lumited for such large classes, that some of his blunders may be attributed to this cause. There were only two entries in champion dogs, viz., Cob and Nimrod. Cob was placed first, but he is quite twenty pounds in weight, is entirely without terrier expression, and has loaded shoulders, his rodeming points being a fair head, great home, good legs and foot, and proper coat. In the latter particular he beats Nimrod, who is a terrier, has good head and cars, so fa work ing size. In an place the case of the placed first Frisky, who is far too big, over the heady-like Deresmaker, whose only fault is want of coat. Lill, the other contestant, was clearly outclassed. The open dogs were a midding lot of forty-live. Gripper was put first, but he is only fair in coat, bas a poor head and ears, is too) broad in chest and large in eye for our taste and we think V. H. C. should have been about his place. Racket came second; he is a good all-round dog, barring his coat, and he should have been first. Joviah, third, is bad in face and eyes, and also in forelegs, but is a terrier all over; he was held too high here, however, and his place should have been occupied by Buckle—who was fourth—whose bone, substance, and grand coat and character hardly received sufficient recognition. Bagman, commended, should have been fourth; he is full of character, bas a grand head, nice ears, and pleary of bone and coat, and we most decidedly prefer him to the winner. Huxier Dick was very singly commended, we thought several better in the class. Tim, very highy commended, we report the stream of the properties of the control of the properties of the properties of the properties of the control of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the p

head and ears, but is far too big, and, not having a particle of character, was just worth a high commendation at most. Little Dorritt, third, is a far one, with splendid legs, feet and chest, and a terrier, with fair head and ears; we think she should have been second. Brunette, very highly commended, was in poor condition, but still she ought to have been is the money, as she is a proper terrier, much after the Dorcas pattern, with capital head, ears and chest, and very straight. pattern, with capital head, ears and chest, and very straight. Venom, very highly commended, has a good coat and head, and is well worthy of her card; and Wasp, highly commended, is nice in head, but rather too long in her couples, still she was, we think, in frout of the second and third prize winners. Gaily, highly commended, with her coat and character, should have been placed over two of the winners. The special class being mostly made up of the contestants in the classes previous, only two prizes were awarded. Impecunies ity Broad (wire-haired) won from Troy II., as he was in the pink of condition. Tory, however, has vastly improved, and for character, bone, coat and head properties he is as good as his late size, of whom he is a worthy representative, and to

special ciass being mostly made up of the contestants in the classes previous, only two prizes were awarded. Impecuniosity Broad (wire-baired) won from Troy II., as he was in the pink of condition. Tory, however, has vastly improved, and for character, bone, coat and bead properties he is as good as his late sire, of whom he is a worthy representative, and to whom he bears a striking likeness.

In Dachsbund dogs Zanker very rightly took first, but we could not understand how it bappened that Gusto was awarded second, as he has a very bad, coarse bead, and his forelegs are very deficient in crook; Matt or Jager were far better than he, and for choice we would have put daged in his pince. In the vite of the promising puly in Jezebel, and she won well over Undige; Undy, controlled, is an incisib hitch, but she had a lot of purposition puly in Jezebel, and she won well over Undige; Undy, controlled, is an incisib hitch, but she had a lot of put the put of th

#### THE IBISH SETTER.

[Reprinted from advance sheets of Vero Shaw's "Book of the Dog," furnished to the Forest and Stream by the author, through Cassell, Petter, Galpin & Co., publishers, No. 596 Broadway, New York.]

#### [CONTINUED FROM PAGE 455.]

[CONTINUED FROM PAGE 455.]

This probable that both breeds of setter—Gordon and Irish what was meant for an improvement would in reality turn out an injury to the breeds. There was, no doubt, a strong cross of Gordon blood in the dog which Mr. Laverack says he saw at Cockermouth Castle, which will account for that animal begetting black stock. Mr. Laverack himself admits that the introduction of black is a fault in the Irish setter, though be frankly adds that, "now thistanding this stain of black in the breed, the best and most perfectly formed Irish setters I have ever seen had this stain or taint of black, which I should never object to, although I am aware many of the most eminent Irish breeders slate that they ought to be without any thit of black whatever in their coats. As far as I have seen and been informed, for general goodness and working properties, those possessing this tint of black have been quite as good, if not better, than those without it."

It is, in our mind, quite probable that, possibly at its first introduction into the sister isle, the Irish setter was crossed with a black setter; and the existence of both the black and red colored dogs being clearly proved from the illustration given in a preceding chapter, we think it very probable that the cross was then a common one, and that the modern dogs throw back in many instances to their ancestors of the early portion of the century. But be this as it may, it is by no means uncommon for black pupples to appear in litters of Irish setters the pedigree of which is irreproachable on paper.

One of the earliest Irish setter celebrities on the bench was

means uncommon for black puppies to appear in litter's of Irish setters the pedigree of which is irreproachable on paper.

One of the earliest Irish setter celebrities on the bench was Carlo, who was owned by that great setter enthusiast, Mr. Jones, of Oscott; and when in the possession of this greatleman he won him many prizes. This dog showed what would nowadays be considered unnistakable signs of a Gordon cross, for he had the black tips to his enrs which are pronounced to be evidences of this tain of blood. The next great star of the Irish setter beach was Captain Hutchinson's Bob, who was a whole colored red. It was recerved for Dr. Stone, of Coleraine, in Ireland, to bring out a greater champion, which he did in Dash, whose general contour was he-youd criticism, though his color was much objected to, as he showed a quantity of white upon his head, feet and neck. This dog in time had to make way for Mr. Hilliard's Palmerston, who, since his first appearance on the show beach, reigned supreme until increasing age rendered his retirement compulsory. This grand dog had only the smallest snip of white upon the show beach, reigned supreme until increasing age rendered his retirement compulsory. This grand dog had only the smallest snip of white upon this forchead, and was otherwise of a beautiful color. His shape and symmetry were perfection, and his popularity with every judge is evident, as his many successes in every part of the enuntry go far to prove. He died in the early part of the enuntry of Fart prove. He died in the early part of the enuntry of sar to prove. He died in the early part of the enuntry as of art oprove. He died in the early part of the enuntry as of art prove. He died in the early part of the enuntry go far to prove. He died in the early part of the enuntry so far to prove. He died in the early part of the enuntry so far to prove. He died in the early part of the enuntry so far to prove and having statistic the part of the saturation of the setters who worked in his company.

As a field-t

writing (1880). Mr. Macdona is in the possession of some remarkably fine-colored and promising young Irish setters,
which were successful at Bristol dog show, though only oine
months old. The color of one of them, Lady Roberts, is almost perfect, and her stock in years to come should be valuable on this account.

In appearance the Irish setter differs somewhat from the
English. His head should be longer and narrower.

Nose, deep-rod or dark flesh-color, to match his red jacket.
Eyes, brown and intelligent.
Ears, set on far back and low, light and feathered. A
heavy "saddle-diap" car is particularly suggestive of the
Gordon cross, and is particularly to be avoided in an Irish
setter.

setter. Flews, rather deep.

Frees, fauler deep.
Neck, light and gracefully set on the shoulders, which could have a good slope.
Chest, deep and narrow.
Body, rather arched at loin and inclined to be flat-sided.

Back ribs short, which tend to give a true Irish setter a

Back rios snort, which tend to give a true first setter a rather "tucked up" spearance.
Fore-legs very straight and well feathered—longer than in the English setter.
Fore-feet, long, and not nearly so round as in the English

setter.

Hind-legs, bent at stifles, with strong hocks.

Stern, set on rather low and well feathered, particularly on
the middle portion of it.

Color, a deep blood-red. White is not liked in show dogs;
but though undesirable, is not a proof of impure breeding.

The color of the feathering is paler than that of the body.

Coat, somewhat thinner than that of the English setter,

Coal, somewhat thinner than that of the English sever, though coarser in texture.

General appearance in an Irish setter goes for a good deal. A good specimen is the beau ideal of strength and activity. He should seem a trille leggy; no doubt his tucked-up loins increase this appearance, which his extra length of leg naturally develops; and an Irish setter should look all wire and whippord. In fact he looks what he is, a thorough work-

increase this appearance, which his extra tength or reg manally develops; and an Irish setter should look all wire and whitpcord. In fact he looks what he is, a thorough workman, and ready to gallop for ever.

The dog we have selected for illustration in our colored plate as being typical of this famous breed is Grouse II., who is the property of the Rev. R. O'Callaghan, R. N., before alluded to as one of the great breeders of his national setter. This bitch is by the old champion Palmerston out of Quail, and has been successful on the beach. In 1879, at Dublin show, she won first prize and silver medal and challenge cup. Palmerston, her sire, was by old Shot out of Cochrane's Kate; Shot by Grouse out of Bruno. Quail, the dam of Grouse, has no pedigree in the Stud Book, but she is credited with winning at Cork in the prize of red bitches. The selection of Grouse, we candidly admit, cost us much anxiety, as we were desirous to select a specimen who is regarded with favorable eyes by authorities who understand this dog, and it was upon the advice of several excellent judges that we asked permission of Mr. O'Callaghan to let his grand bitch be illustrated in this work. The estudy was executed by Mr. Breach under the owner's eye, and we lave to thank the first produced the pains they took to have the portrait of Grouse made characteristics of the breed.

Following up our rule, we append a scale of joints for indering Irish setters. In which it will be seen that we attech

rollowing up our rule, we append a scale of roints for judging Irish setters, in which it will be seen that we attach peculiar importance to general appearance.

STANDARD OF POINTS FOR JUDGING IRISH SETTERS Skull-formation of head and muzzle..... Ears and eyes.
Neck and shoulders and chest.
Body, including loins.
Legs and feet. General appearance, including stern.....

#### THE SPANISH POINTER.

[From Vero Shaw's "Book of the Dog."

[From Vero Shaw's "Book of the Dog."]

BEFORE commencing any remarks on the subject of the English pointer it will be necessary to draw the attention of our readers to the dog from which our modern pointers unquestionably sprung. Such was the subject of this chapter, from the crossing of whom with the foxhound or Southern hound—opinions vary on this subject—the pointer as he now exists was originally produced.

In "Cynographia Britannica" Sydenham Edwards writes thus of the Spanish pointer in 1803:

"The Spanish pointer is a heavy, loose-made dog, about twenty-two inches high, bearing no small resemblance to the slow Southern hound. Head large, indented between the eyes; lips large and pendulous; ears thin, loose and hanging down, of a moderate length; coat short and smooth; color dark-brown or liver color, liver color and white, edac and white, black and white, sometimes tanned about the face and eyes, often thickly speckled with small spots on a white ground; the tail thin, smooth and wir; frequently dewelaws upon the hind legs; the hind feet often turning a little outward.

n. The Spanish pointer was introduced into this country by "The Spanish pointer was introduced into this country by a Portuguese merchant at a very modern period, and was first used by an old reduced baron of the name of lichell, who lived in Norfolk, and could shoot llying; indeed he seems to have lived by his gun, as the game he killed was sold in the London market. This valuable acquisition from the Continent was wholly unknown to our uncestors, together with the art of shooting flying, but so fond are we become of this most elegant of field sports that we now excel all others in the use of the gun and in the breeding and training of the doc.

the use of the gun land in the breeding and training of the dog.

"The Spanish pointer possesses in a high degree the sense of scenting, so that he very rarely or never goes by his game when in pursuit of it; requires very little training to make him staunch, most of them standing the first time they meet with game, and it is no uncommon occurrence for puppies of three months old to stand at poulltry, rabbits and even cats. But as they grow old they are apt to get idle, and often go over their ground on a trot instead of galloping, and from their loose make and slowness of foot when hunded a few seasons soon tire, have recourse to cunning, and in company let the younger and fleeter dogs beat wide the fields, while they do little more than back them, or else make false points. They then become useless but for hunting singly with a sportsman who is not able or not inclined to follow the faster dogs.

"There are other varieties of the pointer, as the Russian, in size and form like the Spanish; coat not unlike a drover's dog, rough and slaugay, rough about the eyes and bearded; color like the Spanish, but often grizzle and white; they differ in some being more rough than others. This is probably a cross between the Spanish pointer and the Barbet or rough water dog. He has an excellent nose, sugacious, tractable and easily made staunch; endures fatigue tolerably well; takes water readily, and is not incommoded by the most cold and wet weather."

In the illustration of pointers which accompanies these remarks of Sydenham Edwards there appears a portrait of a rough-coated dog which is supposed to represent the Russian pointer. The sweet switch accompanies these remarks of Sydenham Edwards there appears a portrait of a rough-coated dog which is supposed to represent the Russian pointer. The remarks of Ir. William Lort upon the former dog, which appeared in a previous chapter, very late of the former dog, which appeared in a previous chapter, very late former dog, which appeared in a previous chapter, very late former d dog.

nearly describe the dog written of by Sydenham Edwards, and certainly the latter's theory on the derivation of the breed appear to be possessed of reason. It is, however, more with the Spanish pointer that we have to deal at present, for though practically extinct, his close connection with the modern dog entitles him to respect at our hands.

Mr. Taplin, writing of this dog in the early part of the present century, remarks that: "Every trait upon record respecting their appearance in England is that they were in very early ages introduced from Spain, and that they were natives of that country from which their name was derived. The Spanish pointer in shape, make, strength, seeming stupidity and bodily tardiness, is a perfect specimen of the most consistent uniformity; well adapted in all these qualifications to the haughty, somniferous, majestic parade and dignity of the lofty Spaniard, but very inadequate to the life, spirit, agility and impatient energy of the English sportsman. This race of dog in his natural and unimproved state is a mass of inactivity, as is evidently perceptible by his shape and make, in every point of which is displayed the very reverse of speed and action, objects so truly necessary in almost every sport of the field. The pointer of this description is short in the head, broad in the forchead, wide in the nose, expansive in the nostrils, simply solicitous in aspect, heavy in the shoulders, short in the legs, almost circular in the form of the carcass, square upon the back, strong across the ioins and remarkably so in the hindquarters. Although this breed disk so much improved), are produced of various colors, yet the bold brown liver-and-white are the most predominant. These dogs, slow as they are, and accustomed to tire with quick work before the intended sport of the day is half over, are yet truly applicable to the purposes of those who, advanced in years or laboring under infimities, feel themselves unable to get across a country in the way they could in former years.

unable to get across a country in the way they could in former years.

"The pointer we are now treating of, though exceedingly slow, must be generally admitted to be sure; indefatigable and minute in his researches, he is rarely seen to miss his game when game is to be found. When a covey of birds is separated by repeated shots, and are afterward found singly, the pointer under description has opportunity to display his best ability, in most industriously recovering these scattered birds, the major part of which (if accompanied by a good shot) are generally picked up to a certainty. To the recovery of winged birds the patient perseverance of this dog is peculiarly adapted; and for the sport of snipe shooting alone they are entitled to the preference of every other."

this dog is peculiarly adapted; and for the sport of snipe shooting alone they are entitled to the preference of every other."

No further description is necessary of a dog which, as we have before remarked, is practically extinct, as specimens which resemble the dog referred to by Edwards and Taplin are very rarely met with. It may, however, be worth considering if a cross between agood specimen—always provided that such can be procured—with a modern pointer, might not improve the latter very considerably. Granted that the present dogs excel in strength and activity, is it still not worth experimenting with a dog concerning whose utility many former writers have spoken so very highly? His nose is certainly a great feature in a Spanish pointer, and though he is in the habit of knocking-up, we think that if a little of his blood were infused into the veins of some of our field trial pointers in the present day they would s'and a better chance of holding their own in competition with the setter than they have hitherto succeeded in doing.

The illustration that is herewith given of the Spanish pointer is particularly fortunate in pertraying his square short head and deep flews to considerable advantage, and his heavy bone has not been lost sight of. As in the case of the Russian setter, it is unnecessary to append a scale of points for judging a breed which is very rarely to be met with. However, it should be borne in mind that depth and squareness of head and immense bone are characteristics of the Spanish pointer which should never be lost sight of.

puppies, whelped October 26, 1880, out of owner's Nellie Hattarick (Dick Hattarick-Tyke) by owner's Joel (Champion York-Diffenduf-fer's Bess).

Bred.
A. Godeffroy's champion Gordon setter

Breuty-Glen-Mr. E. A. Godeffroy's champion Gordon setter Beauty to Dr. Aten's Glen. Belle II-Brag-Mr. J. Otis Fellows' black cocker dog Brag to Mr. Robert Walker's black and tan bitch Belle II. Gipsey-Joel-Mr. Thos. Blyth's Gipsey (Rodman's Dash-Fan) to owner's Joel on December 31, 1880.

owner's Joel on December 31, 1880.

Willers.

Feather—The Riverside Cocker Spaniel Kennel Club's (Claremont, N. H.,) imported Feather, whelped July 5, 1880, five liver and white puppies, three bitches and two dogs by imported Snip, Mande—Mir. Thos. Biyth's (McIntyre, Pa.,) red Irish setter bitch Mand (champion Eleho-Imported Stella), whelped December 16, 1880, eleven puppies, seven dogs and four bitches by owner's Joel.

Wildair-Sara Bernhardi Whelp—Mr. J. Otis Fellows, Hornell Cocker Kennel, Hornellsville, N. Y., has sold a liver cocker puppy, whelped October 17, 1880, out of Sara Bernhardt by Wildair to Mr. J. Smith, New Buffalo, Pa.

Robin Adair-Fannie Whelp—Mr. J. Otis Fellows, of Hornellville, N. Y., has sold an all liver cocker bitch puppy, whelped October 27, 1880, out of Falmie by Robin Adair to Mr. W. M. Bowes, New York etty.

N.Y., has sold an all liver concentration of the Nr. W. M. Bowes, non-York etc.

27, 1880, out of Fannie by Robin Adair to Mr. W. M. Bowes, non-York etc.

Paris-Belle Whelp-Mr. H. B. Harrison, of Thisonburg, Ont., chanda, has sold to Dr. A. B. Clayton, of Chatham, Ont., a blue Belton bitch puppe by L. H. Smith's champion Paris (Ledesster-Dart) out of Belle (Pride of the Border-Kirty). Sold from Mr. G. Boron - Mr. J. F. Kirk, of Toronto, has purchashe, whelped Febrary 8, 1880, imported by Mr. Eramble, and bred by him out of Ruy-Hint prize, Alexandra Palace, London, 1879-by Bob, bred by T. Sayers, West Tarring, Sussex, Bob by Knaker out of Lady. Imby by Speck out of Rex. 2,163). Rex by Rock (4,402) out of Sappho. bred by T. Sayers, News across (2,163). Rex by Rock (4,2400), cut of Sappho.

Lady. Ruby by Speek out of Rex (2,163). Rex by Rock (4,2400), out of Sappho.

Mr. C. E. Lewis, of Ningara, the liver and white cocker bitch Rose by Nash's Rake out of his Busy.

Medigenout—Messra, C. E. Cummings & Son, of South Alstead, N. H., have sold cocker spaniel dog Wedgewood (Snipe-Liol) to Mr. C. Whitmarsh, Nashua, N. H.

PRESENTATION.

Vernicultown, N. C., has

Mr. C Whitmarsh, Nsalus, N. H.

PRISSENTATION.

Joe-Boyn Whelp—Dr. G. A. Tools, of Warrentown, N. C., has presented Mr. H. G. Williams, of Portsmouth, Va., with a pointer puppy out of Dora by Joe.

Réce-Nellie Whelp—Mr. Charles E. Scott, of Schenectady, N. Y., has been presented by Mr. Robert Walker, of Franklin, N. Y., with a beautifully marked liver and white cocker bitch puppy out of his Nellie by Res.

Snipe-Ruby H. Whelp—Mr. H. B. Richmond, of Lukeville, Mass., has presented Mr. Julius E. Wilson, Manchester, N. H., with a lemon and white pointer dog puppy, whelpod August 26, 1880, out of Ruby II. (Snapshot-Ruby) by Snipe (Sensation-Collum Belle).

Deaths

Pallas—Westminster Kennel Club's imported lemon and white pointer bitch Pallas (General Prim-Powell's Queen).

A LATE NOVELTY on the stage is the introduction of live bloodhounds in the everlasting play of "Uncle Tom's Cabin." The brutes are very ferce on the show-bills, but in the theatre warranted perfectly harmless and inoffensive.

-Auburn, N. Y., boasts of many superior setter dogs, but there is not a pug within the city limits.

LIKE WINE, GROWS BETTER WITH AGE .- A COTTESPONDENT LIKE WINE, GROWS BETTER WITH AGE.—A correspondent writes: "Forest and Stream is a most welcome weekly visitor. Like wine, grows better with age. It already wields a large influence with the best and most intelligent portion of the sporting fraternity in this county. There is need of just such a paper, and that you may abundantly succeed is my hearty and sincere wish."

hearty and sincere wish."

DI. PURNELL'S PRAIRIE CHICKENS.—It seems that the prairie chickens that Dr. Purnell brought to and let out in Sussex County, Delaware, have raised some young, one of which, at least, was shot and brought up to this city. It being about half grown its identity was doubted, but it was afterward settled that it was a young prairie chicken. A writer in FOREST AND STREAM mentions that there were grouse some thirty years ago in the Pocono mountains, in Mooroc County, Pa, also in Burlington County, N. J. This is true, as we conversed with sportsmen who had shot them in both places, also several deer on the Pocono mountains. We were told, some twenty years ago, that there were both deers and bears in the wild parts of Long Island.—Germantown Telegraph. town Telegraph.

Connecticut—Granby, Jan 1.—Foxes are very plenty here this winter and can easily find trail any good day. Rabbits are also uncommonly abundant. N. E.

Sour stomach, had breath, indigestion and headache easily cured by Hop Bitters.

## The Bifle.

#### ANNUAL MEETING OF THE N. R. A.

THE annual meeting of the National Rifle Association was held at the Twenty-second Regiment Armory on Tuesday eyenat the Twenty-second Regiment Armory on Tuesday evening last with a very liberal attendance of Life Members. Gen. Geo. Wingate occupied the chair in the absence of the President. Judge Gildersleeve made some remarks on the work of the associstion during the past year. The report of the Treasurer showed a balance of \$114,22. Secretary Donaldson read his report as fol-

To the National Rifle Association of America:
Mr. President and Gentlemen—This annual Secretary's Report

nbraces the year 1880, an epoch in the history of the Association remarkable both for its successes and reverses. In the early spring, the President appointed the usual standing committee for the year, as follows :

Range—Gen. Geo. W. Wingate (Chairman), Col. Jos. G. Story and Col. Geo. D. Scott.

Finance—Maj. D. B. Williamson (Chairman), Capt W. C. Casey, and Mr. James Grant.

Prize—Col. John Ward (Chairman), Maj Henry Fulton, and Col. J. H. Cowperthwait.

The resignations of Directorships of Messrs, Williamson and Casey necessitated a reorganization of two of the above Committees, which was accordingly made, in the month of March, as follows:

Finance—Mr. Jas. Grant (Chairman), Col. J. H. Cowperthwait, and Col. John Bodine.

Prize—Col. John Ward (Chairman), Mr. N. P. Stanton, and Maj. Henry Fulton.

The vacancy in the latter Committee, caused by the resignation as a Director of Major Fulton, has not been filled. There have been held, during the past year, twelve regular, seven special, and two adjourned meetings of the Board of Directors, and four meetings of the Esceutive Committee. This Committee has remained intact, no resignations or changes having been made. Of memberships, there is to be recorded an addition to the roll of sixreen gentlemen becoming members for life, of whom thirteen paid the usual fee, two were offered and won as prizes at the last fall meeting, and one was honorary, having been conferred by vote of the Board. Two deaths have occurred among our life members, those of Maj. Chas. A. Coffin, and Gen. Frederick Vilmar, the total number remaining upon the roll at this date being 382. The annual memberships fall below last year's figures by about thirty-five new. Eleven of this class were effered and won as prizes.

five men. Eleven of this class were offered and won as prizes. But five rifle clubs or Associations have affiliated with us in 1880. The Amstern Rifle Club of New York, the Empire Rifle Club of New York, the New York Butle Club of New York, and the Ilion Ride Association of New York, and the Pennsylvania State Rifle No military organizations (regiments or companies) joined the Association at the balf rates permitted by the By-laws. Three life members' badges were a numbered respectively 97, 98 and 99. The Committee which been appointed at the last annual meeting (1880) to consider the advisability of securing a Managing Director, at a competent salary, to take charge of the affairs of the Association, submitted a written report to the effect that they considered "the objects desired could best be obtained by the passage of a resolution authorizing and directing Lieut. A. H. Weston, the present Assistant Secretary and Treasurer, to represent this Board at all times and in all places, in the absence of any regular Director, with the same power and authority as a director, and that he submit at the Board meetings, from time to time, reports of matters of interest," etc. The report was finally adopted, and the salary of the Assistant Secretary and Treasurer was made the same as that of the Range Superintendent, until Dec. 1, when the salaries of both oil ers were reduced to \$50 that month, and thereafter at the same rate until April 1, conditional upon funds being received

On Nov. 9 the following proposed amendment to the By-laws was submitted (duly signed by ten life members, as required) to the Board of Directors, and by that body approved, and its passage duly recommended, viz.: "Amendment proposed to Article III, of the By-laws management to be paragraph 6, viz.:

"Sec. 6. Any of the permanent or honorary ex-officio Directors named in paragraphs two and three of this article may, by a writing filed with the Secretary, from time to time, designate one of their staff or other subordinate officer to represent them at any meeting of the Board of Directors, such officer to have the same powers at such meeting as his principal would have had if personally

The Committee appointed Sept. 2, 1879, to revise the Regulations of the Association made a final report on March 2, last, submitting a draft of the proposed new regulations. The same, being approved, was adopted, and 2,000 copies were printed and most of them distributed. No changes have been made in same up to this fine.

The elected members of the Board of Directors in January, 1880, was as follows:

Terms expire 1883—Col J. G. Story, Col. G. D. Scott, Mr. James

Grant, Gen. G. W. Wingate and Col. H. A. Gildersleeve. Terms expire 1892—Major G. S. Schermerhorn, Capt. W. C. Casey, Col. J. H. Cowperthwait, Major D. B. Williamson and Mr. F. J. Donaldson.

Terms expire 1881—Hon. D. W. Judd, Col. J. Ward, Major Henry Fulton, Col. E. H. Sanford, and Col. H. G. Litchfield.

On March 2, Major Williamson resigned, and Col. John Bodine was elected to fill the vacancy. On the same date Capt. Casey's resignation was accepted, and Gen. E. L. Molinens was elected in his stead. Business engagements, however, preventing the strict performance of his Directorship duties, Gen. Molineux resigned three months later, and was ancoceded by Gen. Robert Olyphant. Major Fulton's resignation was received on Nov. 9, and followed by the election of Col. H. S. Jewell, who declined to serve, and the granney has not been filled.

On Jan. 13, Mr. N. P. Stanton, ex-President of the Association, was elested an Honorary Director for life, and on April 6, a like distinction was conferred upon Mr. E. A. Buck, editor of the Sprit of the Tines. For the regular three year term, Hon. Levi P. Morton and Gen. Anson. G. McGook were elected to Honorary Directorships on April 27.

The resolution passed, early in 1879, laying aside as a sinking fund to be used upon the range for repairs, etc., all moneys received as dues from now life members, was rescinded during the past year, the receipts from this source not being large enough to make the resolution operative according to the original intentions. The offices at No. 23 Park Row were vacated on Dec. 1, for a less commodions, though almost equally seviceable room, at 37 Park Row, whereby a very considerable reduction of rental was obtained. Two thousand copies of the annual report of 1879 were printed in April last, and most of them were distributed to riflemen and organizations throughout the States and Canada. It was hoped that the receipts from advertisements therein would cover the expenses of publication, but, though no canvasser's commission had to be paid, they fell short by over \$150. The regular monthly programmes of matches were issued in larger numbers than ever before, from and to November inclusive.

The Thanksgiving Match of Nov. 25, and the Christmas Match Dec. 18, were announced in special programmes. The Long

Island Bailroad Company, claiming to have been much imposed upon by parties, other than those intended, availing themselves of the railroad tickets sold to members of the Association, for transportation to and from Queens and Creedmoor, at reduced rates, devised and put into operation a system of certificate of membership cards which, while fully protecting the railroad company, gave, J believe, general satisfaction to our members. This company, at the beginning of the senson, turnished passes to many of our directors and officers, and ran trains direct to Creedmoor, at convenient hours, on Tuesdays, Wednesdays and Saturdays of each week. And the Secretary here wishes to acknowledge the uniform courtesy of Mr Chas. M. Heald, the General Ticket Agent of the line, who, upon several occasions, has evinced his interest in the Association, by accompdating your Secretary in matters over which he has control.

The troops of the National Guard of this State have used the range almost continuously upon three days in each week, from June 1, to Nov. 1, as in former years.

It is gratifying to note the growing interest taken by the United States Army in ritle practice, and also the increasing producincy in marksmanship, as seen in the scores of the army teams at Creedmoor during the last Fall Meeting.

moor during the last Fall Meeting.

The Secretary is pleased to record the names of Maj-Gen. Winfield S. Hancock, commanding the Military Division of the Atlantic and Col. J. C. Kelton, Assistant Adintant-General on the staff of the Commander of the Military Division of the Pacific, both United States Army officers, to whom we are indebted for their earnest co-operation in the objects of the Association. During the past year there have been shot at Creedmoor 111 N. R. A. n nineteen of which were embraced in the Fall Meeting, and the re maining minety-two being monthly and special matches. There was no Spring Meeting, it being surmised that, by its omission, the Fall Meeting would be added to in importance and greatness. That this course was wise and advantageous has not been proven. though the Secretary is of the opinion that a spring op-April, with one or two popular matches and a large number o as, would be preferable and more successful than the aucient, brons spring meetings. The Fall Meeting commenced on cumbrous spring meetings. Tuesday, Sept. 14, and lasted four days, for records and statiaties of which you are respectfully referred to the officer's reports and the tabulated scores in the Annual Report. During the past year the following monthly matches were concluded, the prizes being finally won according to the conditions—viz: Remington Rifi-Match, thirteen competitions, six shot in 1880; Remington Shot gun Match, 12 competitions, 8 shots in 1880; Secretary's Match, 7 competitions, all shot in 1890; Champion Marksman's Badgo Match, 7 competitions, all shot in 1880; Alford Match, 20 competitions, 16 shot in 1880; the Winchester Rifle, the Remington Gold, the We Will, and the Ballard Rifle Matches hold over for another At the beginning of the season, with a view to encourage long-range shooting, a series of matches were inaugurated under the auspices of the Association, known as the Weekly Long Range Subscription Matches, the first competition for which was announced for and contested on May 1. Since that time and until the month of September they were published in the regular programme, though not again shot, owing to the failure of two or more competitors to appear. The monthly and special matches of the year, with the number of entries in each and the amounts reentrance-fees therein is shown :

Individual off-hand—Competitions, 18; entries, 685; e fees, \$683. Team, off-hand—Competitions, 6; cutries, 64; entrance-fees, \$256. Secretary's—Competitions, 7; entries, 397; entrancefees, \$198.50. Winchester Rifle-Competitions, 1; entries, 25 entrance-fees, \$6.25; Remington Gold -Competitions, 3; entries 20 contrapos-foos \$60 We Will-Competitions, 7: entries, 37 entrance-fees, 818.50. Ballard Rifle—Competitions, 8; entries 134 : entrance-fees, \$67. Remington Rifle-Competitions, 6 : en tries, 54; entrance fees, \$27. Alford—Competitions, 16; entries, 552: entrance-fees, \$276. Remington Shot Gun—Competitions, 552; entrance-tees, S2tb. termington some tuni-compensions, 8; entries, 55; entrance-fees, \$110. Weekly Long Range-Subscrip-tion—Competitions, 1; entries, 8; entrance-fees, \$24. Champion Marksman's Badge—Competitions, 7; entries, 1,081; entrance-fees, \$512. Any Ride, Individual—Competitions, 1; entries, 195; entrance-fees, \$97.50. Any Rifle Team—Competitions, 1; entries, 20; entrance-fees, \$80. Thanksgiving—Competitions, 1; entries. 348; entrance-fees, \$207.50. Christmas-Competitions, 1; entries, 662; entrance-fees, \$348.50. This gives 92 competions, with 4,602 entries (of which there were \$4 teams of 4 men each), and \$3,003-Add to this \$149.15 net proceeds of pool tar-.75 in entrance-fees. gets run, during monthly or special matches, \$19 fines and forfeits and \$11,25 net balance proceeds of First-class Match, and we have the total receipts, \$3,183.15. The following will be of in Prizes.

matches.	Prizes.	Cash.	in Value,	of Prizes.

602 entries				

This shows gains for 1880 over 1879, outside of the meetings, of 30 matches, 378 prizes, \$1,775. 48 cush and value of same, 2,000 entries, and \$1,640 entrance-fees receipts. You are familiar with the facts in reference to the selection of an American rife team to shoot a friendly match with Irishmen upon their own soil, and the meaqualled victory achieved by that body at Dollymount, on June 29, is still fresh in your memories, and I need but to add what, perhaps, you already know in this connection, that our success uperhaps, you already know in this connection, that our success upon that occasion was largely due to the able captainship or "Old Rehiable."

After a service of seven years, our faithful Assistant Secretary,

After a service of seven years, our lattiful Assistant Secretary, Mr. Weston, has handed in his resignation. This is loss that all riflemen acquainted with him will deplore, more especially by those who have experienced his uniform courtesy and kindness at Creedmoor, where his pleasant voice and face always seemed to be a

welcome to the shooters. Mr. Weston, I am sure, leaves the N. R. A. with the best and heartiest wishes of all connected with it, and with a record for kindness, courtesy and thoroughness in all he undertook that we are, indeed, proud of. He goes from us, after these seven years' autining industry in the interests of the Association, leaving behind him none but friends, and we part from him with regret, and with the hope that, in his new walk in life, he may have unbounded prosperity.

In conclusion, I beg to call the attention of the Life Members to the necessity of being represented by Directors, who will take an active, not a passive, interest in its a flairs, for there is every probability that during the ensuing year the Association will have only itself to look to for the necessary expenses to keep Creed moor open. Therefore, your new Directors should be selected with a view to obtaining those who will exert themselves to obtain prizes as well as subscriptions, if Creedmoor is not to be a thing of the past. As general dissatisfaction exists with the management, and as many of the more prominent frequenters of Creedmoor have expressed themselves to the effect that the best interests of the Association would be conserved by the election of an entirely new Board of Directors, and not wishing to be a stumbling-block in the way of such a change, I cheerfully tender my resignation as Director. Respectfully submitted,

FRANK J. DONALDSON, Secretary N. R. A.

The last paragraph raised a storm of objections, and some loud talk was indulged in, ending in the adoption of the report with the exception of that paragraph. The election of Directors resulted in the choice of J. R. Andrews, F. H. Holton, W. W. Judd, A. Alford, Geo. G. Scabury for three years each, and Col. Porter and W. H. Murphy for the one year vacancy term. On motion of Major Henry Fulton it was Resolved, That this Association consider it inexpedient to accept the invitation of Earl Stanhope for a match at Wimbledon in July next. This motion he said was made because the Palma was yet in American hands, and this, and this alone was the championship emblem. Col. Cowperthwait seconded the motion and it was carried.

The Board of Directors organized in the choice of E. A. Buck, as President; Geo. W. Wingate, Vice-President; D. W. Judd, Treasurer; F. J. Donaldson, Secretary, and W. H. Murphy, Geo. H. Schmerhorn, Jr., and Col. J. H. Cowperthwait on the Executive Committee.

## RANGE AND GALLERY. BOSTON, Jan 7.—Mammoth Rifle Gallery.—The opening week in

the New Year Rifle Match, at the Mammoth Gallery, has shown some very fine shooting for so early in the month, and the crack of the Maynard, Bailard, Wesson, Stevens and Remington rifles have been incessant. Mr. J. Merrill, of the Massachusetts Rifle have been meessam. Att. J. merrin, of the anassamments thin Association, was successful in getting a clean score of eight con-secutive bullseyes, and receiving 315 for the same. He made eleven consecutive bullseyes, the same number that Mr. N. W. Ar-nold made in the any-rille match in December. These two gentlemen are as yet the only ones who have made clean scores since the new targets were put in the gallery, and to Mr. Merrill and Mr. Arnold should be awarded all praise for their skill and accuracy. Mr. Merrill followed his cleau score with a 39, which was a remarkable performance. The proprietor, Mr. W. W. Newton, wishes to announce that he is ready to pay \$15 to any one making a clean score of eight consecutive bullseyes. This places Mr. Marrill in the lead with five scores which will be hard to exceltwo thirty-eights and two thirty-nines and a forty, making 194 out of a possible 200. Mr. A. L. Eames is second on the list with 189 Mr. Eames is a member of the Rod and Gun Club of Springfield Mass. Mr. Geo. D. Edson is third with 179. Mr. A. C. Gould, of the Massachusetts Rifle Association, is fourth with 178, followed closely by Mr. C. R. Bartlett with 178, but outranked by Mr. Gould. Mr. J. J. Ross is sixth with 177. Mr. Newton has lately purchased a new Maynard rifle of .22 cal., and he has now a complete set of gallery rifles. Any one can find their favorite rifle there, and to all who have a Maynard stock, and not a .22 barrel, can bring the stock and fit the gallery barrel to it, and no doubt many will avail themselves of this opportunity.

The Forner and Stiegam rifle match has not had many entries

The Former AND STREAM rille match has not had many entries as yet, it being early in the mouth, and, as the prize is a very handsome meerschaum prie valued at \$50, it no doubt will prove an incentive for fine shooting before the match ends, and large sores will be in order.

The following are the leading competitors to date in the New Year rifle match (50 yards, rounds 8, possible 40, five scores to win

	or possible 200) :				
	1 Morrill 38	38	39	39	40 - 194
	A T Farmes	36	36	37	37 - 152
ì.	5 C Gould	36	36	37	37 - 181
	Geo. D. Edson	36	36	36	36-179
	D Bartlett	35	36	36	37-175
	f I Ross	3.5	35	35	37 - 177
	A C Goodspeed	35	35	36	86-177
	F J Snow	35	35	35	36-176
	C WarrenS4	35	35	35	36 - 175
)	O T Hart34	35	35	35	85-174
	D H Toley	34	35	35	35 - 173
	H. K. Knowles34	34	34	35	35 - 172

Pistol Practice,—This favorite arm has also been lively during the week, and the match which began January 1 is fast becoming popular, many availing themselves to practice at this favorite range. Mr. J. Ames, of the Massachusetts Rife Association, has shown good helding with this arm, and leads the list with 104 out of a possible 120. Mr. F. J. Rabbeth is second with 103, and Mr. J. R. Scott is third with 100. The shooting for so early in the month is good, as the following scores will show (50 feet, rounds 8, possible 40, three scores to win or possible 120):

F. J. Rabbeth	31	36 - 103
J R Scott	33	84-100
F J Snow	33	33- 99
O T Harf	33	33- 95
L. T. Folsom	32	32- 96

MAGNOLIA RIFLE GALLERY.—The shooting has proved quite attractive. In the No. 1 match Mr. Farnham is at the front. In the FOREST AND STREAM match for the elegant pipe, Mr. Edwards is ahead with a good 47. Mr. Wright takes the lead in No. 2 match with 44. Mr. Gilman, with 117 for the pistol, leads all comers for the past week. The following is the result for the meetings since January 1;

ZETTLER RIPLE CLUB.—New York, Jan. 9.—Monthly prize shoot at Zettler Rific Gallery, 207 Bowery. Conditions—22-cal. rifle, Creedmoor targets, possible 50; 10 shots off-hand; 5 cash prizes; first four best aggregate scores takes first prize; second four scoond prize, etc. A premium of \$10 for a full score, and \$1 for six consecutive bullscores.

WARRIELD, Mass., Jan. 8.—The owl match sustains its interest. and the popping at the white bullseys through the darkne night still continues to be liberally followed. To-day, in the aftermoon, we had shooting with some close leading scores, and in the evening, when wind and elevation had once been secured, it seemed no trouble at all to pour in the bullets to the bullseye. The scores stood:

Boston, Mass., Jan. 8.—The final day of the several matches on the Walnut Hill range drew out a large body of shooters to-day and the pavilion was more than comfortably full. In the early morning the sky was cloudless, the wind hard to control, unsteady and at times approaching almost a gale. Added to this was the most provoking mirage produced by the bright sun upon the white In the afternoon the weather conditions were more pleas ing to the contestants, as light, fleecy clouds prevented the mirage from being so dazling and rested the eyes of all the iris-seekers. from being so dazing and rested the eyes of an life insecents. Splendid work was now done. Captain Jackson closed high man on the ring target (rest). Mr. D. Kirkwood took first honors on the Massachusetts target (off-hand) for a total of 10c. F. J. Rabbeth heads the list for 46 on the Creedmoor target. Mr. Severance made the excellent score of 116, Massachusetts target (rest); and made the excenent score of 110, Massachusetts target (rest)
Ames, with good holding and judgment, scored 82 on the rin
get, off-hand—good work in the erratic wind of to-day. Massachusetts target (rest) get, oft-hand—good work in the erratic wind of to-day. Mr. J. Cram took the lead before the amateur target for 47, outranking Mr. Gould, while Grant and Faunce both put in two 46s. The prizes in this match are gold and silver association medals. Mr. Crant will wear the gold trophy and Mr. Gould the silver one. The entries to-day were many, and as all the gentlemen are trying to improve their scores, only a few finished. The shooting was so heavy that it was impossible to arrange the prize-winners. The names will be given in next week's issue. The subjoined summary will give the results of to-day's meet:

Massachusetts Turget (Rest).

ANNUAL MEETING.-The Annual meeting of the Massachusetts Rifle Association for the choice of officers for the year 1881, and the transaction of any other business, was held at 608 Washington st., on Tuesday, January 11, at 7 P. M. and a report will appear in our next issue. Pending the organization for 1881 there will be shot each Saturday, commencing January 15, a subscription handicap match under the following conditions: Massachusetts target, ten rounds, three scores to win. Surplus of entry fees over expenses to be divided into eight prizes-25, 20, 15, 12, 10, 8, 6 and 4 per cent. Entries unlimited. Match to close and prizes distributed at 4:30 P. M.

WHEELING, WEST VA.—In a recent match shoot of the Wheeling Rifle Club Richard Stewart, at 200 yards, Mass. target off-hand, without sighting shots, put in the score of 11, 12, 11, 12, 11, 11, 12 9, 12, 12=113 in a possible 120.

BROOKLYN LONG RANGE GALLERY,-During the past week P. Ronaldson, T. S. Case and M. B. Hull each accomplished a score of 50 in a possible 50 at the 200 yards (reduced) Creedmoor target On Monday next a new match will be started, the prize being a .22 Ballard rifle, open to all comers, 10 shots, 300 yards reduced target. The matches to close each week and the highest aggregate of 3 scores to be declared the weekly winner. Two winnings before final ownership.

#### SCHUETZEN NOTES.

THE JERSEY SCHUETZEN CORPS .- Jersey City, Jan. 6 .- At the arterly and 192d meeting of the Jersey Schulzten Corps, A. B. Hardekopf, Captain, a full report of the ball committee was re-ceived, which shows that the members have made great prepara-tions for the ball, which will be held in Cooper Hall, Jersey City, on the 20th of this month. New candidates were elected and seven new ones proposed, and other usual business was transacted.

THE HOBOKEN SCHUETZEN CORPS, Captain John Brehmermann, will have their tenth annual ball on February 7, 1881, in Odd Feb lows' Hall, Hoboken.

#### Answers to Correspondents.

12 No Notice taken of Anonymous Communications.

R. G. C., Brooklyn.-1. Bogardus claims the championship. 2. Eugene has shot with the shot-gun.

S., Cleveland, O .- The President of the New York State Association is Mr. Abel Crook, Bennett Building, New York City.

W. H. W., N. Y.—Will you give me the name of the distributing agent for carp for the State of New York? Ans. E. G. Blackford Fulton Market, New York City.

U. B. M., Raleigh, N. C .- We should advise you to get for gener ral shooting a modified choke-bore gun, No. 10 or 12, the weight to depend somewhat upon your own build.

D. C., Belvidere, Ill.-1. Few such barrels made now, The English gunmakers use some of them, but you will not find many. Send to Leggat, Beekman st., New York, for the book.

W. N. W., Madalin, N. Y.—The guns are equally good, except so far as the action is concerned. You may select that which suits you the best, and in other things it will be equal to the maker.

B. F., Meriden, Conn.-The law is substantially as you have it. We have failed to find any material alteration. We have published from time to time able data relative to shooting resorts in the State.

C. W., Minnesota Junction -1. We know nothing of the firm 2. The gunmaker's address is Philadelphia. 3. For Vennor's Almanac write to H. G. Vennor, Montreal, Canada. The price is, we think, 35 cents.

J. M., Poughkeepsie.-1. So far as our dealings with the man go he has given satisfaction. We know nothing beyond that. 2. Sensation 2d by Sensation. We do not know the present owner. 3. Subscription expires April 7, 1881.

G., Flatboro, Pa.-1. For flight of projectile see next paper. 2. The gun is good enough, but its action seems to find httle favor among sportsmen. Aside from this the arm is excellent in every respect. 3. A cocker will run a hare by scent.

W. B., Syracuse, N. Y.-You will find much useful discussion in our rifle columns from week to week about rifles. In selecting one you must be guided by the kind of shooting you propose. See late issues. For guns, see our advertising columns.

L. S., Charleston, N. H .- Can you give me the address of any one who is raising minks, or keeps any live minks? Ans. Phillips & Woodcock, Caneadea, N. Y., used to breed minks for their furs. Whether they are still in the business or not we do not know.

T. C. C., Kingsville. -1. Is there a duty on American beef in ingland? 2. Did the first American ritle team commence firing England? off-hand at 1,000 yards? Ans. 1. No, but many oppressive laws are vigorously enforced nominally as a precaution against the intronuction of cattle diseases. 2. No.

W. N. T., Vermilion, O.—There are many first-class breechloading guns made that it is simply impossible to select one of them and claim that it is the best. By dealing with any of the leading gun dealers—they are all advertised in the Forest and Stream—you will get a good gun.

S. H. W., N. Y .- Have the Game Protectors of the State of New H. Max. 10 11 12 7 10 9 9 11 6 11—6 Tork any althority on Lake Champlain? Ans. They have author-C. Richards. 8 8 12 10 10 7 7 11 12 11—60 ity everywher e within the limits of the State, and therefore it ex-

tends over such pertions of Lake Champlain as may lie within the State of New York. There can be no doubt whatever on this point.

J. C. S., Swansea, Mass.-1. What kind of game is there in North Park, Colorado? 2. Also in North Platte River, Nebraska? 3. Which is the best place for game? 4. Is there any timber on North Platte River? Ans. 1. Antelope, elk, deer, bear, mountain sheep and a few bison. 2. On the North Platte deer, antelop perhaps some elk. 3. North Park. 4. None of any account. 2. On the North Platte deer, antelope and

TRAPPER.—A receipt for tanning mink and muskrat skins is given as follows: First weak the hide in warm water and remove all fleshy and fatty matter. Then soak it in the following mixture: Ten gallons of cold soft water, to which is added eight quarts of wheat bran, one half pint of old soap and one ounce of borax. If the hides have not been salted add one pint of salt. Green hides should be soaked eight or ten hours, and dry ones till they are soft. For tan liquor, to ten gallons warm soft water add one half bushel of bran. Stir it well and let it stand in a warm room until it ferments; then add slowly two and one half pounds of sulphuric acid, stirring all the time. Let the hide remain i hours, then take out and work over a beam until dry. Let the hide remain in about four

—Any subscriber or reader of Forest and Stream in want 2 any kind of carpetings, oil cloths, rugs, etc., etc., can be sure of fair treatment at the hands of John H. Pray, Sons & Co., Boston. Call or correspond with them, and get their prices before buying It will pay you to try them .- [Adv.

POUGHKEEPSIE ICE YACHT CLUB.

POUGHKEEPSIE ICE YACHT CLUB.

The club was organized 1861. The officers for the season 1880-81 are. Commodore, J. A. Roosevelt, Vice-Commodore, The V. Vanhasta, Secretary, Thos. H. Banown; Teasurer, The Secretary Thos. H. Banown; Teasurer, The Secretary Thos. H. Banown; Teasurer, The Regatia fug is blue with P. I. Y. C. in white, and the club signal is a pointed burgee, scarlet field without device. The Commodore files a broad, searlet penant; the device, a blue centre one third the width. The following regatias have been fixed for the winter, and will be carried out as near as the weather will permit: For Club colors won by the Haze, Jan., 27, 1872; by the Restless, Jan., 27, 1873; and by the Bhows Bird of the Zeath Club on the Hadson River. This pennant was won by the Icicle of the P. I. Y. C. Jan. I7, 1872, and by the Show Bird of the P. I. Y. C. Feb. 14, 1879. No challenge is pending for this prize at present. A Recutt will also be sailed for on call from the Commodore. Course not less that the liber to become the property of that yeach's owner. If it different yachts should win the first and second regatias, a third race shall be sailed, and if either of the winners of the first and second races win the third, the filler to become the property of that yeach's owner. Should the third regatia be won by a yacht which has not won either the irist or second race, then the winners in the third, the filler to become the property of that yach's owner. Should the third regatia be won by a yacht which has not won either the irist or second race, then the winners of rany & Co. The silver tiller is I'lin. long, with gold ord where the hand rests, and has never been sailed for. There will be also a regatia for a silk pennant, 15ft. long, with gold ord where the hand rests, and has never been salled for. There will be also a regatia for a silk pennant, 15ft. long, with gold ord where the hand rests, and has never been salled for. The Foughkeepsie foe Yacht Club have challenged the Namera. This prize has been offered by

SEAWANHAKA YACHT CLUB.—At the annual meeting the following members were elected: Commodore, W. A. W. Siewart; Vice Commodore, C. S. Lee; Rear Commodore, M. Rosevett Schuljer; Secretary, O. E. Cromwell; Measurer, A. Cary Smith; Fleet Surgeon, Benjamin F. Dawson; Chaplanns, William Irwin, D. D., and George R. Yandewarter, D. D.; Regatts Committee, Robert Center, C. Wylbys Betts, Louis P. Bayard, Girnul Foster and James H. Elliott, J. M. Beekman and J. Frederick Laws were re-elected to fill vacancies in the Board of Trusters. W. S. Alley, Albert B. Boardman, Sidney De Kay, John Crosby Brown, C. Baldwin Fosdick, J. Halsey Haight, F. C. Lawrence, Jr., and Albert W. Thuries were elected members of the club.

Thuries were elected memores or the call.

Yacuts Phoros.—Brentano, of Union Square, keeps a full line of all photos of American and English yachts. The American lot includes several very handsome specimens of the art, notably those representing the schooner Nellie G., the sloop See Bird, a fine deck riew of the latter, and the sloop Rebie. We wish that some one onld be found with enterprise enough to photograph New York pachts, there would be a small mint in the undertaking. As it is, we must depend upon Boston for a supply of representative illustrations.

trations.

Sands fittings.—Mr. A. B. Sands, of Beekman street, has so long made yacht plumbing a specialty that he may now be said to have captured the entire American market. His work is uncounsiled in strength and finish, and his long experience in titting yachts of all sizes renders his methods and suggestions of great value, a fact which yacht owners recognize generally.

value, a fact which yacht owners recognize generally.

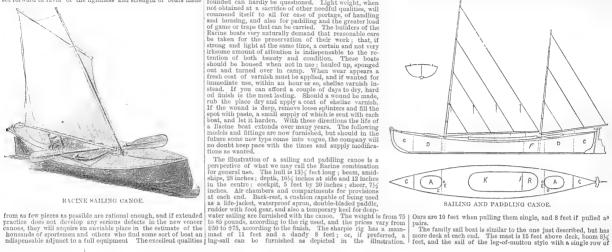

COMPARISON OF XACHTS —The paper of Mr. Hyslop, in the FOREST AND STREAM of Dec. 16, on stability of different models, I regard as valuable. He could have madelt of more value, however, if he had made his calcalations on indichiny sections of the same displacement, as displacement cannot be left out in comparisons between different models. Another element, the wet surface exposed to frictional resistance, demands serious consideration, as the resistance due to friction probably amounts to as much in some models, as that due to other sources, of which the midship section is the chief factor. The problem for yeach designers to solve is this: As water lines are supposed to be perfect, or as near perfection as they will probably ever be, to inclose the required midship section by a line which will give the greatest possible

stability with the smallest possible surface exposed to frictional resistance, and permitting a form productive of the least wave making resistance at the same time.

Nautrous.

#### RACINE CANOES.

M AKING boats by machinery has certainly been brought to a high state of perfection by the Racine Boat Company, whose headquarters and salesrooms are located in Chicago. The claims set forward in favor of the lightness and strength of boats made

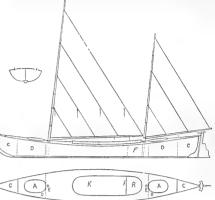

are about one-eighth of an inch thick, will not warp, and are sufficiently elastic, with a strength far in excess of the strains a canoe or boat is likely to be put to. With fair usage these boats ought never to leak, and, when supplied with water-tight compartments at the eids, marked A in the cuts we present, they are life-boats to all the contract of the contra

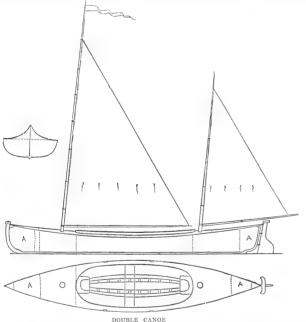

be relied upon in all emergencies. These compartments, we believe, are fitted to every boat turned out from the company's factory.

That the claims of strength, lightness, beauty and speed, made for boats manufactured on the plan described, are well founded can hardly be questioned. Light weight, when not obtained at a sacrifice of other needful qualities, will commend itself to all for ease of portage, of handling and boasing, and also for padditing and the greater load and the greater load. The best set of the facility of the second of the facility of the facility of the second of the facility of

Of deck, 5 inches; cockpit, 7 by 2 feet; weight, without rig, 100 pounds. The badger is finished in five different styles, painted dry grass color, with one or two sails, varnished and brass trimmed and rull finish throughout. The prices vary accordingly from \$50 to \$75.

For general pleasure purposes the Racine family boat has all the qualities desired—light pulling, stiff, handsome, buoyant and unstituded to Length, 16 feet; beam, 38 inches; depth, 12 inches amidships and 7 inches shear; weight complete, 120 pounds.

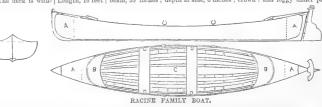

of the Racine cance have been attained by gradual and carefully conducted experiment, extending over two years or more, during within the step the necessite and preferences of the public have also been carefully noted, so that in the models now offered the originators can fairly expect to meet existing demands with the timost confidence. The undertaking was a bold one, for all old methods were so widely departed from that next to nothing in the way of precedent existed, and we believe it mainly due to the undertaking as a bold one, for all old methods were so widely departed from that next to nothing in the way of precedent existed, and we believe it mainly due to the undertaking as the exertions of Mr. Durant, the superintendent of the Racine Hardware Co., that so thorough a success has been achieved in something so original. The principal peculiarity in the "main-facture"—for the new cances cannot be said to be built—is that they are stamped out much in the same way that thinware is, by special machinery, and special additional and the proper stating and framing required. The veneors are combined in several thicknesses through the intervention of waterproof fillings and varnishes. The boats are stamped out makes and joined under the keel, where the only seam is to be found, both bow and stern being neatly sheathed with brass, after the manner of paper-racing shells, giving at once a strong binding-ends which will stand chafe and wear—and a stylish hinks. The boats are stamped out makes the summer of paper-racing shells, giving at once a strong binding-ends which will stand chafe and wear—and a stylish hinks. The sides, when varmshed, are like the finest carriage work in smoothness are shown at A. A, the bulkheads of the manner of paper-racing shells, giving at once a strong binding-ends which will stand chafe and wear—and a stylish hinks. The total stamp is a strong binding-ends which will be sufficiently and the summer of paper-racing shells, giving at once a strong binding-ends which will be sufficiently as

reef points. She will carry five persons and float that number when filled with water. The varmished boats show the grain of the birch and are very attractive to the eye. Besides the models enumerated, the Racine Boat Company build open cances of 50 pounds weight. They make a specialty of all the fittings belonging to a full coupment, among which we may make special mention of their file preserver, \$2 inches long, which serves as a little over one pound. It is sold alone for \$1.50, or with the boats as part of their outfit.

We have recently received the "lines" of a new and improved Shadow model, which the company are now prepared to put upon the market. A sample of this cance was recently on exhibition at the American Institute Fair, and attracted much attention by her well-digested model and fine thish. Commodore C. E. Chase, of the J. G. C., may with justice claim some of the credit of her production, a fact to which, we believe, the Racine Boat Company tour padding and sailing the beautiful attracts and allowed the production and the stream and lakes of Wisconsin last year in his well-known Bubble, gave the Racine builders the benefit of his experience, which was cordially accepted and worked up into one of the best models for a "paddleable sailing cance" in existence. She looks to us like a very slet, siff boat, without the very flat floor which makes the Eastern Shadow slow and loggy under paddle. The masts are stepped 42 inches from bow and speed of this Racine Shadow are very satisfactory. Racing shells have been turned out on the same principles, but in them we principles, but in them we principles, but in them we principles, but in them we principles, but in them we principles, but in them we principles, but in them we principles, but in them we principles, but in them we principles, but in them we principles, but in them we principles, but in them we principles, but in them we principles, but in them we principles, but in them we principles, but in them we principles, but in them we principles, but RACINE BADGER.

ELECTRICITY AND SALTED HERRINGS.—Had any scientific enthusiast of the last generation announced his behalf that the progress of electrical science would directly affect the supply of herrings to those inland Catholic countries where they are—when salted—in such demand for food on fast days, his friends would have been anxious concerning his cerebral welfare. As a matter of fact, this now the case. The Norwegian coast is girdled by 1,900 miles of herring telegraph wire, and telegraph stations are established on the barren rocks of the Lofodden Islands, and in the hollows between the dark precipitous cliffs that form the Arctic face of Europe. Here, among the screaming seabirds, a watch is kept of the movements of herring shoals.

#### FOREST AND STREAM.

NEW YORK, THURSDAY, JANUARY 20, 1881.

#### THE REFRIGERATOR AMENDMENT.

THE proposal to sell game all the year around in the New York markets has aroused the indignation and alarm of sportsmen throughout the State. We are in receipt of private letters upon the subject which show that the view of the case advanced by the Forest and Stream last week is that view which appeals to the most experienced sportsmen of the land. We publish in another column communications from gentlemen who understand thoroughly what such a law means, and we have on hand other letters of like tenor which will be printed next week.

Of the evil effects of such a system there is but one opinion, and that a very decided one, that the effects of the open game market would be ruinous to our game. We trust that the public sentiment, which is so unmistakably in opposition to the proposed amendments, may be sufficient to deter the promotors of the bill from presenting it.

---THE INTERNATIONAL MATCH.-It must be regarded only as a misfortune if the invitation of the British riflemen for as a long-range match at Wimbledon curing the coming sum-mer be allowed to drop into neglect. At any rate, those sending the kindly note for a contest are entitled to something more than a hazy intimation that we find it "inexpedient" to send over a team. There is too much appearance of studied avoidance of a square issue in the use of such indefinite phrases If we cannot afford to send over a team, then let that be said fairly and openly. If the point is made that the Palma represents the championship of the world at long-range team work and that we will stubbornly refuse to acknowledge that any other match is to be thought of so long as this remains in the way, then the issue is a plain one, and there will be no difficulty in getting an expression of opinion that the Palma has been a stumbling-block from the start and seems destined to become the greatest incubus ever laid on American rifle practice. Let the new Executive Committee of the N. R. A. take the matter in hand regarding the a fair, open, American reason for sneaking away from the only match ever offered us by the only other National Rifle Association in the world.

THE MICHIGAN STATE SPORTMEN'S ASSOCIATION WILL MEET at Lansing, January 25.

#### THE HATCHERY AT NORTHVILLE, MICHIGAN

E recently visited the hatchery station of the U. S. Fish Commission at Northville, Mich., where the whitefish (Coregonus) are being so extensively hatched for distribution in the lakes and to such other parts as is deemed necessary. The Superintendent, Mr. Frank N. Clark, showed us over the establishment, and we were much pleased with it. It is situated on a slope across the road from Mr. Clark's house, and the roof of the hatchery is no higher than the road; the building is a single story frame, with side windows, and is eighty feet in length by thirty wide; in one end is the office and a workshop, while the filters and ice room are in the rear.

The question which agitated fishculturists some years ago concerning the hatching of the whitefish in spring water, thereby bringing them out earlier than in the colder waters of their native lakes, still has its partisans, and Mr. Clark has hit a medium course. By making a cooling pond and carrying the water from the spring to the further end of it in a shallow trough exposed to the air, and then further exposing it in the pond he gets the temperature down as low as is possible in the coldest weather, using ice if warmer, and so retards the hatching until toward spring. Mr. Clark has been bred a fishculturist, his father, the late Nelson W. Clark, being one of the pioneers in the business, and his success with the shad and whitefish has been uniformly good.

The hatchery is equipped with five troughs, each fifty feet long and a foot wide, divided into thirty-two compartments, seventeen inches long, filled with the "Clark hatching box." Each of these compartments contains seven trays capable of holding 10,000 eggs each. Besides this there are sixty "Chase hatching jars," six inches in diameter, sixteen and a half inches deep, with a metal top two and a half inches high, capable of holding 125,000 eggs each, making the capacity of the house 25,000,000 eggs, which can be increased, if necessary. At the time of our visit, December 17, there were only 13,000,000 eggs in the batchery on account of the storms and bad weather which prevailed during the time when the fish were spawning, many eggs having been frozen, it having been a most disastrous season for the fish culturists generally who attempted to gather the eggs of the whitefish. Our readers are familiar with both the "Clark box" and the "Chase jar," and so we will not enter into an explanation of them. It was curious to note the different appearance of the eggs from Lake Erie from those of Lake Huron, the former appearing light colored and the latter a decided yellow; and Mr. Clark says that the fish differ, those from Lake Huron having black fins and a black back, while the Lake Eric fish have pale fins and a greenish back, and he claims that their heads are shaped differently. He keeps these eggs separate and will plant each in its own locality, for it is said that the Lake Huron fish does not sell as high in New York market as the other. The Lake Huron eggs are taken at Alpena, Thunder Bay; they are transported to the hatchery in flannel trays. In the practical working of a large hatchery the "self pickers" require assistance, as many good eggs will pass out of the gate with the bad ones, and a siphon of glass is used to remove most of the dead; but this also picks up some good ones, and so they are put into a jar by themselves for future picking when the bad ones get worse and can be more readily separated; still it is an improvement on the old-fashioned picking with nippers which is very tedious. The jars are arranged on the sides of these troughs which are placed over each other, the top one supplying the top tier of jars which empty into the second trough which suplies the lower jars, which in turn empty into the bottom trough. White fish eggs measure, according to Mr. Clark, eight to an inch, and 36,000 to a quart.

Retarding the development by ice is a favorite experiment with the superintendent, and we saw his refrigerator filled with eggs where the thermometer stood at 31 deg. Fahr., as it had done for the last twenty days, and the eggs were quite icy on the outside, often being surrounded by a film of ice, which had made on their surfaces without the egg itself be ing frozen, owing to the circulation of the blood developing heat enough to resist a temperature no lower than that. eggs lay upon canton flannel trays in a double box well packed with fine ice. His father had a box of this kind patented

and the son has improved but not patented it, he having concluded that fishcultural patents are not good. He thinks he can keep the eggs for six months and then batch them; the only care he gives them is to see that the trays are kept damp.

The house is also used for the breeding of salmon and trout, many thousand quinnat-salmon being hatched and distributed here as well as a few of those Western brook trout (Salmo iridea), which have so many common names that we cannot select one, and so we are waiting for some one in authority to choose one for us, for we will not call them "California trout" for the reason that we object to the same name for the salmon; it is not its name in its own home, and there are a half dozen salmons and trouts in that State. young iridea in the ponds are lively and healthy, and may be kept for breeders; they were hatched on the 17th of last May, and belong to the U. S. Fish Commission, as do also a few adults Other ponds contain yearling quinnat salmon and a few brook, trout and altogether the establishment is in good shape and excellent working condition.

#### THE SHINNECOCK BAY DEATH-TRAP.

OUR readers will remember that this beautiful bay on the south side of Long Island was closed by a storm which filled the inlet with sand about the middle of September, and that we cried aloud to have it opened, so that the millions of young fish which had been bred in its waters might go forth on their migrations and return to breed, instead of perishing in their prison and polluting its waters so that breeding fish would not enter it next season. Many other papers took up the cry, and those in authority made a stir as if they would do something, but afterward agreed among themselves that this something should be postponed until their fall plowing was completed and the fish had a chance to die. The bluefish, weak-fish and other migratory species died, obstinately refusing to wait the leisurely motions of their jailors, and thus by their foolish prejudices against being frozen, in water which was becoming fresher than suited their palates, deprived the people of Long Island and New York not only of the amount of food which they would have grown to, but also of a crop of young fish which might have descended Perhaps the Commissioners appointed to locate from them. the inlet, after seeing the perverseness of these fish, became indignant and refused to dig. If so their dignity prevented them from plowing up the sand to let the sea-water in, and to the fishes let their sands of life run out.

It was Mr. William N. Lane who proposed to make a lane to the ocean at his own expense, if allowed, whereby the fish could travel from the Good Ground of the Island to the better ground of the Atlantic, but this offer was not accepted by the Commissioners, who may have had good grounds for declining an offer which brought them in no fees; and so things ran along until some three weeks ago old Boreas bored a hole through the beach in the western part of the bay and let in some sea-water, but too late to save the fish, which were in a bad pickle already.

Mr. Lane writes us that this inlet is in good running order, and is the best one they have had for years, being over one hundred yards wide and a good depth from bay to sea, and all that now remains to be wished is that the flow may be great enough to purify the bay before the arrival of the spawning fish now absent in warmer waters.

THE WISCONSIN STATE ASSOCIATION has undertaken a most laudable work, and none too soon, in its endeavor to check the steady diminution of the game and fish in that State. The meeting of the Society at Milwaukee, of which a report will be found elsewhere, brought together a company of earnest men whose discussions and transactions showed that they appreciated the importance of the stated objects of their organization. If the same spirit pervades the subsequent meetings of the Association Wisconsin game will be

Among the laws which the game committee of the Society proposed was one restraining the exportation of venison. This provision we hope to see presented to the Legislature and passed: for this is the only possible way of checking an export trade in game which, unless stopped in some such way, must inevitably deplete the Wisconsin forests once and

## The Sportsman Tourist.

THE LOG OF THE FAVORITA-(NO. 2.)

GROSS SOUND, 10Y STRAITS.

Poort Frederick, Aug. 18, 1880.

YESTERDAY morning, having successfully accomplished all of the results we had hoped to attain by our visit to the Kootz-noos, we left Kot-e-sok carly, crossed Chatham Straits and at noon rounded the bold headland Point Augusta, and entered Cross Sound, through which we made our way to the westward, and at 8 r. m. made harbor in the port, which is just to the westward of Point Adolphus, on the southern shore of Cross Sound, and is known among the natives as "Kom-tok-kon."

Our parting with "Jake" and "Andrew" was a most diplomatice as "Kom-tok-kon."

Our parting with "Jake" and "Andrew" was a most diplomatice ene; each party lauding the other with "assurances of the usost profound regard," in addition to which the two Tylees gave to us renewals of their promise that the war between themselves and the Stickienes at Port Wrangel should not be renewed, and we gave to them, instead of promises, each, one of those valuable commodities, "apaper," in which we certified to the main facts of our interview, and informed all future white men that these two chiefs had pledged them. each, one of those variable commodities, "a paper," in which we certified to the main facts of our interview, and informed all future white men that these two chiefs had pledged themselves to friendly intercourse with whites; and to Jake, by his own request, we gave a handle to his name, bused upon the most important event in his life, namely, his inforced journey to San Francisco some eleven years ago, upon which occasion I had bad the opportunity to serve him, and as the trip was in the U. S. S. Saginaw, he received her name, and in future will be known as "Saginaw Jake."

A few navy buttons, some yellow tape as a substitute for gold lace on the trowser-legs, and "Janestown" cap ribbons bound them to us forever.

Cross Sound deserves a little description. This hody of water separates the island of Chichagoff from the mainland to the northward, and runs nearly parallel with Peril Straits to the South, and in many respects the two straits are very similar.

similar.

A study of the chart of this region gives the impression that in some distant period the southeast coast of Alaska extended in an unbroken line, bordered by high hills and mountains, from Mt. Fairweather on the north, to Cape Pox on the southern extremity. And with this impression a further study of a general chart will include in this unbroken line the western coast of our continent as far south as the Straits of Fuea and the southern terminus of navigation in Puget Sound, from which point, in latitude 47 deg. N. to Portage Bay in the Chileat region latitude 59 deg. N., an almost continuous, deep and narrow channel, named, as we go north. Puget Sound, Hecate Strait, Clarence Strait and Chatham Straits, with intervening short sections with other local names stretches for over a thousand miles, and through which a large steamer can navigate with safety, and during the entire trip be in smooth water and land locked, except for perhaps in the whole distance about one hundred miles when she passes the mouth of straits, which running to the eastward, admit to this great canal the tides of the Pacific, and make islands of portions of this peninsula; of these the most important are, beginning again at the southward, Juan de Fuca Straits, Quece Charlotte Sound and Dixon's Enfrance. The latter divides our possessions in Alaska, from British Columbia; our southern point, Cape Fox, being in latitude 54 deg. 40 min. north. A study of the chart of this region gives the impression that

40 min. north.

It seems almost certain that once the islands of Baranoff, It seems almost certain that once the islands of Baranoff, Rivedf and Chicagoff were parts of a peninsula nearly two hundred miles in extent to the south, and less than forty miles wide at its base, ending at Cape Ommany on the south, and that through some great convulsions of nature the strong tides have forced their way through the valleys, turning them into channels, and the mountain peaks into the Alexander Archipelago.

Two of these valleys are now.

tides have forced their way through the valleys, turning them into channels, and the mountain peaks into the Alexander Archipelago.

Two of these valleys are now occupied by Cross Soundland Peril Straits, in both of which the entrance from the Paeido is to the northeast till about the centre, then R. E. to Chatham Straits. In both the tides meet at these centres, and produce violent rapids, whithpools and eddies, and the power of these rushing waters is to this day sufficient to wear away any resistance less firm than solid rock.

Cross Sound has been but slightly explored, and still more slightly surveyed. The northern shore is described by Prof. Davison, of the C. Survey, as a "region but slightly explored, but from every indication evidently the home of the glaciers." Few keels deeper than those of canoes have furrowed its surface, for even the hardy prospectors and adventurous Indian traders have been deterred from venturing within its limits, by the reputed dangers to be encountered. Icchergs and floes, eddies, whirlpools and dangerous Indians, have all been held prominently forward by the Sitka "merchants" to prevent a probable competition in trade.

I know that these dangers have been exaggerated.

The western part of the sound is undoubtably an uncomfortable place for navigation, for here is developed a new feature from which this portion is justly named fly Straits; for, drifting to and fro with each change of tide, a solemn procession of icchergs gives a new character to the seenery, and now and then a new and decidedly exciting sensation to the mariner, when the surfaces of resistance of probably greater area than is to us visible, and as in some cases, this upper and visible portion was judged at least a half-mile square in extent, it is easy to calculate that, even with but slight velocity, the other factor of momentum, viz., weight, was quite sufficient to render a colliding match between us and it, decidedly a one-sided affair; and owing to their great depth, in comparison with our own, there can

announces that an undertow has been encountered, and, directly against the surface tide, the mouster makes for us and then our only resource is to depend upon the element, which makes it dangerous, as our hope of safety. A berg drawing a hundred feet cannot chase a steamor drawing but eight a great ways when shoul water is in the vicinity. In some well-sheltered bays many of these bergs and floes had stranded during some unusually high tide and strong whid, and lying well back on the beach, crasted a most beautiful eight; the yellows and and black, water-worn granite boulders of the beach, and the dense green of the evergreen foliage of the forest background formed a rare contrast of colors, and the forms too, were beautiful; the ice, varying in solidity, had been penetrated to varying depths by the sun's rays, and

while the projecting pinnacles glowedand sparkled like burwhile the projecting pinnacles glowedand sparkled like burnished silver, the arches and chasms reflected all hues of the rainbow, among which ultra-marine and lapis-lazuli predominated. By moonlight the effect was superb and weird. But a little fancy was required to people these lonely bays with ice gnomes who had here built a city of crystal.

On the summit of the floating bergs many sea-fowl perched, and on terraces worn into their sides hair seals basked, and from these terraces well-worn sildes showed where they had melted with their bodies warmth, and friction while enjoying their games of coasting.

At about the centre of the sound there extends from the southern short the bold headland of Point Adolphus, and here

their games of coasting.

At about the centre of the sound there extends from the southern shore the bold headland of Point Adolphus, and here an off-shore current proves to be a boundary line, beyond which the icebergs seldom venture, and thence to the junction of the sound with Chatham Straits the dangers from ice are climinated. But others are substituted, among which, and the most important, is a rocky patch which, nearly a mile square and at low water, projecting from three to five feet above the surface, has failed hitherto to attract the attention of hydrographers, although, from its postion (nearly in the centre of the junction of the two bodies of water), it is a source of great danger to any vessel pavigating these seas; for at high water there is on it a cover of eleven feet, and a stranger, in endeavoring to avoid the possible dangers near the shores by seeking a mid-channel route, would stand a good chance of discovering, by hitting it; a method of sounding, which from personal experience I can vouch, is a very uncleasant one. Armed with his sextant, compass and lead-line our hydrographer, undecreted by the violent eddies and tide rips which surround it, and by the spray flying over, boldy attacked, captured and deprived it forever of its greatest power of doing mischief, viz., that of being unknown, for henceforward Hanus Reef—named for its captor—will have a recognized existence.

The run across Chalbam Straits from Kootznoo would have.

for henceforward Hanus Rect—named for its captor—win have a recognized existence.

The run across Chatham Straits from Kootznoo would have been devoid of incident—for the day was thick and foggy and no scenery visible—but for our overtaking the cance of our friend Hoonah Dick, in which were stowed himself and a

Gross Sound 

Stare, his wife and another woman, three children and a dog. Dick gladly accepted our offer of a tow and, stopping for a few minutes, the whole party except the slave, who was left to steer the cance, was transferred to our decks.

The two women squatted immediately in the gangway, took out calico thread and needles, and until we arrived some hours later at their village, employed themselves most industriously in manufacturing clothes for the children, who also squatted close to them and sat as still as mice throughout the squatted close to them and sat as still as mice throughout the day, shy at first and timid, as evinced by shrinking closer to the woman as we approached, and by rapid winking of their bright eyes, but never by a cry or scream, even when well-meant but rather rude attempts to fondle them were made by the sailors. Our Chinese cook was to them a source of unending wonder. Dick himself soon made friends with all hands and gave to us some quite valuable information in regard to the inroad of the "Sim-sims" and upon certain illegal traffic which had been taking place. To me he also gave many items as to the bunting of sec ofter and seals, and he assured me that "Kah-hoo-doo-sak," the old chief of the Hoo nabs, would be very pleased that we had come. In spite of all this friendship, Capt. Vanderbil', in giving the cance a tow, incurred considerable risk, for had it met with any accident while in tow, the s' camer, according to Indian law, would be leid responsible
No accident, however, occurred, that is of any magnitude,

No accident, however, occurred, that is of any magnitude, to any of them, unless a very little one, which followed my feeding to one of the babies fifteen lumps of white sugar in rapid succession can be so termed.

rapid succession can be so termed.

rapid succession can be so termed.

As we steamed along, here and there on the shore the smoke of a camp-fire indicated the temporary home of a family, and at one place on the eastern shore of Chatham Strait there was quite a village.

At 3 P. M. we entered the harbor of Kom-tok-kon, or, as by the charts, Port Frederick, and let go our anchor abreast of the principal village of the Hoonahs.

This tribe is one of the most powerful and warlike of all which inhabit the Alexander Archipelago. They are essentially coast Indians, or as termed by Professor Dall, Orrarians

Their villages are scattered among the various skeltered bays and inlets of Cross Sound, and generally in the immediate vicinity of salmon rivers and halibut banks.

In winter they all gather into the uniar village, Kom-tok-kon, on return from cance trips, for trading and visiting, to Silka and Wrangel and other places.

They have also a summer resort to the northwest of Cape Spencer, in the vicinity of the breeding ground of sea otters, off Latuya Bay.

on Latuva Bay.

The Hoonals, according to various estimates, number from five to eight hundred people. I am inclined to believe that the largest estimate is nearest to the truth. Dick told me, "Plenty people, more as Sitkas;" but the Indian ideas of numbers are vague.

They are bold, enterprising and intelligent, far more so than the Siwashes of Sitka, and until very lately have been classed as "dangerous." So far as I can judge by my own intercourse with them, and the testimony of Dick Willoughby, who has lived among them for some months, and by that of others who have come casually in contact with them, this is not a just classification, although in one respect it has proved advantageous to them, for deterred by fear, but few whites have as yet visited their country, and the demoralizing effects of whisky and debauchery, which through contact with low orders of whites have seriously lowered the morods of the Sitka Indians, have not as yet affected them. They are robust and healthy, and are the most expert canonem and sea otter hunters of all the tribes on the southeast coast.

Such contact as they have as yet had with the whites has tended to their improvement. Many of them wear our style of clothes and use the blanket only as a hunting or fishing costume, or for a cloak, and in their main village I noticed one house in which an evident attempt to improve was shown. A panel door and two windows, will giass, were substituted for the round holes which, in purely native architecture, furnish egress and ingress, and for the hole in the roof through, which ventilation is secured. And in one cance which came alongside sat a very good-looking Klootchman, carrying over her head an alphac umbrells, and in her arms a light-complexioned, blue-eyed, red-haired haby, and her costume consisted of a calico dress, shoes and stockings and a hood. Evidently the tide of civilization was advancing northwestward.

hood. Evidently the tide of civilization was advancing northwestward.

Kom-tok-kon consists of about twenty-live large bouses, built of hewn logs from a foot to eighteen inches square. The outer surfaces of these logs are hewn so smoothly with the axe that at a little distance it would be thought they were planed. In some cases planks of hemlock, three inches thick and over two feet in width, covered fishing, but although quiet and deserted, the village looked neat and tidly. The news of our arrival soon spread, and those nearest came flocking home in hopes of trading, which hopes, however were disappointed, as no trading was permitted upon this trip. They furnish the fure of otters, fur and hair seals, and of some land animals, and the oil of whales, porpoises and walrus, with now and then a little ivory. The oil is stowed in hadders, which hold from one to four gallons. The whale oil is procured from occasional whales, which by receding tides get left embayed in shoal water and are there shown.

shot.

Kom-tok-kon is just to the westward of Point Adolphus, and the village is on both sides of the land-locked bay, which is quite large and includes within its boundaries several level places of several acres each in extent, on which ore cultivated successfully potutoes, kale, turnips and cabbage. These levels are apparently the terminal moraines of ancient glaciers, and here as elsewhere seen to be composed of rich aluvial soil, needing only cultivation to make valuable.

These vegetable patches are owned in common, as at the village itself, the immediate background of high hills prevent agriculture, while they shield from winds.

These vegetators provided the provided the provided the vegetator willage itself, the immediate background of high inus prevent agriculture, while they shield from winds.

Dick invited our inspection of the internal arrangements of his house, which was one of the largest. He received us most hospitably, and his wife and children were attired to garments which were clean and tidy as was the house. On each side of the entrance there was a large human face.

On each side of the entrance there was a large human face, are wight that the provided from wood and trimmed with human hair. These

On each side of the entrance there was a large human face, carved from wood and trimmed with human hair. These faces were upside down and the hair, I learned, grew upon the heads of the warriors who, having been slain by Dick, were thus commemorated.

The principal industries of the Hoonahs are fishing and hunting the sea otter. Their employment for the year is about this:

The principal industries of the troonaus are usuing and hunting the sea otter. Their employment for the year is about this:

As early in spring as the breaking up of the ice will permit, the canoes gather upon the bailbut banks, off Cape Adolphus, and there at times a hundred of them are at once engaged in fishing. They do not anchor; the hook, which is a complicated structure of wood, with an iron spike (shown in cut and described in your paper of July 30, 1879), is baited with herring, and let sink to the bottom; the inner end of the line is fastened to an inflated bladder, which acts as a buoy, the fisherman holds the bight in his hand and permits the canoe to drift. When a fish is hooked, and there is but like, if any, delay between bires, it is if a small one, say of less than 70 lbs, hauled at once to the side of the canoe, stumed by heavy blows, and garled over the side; if a large one it is permitted to amuse itself, towing the moy until exhausted, when it is bauled in, killed and secure.

The fish run from 30 to 200 lbs, weight, and are very delicious, more so than are those caught on our'e astern banks. That opinion may, however, be due to my never having eater of the Korthwest.

The supply of hailbut in these waters is practically inexhaustide, and the number taken yearly is regulated by the

of the Eastern Bill, as Ircshiy caught specimens, as I have of those of the Northwest.

The supply of halibut in these waters is practically inex-haustible, and the number taken yearly is regulated by the demand alone. So at least I believe, and at the risk of being considered as competing for that big dish-hook you once offered as a prize, I'll give you one of my reasons for so

demand alone. So at least I betieve, and at the risk of being considered as competing for that big fish-hook you once offered as a prize, I'll give you one of my reasons for so believing.

I reached these banks in August, long after the fishing season had ended, but wherever we went our anchor had hardly reached bottom, at one end of our vessel, than a good sized halibut left bottom at the other end, and was soon floundering on deek, doomed only to lose his fins, of which we corned down a large quantity, for when once accustomed to them few articles of fish food exceed halibut mis in excellence. Upon one of these banks Dick Wiloughby and I, each with a sailor to help gaff into the bost our captures, fished against each other just one hour. In that period we had lying on the boat's bottom forty-seven fish, which by estimate fell very little short of a lon in weight, we weighed several, large and small, and they ran from 30 to 50 lbs. We called the average forty pounds.

At first I fished with two hooks, but soon had to give that up. The water was about eight to ten fathoms deep, and even with this comparatively slight depth and moderate weight of each fish, certainly four-fifths of our time was socupied in hauling up the fish and rebuiling. The sinker would hardly touch the bottom when the slight tug which proclaimed a bite was felt, which seldom failed to be a profitable one. We were using the ordinary cod fish hook, which I like better than the native look, that is when fishing on a bulk where dog lish donot abound; when they are plentiful the Indian hook, on which they cannot fasten thenuselves, is preferable. The bait with which we caught these fish consisted of not quite two salmon, which we cut into pieces, about 2 by 4 linches.

quite two salmon, which we cut into pieces, about 2 by 4 inches. These salmon we procured right alongside the boat, by fishing with hooks attached to lines about six feet long, which were buoyed, and a line from the bnoy to the loat

permitted us to haul it to us when we saw it dip, and bring permitted us to hanl it to us when we saw it dip, and bring up a ten or fifteen pound salmon which had swallowed the horring and the hook. These herring were caught by two small boys, who were engaged about one hundred yards from the shore (we were about itve hundred) in jerking through the crowded schools, which their cance was floating among, sticks armed with projecting sharp nalis. Nearly every jerk brought from one to a dozen herring to basket. I bought of these boys a basketful, perhaps a couple of dozen, for a cod fish book, and when through fishing our return for thus power server for heir and a doller to be having GOZED, for a con fish hook, and when through fishing our re-turn for that penny spent for hait, and a dollar to the Indian who showed us to the bauk, was nearly a ton of fine halibut, six or seven salmon and a dozen or more herring. The water was chilly, the work soon became hard, and we were all glad when our hour was up and we could start for home. The Indians assured us that all the year the fish were causily abundant.

The water was chilly, the work soon because main, and newere all glad when our hour was up and we could start for home. The Indians assured us that all the year the fish were equally abundant.

That evening, after a comfortable supper, as I sat smoking my pipe, I could but fall to musing and contrasting my position with that of other men, who had spent all of the same day, perhaps, in labor of the same nature as had thred me thoroughly in an hour. I in the cosy and tidy cabin of the Favorita, and she moored safely in a land locked harbor, not over a mile from the fishing banks, where I had for mere sport caught halibut at such a rate, that were I able to withstand the physical strain of eight hours a day of just such labor, a single month would suffice for me, single handed, to give a hundred ton schooner her fare. Eight of us, working together, at the same rate and within two weeks of her leaving Portland, the schooner could have her catch in the market.

And while catching these fish I underwent no more hardship, nor as much, us a basket of trout has often cost me, and had experienced no more dangers than had I been still fishing for bass in the St. Lawrence or Ontario. And my expenses -a cent for hait, and with that hait plenty of fun thrown in (for the catching of balf a dozen fine salmon is not an amusement to be despised), and my dollar to the Siwash—was but slight interest on the money I have paid to guides for far less services.

for fur less services.

I contrasted all this with the cost to our Gloucester men, with far less less results in proportion. I thought of the begrinned and blood stained decks, and close, gressy and foul smelling cabins, where the captain and the mates and the cooking stove and the bunks crowd each other; of the pitching and toosing to the ground swell on the banks, the drifting and dragging and fouling in icy northeasters, and of the fate of those who through gales or ice-bergs, or being run over by steamers, failed ever again to glide in past the "Ten Pound Island" light, and for whom wives and children wait vainly until they are sure that they have become widows and orphans.

Of the five hundred vessels which compose the fishing fleet of Gloucester, and the five thousand of their crews, every year takes from them a large percentage, and, if I remember correctly, one year thirty of the fleet and over two hundred and forty-three men perished and thirteen vessels were lost.

These five hundred vessels bring to market over three nillion dollars worth of fish yearly, but these fish cost heavily in life and properly. for fur less services.

I contrasted all this with the cost to our Gloucester men,

e and property.

In Alaska the yield, if an equal number of vessels were em-

ployed, would be nearly as great, and the expense and danger

ployed, would be nearly as great, and the expense and danger less.

From 1873 to 1876 inclusive, an average of eight vessels yearly, with tonnage from forty to one hundred and forty, averaging eighty tons, have fished upon the Shumagin banks. Their catch in the seven years was over four million pounds of fish, worth in San Francisco four cents per pound or \$160,000.

The vessels belong to the Pacific Fish Co., have a station on Popoff Island and a curing establishment opposite to Sau-celtie in San Francisco Bay, obtaining salt at Redwood City.

The above results are from summer fishing alone, and on this coast, thanks to the wisdom of of Mr. Seward, there is no heavy bill to pay for bait and privileges.

But while the mass of our people adhere to the prevalent belief than in Alaska we have obtained a sterile, barren, worthless, ice bound land, too poor to even be entitled to a government or the profection of law, the Hoonaks will remain in unmolested possession of their banks, and draw from them their yearly tithe, and at home their women and children will continue to gather undisturbed all that they wish of splendid herring, which are in myriads, and to collect the spawn on bushes planted at low tide, encrusted an inch deep after a few overflowings with a most esculent food.

When the fishing season has ended, by the Indians having taken all that they wish, it is followed by the first season of sea-otter hunting.

sea-otter hunting.

I will not do this noble animal the injustice of more than

I will not us this none arminat the principle of more man introduction at this end of my letter. In my next I will tell you about him, his habits and the mode of capture, as told to me by "Hoonah Dick," Pisgoo.

#### THE OLD "SPIRIT" COTERIE

THE OLD "SPIRIT" COTERIE.

In the excellent articles of Col. Thos. Picton, Gen. Sibley ("Hal, a Dacotah,") and Isaac McLellan, referring to the old Spirite of the Times, is tall editor and gifted corps of contributors, a few notable ones, still surviving, who wrote of the columns of that rare old journal, received no mention. Among the most conspicuous is "Ned Buntline," the hero of three wars, and still one of the popular writers of the day, whose contributions adorned the old Spirit in its palmiest days, and later of the Forest and Stream. As an angler "Ned Buntline" is an flat, and his adventures with gun and rod in all parts of the Union would fill a large volume. His picturesque home, the "Eagle's Ness," near Stanford, N.Y., is a spot of romantic interest. The name, it is stated, is the same as that of a little hermitage wherein he once dwelt in the Adirondack wilderness, where he was one of the earliest campaigners, and whose lakes and streams, many of them, bear the natures he gave.

Another notable, then known under the nom de plume of "Young America," is Col. Alban S. Payne, the identical man who "struck Billy Patterson." Col. Payne, or "Nicholas Spicer," as he is now more familiarly known, is an eniment physician, or e of the professors at the Southern Medical College and a capital writer, whose contributions to various sporting journals have rendered his name famous. Hon. R. B. Roosevelt, author of "Superior Fishing." "Gause Birds of the North," and other works of rare interest, was also one of the "free lances" who wrote for the old Spirit in his youth, and in later years has written voluminously for the journals advected to sports of field and stream. Mr. Roosevelt is known as an enthusiastic sportsman, who has assisted in the organization of several societies for the protestors.

Francis A. Durivage ("The Old 'Un") and Geo. P. Burnham ("The Young 'Un"), joint authors of that humorous work "Stray Subjects," and both popular contributors to the old Spirit, are still living—the former in New York, the latter at Melrose, Mass.

Among those who have recently passed to the "shadow land," and who formerly belonged to the brotherhood alluded to, memory recalls several distinguished gentlemen, notably James Oakes, ("Acorn"), the warm friend of Frank Forester, Edwin Forrest and Hawthorne; Thos. B. Thorpe, the famous author and artist; Genio C. Scott, author of "Fishing in American Waters," E. E. Jones, one of the proprietors of the Spirit during the later years of its existence; and C. A. Bristed ("Carl Benson"), the classical writer.

Of the earlier writers, whose names are familiar as household words among the sportsmen of the land, suffice it to say that they were the peers of the leading sporting authors of

that they were the peers of the leading sporting authors of England and that, as Herbert once truly stated, Nimrod, Telrey, Berlsford and other popular writers upon field sports in Britain, would lose none of their laurels to be compared to their trans-Atlantic brothers of the quill. W. W.

## Matural Distorn

PROTECTION OF SONG AND INSECTIVOROUS BIRDS.

THAVE read Mr. N. Pike's letter to farmers in Forest and fully agree with him that some of our smaller birds should be carefully protected and cherished; yes, I will say all birds, until they are proven conclusively by scientific research to be noxious. Birds, especially such as are sungers or beautiful, even if they are strictly neutral so far as we are concerned, neither doing us harm nor good, should be protected by stringent laws and by the sense of decency and common consent of all. But birds that are proven very noxious to one or more classes of our rural people should have no protection, any more than rats or mice.

I write this to say that I find Mr. Pike advocating the same error that the great majority of people do who have not in-

any more than the same in write this to say that I find Mr. Pike advocating the same error that the great majority of people do who have not investigated the subject, to wit, that because a bird is strictly insectivorous in its food habits, therefore it is most certainly beneficial and should have protection. Now, there cannot, in my opinion, be a greater mistake than its. It is true the vestigated the subject, to wit, that because a sure is strictly insectivorous in its food habits, therefore it is most certainly beneficial and should have protection. Now, there cannot, in my opinion, be a greater mistake than its. It is true the martins, swallows, swifts, whip-poor-wills and night-hawks martins, swallows, swifts, whip-poor-wills and night-hawks feed entirely on insects, but the question very naturally occurs to the scientific man, What species of insects? For the entomologist knows full well, to a certainty, that the great enemy of noxious insects, their great destroyers, are other insects—parasitic and cannibal insects; and he also knows it to be an absolute fact that birds do not eat, and therefore destroy, the insects generally known as the most noxious. For instance, what birds are known to destroy the five, prominent potato beetles, or the chinch bug, the canter worm, the tent caterpillar, the squash bug, the cucumber beetles, the croton bug, the cotton worms, the codling moth, the plum curculio, etc., etc., etc., to any appreciable extent? And it is also a fact that many of these above named most destructives.

tent caterina, the square one of the cooling moth, the plum curculio, etc., etc., etc., to any appreciable extent? And it is also a fact that many of these above named most destructive insects have very few effective insect enemies. But there are hundreds of other equally or more destructive insects that are only kept in check by their insect enemies, and not by birds. Now, it Mr. Pike's society will only teach the birds to destroy our insect enemies, and not our insect frends in the shape of cannibal beetles, ichneumon wasps, chalets, and other parasitic flies, ladybugs, etc., te., we will all go to breeding and protecting the birds. But we know that this cannot be done; therefore, until it is definitely settled by scientific research into the food of insectivorous birds, and in this way decided conclusively whether a certain species of bird does or does not destroy more of our friends among thed by scientific research into the food of insectivorous birds, and in this way decided conclusively whether a certain species of bird does or does not destroy more of our friends among the insects than it does of our enemies, we cannot safely recommend the conservation or the destruction of any of our birds. And I will here boldly say that it is my belief that the strictly insectivorous birds named above, which feed on the wing, entirely on insects, are the most noxious birds we have. Their food will be found to be made up in great part of our best friends without which we could not probably exist, to wit, gnats, flies and ichneumons, which in their love flights fill the upper air in myriads. And I am happy to state that the subject of the food of birds is being carefully and scientifically investigated by Prof. S. A. Forbes, of the Illinois State Normal University, at Normal, Ill., under the auspices of the Illinois State Horticultural Society. He is a most competent person, and has taken hold of this heroulean task with all the ardor of a true young scientist. And I would recommend Mr. Nicolas Pike's most commendable society to procure his reports so far as published, and rend them.

Lacon, Ill.

A review and abstract of Prof. Forbes' important paper on "The Food of our Thrushes" will be found in FOREST AND STREAM, Vol. xv., p. 244.

#### IN THE PHILADELPIA ZOO.

THE Zoological Society of our city has a very rare and extremely interesting animal in their collection, a lemur, which has been caged in the monkey house for three years. I am told that there is no other in this country. Mr. A. E. Brown, the superintendent of the garden, states that the group of lemurs is remarkable for its combination of forms, and it is very difficult to place satisfactorily as it has alliances in three directions with Primates (monkeys), with \*Hodentia\* (gnawing animals), and with \*Insectiona\* (moles, shrews, etc.). By most of the recent systematists they are considered as a subdivision of the highest order of mammalia as follows:
Order, Primates, Sub-order—Anthropidae, man; \*Siminadae, apes; Lewurdae, lemur-

subdivision of the highest order of mammalia as follows:
Opter, Primates, Sub-order—Inthropidae, man; Simiadae,
apes; Lemurdae, lemurs.
This little animal is about the size of a large squirrel, and
remains quietly sleeping most of the day, becoming very active toward evening and during the night. Much resembling
the monkey in form of body there is still a marked similarity to our flying squirrel in shape of head and texture of coat.
It is carnivorous and possesses canine teeth, and is very difficult to keep in confinement. Anxious to know how the animal was fed I asked Rolling, the keeper, the question, and
learned that it was given a variety of food, sweet potatocs,
bananas, and now and then an insect.
Inticed in the nonkey house in a separate cage a beauti-

Indicated in the monkey house in a separate cage a bear ful specimen of the moon-eyed monkey, one of a genu-nocturnal monkeys found in the Brazilian forests. It sembles the lemurs, and is similar in habits as is usual w se in a separate care a heautinight feeding animals, and both the specimens I mention

ave large eyes. Philadelphians who take an interest in zoological matters Philadelphians who take an interest in zoological matters are pleased with the prospect of the successful rearing of the young orang-outang at the zoo. This will be the second winter it has passed in this country, and it appears to be in the best of health, great care being taken to keep the apartment where it is confined at the proper temperature. Last summer it had at times the full range of the garden, and around the visitors but the ravid memory in which it made summer it had at times the full range of the garden, and amazed the visitors by the rapid manner in which it made its way from limb to limb of the forest trees in the inclosure, swinging itself from branch to branch so quickly that it required some effort to keep up with it. The orang-outang is now about four years old.

The two chimpones are the proper temperature. Last

quired some effort to keep up with it. The orang-outang is now about four years oil.

The two chimpanzees purchased by the Philadelphia Zoological Society are dead, having succumbed to the change of climate they underwent in being brought to this country. They had furnished great amusement for nincten mouths, which is, I believe, the longest time a chimpanzee has been kept in the United States.

During the present month the specimen of female gorilla—adult size—which was sent to Dr. Morton, of Philadelphia, in a barrel of rum from Africa will be dissected in the presence of a number of scientists. It is the invention of the missionary who shipped this specimen to Dr. Morton to forward on his arrival at his station in Africa, which is in the heart of the gorilla country, a full grown made in good condition. Decomposition having taken place before the female referred to was put in spirits, caused the falling out of almost the entire coat of hair, a small patch on the breast being all that remains. that remains.

A few days since a hawk was observed sailing in circles

A lew days since a hawk was observed saling in circles over the centre of our city, and finally to swoop down and desterously pick a pigeon from a flock that were resting on a housetop. This is an illustration of what a hungry bird will do when forced by stress of weather and dearth of ordinary provender. Snow falls still continue, and last night rain, which has caused a crust to form on top of the snow, rendering it more difficult for the quall to glean a scanty livelihood.

#### THE MOUNTAIN OUAIL.

Ветиленем. Ра.

Betulenem, Pa.

You're correspondent, S. H. C., of St. Joe, Mich., wants to know "all about the California quail—both kinds." To use his own expression I "have been there." They would do well "to divide the burden of 'carrying off shot' with their cousin Bob White." Both kinds afford good sport; both are good eating. For my own part I never was able to discover much difference between the flavor of Bob White and the quail of California. I am aware, though, that some, whose judgment is perhaps better than my own, say that the flavor of the California bird is inferior. But if these birds could be raised here I think that most sportsmen would find great pleasure in hunting them, and would find little fault with them upon the score of flavor.

But the winter, "there's the rub." The mountain quail might, and probably would, survive moderate winters, his habitat being the mountains, at an elevation of about four thousand feet. In such localities there is snow in California, and of course severe cold too at times. But the fact but his home is in the mountains and at such an elevation introduces I think an element of difficulty into his introduction into the Eastern States. Would be be content with the lesser altitude in which he must live if he is to be of any use to the Eastern sportsman? Might he not be disposed to leave the rolling lands of the Eastern and the prairies of the Western States and take up his abode in the highest parts of our mountain ranges? If so he would be of no use to us, and in addition would probably be killed by the rigors of the winter. States and take up his above in the ingliest parts of our mountain ranges? If so he would be of no use to us, and in addition would probably be killed by the rigors of the winter. And yet spite of all these difficulties I should certainly advise that the experiment be made. It would cost but little either that the experiment be made. It would cost but little either in money or troub'e for some sportsama's association or game protective society to import and set free a number of them and observe the results. If their Western labitat is any indication as to where the experiment should be made here, there can be no doubt that it should be done in the near vicinity to mountains. By all means let the matter be tried. I should have great hope of its success.

As to the valley, qualit I think nothing could be done with it in any of our Northern States. Its habitat on the Pacific slope is the valleys. It is true I' is sometimes found at an elevation of two thousand feet, but I think this is always in the warm weather. I am not aware that it is ever found out

elevation of two thousand rece, we the warm weather. I am not aware that it is ever found out of the valleys when snow falls on the mountains. I am quite certain that the snow and cold of our long, hard Eastern winters would kill every valley quail brought here. I feel especially sorry for this for I am indebted to them for many an hour's rare sport in their native haunts, and I would find great pleasure in renewing my acquaintance with them in my mattre haunts. They are beautiful, bright, cunning little fellows, who by their tricks and habits would give a deal of enjoyment to sportsmen who enjoy a new experience. Should any one attempt the introduction of the mountain quail I would advise that it would be done in the early summer.

C. B. I am not aware that it is ever found out

WATER Brg. - I am sending you by this day's mail an animal I call a water beetle, for want of the true name. It was handed me by a lad of more than usual intelligence who says handed me by a lad of more than usual intelligence who says he saw it catch young trout two inches long, and carry them into his hole. The boy dug it out, fish and all. The boy tells me he has seen others like it, but of dull brick color. He says also that he has seen (and will bring mo one) a bug much smaller, with four legs and a pair of stout arms, that catches little tish like tim. Will FORER AND SEREAM please tell us the name of the one forwarded? And have they any knowledge of their habits?

Dec mber 23, 1880.

The bug has been received. It belongs to the genius Belostoma, and is very destructive to young fish. It is found everywhere throughout the country in more or less abundance. The specimen sent belongs to a different species from our Eastern Belostoma grandis. See Forest and STREAM, Vol. XII, pp. 125 and 205.

Black and Gray Squerels.—Denver, Colorado, Jun. 9.
—Editor Forest and Stream: There are two or three questions before the Forest and Stream debating club upon which I feel competent to offer a few remarks.

My youthful days were spent in the Buckeye State and upon a farm. Squirrels were a great pest in the corn-planting season and plentiful at all times to afford the best field sport we had. Seemingly every hollow tree in the woods sheltered

a family of young squirrels in the proper season, and that family was popularly believed to consist of from three to five gray ones and one black one. I do not know that this was the universal rule, although so recognized, but I do know that such was a very common fact, my knowledge being that such was a very common fact, my knowledge being gained by watching the daily gambols of families of young squirrels whose houses were in sight of my father's door.

Such were frequently caught for pets, several gray and one black being taken from the same nest. Except in color they were apparently the same in size, weight and action. Adult squirrels in the woods were in the proportion of one black to four or five gray.

A Pale Dove.—A correspondent, I. H. J., of Macon, Ga., sends us a specimen for identification. He says: "I send you by mail the skin of a dove killed fifteen miles from our city, area aris for our section. I had made an effort to mount it, but secured it too late to preserve it. There was another big killed at the perserve it. another bird killed near here almost entirely white, except little portion of the wings, which were of the natural do little portion of the wings, which were of the natural color. Will you please inform me as to their identity?

The skin is that of a turtle dove (Zenædura carolinensis) It is, however, very pale in color, being of a delicate ligh brown, paler toward the extremity of tail and wings-in a bleached specimen, which might be called a partial albino.

Winter Birds—Niagara, Jan. 7, 1881.—Day before yesterday I saw the first robin of the season. The poor little fellow is very early or very late. I saw him in the church yard among the pine trees. About a mile from here on a friend's farm there has been a meadow lark for the last two. Theory's first there has been a meanow make for the last beweeks. Just before Christmas a young friend told me saw three cow birds. The coldest weather we have here we eight below zero.

Niagara.

WEIGHT OF BLACK-TAILED (MULE) DEER .- Toward the Weight of Black-Taled (Mulk) Derr Toward the close of a favorable season, in August to October, when deer are at their best and the fat on a buck's rump is from an inch to an inch and a half thick, it is not rare to find them weighing, gross, from 250 to 300 pounds. An occasional one may pull down a few more pounds than the highest figure named, but, I think, never more than 325. They are not so large in New Mexico as further North. (By the way, I do not like the name "mule deer.")

Early (?) Kingfisher—Hornellstille, N. Y., Jan. 10.—I saw yesterday p. m., January 9, a kingfisher (Ceryls alegon). This is the latest or the earliest I have observed them in this County. There is no open water on the river except whe the current is very swift. I should think fishing with t temperature ten and twenty degrees below zero would rather discouraging.

J. Oris Fellows.

## fish Gulture.

THE CENTRAL FISHCULTURAL SOCIETY.

[CONTINUED.]

R SHAW: "This writer who, judging from his argument is a mill owner, states the whole case for the opponentof fishways and gives in full what he thinks to be the grievances to which dam owners are subjected by the fishway law, and being a good argument from his point of view, i deserves a careful and a candid consideration from the

public.

He says first: "I am a citizen of the United States and desirous of showing willing obedience to the laws thereof. I derived my title from the United States Government, clear of any and all encumbrance, without any reservation of erecting or upholding fishways for the benefit of other parties," and claims protection from any law that will hamper, endanger or depreciate the value of his property, without payment in full for all damages sustained.

To his argument I made the following reply:

The writer overlooks the fact that he is but one of several hundred that have obtained titles exactly alike from the General Government to the banks of the Waspiphineon River, and that by making the river impassable for fish he has been depreciating the value of their property, thereby doing individually to all those parties just what he now complains the State should not do to him.

We hold those principles to be well settled by usages and

State should not do to him.

We hold these principles to be well settled by usages and decisions so many that, we find it impossible in a short article to quote but a very few of them:

1. In any grant from the public to individuals, any privilege which is not expressly granted is withheld.

2. A river is a public way.

3. The right to the water and fish in a stream is a joint one to all the owners, and must be so used by each as not to unreasonably interfere with the rights of others.

4. The passage of fish in a river is a public right.

5. The Legislature has the right to make such laws as will protect the public from injury by an improper use of any of these public rights.

To partially prove the correctness of these positions we will submit a few decisions.

"Every owner of a dam holds it on condition or limitation that a sulficient and reasonable passage we shall be al-

"Every owner of a dam holds it on condition or limita-tion that a sufficient and reasonable passage way shall be al-lowed for fish. This limitation, being for the benefit of the public, is not extinguished by any inattention or negleet in compelling the owner to comply with it." (Stoughton v. Baker, 4 h sas, 528.)

In that case there was neglect to build a fishway from 1634

In that case there was neglect to build a fishway from 1002 to 1789; but it was held that the duty continued.

"The preservation of fisheries is for the benefit of the public. The right to have the fish pass up the river is a public right. The right to each the fish is in the owners of the soil; but the right to have the fish there, so that they can be caught, is a public right." (Commonwealth v. Essex Co., 13 Gray, 247.)

Commonweath v. Essec. Co., 1st Gray, 247.)

"The grant of privileges and exemptions to a corporation is strictly construed against the corporation, and in favor of the public. Nothing passes but what is granted in clear and explicit terms." (Ohio Life Ins. Co. v. Debolt, 16 Howard,

"Ownership of the banks and bed of a stream gives to the "Ownership of the banks and bed of a stream gives to the proprietor the exclusive right of fishery opposi e his land, as well as the right to use the water to create power to operate mills; but neither the one nor the other, nor both combined, confer any right to erect obstructions in a stream to prevent the free passage of fish up and down the river at their accustomed seasons, as such obstructions would impair and ulti-mately destroy all such rights owned by other proprietors both above and below the obstruction on such stream. "Such water-power is everywhere regarded as public

water-power is everywhere regarded as public "Such water-power is everywhere regarded as public right, and fisheries, even in waters not mayigable, are so far public rights that the Legislature may ordain and establish regulations to prevent obstructions to the passage of fish, and to promote the usual and uninterrupted enjoyment of the right by riparian owners." (Commissioners v. Holyoke Water-Power Co., Supreme Court of United States, December Term 1879)."

Water-rower Co., supreme Court of United States, December Term, 1872.)

This Holyoke case is the most noted that has ever been determined in this country, and was especially favorable to the dam owners, as a moment's glance at what was claimed by the defendants will show.

It was claimed for them, as has been claimed by our corre-

It was claimed for them, as has been claimed by our correspondent, that they had a good title from the Government, and so were entitled to use their property as they saw fit.

It was claim d that they had used the water-power, as they were using it, for a long period of time, and so had obtained the right to use it by statute of limitation.

It was claimed that they had expended \$2,000,000 in improving their power, and so it was against public policy to compel them to put in a fishway. Also, that they had paid owners of fishing or riparian rights above their dam \$20,000 for those rights and that that fact should relieve them.

But more especially it was claimed that they had a special charter permitting them to build just such a dam as they had

owners of fishing or riparian rights above their dam \$20,000 for those rights and that that fact should relieve them. But more especially it was claimed that they had a special charter permitting them to build just such a dam as they had built from the State Legislature.

We have not time or space to go over this case, but will simply say that all that was claimed for the defense was proved or admitted; that it was argued by eminent counsel, both before the Supreme Court of Massachusetts and the Supreme Court of the United States; that on August 31, 1872, the Supreme Court of Massachusetts entered a decree against the defendants, compelling them to put in a fishway; that upon appeal to the Supreme Court of the United States the decree was adfirmed at the December term, 1872, and that the owners were complete to put in a fishway. We could cite dozens of decisions bearing up in the question and in all our reading know of mo one decision that has not borne in the same direction. So we consider the question wirtually settled, so far as the courts are concerned.

The Judiciary Committee of the House and Senate of the Seventeenth General Assembly of lowa, composed of the best of legal talent, so determined and reported, after a full investigation, when this law was before them for their action. Outside of this question of law, there is one of right or "justice." Originally all the purchasers of property along a stream pay the same price for their lands. Fish were abundant along the streams and are the property of the post of fish; but as they are plenty, no one objects. The mill power brings wealth to the owner, until he boasts of its value. The dam brings barrenness of fish to the stream, until the mill-owner, scorning the little that is left, says: "I would give considerable money if there were not a fish in our viver." Now those who have suffered these losses ask those who have suffered these losses ask those whe have suffered these losses ask those whe have suffered these losses ask those whe have suffered these

pass by the streams intough the waste water that hows over their dam, in order not to entirely annihilate the fish—know-ing full well that what they ask will only partially restore to them their rights, but being willing to suffer this much rather than to injure in the least the water-powers that furnish the motive power for an industry which is fully and justly appre-motive power for an industry which is fully and justly appre-

motive power to: an investion would occupy more ciated.

The fair discussion of this question would occupy more space than we have at our command, but we think that what we have said covers the case fully, where the builders own the land wholly upon which their dams are built. But, it might be added, in meandered streams, like the Wapsipnincon, a portion of the land upon which the dams are built—that is, the bed of the stream—has never been bought or sold and belongs as justly to the poorest person in these United States as to the parties who assume to own the dams that are upon them; and there is no question, as a matter of fact, but that an action for their entire removal could be sustained in the proper courts if sufficient cause were shown for so doing. What we have written is in the kindliest of feeling toward mill-owners, but is what we believe to be the facts and the hav in the case and what is being demanded by the masses of our people at the hands of owners of dams.

The Fish Commissioner claims to have made plans of fishways, as far as he was able, so that they shall not interfere with the water-powers (as they only use the waste water), and that, in his opinion, they will add strength to the dam, while they are as cheap as durability and efficiency will permit.

B. F. Shaw.

#### REPORT OF THE TEXAS COMMISSION

THE first report of the Commissioner on Fisheries for the State of Texas is before us. This State is the youngest of all in the work of fish culture, its Commissioner, Mr. J. H. Dinkins, having been appointed in September, 1879, and being without a cent of either salary or appropriation to work with, he naturally has not been able to accomplish much, and therefore confines himself mainly to recommendations for the future. His case is the same as that of many other commissions; he has to educate the legislators up to the point of seeing that whatever brings in a ton of food to the people from sources hitherta many decivers. the people from sources hitherto unproductive enriches the

the people from sources hitherto unproductive enriches the State to that amount.

One would suppose that the successes of fish culture in other States would reach the ears of the Texas lawmakers, and that they would not require to have a Fish Commission rehearse the alphabet of this branch of political economy any more than they would need to be told of the benefits of agriculture, railroads or telegraphs.

The Commissioner calls their attention to the fact that Texas has a large population, and it is fair to presume that they set and that other States have invested largely in re-

they eat, and that other States have invested largely in restocking their waters, and found it profitable. He eftes extracts from Mr. George H. Jerome, formerly of the Michigan Fish Commission; Mr. S. G. Worth, of North Carolina; from the reports of the West Virginia, Maryland, Wisconsin, Ohio, South Carolina, Massachusetts and Minnesota Fish Commissions; quotes an article on the carp from the American Agriculturiet, and publishes his correspondence with Professor Baird, from whom he received 150 German carp, which were distributed to persons in Texas in lots of ten each. Concerning the growth of these he says: "These flish have done well in our waters and grow rapidly. When they were received they were only three or four inches long. stocking their waters, and found it profitable. He cites they were received they were only three or four inches long, and now they are by actual measurement twenty inches

long, and it is thought that they have already spawned, as the ponds and pools where they were placed are now full of young fry, unknown before the carp were placed in them." He also mentions that "the United States Commission, through Prof. Baird, and without any expense to the State whatever, deposited in Texas streams, up to July 4, 1873, 423,000 young shad and 194,000 young California salmon." A calculation is made of the water surface of the lakes and rivers, which gives a total of 166 square miles, or 106,-561 acres, which it is claimed would swell to 200,000 if the smaller ponds and lakes were added in. The list of Fish Commissioners of the different States is published and credited to Forest and Sterkam, where the list is revised annually. After writing his report the Commissioner received 7,650 more earp from Prof. Baird through Mr. Ellis, which will be distributed, but there are no funds to accomplish more be distributed, but there are no funds to accomplish more this season

#### SENDING YOUNG EGGS PERFECTLY DRY.

This known that fish eggs die quickly in water which is not in circulation, but that they will live several days on of it, and here is the advantage of the so-called dry impregnation. It is also known that freshly impregnated eggs do not bear transportation well, especially on long journeys. It occurred to me that dry impregnated eggs which had never been in water, and in consequence had their development retarded by remaining dry, might be better adapted to long journeys than when placed in water before their youare.

yage. To prove this I had Messrs. Fr. Glaser & Son, of Basil,

To prove this I had Messrs. Fr. Glaser & Son, of Basil, Switzerland, send me some salmon eggs and milt, tied up in the bladder of a hog, without a drop of water.

Twice this was done, and each time they were accompanied by a lot of eggs packed in the usual manner. The journey lasted three days and the temperature was high; but on both occasions the dry packed eggs came through in good condition, looking beautiful and red, while the others, packed in the usual manner, were all dead. I will experiment to find out if eggs with the embryo far advanced are also better if sent in the bladder of an animal than if packed in the usual manner.

Max von dem Borne.

Berneuchen, Germany. Berneuchen, Germann.

THE CONICAL SYSTEM OF HATCHING .- The Fischerei Zeitung, of Stettin, Germany, thus notices our Fishery editor: "Mr. Fred. Mather, who has since the Berlin Exposition drawn much nearer the German fishculturists, is again in New York. He is now in charge of the fishery department of FOREST AND STREAM, the great American journal of field sports and fishculture. We take this opportunity to mention a matter in which Mr. Mather deserves honorable mention. The conical system of hatching is of his invention, but has been called the 'Wilmot hatcher' in Germany. Mr. Wilmot patented it in America, July 18, 1876, and it is No. 180,085, while from a report of Prof. Baird for the year 1876 we learn that Mr. Mather made and used the cones in experiments in 1875. It is not necessary to enter into details of this matter, but if necessary it can be done."

WHERE AND WHEN DO BLUEFISH SPAWN?-Concerning the spawning of the "bluefish," or "tailor" (Pomatomus sal tatrix), there seems to be some confusion of dates, and in this connection we are allowed to publish the following:

this connection we are allowed to publish the following:

UNITED STATES COMMISSION, FIGH AND FIGHERIES, Workbygton, D. C., Dec. 29.— DEAR MR. BLAGKFORD: Mr. Earli,
in his interviews with the fishermen along the Jersey coust,
was informed that when bluefish first come in numy of them
are full of ripe spawn, and that this spawn constitutes an article of sale in the loarket. Is this in accordance with your
own experience, and do your men ever remember to have
found ripe ovaries when cleaning bluefish at any season of
the year, especially in spring? If your recollections are not
clear on this subject, will you not make a note in some of
your books, or paste a memorandum in your office to look
into the matter when the time comes? It will be a very interesting problem. Yours truly, SYENGER F. BAIRD,
TO E. G. Blackford, Esq., 80 Fulton Market, New York.

Mr. Blackford informs us that the snawn is not sold in

Mr. Blackford informs us that the spawn is not sold in market, but that young bluefish are often found among whitebait, in May and June. We have found the young, of an inch or two inches, from May to August, and large ovaries (unripe) in July. Correspondence on this subject is in

order.

A PRIZE FOR FISHCULTURISTS.—We find the following in a late number of the Fischeric Zeitung of Stettin, Germany, which we translate as follows: Berlin, December 5.—The committee of the German Fish Society has determined to offer a premium of 500 marks (1 M. = 23 2.3 cents) for the best work or the following subject: Of those fish eggs which are used in latching, especially the eggs of the salmon, the fungus well known to the fishculturists as "Byssus," or formations of mo d, which partly belong to the Saprolegniacea, partly to the Schizonyceto, destroy a significant percentage. An exact botanical description of the species and kinds of these fungi, their biology and propagations, the manner of their introduction into the fish-breeding apparatus, the conditions which favor or impede their development, as also a description of how they injure the eggs, is desired. To this should be added a discussion on the question whether and by what means it might be possible to prevent their appearance among the eggs, and if one introduced into the breed, what is best to he done to prevent the further spir ading of the evil. The competition for the premium is to be international; the said work to be sent sended and provided with motto, or brading, to the Bureau of the German Fish Society, Leipzig Plac e, No. 9, until October 1, 1882.

Lime FOR PONDS—Bernenchen, Germany.—For severa

LIME FOR PONDS—Berneuchen, Germany.—For severa years I have used a large spring reservoir of about 3.16 ha (hectare) to raise a brood of trout in one summer. The pond contained many little stickle-backs, and in consequence thereof the losses on trout were very noticeable in the course of the summer, reaching as high se eighty per cent, and therefore, in the fail of 1870, I put in all the spring channels which supply the pond, after having let the water flow off, so much thinly slackened lime that all the sickle-backs were killed. The success was surprising. In the spring of the

present year I placed 1,500 California salmon in the pond and at the fishing in the fall I caught 1,402 lively salmon; more than twenty (I am sorry that I did not count them) had perished while fishing. The loss in the course of the summer, therefore, was very insignificant. In the fall, after fishing, I poured into the channels of all my ponds lime-milk (that is, lime thinned with so much water that it resembles milk) to kill stickle-backs, beetles and other unwelcome guests. The lime is of no further effect when the pond is retilled, and it can at once be occupied by fish. M. von dem Boens.

Connecticut Does Not Contribute.—The Springfield (Mass.) Republican says: "The intelligent Fish Committee of the last Connecticut Legislature advised against joining with the Commissioners of the United States, Massachusetts and Maine in stocking the rivers of the State with salmon. United States Commissioner Professor Baird, however, unwilling to see the work interrupted, has given the Connecticut Commissioners 240,000 ova of Penobseot salmon. They will be distributed from the Pequonock hatching house. The Legislature should be shamed into continuing the work next year."

Black Bass for Illinois.—The Fish Commissioners of Illinois have thirty thousand young black bass (sp.?) from four to eight inches in length, for free distribution within the State, now in ponds near Quincy, in charge of Commissioner S. P. Bartlett.

## Sea and River Hishing.

THE MORTALITY OF THE GULF FISHES.

OTWITHSTANDING the many notices of the whole sale deaths among the fishes of the Gulf of Mexico and the manner in which their carcasses have polluted the air, until fears have been entertained of diseases being engendered among the inhabitants near the shore, people at a distance do not seem to realize the extent of the loss to the fishermen whose occupation is gone, nor the misery which may result from the continuation of this plague.

We have received a letter from Professor Baird on this subject, in which he incloses a letter from one of his correspondents, which we publish below:

lents, which we publish delow:
United States Commission, Fish and Fisheries,
Washington, D. C., Jan. 7.

Editor Forest and Stream:

Editor Forest and Stream:

In the year 1878 the pages of Forest and Stream, as also the proceedings of the National Museum, contained notices of a remarkable mortality among the fishes and marine animals of the Gulf of Mexico, the quantity of fish perishing being something truly enormous

1 to suite authors. on the subject.

on the subject.

It is considered a matter of so much importance that the
National Board of Health has detailed Doctor Ginteras to
visit the region an 1 make a thorough investigation in regard

Among the various communications that have reached the Among the various communications that have reached the Smithsonian Institution I inclose one of the most detailed, from an extremely intelligent observer, a resident on the west coast of Florida. At present the cause of the evil is unknown, but a careful comparison of the data, supplemented by the special investigations of the Board of Health, may enable us to solve the problem. The occasion is a very serious one to the fishermen, and indeed to the people of the Gulf coast generally, as a vast amount of animal life, cast in a putrifying condition on the shores, must be a source of injury to the multic health. alth

public health.

It is desirable that any observations of facts connected with this phenomenon should be published.

Spencer F. Baied, Commissioner.

Indian Rook, Fla., Dec. 21.

Indian Rook, Fla., Dec. 21.

Professor Baird:

Knowing your interest in everything connected with fish, etc., I take the liberty of giving you all the facts I have been able to collect in reference to the late mortality among the fishes in Tampa Bay and adjoining coasts. Had I known before I began my cruise of the extent of this mortality and splendid opportunities afforded of collecting specimes of strange and perhaps unknown species, I might have gone better prepared for collecting specimens, but I had only heard a few vague rumors, and I was little prepared for anything further than a collection of facts in regard to the matter.

On leaving Clear Water, November 20, I sailed south through Boea Clega Bay, and encountered the first dead fish floating on the water near B rI Key, a little southeast of Pass a Trillo. These were mullet, and as we progressed to the south and east I began to encounter toadfish, cels, putflish and cowlish in immense numbers, and on attempting to land on the extreme point of Pt. Pinellos for the night I was driven to my boat by the stench of thousands of rotting fish upon the beach. The next morning I went ashore and found the dead fish drifted ashore in countless numbers. The cels appeared most numerous followed by puffish, cowfish, sailor's choice, and small fish of every shape and variety. After these followed groupers, and sharks. Other varieties appeared most numerous followed by puffish, ownshe, sailor's choice, and small fish of every shape and variety. After these followed groupers, and sharks. Other varieties appeared hist, stingrays, and sharks. Other varieties appeared is at, stingrays, and sharks. Other varieties anknown to me were mixed atom, the same varieties appeared, while at Tampa I saw but few dead fish, and they were principally gars and catish. From Tampa I proceeded the death of the fishes. I subsequently visited the towns of Manatee, Palmetto, Bradentown, and proceeded thene to Minatee, Palmetto, Bradentown, and proceeded thene to Minatee, Palmetto, Bradentown,

I saw many fish in every stage of sickness from the first attack to the end. All were affected in nearly the same manner. The fish, apparently active and healthy, would be swimming along when suddenly it would turn on its side and shoot to the top of the water, gasping as though out of the water, apparently unable to control its notions, often lying on its side on the bottom for five or ten minutes notionless, then suddenly shooting hither and thither without aim or object, and finally ending the struggle on the surface and floating off dead. Whole schools of mullet would suddenly stand upright on their tails spouling water, and die in five minutes. Gars would run for a long time with their snouts above the water and then lie motionless, as if dead, for ten or fifteen minutes. These generally lived an hour or more after being attacked. I obtained specimens of water from various localities, which I send herewith, marked to show whence obtained.

whence obtained.

Before giving the statement of others in regard to the matter, I will give you briefly the results of my own observation in a very brief manner:

1. The dead fish were most numerous on the outside beaches, and on the inside beaches of the outer line of keys.

That dead fish were least numerous about the mouth of creeks and rivers, decreasing gradually as one approached

of creeks and rivers, decreasing gradually as one approximates such places.

3. That the poisoned water was not diffused generally, but ran in streams of various-sizes, as proven by fish dying in vast numbers instantly upon reaching such localities.

4. That the fish were killed by a specific poison, as proven by the sickness and death of birds which ate of the dead

issh.

5. The fish began dying on the outside beaches first, as Mr.
Strand, assistant light-keeper, at Egmont, reports 'hem
coming up first on the 17th of October, while Mrs. Hoy observed them first on the first or second of November at little

Manatee River.

6. The examination of many hundred recently dead fish revealed no signs of disease. The colors were bright, the flesh firm and the gills rosy. The stomach and intestines appeared

venled no signs of disease. The colors were bright, the flesh firm and the gills rosy. The stomach and intestines appeared healthy.

In my haste I have neglected to state that I saw a good many dead birds during the trip. At Tampa ducks were dying. I saw dead vultures at Anna Maria Key, and at Passage Key large flocks of cormorants were sick and dying. I also saw the carcasses of terns, gulls and frigate birds. The cormorants sat on the beach with their heads under their wings and could be approached and handled.

It might be also proper to state that on Monday morning, December 14, about one hour before day, I heard a roaring southwest of Passage Key, apparently far out at sea, resembling the "blowing off" of a steam boiler. The noise continued some ten minutes and ceased. After daylight I heard a similar rearing, which lasted about five minutes. There was no steamer in sight in the direction of the sound, and I observed no swell in the sea following it. After I got under sail I heard the noise a third time. Wheth r this was followed by the death of fish I am unable to say, as I did not stay to see. I mention this incidentally as a corroberation of Mrs. Hoy's statement, which is hereto appended. Whe ther, however, either of these disturbances of the water had any connection with the mortality among the fishes the theory of sub-aqueous cruptions of poisonous gases is extremely plausible and reasonable.

S. T. Walker.

Statement of Mr. Williams, of Pt. Pinellos:

The fish began dying about the last of October here. All kinds die except red tish. Eels and sea-toads are most numerous, though all kinds die. I have seen only a few sheeps, heads. I think it is caused by a black scun on the water resembling soot. When a school of mullet get into water covered by this black scun they die at once. Oysters are affected by this also, and those who eat of them are made very sick.

Statement of Mr. Spencer, of the Tumpa Tribune:

I went out last Sunday (November 28) expressly to see for myself, and, if poss ble, to account for the dying of the fishes in Tampa Bay. I feel certain from what I saw that it is caused by fresh water from the creeks, rivers and marshes. The water where the fish are dying looks black and slimy-very different from the usual color of the bay water. You see there has been an nunsual amount of rain this fall, and this becoming impregnated with the poison of decaying vegetation, is poured into the bay in unusual quantities and poisons the fish. This is my opinion, and I give it for what it is worth. The oyster saloons here were obliged to close, as the oysters came near killing several people.

Is worth. The oyster shoons here were obliged to close, as the oysters came near killing several people.

Statement of Mrs. Charles Hoy, of Little Manatee:

The fish began dying here about the first of November. About 8 o'clock on the evening of October 28, or thereabout. I was sitting on my front gallery, the air being perfectly still and the bay calm, when I heard a heavy splashing of the water in the direction of Gadsten Pt. This continued for a few minutes and was immediately followed by a roaring sound, such as might be made by the wheels of a side-wheel steamer near at hand, though the noise seemed to be several miles away. This continued for about a quarter of an hour, as near as I could guess, when it suddenly ceased Some twenty-five or thirty minutes afterward heavy swells began to come up the river, such as come in during a heavy blow from the northwest. These continued for a bong time, gradually becoming lighter until I went to bed. In three days the fish began to come up the river dead and dying I caught several mullet that were standing upright in the water sick, and each had three black spots on the back, which gradually faded away. I opened the fish and could see nothing the matter with them. The desh was natural and firm and the gills were normal.

In regard to oysters I have had a rather rough experience, and can with certainty say that they are poisonous. A few days after the fish began dying I had a quart of fine oysters for dinner. I had a lady visitor on that day, but she did not like oysters and ate none. My daughter and I at heartily of them and after dinner I took my gun and went out to a pound to shoot some ducks. I took a colored woman (ny cook) along, and before I had gotten half way I began to feel weak and a mist came before my eyes. I kept on, however, to the pond, and when I reached it was so blind I could not see the ducks, although the water was covered with them. With the assistance of the colored woman I got home, when I found my daughter similarly affected and unable to walk.

Statement of Messrs. Fogarty and Whittaker, smackmen, of Bradentown

Brudentown:
We own a smack and fish off the coast from Egmont south to Charlotte Harbor. Our business is about ruined by the death of the fish. They are dying off the coast as bad as inshore. Our fish die after we put them in the well, frequently in five minutes. We cannot say what causes it, as we have no meaus of ascertaining. The poisoned water runs in streaks, for often when three or four smacks are in company one or two will lose all their fish in a few minutes, while the others, a short distance off, lose none. In one instance, three heing in company, two lost all their fish, while one lost none, the vessels being only a few hundred yards apart.

Statement of R. B. Strand, assistant-keeper of Egmont

Light:
The fish first came up dead on the 17th of October, in the following order: eels, cowfish, teadfish, small fish, such as sailor's choice, minnows, etc., terrapins, ducks and other sen birds. The water has the appearance of being very slimy.

Incident related by Mr. Hendricks, postmaster at Palmetto : Mr. Dolly threw a cast-net into a school of mullet, which appeared active and healthy. Before he landed them they were all dead in his net, and looking back the whole school was floating dead on the surface.

Orders knows how to fashion a rod and tie a fly. He is cile and deft. The fish favor his flies and anglers praise his facile and deft. rods, and between the two the creel is well filled

## Game Bag and Gun.

"THE REFRIGERATOR AMENDMENT."

WHAT IT MEANS AND HOW IT IS REGARDED.

Rew Yoek, January 14.

Faltor Forest and Stream:

New Yoek, January 14.

The marketmen of the city are making another attempt to emasculate the game laws, an attempt which they have made on every possible occasion for years past. The plea for this is ingenious, and to persons, even sportsmen, who are not aware of their "tricks and their manners," is deceifful and alburing. They tell us amiably that great improvements have been brought about in refrigerators, so that they can keep birds and fish and ment an entire year without injury; and ask, with a simple and honest expression, why should they not be allowed to sell at all times what they can keep so nicely? Of course they add virtuously that they would never, no never, sell or buy, or hold or touch any game killed out of season—not they. At least some of our game dealers say this, especially those who have been sued, year after year, by the Association for the Protection of Game for selling game at prohibited times.

There are as good men in our narkets as out of them, who do not commit frauds themselves and do not wish others to do so, but who must have game on their stands if their neighbors do; and these men wish their business protected on the same ground that we wish our sport protected—that both may last longer than our day and generation. It is fair to say such men would oley a law though it gave them large ficense, but usually it is not safe to make a person judge of the law in his own case; and to trust a man to sell game during the close season, leaving it to his honor to make sure that only game killed at proper times be so sold, is surely string the largest license, but on the same sure that only game killed at proper times be so sold, is surely string the largest licens, our of the law, and then there were few convictions for selling game out of season. One invoice will cover any number of birds or fish or deer; there is no earmark by which one quail can be distinguished from another, nor can it be proved whether one woodcock came from Maine or F

brought from the wilds of Maine; but such shades of difference would not be recognized in court and could not be explained to a jury.

If game is to be sold all the year through, it may as well be killed all the year through and the game laws abolished. The pot hunters have a big enough pull on the sportsmen mow in the difficulty and rarity of their conviction; do not nake the law wholly in their favor; do not let all the digs loose and tie all the bricks fast. If any such amendments as those proposed are passed there will be no more convictions for infractions of the laws, and we may as well all go in and have a good time while it lasts.

As to the pretense that there is more game killed in the open season than can be sold, it is no more than a pretense. Of course the game killed toward the end of the open time cannot be sent to distant markets, but that result is a necessary result of any law and would equally exist under the refrigerator provisions if those provisions were to be honestly obeyed, that is if no game whatever was to be purchased after the commencement of the close time, and only that sold which was actually refrigerated before. Apart from this, there is market for all game that is legitimately killed and more than for all that should be. People forget that game cannot be cultivated like tame animals, that we cannot replace pinnated grouse when once exterminated, as our Long Island and Nantucket Plains testify; that we cannot raise quall as we raise chickens, nor ruffed grouse like ducks, nor deer like sheep, but that the supply is limited by nature, and if exceeded by man's destruction will coul in certain annihilation. If the marketmen's statement were true, we ought simply to reduce the time for killing, as game is disappearing if exceeded by man's destruction will end in certain annihilation. If the marketmen's statement were true, we ought simply to reduce the time for killing, as game is disappearing rapidly enough already. The proper law would be to forbid the sale of any game after the first day of the close time. This is the rule abroad. Why should it not be so here! The only exception to this might be made in the case of venison, which only exists in our State in a few localities and could there be protected by local laws, with the consent and cooperation of the residents, and which, when it comes from the far West, the principal source of market supply, only reaches New York city in primest condition in the latter part of December of fore part of January. I write this hastily, that I may reach you in time and under the hope that you will take prompt notice of this insidious attempt to dearror

the protective work so long carried on by our best and most self-denying sportsmen. ROBERT B. ROSEVELT.

New York, Jan. 12.

Originally the means of taking game permitted only a moderate amount to be captured, sufficient for the use of the captors for a few days only. Since then fixed ammunition and percussion caps and breech-loaders have been invented, increasing the capacity of destruction a hundred fold. Furthermore, the whole of the United States has become wholly or partially cultivated, and game has no longer its fastnesses. Then American ingenuity invented nets by which all the quali in a county can be trapped within a month, and all the fish in a river can be captured during a season.

The wealth of a prairie is the grouse; the value of a stream is its fish; the charm of field and water is the regular enjoyment year by year and generation by generation of the sports of the moorland and river. It is that which gives manhood to the growing boy and youth to old age, and makes the autumn of the year vocal with the cry of familiar birds.

To preserve this continuity of pleasure to our children we have enacted laws limiting the killing of most kinds of game

the attumn of the year vocal with the cry of familiar birds. To preserve this continuity of plessure to our children we have enacted laws limiting the killing of most kinds of game to four months in the latter part of the year.

Now comes the plea of the trapper and the trader, asking that they may capture all the game they can from your fields and your streams by any known invention and sell them during all the year, providing only they freeze them. Putting aside all the loss of the curd that is frozen out of the fish and all the juice that is dried up in the birds, the question of right to be decided is whether men who do no not own either the land or water, and who in most instances are varguits.

right to be decided is whether men who do no not own either the land or water, and who in most instances are vagnusts from a disrance shall be authorized to capture all this game and ship it to distant cities and there sell it all the year round for what price soever it may bring, and failing to sell it there to ship it to other States or foreign countries. We may admit that trapper and trader would each make large gains which the law prevents, but we know that some one's fields and some one's streams are left unpepted and diminished in beauty and pecuniary value in order that the trappers and traders can make this gain. If we desire that races of conspicuous birds and fish and deer shall remain as part of the soil, as much a part of it as the snucal flowers and the the soil, as much a part of it as the sanual flowers and the music of the waters, we must see to it that their use shall be the thoughtful, moderate use of the intelligent man, and not the use of the trader that has annihilated the beaver and the buffalo.

#### WISCONSIN SPORTSMEN'S ASSOCIATION

THE second annual meeting of the Wisconsin Sportsmen's Association was held at Milwaukee, January 10. The following members were present: R. M. Boyd, W. G. Barker, C. W. Smith, A. Pugh, Geo. Rickeman and A. H. Amos, Gun Club of Racine; A. K. Delaney, Mayville; Sam. Ffifeld, Ashland; T. S. Powers, Tomali; H. W. Weischer, Madison, and S. J. Williams, Fred. Rictbrock, Stewart Murray, J. G. J. Campbell, O. W. Robertson, M. P. Carpenter, O. W. Wight, Prof. G. W. Peckham, G. Preusser, B. Liedersdorf, C. Fernekes, Judge, J. A. Mullory, J. M. Neil, T. S. Gray, C. Simmonds, J. G. Wells and W. E. Mann, of Milwaukee. New members elected were: F. E. Pond, of Westfield; John A. Dutcher, Louis Auer, August Luening and C. A. Hart, of Milwaukee.

S. Gray, C. Summan, Milwankee. New members elected were: F. E. Foun, on Milwankee. New members elected were: F. E. Foun, on Westfield: John A. Dutcher, Louis Auer, August Luening and C. A. Hart, of Milwankee.

President Fred. Riechrock delivered the following address: "The Association is organized for the purpose of securing the enactment of judicious and effective laws for the protection of wild game of fur, fin and feather, and of insectivorous Theory and Company of the production." enactment of judicious and effective laws for the protection of wild game of fur, fin and feather, and of insectivorous birds, and for the enforcement of all such laws. The organization was effected at so late a day in the session of the last Legislature that it was not deemed expedient to put forth any effort to influence the enactment of laws calculated to curry out the objects of the Association But I think it was carry out the objects of the Association — But I think it was generally understood at our first meeting that our committees on laws should at their leisure consider the whole subject of generally inderstood at our rost meeting that our outliness on laws should at their leisure consider the whole subject of game and fish laws, and a practicable mode of securing the enforcement thereof, and at the present session lay before you the results of their work. Two of such committees recently held a joint session, and will to-day make recommencently held a joint session, and will to-day make recommendations on various subjects which I hope will mete with your approval, and that you will take such steps as will prevail on the members of the Legislature to enact them into laws. In the southern portion of the State the quail and prairie chicken, which were once abundant, are becoming very scarce; would it not be well to suspend the killing thereof altogether for two years, so as to allow the depleted sections to become restocked.

for two years, so as to allow the dephreus sections to decoherestocked.

"Snipe, woodcock and duck are migratory birds, but they find their natural breeding ground in our State. Should we not forego the pleasure of spring shooting altogether, so as not to kill or disturb any of those birds when they are pairing and making ready to hatch their broods. I suggest that it would be well to hold at some early day, if possible, a meeting of sportsmen from the whole Northwest, to devise a uniform system of laws for the States of Indiana, Illinois, Wisconsin, Iowa and Minnesota, in so far at least as spring shooting is concerned. In wild game or fish there is no species of property; at least not until it has been reduced to possession; but the taking, disposition and use thereof is properly within the control of the State. Should the Legislature not be prevailed upon to enact against the exportation of every species of game from this State? In the northern half of the State deer are still abundant, but are skin by the hundreds every fail for the hides and saddles alone; the exthe State de hard of the State deer are still abilities, and saddles alone; the port demand only making it profitable to slay them in signeat numbers. Nor should the Indians, in my judgment of the state of the sta great numbers. great numbers. Nor should the Indians, in my judgment, be exempt from the statutes enacted by white men. I am credibly informed that toward the northern border the Indians have fallen into the practice of building fences or traps, miles in length, by which they are enabled to slay them in large numbers, and that they do this largely for their hides alone. It seems to me that the time has come when the Indians should in this State either follow the pursuits of civilized people to secure a livelihood or be kept on their reservations. During the last few years the State has done much by way of propagating fish and bringing to our waters species not indigenous here. Our State is remarkably well watered by Greeks, rivers and lakes, and most of these are abundantly stocked with native fish as gamy and delicious as any that can be planted in them. Many of these waters have, however, been very much depleted by net-fishing and by other unsportsmanlike practices, such as disturbing the spawn, spearing during the spawning season, and the angling thereof far beyond actual capacity to use them and only for the musement the catching thereof may have afforded. Would it not be economy if the State were to expend \$100 for the protection of our native stock of fish against such rayages exempt from the statutes enacted by white

every \$1,000 that is expended in the propagation of species not natural to our own waters? Since the organiza-tion of this Association our Secretary has traveled to various parts of the State and been in correspondence with members of the Association and local clubs, and by his personal en-deavors has awakened much interest in the object of our society. Indeed, from every portion of the State we have deavors has awakened much interest in the society. Indeed, from every portion of the State we have received encouragement in the good work that we have commenced. Let us then hope that the Legislature about to convene will give us an intelligent game code, one that will meet the approval of the mass of the people who interest themselves in the subject, and that the true sportsmen will so compromise their differences of opinions and wishes as to give them their united support."

The committee on game then read the following report: How much soerer we may wish it were otherwise, Wisconsin has not been exempt from the all-pervading destruction of game. In the southern portion of our State it is gone, except, perhaps, two or three species of game birds. From this

cept, perhaps, two or three species of game birds. From this section the deer, that noble monarch of our primeval forests section the deer, that mode monarch of our primeval forests, has long since disappeared from the presence of his deadliest foe, civilized man. Of our game birds, the prairie chicken and the quail are well-nigh extinct. The ruffed grouse, that gamiest of all game birds, once so plentitul in our groves unitsi part of Wisconshi, now rarely startles us with noisy wing and impetuous flight from cover and darts from view no sooner seen than lost from sight. Woodcock, if not d minishing in numbers, are barely holding their own. Snj are unquestionably decreasing in numbers, owing chiefly destruction they encounter each spring during their gration northward gration northward. The prompt, decisive "quack" of the mallard and the wild, weird note of the woodchuck are sounds maliard and the wild, weird note of the woodchuck are sounds which less and less frequently greet the car as the seasons come and go. Thousands of lakes, streams, marshes and bayous in Southern Wisconsin, which a few years ago teemed with them, are now tenantless the livelong year.

All these facts point to one unmistakable result. They

mean extermination

In view of these facts, the apathy, the rather want or in-terest in this matter, which characterizes a large majority of our people, my well be a subject of astonishment. This lack of interest on the part of our people generally has become so universally understood and recognized that every person who In view of these facts, the apathy, the rather want of inour people, may we to be a complete generally has become so universally understood and recognized that every person who has given the subject the slightest consideration has reached the conclusion that the final hope for the preservation of game rests with the fraternity of sportsmen. If they do not take some action toward game protection and preservation and to arrest the march of externination, the future will be a repolition of the past, and gentlemen who in the golden autumn of each year gladly snatch a few days from the active pursuits of life to indulge in the soul-stirring delights of field sport, will find the pursuit of their fave rite recreation leading th m year by year toward the setting sun. It should be, then, not only the duty, but the pride, of every sportsman to assume the responsibility thus presented and meet the case with such remedies as its exigencies seem to require. Two things are imperatively demanded: First, stringent laws for the protection of game; second, their relentless and stringent enforcement. Toward the accomplishment of those re-ulis sportsmen must take the initiative and persevere, and it is confidently believed that with the interest which is rap-

its confidently believed that with the interest which is rap-itly awakening upon this subject, Wisconsin will not be long without an efficient system of game laws which shall be rig-orously enforced.

But too nutch in the way of good results must not be ex-

But too much in the way of good results must not be expected. Even after the realization of these two objects in this State it is a question whether many species of our game birds will not continue to diminish in numbers, even under these favorable conditions unless similar steps are taken for their protection in our neighboring States.

A large proportion of the nigratory birds which are exposed for sale in the spring in the State are taken in other States and shipped here for a market. So long as the taking, killing and transporting is permitted in adjacent States, if our Legislature drives them from the markets of this State they will doubtless find a market elsewhere. The true and complete remedy lies in securing protection for and prohibition of traffic in all our birds of migratory habits in all the States traversed by them during their spring flight. By energetic and considerate action it is confidently believed this can be accomplished. Vour committee would therefore recommend that the association take such action as may seem best calculated to engage the co-operation of the, sportsmen best calculated to engage the co-operation of the spor and sportsmen's associations in our neighboring States sportsmer and spotsmen a sassociations in our neighboring states, we a view to secure laws on the subject of game protection their several States which shall be uniform, harmonious a co-operative and especially directed to the abolition of spring shooting.

In regard to legislation in this State, your committee are

of the opinion that all laws in relation to game should be codi-fied and reduced to a form which should embrace substan-tially the following provisions:

#### PROPOSED LEGISLATION.

Shooting or taking, transporting, selling, offering for sale, having in possession, of all game animals, deer, hare, rabbits, gray, black or fox squirrels, and all game birds and wild fowl, prohibited except during a short open season, pro-vided ten or fifteen days after close of open season allowed

vided ten or interest days after close of open season anower to dispose of game on hand.

2 Prohibition of all taking by set-guns, traps, nets, snarcs, springs, and the use thereof for such purpose at any season of the year.

3. Exportation of all game out of the State prohibited.

4. Limitation of the number of animals or birds lawful to be taken in any one day by one person to be, deer, one; all other game twenty-five

other game twenty-five.

5. Shooting from punt or sneak boats, and the use of any battery, swivel or pivot gun, or any arm other than the common gun discharged from the shoulder prohibited.

6 No qual shooting for a term of three years.

7. Molesting or disturbing nests or eggs of all game birds with all demonstration.

and wild fowl prohibited.

8 Prohibition of shooting any bird, game or insectivorous bird from the trap.

9. Protection of minks, rats and fur-bearing animals, same as now provided by law.

10 Protection to the robin, martin, meadow-lark, and all

insect-devouring birds, their nests, birds and young.

11. Persons violating laws to be subject to prosecution in any country within or through which game is unlawfully taken or held in possession.

12. All sheriffs and denuties, constables, city and village

marshals and police force required to make complaint of any violations, and District Attorneys to attend and conduct

trials.

13. Appointment of game and fish wardens by the Governor are recommendations of this Association and the Wis-

consin Fish Commission, whose duty it shall be to see that

laws are executed, and make complaint of violations.

14. Penalties: Twenty-five dollars per head on deer; ten dollars on all other game animals; and fine from ten dollars to fifty dollars for other violations; one-half, in all cases, to

to fifty dollars for other violences, and go to the informer.

15. Open season: On deer from August 25 to Dec. 15; on all grouse, ducks and snipe from August 25 to December 15; woodcocks from July 10 to December 15; on hares, rabbits and animals from September 1 to February 1.

All of which is respectfully submitted.

A. K. Delaney, Preciser,

GUSTAVE PREUSSER, O. B. THOMAS. Committee.

By a suggestion of Judge Mallory an amendment was adopted making the infringement a misdenceanor. An amendment was also adopted to the paragraph numbered "4," by which "deer" was stricken out altogether. An amendment was also adopted to No. "6," classing prairic chicken with quail, so as not to be shot for three

Number "8" was stricken out.
An amendment to No. "11" made the penalty either five

An amendment to Mo. "It made the penalty cliner incomment.
It was also ordered to insert a clause prohibiting the catching of wild pigeons with nets.
Judge Mallory submitted the report of the committee ou "Enforcement of Game, Fish and Trespass Laws" as fol-

TO THE WISCONSIN SPORTSMEN'S ASSOCIATION: The com-TO THE WISCONSIN SPOTTEMEN'S ASSOCIATION: The Committee on enforcement of game, fish and trespass laws respectfully submit the following report:

In the opinion of your committee the first step to be taken for the enforcement of such laws is to appoint a committee

for the enforcement of such laws is to appoint a committee for the purpose of raising a special fund to be used for pay-

tor the purpose of raising a special tunt to be used for pay-ing expenses of prosecuting violations of such laws. Your committee further recommend that this Association make an effort to secure the passage of a law by which the Governor shall be authorized to appoint game constables or fish wardens in such localities as may be necessary, mak-ing it the duty of such officers to be watchful and diligent in their efforts to detect and bring to punishment all persons who may be committing violations of such laws; and requiring the prosecuting attorney of the county in which any violation of such laws is committed to prosecute cases against such offenders the further opinion of your committee that effort

should be made to secure the organization of local societies in every county in the State when such a society may be needed, for the purpose of assisting in the enforcement of the game and fish laws. Your committee do not make any recommendations as to

trespass laws, but suggest that subject for such consideration the Association may think proper to give it.
All of which is respectfully submitted.

J. A. Mallory, B. Leidersdorf, Committee.

The election of officers resulted as follows:

The election of officers resulted as follows:
President—Fred. Reitbrock, Milwaukce.
Secretary—O. W. Robertson, Milwaukce.
Treasurer—Stewart Murray, Milwaukce.

same, and to prepare them in proper shape for presentation to the Legislature. The next neeting of the Association was appointed for the third Tuesday during the Legislative session at Madison.

#### HIGHHOLDS, SQUIRRELS AND WOODCOCK.

FAST CRESTER, New York, Jan. 10.

EAST CHESTER, New York, Jan. 10.

Editor Forest and Stream: I have been deeply interested reading the various contributions to Forest and Stream on the proposed revision of the game laws, and believe with some of the writers that enforcement of the law is more needed than revision. But that some of the sections are defective my perty effices of constable and game constable for the last couple of years have made palpably plain to me. I have succeeded, however, sufficiently well to cause the violations upon the land to be very rare where they were once frequent, and have entirely stopped the drawing of seines in Hutchinson's River, near Pelham Bridge.

This I effected two years ago last June by arresting four where they were con-drawing of seines in Hutchinson's River, near Pelham Bridge, This I effected two years ago last June by arresting four parties whom I caught in the act. They got off lightly, but have never wet their seines in the river kince. For this I re-ceived favorable mention in Forest and Stream at the time ceived favorable mention in Forest and Stream at the time ceived favorable mention in Foiest AND STREAM at the time and the thanks of the fishing fraternity generally. On different occasions since I have warned and driven off other parties without making an arrast; the laws in regard to salt water being somewhat vague and defective.

I would suggest that the rivers, salt water bays and estuaries emptying into Long Island "Sound be distinctly stated, and if fykes are allowed the square size of the mish to be plainly given, and that pounds be prohibited in Westchester County.

County—
Section twelve should have the swallow mentioned as well as the martin, as some so called sportsmen are up to she of swallows when assembled for glass ball and pigeon shooting. This section, as well as section thirteen, as amendeded in 1880. This section, as were as section that the section as were as the section as were as the section that the summary arrest without warrant, provided for in section thirty-five, is usel as, and as that is about the only way to bring non-resident offender a to justice, the killing of the birds should certainly be made a

misdemeanor.

I see that Col. Pike in his address to the Long Island I see that Col. I'lke in his orderes to the Long Island farmer proposes to abolish the shooting of meadow larks, highholds and "I suppose robins, under the head of song bird." Of course, they are all insectivorous birds, but so are the quali and ruffed grouse, and what these are to the wingshot the robin and highhold are to those who have never acquired the art of stopping the swift flying, game bird on the

wing. And the meadow lark, with his even steady flight, is a good bird for the beginner to practice on and fit him for the killing of nobler game. I do not write this from interested motives, for ever since the time when as a mere lad, nearly twenty-five years ago, with a terrier dog and a twenty-bore single barrel gun, I killed six woodcock one summer afternoon, I have disdamed the tesser game. But I write in behalf of wenty-live years ago, with a territer dog and a twenty-lore single barrel pun. I Rillet six woodcock one summer afternoon. I have disdained the lesser game. But I write in behalf of those who, confined in close, stilling offices in the cities, can occasionally get a day off during the open season. Notice one of these coming in from his day's sport, with what pride he displays his string of highholds and robins and if, by some lucky chance he has manuged to scure two rot three larks, then he is happy indeed. No big pockets for hint to hide his game. On, no! He wants every one to see that he is a gunner and has them strung out to make as much show as possible. You ask him where he shot those highholds and he will tell you, and truthfully too, that two-thirds of them were found itseding upon the dogwood, pepperage or ivy berries and frost grapes, and one-haif the other third upon the dried top of some decayed tree. I do not dispute the fact that the high-hold destroys insects, but it is no more to be compared as an insect destroyer with the small redheaded woodpecker than the imported sparrow should be compared to our native song sparrow. The robin is a great destroyer of grapes and other truit. The meadow lark probably destroys more insects than either of the others, and does little or no mischief, but he is pritty well able to take care of himself, and is so shy that very few of them are killed by the tyros. Alt zgether I think that the loss caused by the killing of these three birds during the months of October, November and December is more than counterbalanced by the billing of these three birds during the months of October, November and December is more than counterbalanced by the billing of these three birds during the months of October, November and December is more than counterbalanced by the billing of these three birds during the months of October, November and December is more than counterbalanced by the pleasure the hunting of them gives to the class of hunters above referred to, and to the small boys more than counterbalanced by the pleasure the hunting of them gives to the class of hunters above referred to, and to the small boys, who in hunting them acquire a love of field sports which is apt to last them through life; and the man who loves to shoot and fish is seldom a bad member of society. That these gunners sometimes kill the farmers' poultry is un-doubtedly true, but I think they are killed fully as often by those who are professedly hunting higher game, and there are layer to punish these marauders whether of high or low

have written at some length upon this subject, believing that the protection of the game will be more generally ac-complished by a liberal law than by a law for any special

ass. In regard to the proposal to issue licences 1 do not believe In regard to the proposal to issue licences 1 do not believe that any body of men sent to Altany by the people of this State will ever seriously consider such a preposterous question. If they have the right to pass such a law for Long Island they have the right to pass it for the whole State. It they have the right to have a license fee of two dollars charged they have the right to increase it to ten, twenty or fifty dollars, or more. It smecks a little too strongly of the English laws, when a man could be transported for killing a pheasant or hare, to ever finit favor in this country.

man could be transported for Rilling a pheasant or hare, to ever find favor in this country.

The proposed open season for squirrels is as much too late as the old one was too early; September 15 is late enough. The most of the squirrels are well grown at that time, though in isolated instances they have young very late, as on one occasion I killed a squirrel with milk in her teats in November.

casion I killed a squirrel with milk in her teats in November. But most of them are bred very early to the summer, some before the snow has left the ground in the spring. Most of thoe who hunt them, at least in this vicinity, still-hunt them in September and October. After that a dog is necessary and good squirrel dogs are very rare.

In regard to the proposed change in the open season for woodcock I should prefer to see it one month earlier than one month later. I have read most, if not all, the articles which have appeared in Forrs and Stream upon the subject and they have failed to convince me that woodcock are not better able to protect themselves in July than many quall are in November. With the exception of a few years about the time of the war, I have shot woodcock in the lower part of Westchester County for twenty-five years and tried to shoot. November. With the exception of a few years about the time of the war, I have shot woolcock in the lower part of Westchester County for twenty-five years and nied to shoot them somewhat longer and in favorable seasons. Taking into consideration the immense increase in the number of gunners and the wholesale destruction of their favorite covers and breeding places, they are as plenty as ever. My idea is that sufficient birds are raised in inaccessible regions where they are never hunted, to keep up the supply; that the place where they stop to breed is entirely dependent upon climatic changes and not upon their fondness for any special locality, as with some other birds; that the birds which, if the spring opens early, would breed in the northern part of the State, will, many of them, remain here if the season is late. I have never but once in the number of years mentioned found birds unable to fly in July, and they were probably the offspring of a bird that had her first nest destroyed, as I do not believe they habitually breed twice the same season.

In regard to the woolcock being an easy prey to the gunner during the summer I would say I have shot in company with many different men and have noticed that those who would kill three out of five birds, shooting at every one that rose in the summer were more rare than those who would kill four out of five in the fall.

One year ago last fall, from October 20 to November 23, shooting fourteen days alone, I killed ninety-three woodcock, and shooting in company with another party four days during the period we killed twenty-four. These birds were all killed within eight miles of the northere boundary of New York city, many of them within three miles and that after the ground had been repeatedly shot everduring the summer, ten being the most killed to any one day. Last fall with very little summer.

had been repeatedly shot ever during the summer, ten being the most killed in any one day. Last fall with very little summer shooting not more than one-half that number fell to my gun, nine, however, being killed on one occasion. The britds were quite plenty fifteen miles above here, Nelson Ferris and a friend named Horon killing sixteen and two or three grouse in one day hear Portchester. The weather changed suddenly very cold, freezing the ground, and most of the birds passed over here without stopping. In concluding I will only say that however much my views may duffer from those of others I shall do all in my power to protect the game and uphold whatever laws may be passed. had been repeatedly shot over during the summer, ten being the

#### A DAY'S DEER HUNTING IN CANADA.

"T"S no use, sir," said McKinlay; "the deer will hear you a mile off this morning. And we might just as well be in the shaaty as wandering about through these cursed briars and woods."

This remark was made to me by a backwoodsman whom I had hired to accompany me for a couple of days' still huntion.

The day was clear and pleasantly cold, without a breath of air stirring, so that every little noise re-echoed itself through the woods, making a man's progress even in moccasins far too noisy to enable him to follow a deer with any chance of getting a shot.

At least so thought McKinlay, but as my time was limited, I determined to go in spite of the unfavorable calmaes of the weather. So telling McKinlay to strike off in an easterly direction, I entered the woods, and after going north for a short distance I turned my steps to the east, so as to travel parallel with my companion at a distance from him of about half a mile. In less than twenty minutes I came suddenly on three fresh tracks, evidently those of good-sized deer, which had been feeding leisurely on a hill side, and to judge from the tracks the animals could not have gone far, and were most probably at that moment within hearing distance of me. For nearly an hour I followed the tracks, proceeding with the hope of seeing my three friends, as I now fel t tain that they must be but a short distance ahead of me.

I saw the tracks running up a hill on the other side of which lay a ravine, and further on a second hill of greater size than the first appeared, and I said sofily to myself they must either be in the ravine or on the hillside beyond. Creeping stealthily up through underbrush and fallen trees

must either be in the ravine or on the hillside beyond.
Creeping stealthily up through underbrush and fallen trees
I reached the top of the nearest hill, and here paused for a
quiet survey of the country beyond. Not a living creature
was to be seen in the rocky gully beneath me, but standing
immediately in front of me, at a distance of perhaps minety
yards, was a fair-sized buck. Further to the right I could
see the head and neck of a doe, but the third deer was not to
be seen, although I knew the missing animal must be somewhere close at hand.

be seen, although I knew the missing animal must be somewhere close at hand.

Both deer appeared to be looking straight at me, and I immediately fired at the buck. After the crack of my rifle I saw his legs waving a farewell to those he left behind him, and the next instant the doe was stooping over him, thus exposing nearly her whole side. Again my Spencer cracked, and I heard the dull "thud" of the bullet as it crashed into the side of the faithful animal. Never moving, she stood over her fallen lord, while once and again she calmly took my fire, and then, with three buils through her body, she knelt and 1-y down and died almost touching the dead buck. Re-loading my rifle, I made two or three steps forward, when the third deer started from a small thicket close to the curcasses of the deer I had killed. Getting glimpses every now and then of the nimble-footed beast, I tried hard to obtain a sufficient view to enable me to shoot, and at last, as

tain a sufficient view to enable me to shoot, and at last, the deer bounded swiftly over a beaver meadow to my left, fired almost a snap shot at a distance of upward of a hundr

nred almost a stap snot at a distance of upward of a manufed and fifty yards.

Simultaneously with the clear, pleasant ring of my rife I saw that the ball had taken effect. A moment more showed me the deer disappear in somecedars, but going at a slackened me the deer disappear in some cedars, but going at a stackened pace and on three legs, a pretty sure evidence that my ball had done mischief. I hastily cut the throats of the two deer and whistled for McKinlay, who was not long in joining me. Leaving him to clean the deer, I took the track of the wounded animal and ran until I saw blood shows warm, where the poor brute had stood under the shelter of a tre -top.

where the poor brute had stood under the shelter of a tre-top. The tracks now showed me that the pace was no longer a run, and clots of blood marked every step.

The woods became more open and I hurried on until I reached a marsh, through which the track ran. This swamp was several hundred yards in length and as smooth as a table, being firmly frozen by continued severe frost. When half was several number yatus in length and as smooth as a table, being firmly frozen by continued severe frost. When half way across I found the track turn suddenly to the right, and as my eyes glanced in the new direction I saw the deer (a fine, fat doe) get up out of the crisp rushes and make a dash straight away from me on the level surface of the frozen marsh. She ran slowly and apparently with great effort, but was very nearly two hundred yards off before I fired, of course burgely, and mixed. course hurrledly, and missed.

course hurriedly, and missed.

Click! click! went the guard, and another cartridge slipped into the breech. Spang! said my good rifle once more, and to my joy I saw the doe pitch on her head and lie

On examining her I found that my first shot had shattered On examining her I found that my first shot had shattered her left hind leg, and in her efforts to get away I fancy the other hind leg must have been sprained, as she hardly ran a mile after the first ball struck her. My last bullet (it was rather a lucky shot) had caught her squarely in the centre of the neck, and I don't know any spot more falst than the neck bone. I have shot plenty of deer in the water and have often remarked that if you place your ball properly in the deer's neck, just below the head, the animal dies almost without a

nder. was now quite satisfied with my morning's work, and af-

I was now quite satisfied with my morning's work, and after cleaning the doc I buried her under the snow, first fastening her fore legs to her nose by means of a piece of hard wood, a simple process which enables you to drag a deer through the woods with very little trouble.

Rejoining McKinlay, we managed, after three hours work, to get two of the deer out of the woods before dark. Bright and early the following morning we brought the other deer, now frozen stiff, to the Frontenac Road, and an hour afterwards I was en route to my home in the city of Kingston, a distance of forty miles from the scene of my still hunt.

Kingston, Dec. 14. RIDEAU.

#### GAME IN NOVA SCOTIA

New Glasgow, N. S., December, 1880.

PERHAPS some of the readers of Forest and Stream
might like to know how their brothers of the rod and
gun fare for sport in this the land of the Maydower.

gun lare for sport in this the land of the Mayflower. First and foremost we have the king of the bog and barren, the lordly moose. Next to him the caribou, the black bear, and of late an occasional wolf. Of game birds we have the goose and brant and an army of ducks, from the beautiful woodduck to the smallest teal, ruffed grouse, woodcok, spin and player.

cock, snipe and plover.

Of late sportsmen and the public generally have been pay. ing more attention to the game law, and although it is not yet all that a sportsman could desire, still a man has not now to travel the woods and barrens for a week before striking a

to travel the woods and barrens for a week before striking a fresh mose track.

In 1873 a law was passed prohibiting the killing of mose for three years, and since that time they have been on the increase. Previous to that a war of extermination was carried on against them, and some idea can be formed of the number killed from the fact that a single firm in Pictou shipped in one season over seven hundred moose bides, the deer mostly killed in the counties of Pictou and Guyshore. The writer knows an Indian who in one year killed one hundred moose, and I have while hunting in the Liscomb region in a single day come upon the carcasses of twelve moose, killed alone for their skins, and the flesh left for the bears or for any one who cared to take the trouble to carry it out of the woods. Happily this state of thing no longer exist. This is partly owing to increased vigilance on the part of the

game wardens, who are stimulated by receiving half the fine game wardens, who are stimulated by receiving nair the nno in case a conviction for a violation of the game law, and partly that the skins have fallen so low in market value that it hardly pays to hunt for them. No single hunter or party of hunters are allowed to kill more than three moose and five caribou in one season.

The practice of hunting with dogs is, I am glad to say, closed done away with and the greatest evil which

party of hunters are allowed to kill more than three moose and five caribou in one season.

The practice of hunting with dogs is, I am glad to say, almost done away with, and the greatest evil which now remains is the abnormal practice of "snaring," which is practiced by many of the settlers in the outlying districts, the modus operandi of which I may give at some future time. We are in hopes that in a little time we will be able to crush out this evil, but I must admit it is a tedious operation. A man who hunts with dogs or hunts out of season generally leaves some trace, but one who sneaks out generally after night, sets his snares and quietly returns, and does not visit them again or go near the woods for some days, and then not until darkness covers his evil deeds, is a more difficult subject to deal with, and it is not until some hunter or lumberman comes by accident upon the "spring pole," and sees the work the poor bruth has made while tang ed, that it is known that a moose las fallen in the toils of some vile snare. And this is generally all the evidence that is forthcoming, and I have no hesitation in saying that more moose fall in this way than to the rifle of the hunters either by "calling" or "still hunting."

The best district for hunting in this part of the province is the Liscomb Lake region, which extends from Sheet Harbor to the West River of Pictou, a distance of over seventy miles, nearly all woods and barrens. I have no doubt that some of the readers of this will remember with pleasure days enjoyably spent hunting or fishing in this locality. In this region is the Bg Barren, which extends nearly from Liscomb Harbor to the West River of Pictou, a distance of over seventy miles, nearly all woods and barrens. I have no doubt that some of the readers of this will remember with pleasure days enjoyably spent hunting or fishing in this locality. In this region is the Bg Barren, which extends nearly from Liscomb Harborus the Bg Barren, which extends nearly from Liscomb Timber of the principal of the

also appear to have followed the caribou as last season they were more plentiful than ever known before.

The Liscomb region is well watered by lakes the principal of which are Big and Little Liscomb, Rocky, Prince Arthur and Siloam, to say nothing of Henius, Porcupine and Chesholm, all of which abound with salmon-trout. If I were to tell of some of the hauls I have made on these lakes it would gladden the hearts of some of the disciples of old Izaak even to hear about them. If Mr. H—, of Boston, should read these lines it will carry him back to the days of "auld lang syne," some of which were spent upon these very lakes.

However, as the sailors say, Iam spinning too long a yarn. It was my intention to have given a few sketches and inci-

However, as the sahors say, tam spinning to long a jumi. It was my intention to have given a few sketches and incidents which have happened during some of the many moose hunts he has engaged in; the best weapons; the different dents which have happened during some of the many moosa hunts he has engaged in; the best weapons; the different modes of hunting and "calling," etc., which perhaps night interest some of the readers of Forest and Stream who may not have had an opportunity to engage in one.

Globe Sight.

#### FLORIDA QUAIL SHOOTING

Fernandina is situated on Amelia River. The principal struct—center—runs from the river to the color and in sistent at a many as twenty to thirty vehicles abreast. Fernandina is situated on Amelia River. The situated on Amelia River. The principal structure of the theory of the situated on the situated on the situated on the situated on the situated on the situated on the situated on the situated on the situated on the situated on the situated ciphteen miles one, somewhat triangular in shape, the ocean on one side and the Amelia and Nassau rivers on the other two. On the ocean we boast of the flower than the world, and do not say it in egotism, but simply state a truth. For fifteen miles on the beach at low tide we have a drive as firm as any parement and in width sufficient to accommodate as many as twenty to thirty vehicles abreast. Fernandina is situated on Amelia River. The principal struct—Center—runs from the river to the ocean, a distance of two miles. The road is shelled to the beach. About a quarter of a mile from the beach an arm of the sea makes into the island and gives us a beautiful marsh for snipe shooting, about the only good sport that we have on the island. On the mainland, however, about five miles from Fernandina, we have fine quall shooting, and it is there that my fun is generally had.

We left Fernandina on Tuesday morning about daylight with Dandy, my Gordon setter. We traveled about five miles, when we stopped. It was hard work to keep Dandy miles, when we stopped. It was hard work to keep Dandy we have stopped. It was hard work to keep Dandy we can be such as the side of the side of the principal states of the weather that my fun integration was the such and work to keep Dandy with the side of the principal states. FERNANDINA, Fla., Jan. 7.

We left Fernandinz on Tuesday morning about daylight with Dandy, my Gordon setter. We traveled about five mith Dandy, my Gordon setter. We traveled about five mith Eandy, my Gordon setter. We traveled about five mites, when we stopped. It was hard work to keep Dandy from bounding away, as he evidently winded birds, but he was too well-bred to go until he had license. We finally were ready, and in about ten minutes my beauty was as "stiff as a poker" in a bunch of weeds, unfortunately very near thick cover. We got in proper distance and I told 8, to be on the qui vise, as I would go in and flush. They got up in nice style, Dandy dropping to command. I got my bird, but S. scored a zero. We relonded and Dandy retrieved in nice style. As the cover was so thick, I would not go in after them, so we took another direction, and my dog bounded away like a shot, his head up and altogether, to a sportsman, presenting a most beautiful sight. When about a hundred yards away he quartered a little to the right, and although at full speed he dropped in an instant, turned his head to the right and I could see he had a bevy just under his nose. What a beautiful stand! we both exclaimed, and what a "love of a place" to get them up. I flushed and in a short while four cartridges were discharged. Four birds fell, and such a covey as it was! There must have been at least thirty birds in it. Dandy retrieved nicely and we went for the scattered birds. Fifteen fell under the ann of our breechloaders, and I scorde a straight ten out of ten shorts. S. making some poor shots and scoring only five to his credit. We went about half a mile further and Dan commenced growing very cautions. We looked ahead of us and there before our eyes we saw the cover running in almost every direction. Dan was in the midst of them and rather flustered, as he could went about hair a mile further and Dan commenced growing very cautious. We looked ahead of us and there before our eyes we saw the covey running in almost every direction. Dan was in the midst of them and rather flustered, as he could see them and did not know exactly how to act; he finally pinned them so closely that they squatted and he was true to his stand. We got three out of this bey and followed them up, bagging flye more before they reached cover. In a small

field, certainly not over an acre square, we got up three separate and distinct coveys, begging one dozen out of the three. We could have gotten a few more, but the cover was so thick that I could not see my dog, so we left for another field, before reaching which, in the open pine woods, Dandy found another large bevy. We had splendid sport for a while, adding to our hag sufficiently to make thirty-six in all. Not caring to kill any more than we needed, we concluded to retrace our steps. Dandy had hunted them four hours without any rest and when I called him in to go home he seemed as fresh as when he started. We reached home in good time and enjoyed our birds, for they were in excellent condition. The birds are more numerous this season than they have been for ten years.

#### NOTES FROM ONTARIO.

BOWMANVILLE, Ont., January 1.

Bowmanulle, Ont., January 1.

HAVE neither very much nor very interesting news to up, and our sport has finished in this part of Canada until the spring duck shooting sets in. About fifteen or twenty of the boys went to the flats to-day, and indulged in all tille rifle practice to help pass the day. Some very fair shooting was done, but the day was rather too cold to make the sport pleasant, and the scores suffered in consequence.

In the Dominion organ and piano factory there are quite a number of sportsnen, and riflemen enough to turn out a very decent team. Our rifle shot in the institution who stands at the head of the team is Scott Russell, a genuine sportsnan and good shot either with the hunting or Greedmoor rifle. This gentlemen, and Dr. McLaughlin, our esteemed M. D., are annong the best long range shots in the Dominion. We are also organizing a gun club on a new footing, and as we have quite a number of good trap and field shots we hope to make the institution a success, and commence with a grand match at glass balls or pigeons.

I am afraid from what I see in your issue of the 30th that I have trodden rather hard on Nessmuck's toes in the beaver question. Well, if I have offended him by doubting his skill in woodcraft I sincerely applogize for it, and offer him the hand'of fellowship as a brother sportsman. His opinion for New York, Chicago, or in fact any other city, finds a ready echo in my heart, and I would sincerely like to have him on a tirrough the wilderness of Lower Canada as my "companion du vojage" in one of the bark shanties he speaks of. I think we could pass a pleasant time, and perhaps add to our bag a few of the beaver in question tor they are there in plenty as more than myself can testify to. I admit that he is correct as regards the Eastern, Western or Middle Shates, and probably the thirekly settled parts of Ontario, but as sind in my letter I can show him plenty of them yet, and States, and probably the thickly settled parts of Ontario, but as said in my letter I can show him plenty of them yet, and not travel a day's journey from the settlements, and I must say that the deer have almost entirely disappeared from these

say that the deer have almost entirely disappeared from these same places.

I see a small item on the wild pigeon from my friend "Jean," of St. Elie, one of the best fellows in existence. I am glad to see a squib from his pen again after a long silence. I am glad to see a squib from his pen again after a long silence. I am a fraid, though, that the pigeon like the other game of the country is doomed like the red man, the buffalo, and last, but not levst, our trout fishing. They are disappearing from the face of the earth, and even now in our backwoods they are to all intents and purposes a thing of the past. Oftentimes when I asked the habitants around the country the question if there were any pigeons the invariable answer would be "Jula vipus, sunsieur." At one time a good bag of them could be made at any time after the grain fields were cleared, but now Lejeu ne vaux pas le chandle. Au SAUBLE.

#### SAVE THE BIRDS.

Vall, Jowa, Jan. 10.

The intense cold weather and abundance of snow, qual, which have been getting more plentiful each year for several years. The farmer boys, too, are taking advantage of the opportunity to trap them, which they can now do nost effectually, as they are so huggy that that they will walk into a trap in a body to get something to eat. One young man caught five with his hands a few days ago. He flushed a flock and tracked them from where they lit into some bushes, where they sat in plain sight, and allowed themselves to be picked up rather than make any effort to escape. E. B. B. VAIL, Iowa, Jan. 10.

Essex Guy Cluu.—Nearek, N. J.—The regular annual meeting of this flourishing organization was held on January 12 for the election of officers for the ensuing year, the following gentlemen being chosen: Dr. W. N. Pindell, President; Joseph Belcher, Vice-Pres.; John Poineer, Treus.; Wm. Hayes, Secy.; Frank Watts, J. R. Burnett, R. H. Brientuall, John Illingsworth and J. B. Kinsey, Exce. Com. During the business meeting a resolution was unanimously passed to the effect that no member of the club should shood on any team against the club except in matches of the State Association. This was done in order that in choosing teams the committee should know the club's full shooting strength and that the club might not be beaten by its own members. The Secretary was authorized to take such action as he deemed necessary to prevent the sale of game out of scason, and dealers may expect this energetic officer after them for any violation of the law. It is hoped that other clubs will follow the Essex in this the New York Association having declared it to be the most effective way of stopping illegal shooting. The Treasurer reported his department in good condition, that a handsoom balance was on hand after paying all debts. After other routine business the club adjourned to the dibinar-hall, where the proprietor, Mr. Kleb, had been the proprietor, Mr. Kleb, had been and debts. After other routine business the club adjourned to the dining-hall, where the proprietor, Mr. Kleb, had teen ordered to spread a collation. Various toats were drank, among which were the "Bssx Gun Club," "Sister Organizations," "The Officers elected and retiring," "The Gull Island Club."

Island Club."

Mr Hayes, the Secretary, said that it was unlikely that all the members understood the meaning of the "dec.," upon the notices of the meeting, but that this entertainment was the notices of the meeting, but that this entertainment was the explanation of it.

The meeting broke up at a late hour, well pleased with every one, themselves in particular.

Loxa Island Game—Good Ground, L. I., Jan. 6.—I wish to call your attention to the suggestions made by Mr. Pike in his speech delivered before the Long Island Sportsmen's Association and published in Forest and Stream of 16th Dec. In the first place he recommends prohibiting battery shooting entirely. This would be a hardship to the gunners on Shinnecock Bay, as our bay is not adapted to point shoot-

ing. Besides, we have a law here now allowing shooting only three days a week, which works very well. It gives the birds four days a week in which to rest and feed unmolested,

birds four days a week in which to rest and feed unmolested, and has proved very successful so far.

The next proposition made by Mr. Pike was to prohibit quail shooting on Long Island for three years. Now I do not think we want such a law here. There is so much thick cover that all the gunning we do here does not materially affect the birds. It is not the gun that is destroying the quail too fast. It is the snare and the snow. The hard snow storm, if it comes just right, will kill more quail than are killed by gun and dog in three years.

The next proposition was to stop snipe shooting here and let it continue everywhere else from Maine to Fforida. If anything is to be done to protect the birds around Shinnecock Bay let the law prohibiting the sale of trapped birds or net-

anything is to be done to protect the birdsaround Shinnecock Bay let the law prohibiting the sale of trapped birds or net-ted flocks be strictly enforced. If some one will attend to it at New York I will notify him every time any trapped or netted birds are shipped from here. It is not of much use to pass laws protecting the ducks in this bay so long as people are allowed to set nets for ducks. I believe it was the nets that drove out the ducks last fall and spoiled our late shooting. They come held but morable to see the state of ing. They came back, but would not go near the old feed-ing ground. If there were no market in New York for these captured birds it would not pay to net them—that business would stop and we would have good shooting once again. SHINNEGOOK

We have always claimed that if the markets were closely watched, the poacher's occupation would be gone.

Swan Captured in Washington.—Washington, Jun. 14.

—A few days ago while Mr. Albert Gaines, of the Quartermaster General's office, was passing Louise Home, Fifteenth street and Massachussetts avenue, he observed a large white object flying over that building, when, suddenly striking a telegraph wire, it fell plump to the ground and proved to be a beautiful white swan. It was rather stunned by the collision and the fall, and fluttered vainly in an attempt to rise again; but, after a struggle, in which on account of Mr. Gaines slight proportions, it was doubtful whether the swan would get away with him or vice versa, it was captured un-Gaines' slight proportions, it was doubtful whether the swan would get away with him or vice vera, it was captured unhurt, and is yet alive and thriving heartily. In the tussle it dapped its wings viciously against Mr. G.'s head, demolishing a new Dunlap tile, won on the Maine election and making severe scalp wounds. It is supposed that the swan flying southward missed sight of the wire on account its similarity in color to the expanse of snow beneath.

southward missed sight of the wire on accountor its similarity in color to the expanse of snow beneath.

The cold weather and continuous deep snows in and around here have nearly exterminated the quait, and it will be a long time before there will be any good shooting in "Old Virginia, are that whole coveys of quait are found frozen, and rabits and other small game and wild turkeys are being killed daily without regard to future sport and supply. Bears are reported numerous in and around Wood's Mountain, Virginia, andk the tracs of a "drove" were recently seen in that vicinity, and judging from the size of their tracks were able to take care of themselves.

Near Fredericksburg, Virginia, the cold weather and heavy snows have had the effect of driving deer into the barn yards, through want of food, and are easily killed. Blue Wing.

The Butler Association—Butler, Pa., Jan. 6.—We started here last June an association for the protection of game and game fish, and so far have done very well. We entered suit against nine or ten persons for violating the game and fish laws, and have been successful in all but one. We have also ordered two thousand black bass for the Connequenessing, Slipperyrock and Shornereek, which will be put into these streets in the spring the streets also not renoquenessing, Slipperyrock and Shorncreek, which will be put into these streams in the spring. We have also put notices in the different papers in the county offering twenty cents per pair for all the live quail we can get for the purpose of keeping them over winter and liberating them upon the farms around Butler in the spring. We have had three fish wardens appointed for this county. We intend to make it hot for pot hunters. We have also invited farmers to co-operate with us, and not to allow any person to hunt on their farms without permission, and to notify us of violations of the game laws. We also intend to try to have a law p-ssed this winter offering a bounty of twenty-five cents for small hawks and owls, and fifty cents for arge ones and one dollar for foxes.

G. W. Z.

North Carolina—Ridgereay, Jan. 14.—The snow has all disappeared down here and shooting has been very fair. Messrs. Case and Crossman of your city are here at the present time. They killed twenty-ix quail on Wednesday, twenty-eight on Thursday. There is a good hotel here, and they try to make it pleasant for all, besides the proprietor has control of 7,000 acres of the best shooting grounds in this section and protects it for the benefit of his c shomers. Any persons wishing information, if they will address me at this station, I will attend to giving them all the details.

T. E. Smith.

Poisoned Game Flesh.—At this time it will be somewhat dangerous to partake of broiled ruffed grouse, especially if they have been shot (trapped most likely) in sections where "laurel" grows, for it is known that this bird will feed on the buds of the rhododendron when obliged to, and there are cases recorded of persons being poisoned after partaking of it, the flesh having become thoroughly impregnated with the poison. Forester or Lewis mentions cases where it has occurred.

Kennebec Association.—The annual meeting of the Kennebec Association for the Protection of Fish and Game was held at Augusta, M., January 6, and the following officers elected: President, Hon. P. O. Vickery, Vice.—President, J. E. Badger, Esq., R. W. Black; Executive Committee, Hon. P. O. Vickery, J. E. Badger, Esq., Daniel Whitehouse, S. B. Glazier, Ira L. Mackler; Secretary and Treasurer, Mr. A. J. Pierce. The Society, now two years old, has an active membership of 123, and has done much efficient work in the protection of game and fish.

JERSEY CITY HEIGHTS CUN CLUB .- The annual election of officers of the above club took place at their club rooms on the 12th inst, with the following result: Dr. J. Q. Bird, President; B. S. Payne, Vice-President; A. Herltage, Freasurer; Dr. P. W. Levering, Secretary; Geo. B. Eaton, J. Van Gelder and F. Mitchell, Executive Committee.

OTTER IN New Jersey—Tom's River, N. J., Jan. 15.— James Chamberlain, while out gunning on Thursday last, discovered an otter in the creek, near the flood-gates, a short

distance west of the town, and succeeded in killing it. The animal measured nearly six feet in length.

The Monroe County (N. Y.) game law is now the same as e State law, the Supervisors having repealed the County

GAME LAW COMMITTEE.—The standing committee on game laws of the New York Legislature are Messrs. Gorseline, of Herkimer; E. A. Carpenter, of Suffolk; D. A. Wells, of Fulton and Hamilton; Binninger, of Jefferson; Sheeby, of Essex; Roberts, of Oneida; Yan Buren, of Montgomery; Benedict, of Ulster; Cock, of Queens.

#### SHOOTING MATCHES.

Toronto, Jan. 11.—On Wednesday, Dec. 29, there was a pigeon match between Mr. Sheppard, of Yorkville, and Mr. H. Watson, a member of the T. G. C., 50 birds each, 21 yards rise, 50 yards boundary, H and T traps, T. G. C. rules, for \$100. The match came off at Severn's Parm, about two miles from the northern limits of the city. The weather was exceedingly cold, several de-grees below zero, and the friends of the contestants felt constrained to make some provisions for their confort and warmth. Some of the spectators had either their noses, ears or fingers frozen. John James acted as judge for Watson, and Joe Taylor as irozen. John James acted as judge for Watson, and Joe Tayloras puller; J. Webster judge for Sheppard, and John Olcott puller; R. Tinning, Jr., official scorer, and Mr. George Wright referee. Sheppard had the first shot and killed his bird. Watson also killed his first bird. At the conclusion it was found that Watson had nis lifet bird. At the concusion it was found that Watson and killed 39 birds and Sheppard 33, as the following score will show: Sheppard...101106111011-33.

Watson....1011101111311-33.

Watson....1011101111311-11132.

The T. G. Club's veteran shooter, aged 66 years, Dr. W. Smith, shot a match with his nephew, Mr. George Smith (same conditions as previous shoot), on 11th inst., for \$20, ten birds each, at the Woodbine Park. Each killed eight birds out of ten, and on shooting off the tie at 26 yards the ancient doctor killed three out of five and his nephow two, the veteran thus winning by one bird: Geo Smith..... Dr W Smith..... ......1 1 1 1 0 1 1 1 0 1—8 The large number of spectators on the ground congratulated

the Doctor on the victory.

PORTSMOUTH, Va., Jan. 13.—Our club will go up to Richmond on the 18th inst., by invitation of the Richmond Gun Club, to wit-ness a match between Capt. A. H. Begardus and a member of that club (Mr. Mitchell) of 100 birds each.

Hop Bitters does not exhaust and destroy, but restores, cures and

THE COCKER CLUB

HE Cocker Club list will be open one week longer for the addition of new names. The propose, I members already registered represent a wide area, and give sufficient proof that there will be nothing sectional about the Club. Next week we shall close the list and proceed to call for the votes for the committee. It is desirable that all who are desirous of joining the Club, and have not yet forwarded their names, should send them in before next Wednesday.

BOBSAWYER. - On Friday last Mr. J. P. Barnard, Jr., received from Mr. Wm. Stockwell, Halifax, England, the young bull terrier dog Bob Sawyer. Bob is all white, has a very fine head and long nose for his weight—twenty-eight pounds. He is one and a half years old and very promising.

Bonnie Bon.-We have received an excellent picture of Mr. J. P. Barnard, Jr.'s, bulldog Bonnie Boy. The Boy is by Slenderman out of Sal O'Shoreditch and appears to be, from his picture, a splendid animal. His nose is less than an inch long.

Photograph of Rover.—We have received from his owner, Mr. J. R. Raymond, a capital photograph of this prom ising young dog. As our readers will remember, he did most excellent work at Robin's Island and took third money in the Nursery Stakes there. He is now about a year old and is a very handsome dog.

Rover was trained by G. Herbert Newton, of Smithtown,

COUNTESS BEAR.—Countess Bear, the pointer hitch re-cently purchased by Mr. R. Ll. Purcell Llewellin, was shipped by Mr. Jos. H. Dew on Monday, Jan. 10. She reached this city in good order on the 13th and was at once sent on board the steamer Wyoming, of the Williams & Guion Line. On Tucsday last she left these shores again. She is consigned to Mr. G. T. Teasdale Buckell for Mr.

#### THE ENGLISH POINTER.

d from advance sheets of Vero Shaw's "Book of the Dog," shed to the Forest and Steram by the author, through ill, Fetter, Galpin & Co., publishers, No. 596 Broadway, York.)

Cassell, Petter, Galpin & Co., publishers, No. 506 Broadway, New York.)

THERE are very few varieties of dog which owe more to the institution of dog shows than the modern pointer does. Up to the commencement of canine-shibitions the majority of the admirers of this I read appear to have devoted the greater portion of their attention to breeding for sporting purposes, and to a certain extent seem to have ignored appearance. Now things are so far changed, by a wider knowledge of the pointer having been extended to the public, that most breeders seem to regard good looks more favorably than formerly. It must not, however, be thought that a litose who br dpointers were unimpressed with the desirability of producing a handsome dog, or that they were by any means indifferent to the symmetry of their strain, for many gentlemen have used great exertions in improve their dogs by every means in their power. The imanguration of dog shows, nevertheless, has done a great deal in the way of obtaining uniformity of appearance in the pointer, though it mus: freely be confessed that more than one type is supported, and we may add that it is always likely to be so by the various judges.

With reforence to the appearance of this breed, it may, we think, be fairly taken for granted that it is the offspring of the old Spanish pointer referred to in the preceding chapter, and the lighter variety of foxhound, to which allusion bas already been made in former pages. The introduction of the latter blood was unquestionably the result of a desire on the part of the Donder Searly breeders to increase the pare and stamina of the Spanish pointer, for, as before observed, his forder was nooe, not pace. The hounds selected for the purpose of crossing with this dog were, we consider most probable.

or was nose, not pace. The formula selected for the purpose of crossing with this dog were, we consider most probable, chosen as light-formed as possible, and probably some attention was paid to their color as breeders, no doubt, preferred to get their puppies well marked with white, as such are more easily their pappies well marked with white, as such are more easily seen at work than liver or dark colored dogs. The precise period at which the pointer was intro-duced into this country is, of course, unascertainable, as he is, as he at present exists, a manu-factured breed, and consequently factured breed, and consequently made his appearance gradually. That the introduction has been, comparatively speaking, of recent date, is, however, an almost pal-pable fact, as no mention is made of the pointer in the earlier works on canine subjects. Dr. John or the pointer in the earner works on canine subjects. Dr. John Caius, for instance, though fully recognizing the spaniel and the setter, makes no allusion to the pointer, and this he most certainly madd been done if the bread

setter, makes no allusion to the pointer, and this he most certainly would have done if the breed were in existence here in his time. He particularly alludes to the Spanish origin of the spaniel; and, as the earlier pointers were inquestionably imported from that eountry, he would have remarked upon that fact at the same time beyond a doubt. Gervase Markham, too, gives prominence to the setting dog, but ignores the pointer, and in fact it is only in the writings published toward the commencement of the present century that we find allusion to the latter. This is no doubt due to the fact that shorting was only becoming a popular recreation about this period, and this it clearly proved in the preceding chapter. Up to this circus the setting was the

popular recreation about this period, and this is clearly proved in the preceding chapter. Up to this time the setter was the sportsman's dog, as his peculiar mode of working was found to be of more service when birds had to be driven into nets that were spread out for their reception. The general introduction, therefore, of fireners into field sports may, we think, be correctly taken as the final cause of the pointer, and, no doubt, on his first appearance the setter fell into temporary disuse, as it probably never struck our fathers for some considerable period that the sottler's abilities could be so easily moulded to suit the novel innovations introduced by the use of firearms as future events have testified. However, about the period referred to ample mention is made of the improved pointer; and Sydenham Edwards, writing in 1893, speaks of him in the following words:—

"The sportsman has improved the breed by selecting the lightest and gayest individuals, and by judicious crosses with the foxhound to procure courage and flectness. From the great attention thus paid has resulted the present elegant dog, of valuable and extensive properties, differing much from the original parent, but with some diminuition of his instinctive nowers. He may thus be described—light, strong, well formed, and very active; about twenty-two inches high; head, small and straight; lips and ears, small, short and thin; coat, short and smooth, commonly spotted or fleeked upon a white ground, sometimes wholly white; tall, thin and wiry, except when crossed with the setter or foxhound, then a little brushed.

"This dog possesses gaiety and courage, travels in a grand anner, quarters hig ground with great rapidity, and scents

This dog possesses gaiety and courage, travels in a grand "This dog possesses gaiety and courage, travels in a grand manner, quarters his ground with great rapidity, and seents with accuteness, gallops with his bannehes rather under him, his head and tail up; of strength to endure any futigue, and an invincible spitit. But with these qualifications he has con-comitant disadvantages; bigh spirit and eagerness for the sport render him intractable and extremely difficult of educa-tion; his impatience in company subjects him to a desire to be foremost in the points, and not give time for the sportsman to

come up; to run in upon the game, particularly down wind. But if these faults can be overcome in training, if he can be made staunch in standing, drawing and backing, and to stop at the voice or token of the hand, he is highly esteemed; and those who arrive at such perfection in this country bring

those who arrive at such perfection in this country bring amizing prices.

"There is a circumstance worthy of notice in pointers, that some of them have a deep fissure in the centre of the nose, which completely divides the nostrils. Such are termed double-nosed, and supposed to possess the power of scenting better than others.

double-newer, and supposed to possess use power of securing better than others.

"The most judicious cross appears to have been with the foxhound, and by this has been sequired speed and courage, power and perseverance, and its disadvantage, difficulty of training them to be staunch. I believe the celebrated Colonel Thornton first made this cross, and, from his producing excellent dogs, has been very generally followed."

There frequently occur now in modern fitters of pointers, puppies malformed by a "double nose," as described by Sydenham Edwards. We use the expression malformed advisedly, as, in our opinion, such a development is not only unsighly, but positively injurious to the animal's power of seent. In certain quarters we are aware of the existence of a lingering superstition to the effect that a "double-nosed" pointer has superior scenting powers, but for our own part we cannot agree with the theory, and have never seen it proved in practice. we cannot agree proved in practice.

would seem that the large proportion of hound blood which then existed in the pointer caused him to be very headstrong in the field, and completely changed the character of the old Spanish pointer, whose extreme steadiness was one cause of his being so popular with sportsmen. According to the "Sportsman's Cabinet," it will be seen in the quotation given below, that the pointer was supposed to have been imported from Spain about the year toldy, but, at the same time, it will be observed that no idea is given as regards the possible period when the Foxbound cross was first instituted. It is, however, we should imagine, most probable that this was not resorted to until the use of firearms in the field became a custom, as when nets only were employed in the pursuit of winged game it is probable that a slow hunting, keen-scented dog was hore valuable to the sportsman than a feas and high-couraged one, who would naturally be more liable to flush the birds. The ideas on the elementary education of the Pointer which were held by sportsmen in the early years of this century are thus expressed in the "Sportsman's Cabi-

which were held by sportsmen in the carly years of this century are thus expressed in the "Sportsman's Cabinet!"—

"The pointer, notwithstanding the beautiful uniformity of his frame, the decility of his disposition, and his almost unimited utility, has been less noticed by naturalists than any other individuals of the species; hence it may be fairly inferred this particular breed was formerly unknown in Britain, and that the stock was originally of foreign extraction. A combination of circumstances tends to justify the predominant opinion that they were first introduced into this country from Spain (very little more than two centuries since), and that the heavy, awkward, slow and somiferous appearance of the Spanish Pointer is nearly lost in what may be candidly considered to foreign a present of the predominant of pointers was nearly white, or most variegated with liver-colored spots; except the celebrated stock of the then celebrated Discks were considered superior to all in the kingdom, and sold for immense sums after his death. But so great has been the constantly increasing attachment to the sports of the field, particularly of the gun, that they have been since bred of every description, from a pure white and fleather the production of the color of the field particularly of the gun, that they have been since bred of every description, from a pure white and fleather the production of the tion, from a pure white and fleabitten blue or gray, to a complete liver color or perfect black. After every experiment that can have been possibly made by the best judges and most energetic analeums in respect to size, it seems at length a decided opinion with the majority, that when bred for every species of game and every diversity of country, both extremes are better avoided, and the line of mediocity more advantageously adbered to; overgrown, fat and heavy dogs very soon get weary in the lot and early part of the season; the smaller sort are likewise attended with inconvenience in hunting high turnips, heath, ling and broom fields."

"The art of breaking Pointers was also considered a most difficult and mysterious concern, many of those demoniared dogbreakers having nearly derived their sole subsistence from such employment; that colorably well-bred flohier poppy may have the groundwork of all his future perfections theoretically implanted in the parlor or kitchen of the dwelling-house before he once makes his appearance in the field. The instinctive impulse of this breed is frequently seen to once makes his appearance in the field. The instinctive impulse of this breed is frequently seen to once makes his appearance in the field. The instinctive impulse of this breed is frequently seen to once makes his appearance in the field. The instinctive impulse of this breed is frequently seen to once makes his appearance in the field. DOGS AND GAME, BY DESPORTES (ABOUT 1700), SHOWING THE RABLY FOUNDING AND POINTED CROSS IN PRANCE

Apropos of the "amazing prices" which Sydenham Edwards dilates upon, reference may be made to the preced-ing chapter on sexters, from which it will be seen that at the sale of Daniel Lambert's dogs the pointers fetched lower prices than the setters. On the other hand, in 1848, thirteen prices than the setters. On the other hand, in 1848, thirteen pointers were sold by auction, and though only two of them had been shot over, the large total of 256 guineas was secured. The following is the catalogue:—

256 guineas

Lots 12 and 13 were shot over in England and Scotland

Lots 12 and 13 were shot over in England and Scotland; the olhers were well broke.

It may be remarked that Bloom, the dam of Swap and Snake, had previously been sold for 80 guineas.

Subsequently to the appearance of Sydenham Edward's work, all the writers on canine subjects make special reference to the pointer, and nearly all of them give special directions for his training. From the remarks which appear, it

display itself in subjects no more than three or four months old; where, in still and uninterrupted situations, puppies may be observed most earnestly standing at chickens, pigeous, and even sparrows upon the ground, by sight, before the olfactory powers can be supposed to have attained maturity to prompt a point by scent.

"When a whelp of this description has reached his sixth or seventh month, the process may be proceeded upon in the following way; and either a single dog, a brace, or more, may be managed with equal ease in any convenient spot, room or yard, at the same time, with no other assistance whatever than the alternate expression of 'To ho!' 'Have a care!' and 'Take heed!' (having the small field whip in hand to impress attention and enforce obedience) although the most attractive ment is tossed before them in every direction. The commencement of the ceremony consists in throwing a piece of bread at some small distance before the dog, who, upon making his effort to obtain it, must be instantly checked by a quick exclanation of 'Have a care' and the assistant terms alternately repeated, to keep him in a patient point of perseverance, till, having given ample proof of his obedience to the injunction, and stood time sufficient to demonstrate his comprehension of the restraint be must occasionally encounter, a wibrative, low-toned whistle, accompanied with a mild ejaculation of 'Hie on', will prove the signal for proceeding, which the whole will quickly learn to obey; and it will be found by practice that one or more may, at the very moment of seizing either the bread or the meat, be as instantly stopped and made to renew their point by a repetition of either of the verbal cautions previously observed. Some there are who consider it a qualification in a Pointer to bring the game to foot when killed, and those

who wish it, will find it easy of attainment, by teaching them to fetch and carry before they are at all secusioned to the field; it is a mode of being employed they are much de-lighted with, and never forger, but is attended by the chance the field; it is a mode of being employed they are much delighted with, and never forcet, but is attended by the chance
of one inconvenience annexed to the experiment; if they become hard-mouthed, and take to breaking both flesh and
feather, it is a fault, or rather crime, which generally becomes incorrigibl, and is hardly ever obliterated without incessant trouble and much distressing severity. This circumstance, so naturally likely to occur, it is more necessary to
bring to memory, because punishment is at all times unpleasant to the humane and liberal-munded sportsam, who will
coincide with the writer in opinion, that prudent prevention
is preferable to the uncertainty of cure; and that a slight
and satulary o rrection to-day, may sometimes render unnecessary the doubly and trebly enhanced deserts of to-morrow."

The noove remarks are essentially practical, and show that
considerable attention had been paid to the habits and breaking of the pointer. Of a very different nature is the ancedue told of the worthy pricsi, in the following extract from
the "Sportsman's Repository"—in fact, the story hears with
the impression that it was mertive a playful invention of

ing of the pointer. Of a very different hauter is the ancedote told of the worthy prics, in the following extract from
the "Sportsman's Repository"—in fact, the story bears with
it the impression that it was merely a playful invention of
the author of the work, to excite the feelings of those re-ponsible for the story of the staunchness of Juno and Plutor,
when Mr. (ilipin was executing their likenesses; we therefore give the extract for what it is worth, merely observing
that the story told of the price given for the pointer Dash,
and the conditions under which he was disposed of are, we
believe, perfectly correctly referred to, as they are accepted
as facts by other writers of that period, who themselves express no doubt of their veracity. The staunchness of Pluto
and Juno, is of course, possible; but we should venture to
suggest that the balance of probability lies in favor of it being
slightly exaggerated. However, it is valuable as showing
that, in the first place, breeders began to recognize the fact
that too much loxibcund was undesirable in their pointers, as
it rendered them headstrong; and, in the second place, that
the dogs had become more staunch, or any foundation for the
story could not have existed.

the togs had become none stander, or any foundation for the story could not have existed.

"For something very extraordinary in the sporting way we must have recourse to the practice of Colonel Thornton, whose high and laudable ambition it has ever been, but he deviate fain the co-mono road and to excel; and he has undeviate fam the coronal deviate families and many which will go down with eelat to sporting posterity. We suppose that the Colonel himself meditated and carried into effect the crosses necessary to produce his famous pointer, Dash, which is, as we have before observed, in all probability three-parts foxhound. Dash, in his day, was held to be the edipse of pointers, a character sanctioned by his high ranging over the moors, the vast expedition with which he cleared his ground, and the intuitive, heaven-born method, said to be almost incredible, in which he hunted inclosures for birds, which was by at once scenting and advancing upon them, without the credible, in which he hadded inclosures for birds, which was by at once scenting and advancing upon them, without the previous labor imposed upon other pointers, of quartering his ground; add to this, he was a most staunch and steady previous abor imposed upon other pointers, of quartering his ground; add to this, he was a most staunch and steady backer or seconder of other dogs. Dash was sold by Colonel Thornton to the late Sir Richard Symons for one hundred and sixty pounds worth of champagne and burgundy, bought at the French ambassador's sale, a hogsbead of claret, an elegant gun, and a pointer; with the annexed stipulation that, if any accident should betall the dog, which might render him unfit for hunting, he was to be returned to the Colonel at the price of fifty guineas. This latter agreement accually took place: Dash had the misfortune to break his leg, and was returned to Colonel Thornton, who considered him in that state a great acquisition as a stallion.

\*\*Exalted as was the reputation of Dash is a state of the colonel and the property of the propert

turned to Colonel Thoruton, who considered him in that state a great acquisition as a stallion.

'Exatted as was the reputation of Dash, it seems nearly impossible that he could have exceeded in point of steadiness the merit of a brace of other pointers, the property also of Colonel Thornton, Pluto and Juno. Pluto has also been stready cited as a famous deer hunter. It is recorded that this slog and bitch, being taken at a point, kept, their point upward of one hour and a quarter; namely, until the late elebrated Mr. Gilpin could take the sketch from which they were painted for thich proprietor, an elegant engraving of which we find in Mr. Daniel's 'Rural Sports.'

'Many morry jokes have been passed in our hearing, by sportsmen, on the above account, with the view of promoting the cause of ridicule, comparing it with another still more marvellous and well known, given on the authority of a grave and most respectable member of the priesthood. For our parts we really believe both the possibility and probability of

and most respectable member of the priesthood. For our parts we really believe both the possibility and probability of the staunchness of Pluto and Juno as just related; and although Gijnic cannot be referred to as have quitted—we hope for a better—this painting and plastering world, there are yet survivors to whose authority an appeal may be made. It remains to back the above story with the well-known one (but the repetition on this occasion will be pardoned) of the Rev. Theophilus Verity. On a certain Christmas Day this gentleman was rising but ang from his parish church, which was at considerable distance from his dwelling-house, and his way have over the most private snot of a secluded and needleded. man was riding his nog from his parish church, which was at considerable distance from his dwelling-house, and his way lay over the most private spot of a secluded and neglected heath. In the deepest recess of this wild he espict a pointer by himself, standing at a covey of birds. He looked, admired, pondered on the wonderful and inscrutable instinct of the brute creation, blessed himself and passed on. The cares and studies necessarily attendant upon his calling, however, soon expelled every vestige of this occurrence from his mind, until he was awakened to fresh admiration and benedicti in by a renewed and stupendous view of the same objects. Exacily on the above day twelve months, passing the same way, his second astonishment wasfar greater than the first; for he saw, upon the self-same spot, the dog pointing at the birds in precisely the same attitude he had left both parties twelve months before; with this difference, however, that they were then living and breathing, one party treacherously circumventing, the other apprehending; whereas now they were in a state of skeleton, fit for a lecture in anatomy, and doubtless, as the reverend gentleman supposes, the partridges were held to their destiny by the well-proved and well-known power of fascination enlited from the eyes of the dog. Now, we particularly request that no light-minded person will attempt to make a joke of thie, well convinced, as every rational man ought to be, that there are wonders of which, never having had the experience, he cannot have any adequate conception."

This extract is valuable as corroborative testimony that the

tion."
This extract is valuable as corroborative testimony that the This extract is valuable as corroborative testimony that the introduction of the foxbound cross was first due to the enterprise and judgment of Colonel Thornton; as lovers of the modern pointer will no doubt be glad to know to whom they are indebted for the improvement in their favorite breed, their later exertions having unquestionably been rendered mere casy by the good he orginally wrought upon this variety of dog. But, looking back to the year 1811—that is, eleven years after the publication of the account of the peinter by Sydenbam Edwards in "Cynographia Britannica," we find the following description of the pointer given in the "Shoot-

er's Guide," by B. Thomas, or rather, to give the author's correct name, by Thomas B. Johnson.

"The pointer g-nerally to be recommended is of the middle size, well made, active, light and strong. It will easily be perceived that a dog of this description will bear a vast deal of hunting; whereas a small one, however good he may be, is by no means calculated for a piece of of strong turnips or potatoes, strong and stiff stubbles, or mountains where the heath is strong and to good of the contrary, it is generally supposed that a large dog is much sooner tired by his own weight than one of the middle size, consequently the latter are in general to be preferred, and indeed I would by all means recommend them. But, at the same time, I would not reture a large dog for no other reason than his size, as, however large a dog may be, it often happens that he has strongth according to his builk.

"With respect to color, nucle may perhaps depend upon

With respect to color, much may perhaps depend upon "With respect to color, much may perhaps depend upon francy—and no doubt there are very good dogs of all colors. However, those I would recommond are the liver or brown-and-white. A white dog is to be preferred on account of his go d temper, and being naturally less subject to disease than others, which arises from the predominancy of phlegm in his constitution. He has an excellent nose, is a curious hunter, is full of strategens and cunning, and may be seen at a great cisance. Pointers of a brown or liver color are generally good ones, but they are certainly difficult to be seen at a great distance, particularly on a mountain, which gives the sportsman sometimes a vast deal of trouble. At the same time, a brown dog will bring you nearer the game, and is particularly useful when it will not lie well. Birds will suffer a brown dog to approach them much nearer than a white one brown dog will bring you nearer the game, and is particularly useful when it will not lie well. Birds will suffer a brown dog to approach them much nearer than a white one, which arises solely from his color approximating more nearly that of stubbles, etc., among which he hunts, and consequently renders him a less distinguished object.

"A deg of the lemon or red color is generally of a giddy and impatient nature, as choler is found to be the most predominant humor in him. In fact, in general, white and brown, or these colors mixed, are to be preferred. If a dog has much white upon him it is an indication of good temper."

The opinions of this writer certainly seem to be largely upon conjecture, for, as far as our experience goes, we have no reason to sgrees with him that white, or nearly white dogs.

upon cinjecture, for, as far as our experience goes, we have no reason to sgree with him that white, or nearly white dogs, are by any means better in constitution or temper than pointers of any other shade. There is this much, however, to be said with reference to Thomas' theory, and in defence of any ideas he has formed, that it must be borne in mind that there is every reason to believe that foxhound blood was very largely contained in the veins of pointers about that period, and consequently the lemon or red colored dogs, to which he alludes, may possibly have been more nearly allied to the hound, therefore more headstrong than the livers, which parand consequenty the temon or rea colored logs, to which he saludes, may possibly have been more nearly allied to the hound, therefore more headstrong than the livers, which par-took more of the nature of the siteady-going Spanard. His ideas on the subject of color are certainly sound, as far as they refer to the working of dogs in the field, for it is palthey refer to the working of angis in the held, for it is pal-puble that a white dog can bejseen farther off than a liver-colored one; and also that the latter is less likely to disturb birds than a light-offored one. His reasonings upon the amount of phlegm which he asserts to exist in the white dogs are merely conjectures on his part, and given as they are, unsupported by any practical reasons for the assertion, may watch be set as also when the conceins. birds than a de when the question of colors is to be dis sately be set aside when the question or colors is to be dis-cussed. No reference to such advantages possessed by one color over another is made in "Kunopedia," an excellent work on breaking the pointer and the spaniel, which was written by William Dobsoo, Esq, of Eden Hall, Cumber-land, in 1814, and this, we are of opinion, would surely have been done if it were by any means a generally popular idea at that period that a white dog was constitutionally superior to a dark-colored one. to a dark-colored one

to a dark-colored one.

The foxhound cross has been resorted to by Irish sportsmen of the day for the purp so of increasing stamina and giving a wet-resisting cost suitable to the moist climate of Ireland, and these results were well exemplified in specimes, we saw exhibited at a Dublin show, bred and shown by a thorough sportsman—an appreciator of every branch, but whose specialities are hunting and shooting.

[TO BE CONTINUED.]

#### THE PITTSBURG BENCH SHOW.

#### FROM OUR OWN REPRESENTATIVE.

THE officers of the society are to be complimented for L the commendable spirit they have shown in undertakcongratulated that the show is in every way a success. by far, as regards the quality of the entries, the best that has been ever given in this city, and it compares in this respect with the best shows in the country.

At first it was estimated that the entries would not exceed one hundred and fifty in number, but the official catalogue informs us, that, thanks to Mr. Lincoln, two hundred and eighty two were booked.

The city was alive at an early hour this morning with the The city was alive at an early hour this morning with the backing of dogs, the crowing of co ks, the quacking of ducks, the coping of pigeons and the gabbling of geese. At eight precisely the doors of the old City Hall were swung open to the public, and the unearthly racket overhead announced that the show was being held on the second floor building.
large well ventilated hall, fairly adapted for the

nose, the drgs are benched. Three long double rows of pens, extend the whole length of the room, and in these the sportcarient the whole tength of the room, and in these the sporting and larger non-sporting dogs are stalled, while the small non-sporting dogs are boxed in front of a stage that stretches across the north end of the hall. On each side of the dogs the ponitry exhibits are caged, but although both sides of the hall have a number of large windows, the light early in the afternoon was insufficient whereby to see the animals, and the atternoon was insufficient whereby to see the animals, and the gas had to be lighted. The benching in all respects is similar to that adopted at the New York shows, and many of the pens are tastefully decorated, prominently those of the "Laverack Kennel," of Messrs. Shellenburg and McConnel, of New Brighton, Pa., and "superior Kennel," of Messrs. Henricks and Stayton, of Allegheny City, Pa. These have large compartments, so that several does can be taken in at the great signs. The senitary arrangements are well as a second process.

large compartments, so that several does can be taken in at the same glance. The sanitary arrangements were well cared for and there was an absence of all doggy smell. The majority of the dogs were in admirable condition, and as the judge was instructed in the bench-show rules and regu-lations to make allowance for dogs that had been worked this season, a proportionate number of Field Trial dogs put in an

appearance.

Turning to the catalogue we find that the classification is

somewhat faulty, the red Irish and red and white setters are pooled under the head of "Irish Setters;" this should not be, there should be two distinct classes. In Class 31 three field spaniels got mixed up with the Irish water spaniels and were raide out. Class 49 truned out to have no legitimate entries, as its three entits belonged to the rough-coated collie class, no smooth coated dogs being present, the entries were therefore judged with class 48, rough-coated collies. Classes 33, 38 and 37, beagies, contained both the bench or boy-legged and the straight legged dogs, and there was a large number of the former type of dogs present, which represent a large class of the old stock of Maryland dogs, which has been kept pure with grest care for many years; and as the two typea are so different and wide a part Dr. Twaddolf, bucked by Dr. Maddux, of Baltimore, and Genl. Bond, of Maryland, petitioned the executive committee to allow two typical classes to be detablished—name y: one headed under the name Maryland, the bench-legged beagle, and one for the straight legged beagle. The committee's omsent was at once obtained, and the Pittsburg show of 1881 will have the honor of assisting in instituting a precedent that we trust to see observed at all future shows. This, if done, will hereafter bring a large number of entries in both classes. It is full time that harriers should not be classed with beagles, as they were at last years "New York show, and now that our game birds are rapidly disappearing in the East, there will be sportsmen who will turn to other field sports for their anusement. somewhat faulty, the red Irish and red and white settlers are sportsmen who will turn to other field sports for their amusement. One of the most popular of these will be hare shooting, and with well-bred beagles this sport can be enjoyed to the urmost. To obtain well-bred dogs, distinct classes for them must be opened at our shows, and it is the suegestion of Dr. Twaddell that it might be also well to open classes for dogs under and over twelve inches height of shoulder. Of this, however, more in the future; we shall at once publish pictures of dogs of each type, and as this distinction had to be made sooner or later, we consider that there is no better time than now for the discussion of the important subject.

have already stated that the premium list was a good We have already stated that the premium list was a good one, but we must not forget to mention that the donations from outside contributors were liberal. To dispose of two of these prizes two special prize lists were opened that certainly could have been arranged to better advantage. We refer to specials A, "for the best setter dog or birth of any strain," and B, "for second best dog or birth of any strain," The special A, as it will be seen in the subjoined entry list, closed with five entries, namely, with three English setters and two red Irish. To ask any judge to select the best, where the standards of the two types are so entirely different, is really asking too much of any man. Special prize list B would inter that none but second-rate dogs would be entered and the lucky one therefore would go before the world as a winner in a second class. This, however, is not the case, as all the ena second class. This, however, is not the case, as all the e-tries are of first-class dogs.

tries are of trat-class dogs.

The judging began at 2 p. m., both sporting and non-sporting dogs being judged simultaneously. The former were taken to a large room on the third floor at the south end of the building and the latter were reviewed on the stage. The attendance was very large and much interest was taken up to the end of the judging, at 6 o'clock. The show remained open until 11 p. m.

JANUARY 18

JANDARY 18.

The judging was continued at half-past nine this morning and at the close of the day had been completed. The judging was ended at 0 r. x., and both Major J. M. Taylor, Lexington, Ky, the judge of sporting classee, and Dr. L. Henry Twaddiell, of Philadelphia, deserve great credit for their care and excellent decisions. Major Taylor gave every dog recognition, and there was not one dog brought before him that was not handled by him and carefully looked over. Among the exhibitors Mr. A. H. Moore, of Philadelphia, carried off the greatest number of prizes. He had twenty-five entries, of which fifteen were sporting and ten non-sporting dogs. This tentleman won-every special prize but one—six in all. His exhibit was one of the fluest ever seen in this country, and his kennelman. Benjamin Lewis, who used to be in Llewel. exhibit was one of the fluest ever seen in this country, and his kennelmap, Benjamin Lewis, who used to be in Llewel-liu's kennels in England, certainly deserves credit for the ex-cellent bench show condition he had prepared the dogs. The Baltimore Kennel also sent eight dogs, under charge of their efficient kennelman, A. J. Keily. There stock was in fine or-

der.

As the following list will show, there were very few absentees: The following does were not present: Nos. 3, 16, 26, 41A, 50, 68, 94½, 117, 121, 124, 185, 175, 178, 187, 204, 218, 219, 2344. 26, 414, 50, 68, 94‡, 117, 121, 122, 150, 110, 110, 101, 102, 103, 254‡.

We publish below a full list of the awards, reserving any detailed comments on the show until our issue of next week.

#### (Special to Forest and Stream, )

PITTERDAGH, Jan. 19.
A committee meeting of the society will be held this evening at 8 o'clock for the purpose of deciding upon a name for
the two new classes of beagles. It is quite probable that the
name Maryland will be changed to America, but as yet this
meeting is unfacided.

AWARDS.

Class IV—Imported English satter bitches, v c b, Minerva. VIII—Champion Irish setter dogs. 1st, Berkeley. X—Champion Irish setter dogs. 1st, Berkeley. X—Champion Irish setter bitches. 1st, I.o. 01. #### DOGS THAT TREED GROUSE.

POINTERS VS. SETTERS.

FOINTERS VA., SETTERS.

Editor Forest and Stream: STRINTON, Va., Jan. 7.

I have seen several communications in late issues of your valuable paper touching subjects which I think I am able to throw some light on, and others about which I would like to have "my say." Of the first class of subjects is the phensant dog—the dog that will tree pheasants (ruffed grouse). These dogs are like poets, born and not made. In an active experience as a sportsman of twenty-five years, I have never seen more than two really good pheasant dogs of this kind. One was a half terrier, the other half cut up into sixteenths of every variety of no account dog in the world; and the other was a fine-bred hound bitch, the best deer dog I ever saw besides, so that you may infer that there is nothing in the breed. Nobody could tell how either of then ever arrived at the perfection for which they were noted—as no attempt at training was made on either—they just "took to it."

The quality which distinguished them from all other dogs. I ever saw hunt pheasants to tree them was this, that the moment the bird was seented they commenced to bark vigorously and run the trail or body seent as fast as they could, until the bird was run in upon. All the other dogs I ever saw tree pheasants never barked until the bird was son the wing. The first method was so sudden and violent that the bird never had time to collect hinself sufficiently to determine upon the line of flight or the point of lighting (as in the other case he had already done before starting to fly), but would be so startled and confused that he would seek the fast shelter offered, which was generally the friendly branches of an overhanging tree or bush. The result was that fully

the other case he had already done before starting to fly), but would be so startled and confused that he would seek the first shelter offered, which was generally the friendly branches of an overhanging tree or bush. The result was that fully 80 per cent. of all the birds I ever saw either of these dogs flush lit in trees not five rods from where they were flushed, so that neither the dog nor the gunner had any trouble in indig them. As to their sitting still and letting you kill them, one after another, by shooting at the lowest one on the tree, I never found any of that breed. I m-ver killed more than one from the same tree in my life, except from grape-vines when feeding. Then, with a small rifle, or a shot-gun with a light charge, I have killed two or three before the others would fly. So much for what I know. Now for what I think and believe on other subjects.

I am glad to see from the results of the late field trials on Robin's Island that the pointer is beginning once more to get his dues. I welcome such intelligent and vigorous champions of this noble-t of all dogs—as "Back Ned" and South Side." I have sat in mute astonishment for the several years I have been reading your paper at the crazethat seems to me to have taken possession of our Northern (and to some extent our Southern) sportsmen about the setter. Now don't be alterned! I don't intend to go all over the threadlare discussion of the whole merits and demits of the two breeds, but I wish to give my experience of the two for what it is worth. I started bird bunting more than twenty-five years are

ed! I don't intend to go all over the threadbare discussion of the whole merits and demits of the two breeds, but I wish to give my experience of the two for what it is worth. I started bird hunting more than twenty-five years ago. My first love was a setter. I have broken and hunted four others up to this time, and have owned and broken three pointers in the same time. They were all of good native stock, but as pure as the best "imported." My setters passed with sportsmen for first rate dogs, but I honestly confess that not one single one of them ever "filled my eye"—they never came up to my ideal of a good bird dog—while of the three pointers each one was all I could wish him to be.

It is said that they haven't got the speed or the style of the setter. I can tell "Black Neal" for his comfort that we have here a strain of bold, "shashing liver and white pointers," that have for eight or ten years past shown the way to all the setters that have been brought against them, and can do it yet. They are as fast, have more nose, as much bottom, are stauncher and back prettier from the very start than any settered that over were seen here. They do not take heavy brier that over were seen here.

thickets like some setters I have seen, but they will take water at any season, and are natural retrievers. But outside of all this there is a quality in the pointer that I have never seen this there is a quality in the pointer that I have never seen mentioned by any one in writing of the dog, a quality that is not put down on the scale of points in field triats, but which they possess in a much higher degree than the setter, and which in my opinion is worth more than "style," "quartering," "dropping to shot," and all those fancy trimmings that are put on dogs by professional trainers, and that quality is what an old friend of nine (and the best sportsman I ever knew) need to call "bird sense." It is that instinct, which, after the property of the prope are pit on togs by processional trainers, and that quanty is what an old friend of nime (and the best sportsman I ever knew) used to call "bird sense." It is that instinct, which, after a few years hunting, canables the pointer to go into a thirty or forty acre field, and go straight to the most likely places in it to look for the birds, and nine times in ten find them, while the setter is "fussing" around, quartering and putting in his fancy licks over an acre of ground. The strain of dogs of which I have spoken have this faculty to an uncommon extent. I never saw a setter have a particle of it in my life, and never saw a pointer that has been hunted two or three seasons that din't have it to a greater or less extent.

I fully concur with you in your remarks about the tendency of modern broeders and trainers to sacrifice everything to speed. Good speed when combined with good nose is a good thing, but of the two give me the dog wift the nose, and other things being equal in a day's hunt I'll take my chances for a bag over him. I don't think field trials or bench sho 's will prove a permanent success in this country. There are too many purely arbitrary rules, and too much left to the prejudice and bias of the judges.

If merit in a dog could be brought down to the same fixed rules that govern in horses then the best fielders in the country could be seen, and the best dog would be sure to win, for there wouldn't even be the same chance for "jockeying" that sometimes disgraces horse racing. But to express it mathematically as the matter stands, there are too many quantities in the problem for the conditions, and the result is indetermination.

tities in the problem for the conditions, and the result is indetermination.

I maye had considerable experience in this line as ruffed grouse and woodcock shooting was my principal sport. I used at this time an Irish water spainel, imported; the same dog that took second prize at the Westminster show of 1877. He had no pedigree that I could ever ascertain. He was presented to me by a colored man named Tuckett who was at the time a valet for some officer stationed at the Montreal Garrison, Canada. The officer had imported the dogs for his duck shooting on Rice and English lakes, Canada, and this was one of the first litter they produced in this country, and as the officer would neither sell nor dispose of this stock the aforesaid valet, through some means best known to himself, managed to -muggle one of these whelps away. Upon leaving Canada he opened a barber-shop in Saratoga Springs, and it was soon after that I became possessed of old Spot.

He would take the trail of ruffed grouse and run them up a tree and stand at the bottom barking all the while until I would come and shoot the bird. Not a very sportsmanlike way of shooting I admit, but I merely relate this to sho v what the dog would do, and further how the birds would in almost every case when flushed by Sport take refuge in the pines and hemlocks. This dog was one of the finest woodcock dogs I ever shot over. He would range and beat the ground around me for about a circle of forty to sixty yards, never going beyond this limit, and nothing could escape his nose, and the moment he winded his game he would commence barking or giving to gue moderately, and the hotter the scent grew the louder and more volvent the barking, until he flushed inc bird, when his yelping was almose continuous and as if every energy was exerted in announcing the fact. It was beautiful shooting, especially in corn and where the birds were plenty, and many a royal days sport I enjoyed over him. It took a live man to follow him, and one had to be on the constant qu'e view with ever

He was all a pure liver, with long ears covered with fine ringlets of bair fine as silk, and measured from tip to tip twenty-nine inches; his body was covered with tightly curled crisp culls; a tail like a pointer's, thick at the root and coming to a string-like point. It also was covered with the same curls and hair as his body, except about four inches of the end, and that was as clean as any pointer's. He was strong as an ox. I have seen him retrieve five wild goes from the Rock River in Illinois, and bring them ashore, lifting them botily as easily as if they were ruffed grouse. He had an oil next his skin that never allowed his hair next to the ekin to become wet. Such was old Sport or old Injun Sport, and old Nigger Sport as he was familiarly called by all the boys His endurance was beyond belief unless scenand appreciated. He left no worthy sons or daughters, and died at my resi-

old Nigger sport as he was miniarly called by all the boys. His endurance was beyond belief unless seen and appreciated. He left no worthy sons or daughters, and died at my residence in Platbush, at the age of twelve years, from injuries received no one knew how. He was the pet of every one, from the aged to the children. He had traveled nearly all over the Union.

In northern New York, around Warren, Saratoga, Hamilton and all these adjoining counties, ruffed grouse, commonly called partridge, will tree invariably whether floshed by man or dog, and the common bellef in this section is, that any dog that approaches the color of our common red fox is not minded by the ruffed grouse, as they take him for a fox, and merely flirt up in the trees to escape reynard's aristocratic taste for toothsome game tid-bits, and my experience has gone a long way to prove the same as any one can easily see how much more readily a good bag can be made over a dog of a red color than any other (i. e., the ruffed grouse tree better and nearer to where flushed.). I hope this fourteen years' experience on this most lively of our game birds may lielp to prove and establish some definite result.

Batta NED.

EASTERN FIELD TRIALS CLUB.—The annual meeting of the Eastern Field Trials Club was held January 13. The following gentlemen were present: Mr. F. N. Hall, Mr. W. A. Coster, Dr. J. W. Green, Mr. Geo. T. Leach, Mr. F. R. Ryer, Mr. H. N. Munn, Mr. H. E. Hamilton, Mr. H. T. Danforth, Mr. E. A. Herzberg, Mr. J. Von Lengerke, Mr. Max Wenzel, Mr. H. W. Livingston, Mr. Jacob Pentz, Dr. I. C. Muuroe, Mr. J. Otto Donner, Mr. P. H. Morris, Mr. E. A. Spoener and Mr. T. F. Connolly, The following centlemen were unanimously elected members: Dr. H. N. Bunks, Messrs. Richard O. Cheney, Charles S. Cheney, J. H. Meyers, John C. Higgins and H. Walter Webb. The election of officers for the coming year ensued. It was decided that the members should vote as their names were called from the roll, either by ballot or by proxy. Messrs. Livingston end Specong were appointed tellers of the clution

The following are the tickets that were balloted for:

Demont, Jr., Martin van Buren, Travis van Buren.

The whole number of votes cast was seventy-eight, of which the first ticket received forty-one votes, while the last ticket received thirty-seven.

It was resolved that the finance committee should be requested to dovise a system to govern the Secretary and Tressurer in regard to the financial business of the club. The meeting then adjourned.

#### FIELD TRIALS CRITICISM.

PITTSBURGH, Pa., Jan. 7

PITTSBURGH, Pa., Jan. 7.

In my article commenting on the National Association Field Trial Rules I promised in my next to speak my mind of the bad taste of an interested field-trial reporter in trying to run Count Noble to the front and some irregularities at the trials at Vincennes. I now address myself to that duty. I may be wrong in saying that this newspaper man tried to run Count Noble to the front, but as a close observer I simply say what my impressions are from what I have seen and heard. I have of 'en heard it intimated—and I venture the assertion many sportsmen have heard the same—that the National Association Field Trials were run in the interest of certain men and strains of dogs in which they were interested, and that this newspaper man was active in running these to the front. I confess my observations for two years trials have led me to believe that the charge is not without some foundation. At Vincenness the changes were rung on Count Noble and Gladstone, Gladstone and Count Noble, and you could hardly hear anything else. Pools sold high on them, and talk loud and continued in their favor; and to add to this (as I am informed), this man at the conclusion of the heat between Count and May publicly on the field announces an offer of \$1,000 for Count Noble. I say it was in very bad taste for him to have done so. It is said he was authorized to do so by a Mr. McDonald. But suppose he was, does this fact make it appear any better? Very few thought the offer a brant fide one, and I was told a significant wink went the rounds at the time annong those present.

By the way, was it not the same McDonald who once offered \$1,500 for Gladstone? Pity he cannot make an offer where his money would change hands.

I say it was not the fair and square thing to do under the clircunstances, and in this I believe all disinterested sportsmen will agree.

Now, let me ask, what was the object of this \$1,000 offer and of the president let and heav? Was if not a next of a few contractions and the next enter the next of th

encommances, and in this I believe all disinterested sports. Now, let me ask, what was the object of this \$1,000 offer and all this persistent talk and brag? Was it not a part of a concerted plan to influence the judges and carry these dogs to the front in the "Derby" and "Pree for All"? If I did not believe it was intended to create a popular sympathy and influence and remind the judges if their awards were adverse of the "viols of wrath" to be poured upon them, then I believe the judges influence? is the question which naturally arises. I must say I believe the judges meant to do the square thing, may have gone home thinking they had, but so subtle was this influence the sequel seems to indicate they were not proof against it.

ence the sequet seems to indicate they were not proof against it.

In my previous article I claimed that Count Noble was beaten by two entries. I referred to May and Daisy Laverack. The heat between May and Count was only continued about fifteen minutes and the award made on the first fault of May; Count Noble, as far as I could learn, made several flushes, secured but one positive point, and was credited for several doubtful points. May fairly outquartered Count Noble, and her bursis of speed were immense, so much so that this reporter, in his account, was forced to say "she showed Count Noble her heels." She flushed and pointed, as Count Noble did, but refused to back, which, it was reported the judges said, if she had done the heat would have been hers. Now, I whis here to call attention to a little fact that was not noted in this account of the trials, namely, Count Noble's huddling.

judges said, it sae had other the near would have been hels. Now, I wish here to call attention to a little fact that was not noted in this account of the trials, namely, Count Noble's huddling.

After pointing he deliberately left his point to go round his birds, meanwhile May came down on them in the position he left and pointed staunchly before "Count Noble" pointed again. So apparent was this that I am informed that Whitford insulied Sanborn who overheard him saying to Short, the handler of May, at the supper table, referring to the opportunity: "There was where you made a mistake Short, you should have walked right in and flushed your bird before Count Noble secured his point again." But Short did not do this, and after a while Count Noble got his point and the judges allowed both a point. Now, I claim, considering that, that Count Noble should have been cut for staunchness first allowed a point, and this, considered in connection with May's superior speed and quartering in a heat but fifteen minutes long, proved her the superior.

But the work of Daisy. Well may your kennel editor express regret that Daisy did not have an opportunity to meet Count Noble. Her work was perfect and as brilliant as a meteor and without a mistake; continued for nearly two hours under most adverse circumstances (sore feet), and yet when it was left to the judges to make the awards, it proving impracticable to finish the trials, they give Count Noble first, Daisy second, and threw May back with three others for third, throwing Abbe W. out, a smart little Irish bitch, who had done very clerer work and won her heat, and brought in for a division of third a dog that had lost a heat.

Now why the judges concluded the heat between May Laverack and Count Noble in fifteen minutes under the circumstances related, and yet compelled Daisy Laverack to run hearly two hours with sore feet against continued blundering from the first on the part of Peepo' Day I fail to see, miess it shows that Count Noble would have been licked in a two-hour h

them twice over before the jndges would concede it. So much for the subtle influence."

Mr. Aldrich in one of your issues says "Whitford is a trickster, and Gladstone a trick dog." There is a great deal of truth in this, but this reporter calls Whitford's tricks with his dogs "nice generalship." I say, out on such judgment that will allow such tricks. If time would permit I would show how Davidson was imposed upon here. Your Eastern trials were not free from the like, and did not reflect as much credit on the judges.

reads were not the fludges.

I say, let the best dog win regardless of man or blood. Grand style may be well enough with other qualities, but give me the dog that will find and point his birds staunchly in preference to all the style imaginable in a flusher. So says

#### LEONBERG DOGS.

THE account of the Leonberg dogs in your issue of Dec.

LEONBERG DOGS.

THE account of the Leonberg dogs in your issue of Dec. 30 induces me to send you a description of several of the same breed now in my possession, to which reference was made in your valuable journal of May 9, also July 31, 1879. In February of that year I received by steamer Nederland, direct from the kennel of Count Essig, two magnificent specimens of his celebrated breed of dogs, Sultan and Para, then pups of three months old. Despite the utmost care, the voyage and change of climate proved almost fatal to the young animals. Para, considered the most promising of the two, finally succumbed and died the following May, not, however, until both he and Sultan began to show signs of that remarkable size and beauty for which the race is noted. Dog fanciers from far and near were loud in their praise and frequently visited the growing animals. Efforts were made to have them exhibited in the Philadelphia Bench Show of that year, but it was not deemed advisable to subject them to the excitement, etc., of a public exhibition.

Informed Baron Essig of Para's death, when, in the kindest manner possible, he sent me a half-brother of Sul an. Crear, sired by Marco, one of the most celebrated Leonberg dogs of Europe. Crear was eight months old when he arrived by steamer Zeeland, in July, 1879, and although not so large as Sultan, is perhaps one of the finest specimens of the canine race in America. In color and appearance he resemblea young lion, as full of courage as he is of gentleness and as affectionate as a child. Sultan is methaleness of the canine race in America. In color and appearance he resemblea young lion, as full of courage as he is of gentleness and as affectionate as a child. Sultan is methaleness of the canine race in the merican tools and appearance he resemblea young lion, as full of courage as he is of gentleness and as affectionate as a child. Sultan is much larger, standing hirty-five inches high, his head reaching nearly four feet; he is seven feet in length from tip to tip; in color he

of the house. As evidence of their sagacity, it may be mentioned that the present race of so-called St. Bernard dogs in use at the Alpine Hespices are in reality a cross between that breed and Count Essig's celebrated dogs. S mey years since, when, through accidents and an epidemic that attacked the dogs of the Hospice, the staff of life-saving brutes were reduced to a single animal, Count Essig presented the Rev. Prior Father Deloquise with two dogs from his then already celebrated kennel. From these three, two Leonberg and a Mount St. Bernard, are descended the present dogs, of whose galant services to benighted travelers amid the snow-bound fastnesses of the treacherous Alps the public are frequently made aware through the columns of the newspapers. One of these dogs was presented to the Prince of Wales when he visited the Hospice, and this dog has taken numerous prizes at the bench shows of Great Britain.

The breed varies in color, but the most valuable may be considered to be the rich brown-colored ones, shaded more darkly over the read and neck. Differing from other breeds of dogs, these animals take a much longer time to fully develop, and furthermore, require indulgent treatment in their youth, rarely attaining their full growth until they are three years of age. I am now about to import four more Leonbergs, with the idea of maintaining a complete k mel of this rare breed. My experience in the matter, however, teaches met he folly of sending for pups, as they will seldom survive the hardship of the trip, and a grown dog is not desirable to import. I therefore intend to visit Germany and accompany the dogs myself.

port. I therefore intend to their state of the dogs myself.

I might add that Sultan and Cæsar were especially invited to visit General and Mrs. Grant at their rooms at the Continental Holel, Philadelphia, December 22, 1879. The General was especially delighted, presenting each with a gold medal and promouncing them the largest and most magnificent dogs he had over seen.

W. E. Sterling.

had ever seen. New York, Jan., 1881.

Belton.—An erroneous impression seems to prevail in regard to the origin of the term Belton, as applied to setters. Beltons are so called from Belton, a place in Northumberland, and hence the word should be written with the initial letter capitalized.

What is a Cocker-Cortland, N. Y., Jan. 11—I have been very much intere-ted in the articles which have appeared in your paper on the cocker spaniel, and the proposition for the formation of a club and sat sfactory standard receives my hearty endorsement. The standard, however, ough not to be in the interest of any particular strain of this breed, but breeders all over the country should present points on their dogs for the guidance of any committee appointed, that thereby a more general standard could be established. I have been a lover of the cocker for many years and have bred them very carefully. I have now in my possession six very fine specimens. Their color is seal brown and white, and lemon and white. The father of my dogs was imported from England and from one of the best kennels. The bitch was bred in Philadelphia. I submit the points on one of my dogs as representing my strain: Tip of tail to mose, 30 in.; tail, 9§ in.; chest, 28° in.; height, 10§ in. From tip of one ear to the other, not counting feather, 16 in. Dis-

tance between centre of pupils, 3 in. From tip of nose to beginning of forehead, 33 inches. Shape of head, roundish, coat very glossy seal-brown and wh te. Color does not fade by constant exposure to sun and water. Hair along the back is about two inches long and decidedly wavy; legs and toes well feathered and tail full. For hunting qualuties in thick cover I prefer the cocker to any dog I have ever used. And as for the most part it is that kind of hunting in this State, it is a wonder to me that they have not come into more general use. As retrievers I find the cocker as intelligent and sure-scented as any and more persistent than most of dogs.

gent and sure-scented as any and more pressure.

of dogs.

Let it be understood that while I am in favor of a standard for the cocker, yet if, as one of your correspondents says, a standard already exists, I should be in favor of proving, first, that such standard fails to neet the requirements. The force of that will appear to those who have used great care in trying to retain the points in breeding of those dogs which they have procured from a standard kennel in Eugland and elsewhere.

PETE.

South Aevorth, N. H., Jan. 13.—We wish to become members of the Cocker Club and would recommend every breeder and owner of a cocker spaniel in the United States and Canada to join the club. It will be the salvation of the cocker if rightly managed. We hope all breeders will take hold and join at once and get the wheels to rolling as soon as possible.

C. B. CUMMINGS AND SON.

Not So Very Large.—I see by a late number that you call General Hancock's dog (125 pounds) "undoubtedly the large-t specimen of the canine race in the United States." Issace Benson, of this place, has a dog two years old ("General") who weighs 130 pounds, and now growing fast as ever. His mother was a St. Bernard and his father a New Foundlard. He is a tall, "rangy" fellow, and bids fair to go to 150 pounds by the time he is four years old; is very good-natured, intelligent, friendly and a good faithful watch dog. Have you any larger "two-year-olds?" A. Condersport, Pa., Jan. 10.

The article you refer to was a reprint. Many dogs go over 130 pounds in weight. We have seen within a week a Leonburg edg, ciritteen months old, said to weight 600 pounds.

Leonburg dog, eighteen months old, said to weigh 160 pounds.

Off for the South.—Mr. W. Titus sailed January 15 for Savannah. He will locate for the winter at some point in Georgia near the Florida line.

ADDED HONORS FOR ELOHO.—I see by your extract from London Field, that there is "one more" added to the list of honors won by the get of Elcho, in the winning of first by his daughter Ailleen at Manchester, England Dog Show. You will remember she is the bitch that after taking first at Cork, Ireland, 1876, was brought over to this country by her owner (who came to shoot in the Irish Rifie Team) and carried off from all aspirants the valuable silver tea set gi en by your paper as champion prize at the Centennial. She has since her return to Ireland been winner both there and in England. Yours,

Jan. 15.

CIRE FOR MANGE—Editor Forest and Stream: Incorporate equal parts of pine tar and lard or grease with gentle heat; when nearly cool thicken to consistency of paste with flour sulphur. With carbolic or laundry soap give the animal a thorough lathering; when dry, apply the ointment with hand, vigorously rubbing against the hair. Don't forget the tail, and if a housekeeper, don't you forget to chain that dog out of the house if the madame's hair is inclined to the pink tint. An old fox-hunter many years ago gave me the above specific and but once have I found the second application necessary to a cure.

Mill Springs, Ky.

Western Pennsylvania Dog and Poultry Society.—
The annual meeting of this organization was held at the City Hall, in Pittsburgh, Pa., on the evening of January 10, 1881, when the old board of officers was re-elected for the ensuing year, namely: President, Mr. Edward Gregg; Vice-President, Mr. Palmier O'Neil; Treasurer, Mr. C. A. Stevens; Secretary, Mr. C. B. Elben. Board of Directors—Messrs. Thos. Booth, Isaac R. Stayton, W. C. Myer, J. J. Snellenburg and Jenry H. Phillips.

Lost.—November 17, 1880, a Gordon setter dog; black, with tan spot over each eye; tan on jaws, legs and under tail; white on chest and each foot. Reward will be paid for return to W. Chisholm, Prospect avenue, near Westchester road, Morrisania, N. Y. Had on when lost a black leather strap collar, with buckle and ring.

#### KENNEL MANAGEMENT.

44 F. L. H.-My black cocker spaniel, eight years old, has what as what spears to me to be an attack of rhoumatism, or paralysis in his lome, affecting his hind quarters. He is very tender to the touch and cries out when patted or pressed with the hand; has lost all his liveliness and seems to have considerable difficulty in raising himself after lying down. He is in good condition, rather too much so. I am feeding sparingly on milk and porridge, and giving an occasional dose of castor oil. What do you think is the matter?
How shall I treat him? Ans. Doubtless rheumatism. Pursue same treatment, that is, low diet, exercise and occasional doses of oil, or, what is better, Epsom salts in the morning. Keep your dog where it is dry and moderately warm, and avoid exposing him in damp and wet weather.

45 C., Mass.—1. What would be the proper weight for a "heavy weight" pointer dog? 2. How high should said dog stand at the shoulders? 3. What would be the correct length of head and eurs? 4. My dog's feet are cut, resulting from hunting him on crusted snow after keeping him on the chain for about a month, shall I do for them? Ans. 1, 2 and 3. We answer your questions regarding the measurements of a large size pointer by giving those regarding the measurements of a large-size pointer by giving those of Mr. Price's celebrated Wagg: from those you can draw your own conclusions: Wagg when full grown weighed 70 lbs.; his height at shoulder was 24 ims.; length from nose to set-on of tail, 44 ims.; length of tail, 13 ims.; girth of head, 31 ins.; girth of head, 17 is ins.; girth of head, 17 is ins.; girth of head, 17 is ins.; girth of head, 17 is ins.; girth of head, 17 is ins.; length of head. from occiput to tip of nose, 10 ms.; girth of muzzle midway between eyes and tip of nose 10 ins.; length of cars 6½ ins. 4. Keep your dog's feet clean by washing with castile soap and warm water, and grease them with mutton tallow. Should the thick cuticle covering

the sole or pad have become worn down apply warm fomentations and poultices of bran and bread scalded together. Aperiant medi-cine is advisable with rest. A wire muzzle maybe worn to prevent the dog from tearing off the poultice.

A Case or Directional. - Early in December last a large liver setter was brought to this office for examination. The animal appeared to have some paralysis of the lower jaw and looked very badly. Some of the symptoms seemed to point to rabies, and as the case was an obscure one we recommended the owner to take the animal to Dr. H. J. Dancer, which was done. Some time later we received from the owner the following letter:

PATERSON, N. J., December 16.

I brought home my retriever from Dancer, last night, almost entirely well. He was a very sick doggie and I think his cure very creditable to Dancer, as the case seems to have been something quite out of the usual line. Dancer was modest enough to confess he was pretty well puzzled at first-which I liked-but he brought close observation of the patient and intelligent treatment in accordance with the symptoms to bear, with very gratifying re-

I am much obliged to you for sending me to him-no less than for your courtesy when I saw you.

At our request Dr. Dancer has prepared the following report of the case. It is very clear and deserves the careful consideration of all dog lovers and especially of medicine men. The report is as

the case. It is very clear and deserves the careful consideration of all dog lovers and especially of medicine men. The report is as follows:

On Wednesday, December S, a dog was brought to my office presenting the following symptoms: Great general enanciation; fance planched; expression anxious; tongue covered with a thick yellowish white seum, extending into pharyns; throat very tends of the winds come, extending into pharyns; throat very tends of the winds can extend the pharyns; throat very tends of the was expressional tenhors, a ropy subscription of the tends of the was expressional tenhors, a ropy subscription of the tends of the was expressional tenhors, a ropy subscription of the tends of the was expressional tenhors, a ropy subscription of the muscles of mastication and deglutition, as well as the bucking completely gone. The three latter symptoms were due to paralysis of the muscles of mastication and deglutition, as well as the bucking completely gone. The three latter symptoms were due to paralysis of the muscles of mastication and deglutition, as well as the bucking of a nervine and stimulant. It passed down readily, the weight of the material forcing the glotti down, a circumstance readily understood by any one understanding the anatomy and physiology of the part.

It passed down readily, the weight of the material forcing the glotti down, a circumstance readily understood by any one understanding the anatomy and physiology of the part.

It passed down a case is an follows: He had been taken sick four days before, showing the same symptoms, only in a milder form. They kept getting worse until they reached their present exaggerated state. He had been taken to several veterinary surgeous of repute, but all had failed to either alleviate the animal or see what was the matter with him, was nuchanged, except that the animal or see what was the matter with him, as nuchanged, except that the animal or four him that foll of a more ropy consistency. I now diagnosed diphtherns. Up to this time I was unwill

days.

ew remarks on diphtheria in the dog may not be out of
, they will at least show what a rare disease it is, and how

mace, they will at least show what a rare disease it is, and how tatal.

It has been mistaken for dumb rabies; some of the symptoms resemble those of that affection. Mr. Robertson, of England, mention out of the strength of the symptoms of the strength of the symptoms o

of fluid.

In Aug., 1875, cases similar to the above cropped out in England
In Aug., to taken at first for dumb rabics, and many animals were
killed before the true nature of the disease was discovered.

J. H. DANGER, V. S.

We may repeat here what we have previously said, that the Columbia Veterinary College, No. 217 East 34th st., this city, has kindly offered to make post mortem examinations of any specimens sent them, and to report on the same through our columns. The animal must be boxed and sent to the college by express, charges prepaid. This arrangement will admit of our treating diseases of an epidemic character in the most direct way, which may lead to the saving of many valuable animals of the same kennel.

#### KENNEL NOTES.

\* \*\* Breeders and owners of sporting dogs are invited to send memoranda of names claimed, bred, whelps, sales, etc., for insertion in this column. We make no charge for the publication of such notes.

#### NAMES CLAIMED

NAMES CLAIMED.

Bronzo-Mr. P. W. Aldrich, of Readville, Mass, claims the name of Bronze for Gordon setter dog puppy, whelped August 11, 1880, out of Nellie Horton by Doane's Yom.

#### RANGE AND GALLERY

Conlin's Gallery, 1,222 Broadway, N. Y.—The first week's competition, ending 15th inst., of the pistol shooting fournament for the champiouship of New York for year 1881 was in every way a success. After a very close contest, in which the foremost shots of the city participated, Mr. Wm. M. Chase won the championship of string measurement shooting by the following extraordinary score, ten shots at each distance :

10 yards. Total measurement, 5 2-8 inches 15 " " " 6 2-3 " 6 2-8 9 3-8 Total....

The Coulin's ready measurement paper target was used, by which each shot can be measured from centre of bullseye to center of shots to within the sixteenth part of an inch. Judging by the interest taken in the first competition and the

large number of expert pistol shots competing for the honors, this tournament promised to be the most successful and popular indoor match ever inaugurated. Col. H. (4. Litchfield, Col. J. Dunn, H.W. Wickham, Hon. Sherman Smith, P. Lorillard, Jr., H. J. Brown, D. A. Davis, T. Fitz, J. B. Miller, Capt. L. C. Bruce, W. C. Southwick, J. Medhurst, R. S. Gifford, G. Work and many more gentlemen whose names are equally familiar to the shooting public are taking an active interest. The winner of the title of champion will win only by superior skill and nerve, and it is very probable that his victory will be earned by a very hard and close struggle, The plan of the tournament is a new one and is acknowledged to be a perfect method for determining who can justly claim the honors of being the champion pistol shot of the metropolis.

The tournament is held for ten weeks, and the championship for each style of pistol shooting, such as string measurement, word shooting, bullet shooting, fancy shots, etc., etc., is shot for during a specified week of the tournament; the winner of the most championships to be declared the champion. A competitor win-ting a championship of any of the styles of shooting to be presented with a gold badge. In case he wins an additional cham-pionship he will be presented with a gold bar, suitably inscribed, which can be appended to his badge; and the competitor winning accord place to be presented with a gold expert pistol shot badge. During the second of the tournament, January 17 to January 22, inclusive of both dates, the championship of bullet shooting will be contested for. The competitions are open to all comers.

JAMES S. CONLIN.

Boston, Mass., Jan. 15. — A new temporary subscription handicap match was opened at Walnut Hill to-day, and it will be handresp match was opened at wanter lift occupy, and it will be run until the new programme of matches has been perfected. A perfect winter day prevailed, clear, quite cold, with a cloudless sky and a strong north wind from 11 to 12 o'clock, hard to control and vacillating. Large scores were not in order, although good and vacuating. Large scores were not in order, attentinging good results were obtained off-hand at 200 yards on the ring target. The spectators were numerous, but the attendance of riflemen was smaller than usual, most of those present being the new Board of Directors elected at the last annual meeting. The conditions for the new match on the Massachusetts target call for ten rounds, three scores to win. The summary gives only the best scores made: Handicap Match.

THE S. S. YOSEMITE.

THE S. S. YOSEMITE.

THE Yosemilo is the second largest steam yacht built in America
In her salient features she represents at last a new depar
ture. The everlasting flare-sided cockle shell model, the high
blige, light fart and low freeboard which have so long ruled as the
highest attainable among the modelers of steam yachts have at
last heen discarded and something more fit to the work has taken
their place. Like our sailing fleet, our steamers have suffered
from the prevalence of river and smooth water features long after
the yachts had been put to service in reaches and stretches comparatively open and demanding sea going qualities in no small
degree. Mr. Belden's new steamer is in reality the first of the
kind which can fairly be classed as a sea-going steam yacht, and
even in her some points of the able cruierr have been neglected
more than they ought to in view of her small bunker capacity. In
noting the Yosemite as the first sea-going atmoser in the fleet we

see not overlooking the Edgar Stuart, the America, the Henriettle, es-Shaughraum, the Bertyane and the Vidette. The latter, though a field and careful and the reason of the product of th

sail area is indispensable in a cruiser, and we think this can be supplied to vessels of the Corsair class without materially inter-

sau area is immspensable in a cruiser, and we think this can be supplied to vessels of the Corsair class without materially intertions of the control of t

sharp cutrance, and a good clearance, so that with small beam and a liberal supply of power, a high rate of speed aught to be expected.

The Yosemite is built of iron according to Lloyd's Rules, and in some respecte exceeds the requirements of the surveyors, as expense was less a consideration than a rigid structure to take the thrists and vibration of powerful machinery for long voyages without danger of straining or shaking rivers losse. The workman could hardly of straining or shaking rivers losse. The workman could hardly be imagined. She is 18sft, over all; 18ft, on deek; 17ott, on load line; 24ft, beam; depth of hold, 12ft, and draft at 12ft; draft midslips, 94t, and forward, 84ft. The stemhead, spin out into a stump bowsprit, is 18ft outboard. The engines are of the tripple compound type, similar to those of the Britannie of the White Star Line. Two low pressure originalers of 40in, and a high pressure of 248in. Stroke, 33in, whice), 11ft, diameter, with a pitch of 17ft. Two cylindrical boilers, each 12ft, in diameter and 11th long, the shells being sign, thek. Height of stack, 25ft., with 44ft, diameter. Engine latch, 1986ft, is boiler hatch, 1986ft, with 41ft diameter. Engine latch, 1986ft, is boiler hatch, 1986ft, two substitutes of the substitute of the subst

is in a single forging. Keel plate, %; garboards, 9-16th; side plating, 4 and 7-16th; the plates diminishing alightly at the vessel's ends. Middle line keelson 10th; stiffened with single irous \$1,35%, Deck beems of bulb iron \$8,%, with angle irons \$2,82,85-16th. Stringer plates are worked over the beam ends and second home to the outside plating, being secured to the latter by short lengths of angle iron and having a continuous angle iron fayed against the reverse frames on the inside. The plates are 20x%. The dock is covered with lighthiron. Dismeter of rudder head in, the rudder being a forged frame with plating each side. The bull is further stilled by diagonal bracing from 6th etc. The bull is further stilled by diagonal bracing from 6th the accommodations below are both richly and elegantly furnished, besides being well arranged, a matter of no pract difficulty is so large a vessel. The companion leads down from the smoking room or chart house just forward of the mainmast, and land you into a sort of anti-chamber to the main saloon, the landing, or in naval parlance the "country,"

is hansomely finished in true Eastlake. State rooms, 8x5ft., open into this steerage or country, one on each side. Sliding doors, paneled in malogany, chony, maple and ground glass, lead into the main saloon, 20x20ft., a most handsome specimen of the joiner's art, firsh in color, yet well blended and harmonous in effective their quota to the delightful and almost surprising pleasure of the eye. Overlead the deck is finished in ash burn panels, with trimmings of satin wood, amaranth and holity. The mainmast is encased in panel work to correspond with the rest, and a grand buffet, broad looking-glasses and sumptious furniture lend enchantment, comfort and luxury to these quarters. A passage of 34 ft. long and 3 ft, wide leads aft from the saloon, and into it the various staterooms open. On 14 ft. long and 6 ft. wide. This and all the other rooms are lighted by 12 in. air ports, the framing being nickel plated on the interior. Further aft are located two staterooms for guests, 9x7, with lower betths fixed and upper berths ready to let down on the Pullman-sleeping-car principle. Beyond these 1s the retiring room and a nursery for children across the stern. On the port side the arrangement is similar, a servant's room taking the place of the retiring room. Forward of the accommodations for passengers we find on the starboard eide, besides pranticy be-quarters for his assistants in a room for the chorungeer, is hansomely finished in true Eastlake.

boiler space. Just forward of these and located amidabips is the galley with a laundry attached, and next to it two small rooms for the oilers and cools. Then the captain's quarters accessible from the pilot house also, and a couple of staterooms for the oilers and cools. Then the captain's quarters accessible from the pilot house also, and a couple of staterooms for the oileres, and their mess room 10x6 ft. The forecastic, or rather "berth deek," is fitted up for a crew of fourteen well ventilated by four ports in the sade, and it by four deek lights above. The passageway on the proposed of the machinery and forward has been devoted to use as a "promoundo" dring bad weather. Twice, and will be four the promoundo" dring bad weather. Twice, and will be used as a "promoundo" dring bad weather. Twice, and will be used as a "promoundo" dring bad weather. TORONTO CANOE CLUE.—A new club under this title has been formed in Toronto, Out., with the following officers: commoders, J. W. Bridgman; Vice-Commodors, Mr. Nicholson; Secretary, Robt. Tyson; Treasurer, E. M. Barrett. The next meeting is called for February.

Nob. Tyson; Treasurer, E. M. Barrett. The next meeting is called for February?

"LR YACHT."—Our esteemed French contemporary comes to use in a new drees and enlarged in its pages. We congratulate our French consins upon the possession of an enterprising organ of the sport which is a credit to its management and speaks volumes for the increasing popularity of yachting in La Belle France.

The Perrins Syerem.—One Dent, "late commanding steamer Anthracite," writes to the London Field that "of the many visitors in the United States (both nautical and mechanical), all were convinced that in a vessel of the same dimensions and the same indicated horse-power, no other engines and boilers could compete with those of the Anthracite." For this brainless statement the worthy Dent draws upon his imagination. It is out of whole cloth. No practical Americans are prepared to give preference to a system which, by the patentee's own showing, is more costly, heavier, requires more space, shows more wear and tear and is less economical than any other system in general use, including the ordinary tabular boiler and compound engine. What Dent states in the Field is a libel upon American engineers, not one of whom has indoned the Anthracite to the exclusion of all other systems. A literature of the Anthracite to the exclusion of all other systems. A convention of the contract that any one deal exception of the Anthracite to the exclusion of all other systems. A literature of the Anthracite to the exclusion of all other systems.

would be to their own interest.

CHICAGO ICE YACHTS.—A correspondent writes that a good deal of excitement is being created by a number of ice yachts on the lake, and that the fleet is growing in numbers.

VALUABLE EXPREMIMENTS.—Mr. Dixon Kemp has been selected by the Marquis of Exter to conduct an exhaustive series of experiments on models of wave lines and other forms, also of deep and narrow and wide and shallow models with equal displacement. These experiments will probably contribute more important and definite information on the subject of naval design than anything Yt undertaken. We await the results with the greatest interest.

NATIONAL YACHT (UDB.—At the annual election in Jersey City James King was elected Commodore, William Fortune, Vice-Commodore and T. H. Gibson, Corresponding Secretary.

WAN LOST.—Una gale off the coast, Jan. 5, the Nokomis lost a

modore and T. H. Gibson, Corresponding Secretary.

Max Lost.—In a gale off the coast, Jan. 5, the Nokomis lost a man overboard. The schooner was bound South with Mr. Paddle-ford on board. When in lat. \$2 deg. 55 min. N. and lon. 78 deg. 56 min. W. she took a gale from S. W. and was "knocked down." Before steerage way could be given a heavy sea boarded her forward, carried away flying jib boom and two men engaged in securing the sail. The cutter was seent after them and life buoys thrown to the men. One was research the othersank. The Nokomis illustrated, in her violent behavior and desire to "stand on end," the danger and discomfort of our flat-bottom style of building, and the Nokomis is one of the least-objectionable on that score in the fleet. There is danger in going to sea in yackits which can be knocked down, with doubts as to their righting. A few disasters will be needed to sharpen the intellects of many to comprehend the necessities of a crusing yacht.

CHALLENGE.—A foreign sloop, if over 30 tons, is entitled to challenge for the American Cup. See recent dates of this paper.

F. P. W.; Orange, N. J.—The gun is highly spoken of, and the only objection urged against its action is that it is inconvenient. There is some wear, but it is practically insignificant,

B., Belleville,—Mischief, 67.5 ft. over all; 61 ft. on w. l.; 19.9 ft. extreme beam; 7.75 ft. depth; draft 5.8. Hoist about 58 ft. Gracic, 79.10 ft. over all; 70.8 ft. on w. l.; 21.5 ft. beam and 6.7 ft. depth with 6.5 ft. draft.

T. S. Van Dyke, the favorite contributor to our columns on topics connected with the use of the hunting ritle, is to publish a book on the whole subject of game shooting, and uniting as he does a varied experience with an attractive and instructive method of writing, his book cannot but be useful and interesting.

Pamlico, Baltimore.—Kemp's Yacht Designing will serve your purpose. The principles underlying design are the same, of course,

for English and American yachts. You need not be bound by the lines of English yachts unless you choose. Nothing else of the kind published. Price \$15. Brentanos', Union Square, N. Y., or can send it to you upon receipt of price.

W. R. W.—The yacht to accommodate six in cabin and have two staterooms would have to be 50 ft. water line. Hefer you to any of our advertisers as the best builders. No other works published but those of Mr. Kemp which can be recommended. A work on ship building and Lloyd's Register of yachts would meet your wants. Do not know price asked for Polynia. Write to Mr. Jas. G. Bennett, care *Herald*,

A READER, Laconia, N. H .- I have a Newfoundland bitch which was served six days ago; the dog has been with her all the tune since until to-day. She escaped from the stable and was served by since until to-day. She escaped from the stable and was served by a cur. Can you tell me if it is possible for her to have puppies by the last dog, or if it can injure those of the first dog? it is possible that she may have pupples by both dogs, in which case each lot will be distinct.

N. R. A .- At the first intimation that he had been chosen as President of the National Ride Association Mr. E. A. Buck sent a declination on the ground that he would be out of town durng a large part of the year. Lieut. A. H. Weston, the very efficient Assistant Secretary, was induced to withdraw his resignation, and he will continue to fulfill his duties as usual. Among the life members chosen were Maj. E. A. McAlpin, H. R. Russell, J. W. Mangam and Ralph Troutman. A special meeting of the Directors on the 20th considered the question of the Presidency,

Vulp, New York City.—1. This morning upon visiting my litter of mastiff puppies I found one of them much swellen about the right side of the face. The swelling, which has come on within the last twenty-four hours, is quite hard and extends from the eye which is closed, to the lower jaw. The little fellow presents a very ludicrous appearance as he totters about, his head being nearly double its former size. He seems, however, to experience no pain and nurses as greedily as ever. My first impression was that the pup was afflicted with mumps, but the fact that he is the only sufforer seems somewhat to discredit this supposition. 2. Has such a case ever been heard of before? Ans. I. The swelling is either inflammation of the glands, or the formation of a chronic abscess; impossible to say which without seeing the youngster. Show him to a skillful surgeon in your vicinity. 2. Yes.

C. E. W., Nashua, N. H.-1. My puppy four months old passes worms. They are whitish in color, about three-quarters of an inch in length and flat in shape. 2. He also has a bunch under his lower jaw. It has been coming for four days and is nearly half as large as a hen's egg. Ans. 1. It is the maw worm that you have seen your dog pass with his excrement. The maw worm is the least harmful of the three most common. Give santonine from two to four grains, after keeping all food from the dog for ten hours. Follow later with olive, or castor oil. 2. From description we would term the swelling, or lump, goitre. It is especially It is especially a disease of old dogs, although it occurs in ill-fed and scrofnloud The treatment consists in applying the following ointment daily till the swelling disappears. Give cod liver oil in dosos of a teaspoonful twice a day for a month or two, or, in same way, iodide of potassium, in doses from two to four grains, in water, or decoction of sarsaparilla. Ointment: Take foldide of potassium, one drachm; lard, seven drachms. Mix and apply as directed

-Any subscriber or reader of Forest and Stream in want of any kind of carpetings, oil cloths, rugs, etc., etc., can be sure of fair treatment at the hands of John H. Pray. Sons & Co., Boston. Call or correspond with them, and get their prices before buying. It will pay you to try them .- [Adv.

FOREST AND STREAM PUBLISHING COMPANY,

New York City, N. Y.

—Scarocly less rare than a black tulip, a redhaired negro, or a four-leaved shamrock, is the amazing natural curiosity now being exhibited in the Berlin Aquarium, to the ma terial augmentation of that admirable institution's daily receipts. A milk-white raven, with pale pink eyes and red legs, received admission a week ago to the great central aviary in which se was observed but the receipt of

—The cricket field, the hunting field, the race course, the racket court, and the arona of athletic sports, says the London Lancet, all number a good many maimed, or even killed, among their votaries, but the undoubted value of athletic exercises to the individual and the nation more than counterbalances the occasional mishaps which must inevitably occur. While it is advisable to avoid anything approaching to brutality in our pastimes, it is equally necessary not to encourage effeminacy, especially in this age, when manufacturers of "gentlemen's corsets" flaunt their advertisements in the public press, and men of the modern æsthetic school write maudlin poems in praise of each other. There are many pastimes infinitely more ruinous to health than we have enumerated above. Dancing night after night in crowded non-ventilated rooms is among the most unwholesome and dangerous practices of modern life, and kills infinitely more persons (th ugh more indirectly) than either the "Rugby" or the "Association rules. The men who are killed by sitting in public houses or (what is very much the same thing) in club houses, playing billiards or cards till the small hours, and drisking "B." and "S." are not held up as warnings.

#### FOREST AND STREAM.

NEW YORK, THURSDAY, JANUARY 27, 1881.

THE TIDE OF TRAVEL is setting in to the equator. Many scores of tourists are on their way to Florida in pursuit of warmth, health and sport.

A LETTER PUBLISHED in our game columns shows how the proposed "refrigerator amendment" is regarded in the interior of the State.

The Sportsmen's Association of Western Pennsylvania reports a roll of nearly 200 members, that number being the limit allowed, a sound financial condition and increasing popularity.

ularity.

The officers elected to serve during the present year are: President, Robert Dalzell; Vice-Presidents, D. C. Phillips, F. H. Kennedy, S. B. Sweitzer; Treasurer, W. C. Macrum; Secretary, J. C. Brown; Naturalist, H. S. A. Stewart; Board of Directors, Ormsly Phillips, R. C. Gray, Howard Hartley, W. T. Dunn; W. C. Taylor; Election Committee, John Calwell, Jr., C. A. Carpenter, Chas. Hays, Edward Gregg, W. A. Melntosh, Henry Holdship, Benj. Bakewell

THE MIXTURE of sand or pulverized glass with gunpowder, in order to separate the grains of the latter and thereby make its transportation safer, is nothing new. It was tried as far back as 1835 by Piobert, in 1841 by Fadeiff, and again in 1855 by Capt. Riley and by Gale of England. The man who is alleged to have been exhibiting this device to "scientific and practical men in Jersey City," must have talked very loud to have made them believe that it was a "recent English invention," or else the company was not so "scientific and practical" after all.

THE COCKER CLUB.—We have received the names of seventy-five persons who have expressed their desire to join the proposed Cocker Club, and in accordance with the plan already stated, we send circulars this week to the members calling for the selection of a committee to perfect the organlzation of the Club. It gives us much satisfaction to congratulate the owners and breeders of cockers upon the promising condition of affairs and the assured success of the Cocker Club.

# GEN. HANCOCK AND RIFLE PRAC-

THE acceptance of the Presidency of the National Rifle Association by Gen. Winfield Scott Honcock puts a man with rare executive ability in a place where he can have a full exercise of it. The election was unanimous, and the General can rest assured that that feeling is shared by every member of the National Rifle Association. He is not an untried man, and for one holding a position of so many and such important responsibilities, he has found time to give considerable attention to the matter of rifle practice. He it was, first of all army officers holding commanding posts. who appreciated the fact that the volunteers were far ahead of the regulars in the matter of skill with the rifle. When the fact became apparent there was a frank acknowledgment of it, and Gen. Hancock instituted prizes and in various other ways set about supplying the deficiency which he saw existing among the men under him. The other departments fell into line, and with the establishment of the Hilton trophy, which might without impropriety, and with an entire regard for fact, be styled the Hancock trophy, the new president completed an effective plan of getting rifle practice on a firm basis in the army.

Gen. Hancock, too, will command the entire confidence of every class of the shooting men. Though an army man all through his life, he is thoroughly aware of the fact that rifleshooting is far more than a mere branch of the soldier's duties. He is a man of society and the world, and will appreciate fully what is being done to build up rifle practice throughout the country as a gentlemanly sport, free from all tendency toward gambling and questionable practices. It is entirely proper that the head of the National Rifle Association should be an army officer of high rank. The British National Rifle Association is presided over by the Commander-in-Chief of the British armies, and under the Duke of Cambridge the small bore men have had no real cause of complaint that their wants were not looked after. Ample provision is made in the Wimbledon programme for the shooting of any-rifle, all-comers matches, and Gen. Hancock will see to it that the division of the work of the N. R. A. is well looked after. Under Gen. Hancock the association may become truly national in extent, in influence and in power to unify and systematize rifle shooting, as well as in name. He has assumed the position with a very clear idea of the work to be undertaken, and he has declared his conviction that the association can be built up to a position of general respect, and be made a valuable adjunct to the army and its methods. Under such a presiding officer there should be no difficulty experienced in securing a liberal prize list, and with this the entry lists soon fill up; and while we are not over sanguine of ever seeing anything more than sudden rushes to Creedmoor solong as it remains isolated as at present, we do expect to see the year 1881 make a showing in target practice as fine as any of the preceding ten-years of the association's existence. The desire to enjoy the rivalry of competition before the bulls is as strong as it ever was, but in very few cases is it strong enough to induce men to make a toil of a pleasure, and sacrifice a day for an hour, to give up to riding and waiting about in railroad depots above five hours to secure an hour's prac-There has been too much of the laissez tice on the range. faire policy in the past, and with attention and zeal in place of neglect and apathy great results may confidently be

In Boston the Walnut Hill range shooters have shown an appreciation of things by the selection of L. L. Hubbard for the Presidency and A. C. Gould for the Treasuryship of the Mass. Rife Association. They are men well versed in the technicalities of rifle shooting, and it is certain that under them the wants of the actual shooters will be looked after; and Boston, if such a thing were within the probabilities, may be expected to surpass her own champion record.

Transporting Young Fish Eggs.—The letter from Mr. von dem Borne in our last issue on the subject of his experiments in transporting fish eggs which had never been in water, in the bladder of an animal, is worthy the attention of our fishculturists. If this can be done with eggs which are as delicate as those of the cod and shad or other floating eggs it will prove of great practical value.

#### THE MAINE SYSTEM.

ONE year ago the plan of making the Maine Commissioners of Fisheries Commissioner of Game also was an untried experiment. It is such no longer. The wisdom of the system and its efficiency are amply attested in the detailed report just published by Mesers. Stillwell and Smith. Portions of the report are published elsewhere. As the record of the first year's working of the new system it is worth a careful study.

There were serious obstacles in the way of the Commissioners. In the first place there was no adequate provision of funds to enable them to do the work as it ought to have been done. As soon as it became known that there were two officials whose duty it was to prosecute violators of the game law, a flood of complaints poured in upon the Commissioners from every part of the State. To attend to all of these separate complaints the writers of the report tell us was beyond their power, and the result was an imputation of blame where it did not properly belong.

But hampered as the work was, the accomplishment s most gratifying and creditable and full of promise for the future. The Commissioners have really done something. Men who have killed game out of season have been prosecuted and made to pay their fines. Others, who saw that the prosecutors meant serious work, came forward and paid their fines of their own accord; other cases are now on the docket awaiting their turn.

These prosecutions mean much more than the punishment of these individual violators. They are showing the people throughout the State that the game laws mean something and are not to be ignored. It is for this reason that we say that this first report of Game Commissioners of Maine is full of promise for the future.

If a system of game protection, whereby the laws are enforced by game wardens and a game commission, works well in Maine, why will not the same system work equally well in other States?

Michean Sportsmen's Association.—The special dispatch to the Forest and Stream, published in another column, reports a large convention at Lansing, and a meeting, which like previous assemblies of the Michigan sportsmen is characterized by a spirit of earnest work. The report of the papers read and the transactions of the society are necessarily too brief to warrant extended comment upon them now. We shall publish the proceedings at length hereafter, and meanwhile congratulate the people of Michigan that there are among them a number of sportsmen so intelligently and faithfully endeavoring to conserve the fish and game interests of the State.

The Present Demand upon the columns of the Forest and Streem is allogether unparalleled in the history of the paper. To do justice to the paper and to i's friends it has become absolutely imperative to make some provision where, by the capacity of the pages shall be increased. Next week, therefore, the first number of Volume Sixteen will appear with a change of type in several departments. This change will be equivalent to an addition of two pages to the paper, and with the increased facilities thus afforded it is hoped that the value of the Forest and Stream may be proportionately enhanced.

Our Alaska Letters.—The map which we republish with the "Log of the Favorite," is the first chart of that part of the Alsaka coast ever made. It is due to the writer of of these articles, Capt. L. A. Beardslee, of the United States Navy, to note here the wide interest awakened by his letters to Forest and Stream. (apt. Beardslee is to day the best informed man on Alaska affairs in the country, and his descriptions of the land, its products, fauna and inhabitants, are the most vivid and truthful pictures of that country to be found in print. The series, of which the present paper is the fourth, was begun in our issue of Nov. 25, with the account of the Chilcats and Chilcoots. It will extend through one or two more numbers, the concluding chapters being fully equal in interest and information to those already published.

Among those who called at the office of the Forest and Steeam last week was Hon. Jno. S. Wise, of Virginia,

# The Sportsman Courist.

THE LOG OF THE FAVORITE, NO. 8.

THE LOG OF THE FAVORITE, AV. 8.

GLACIER BAY, CROSS SOUND, AUG. 20, 1880.

WILESS you are provided with better charts of Alaska waters than I am, I am sure that you will be unable to trace out the locality from which I date this letter; for on all of mine an unbroken coast-line (dotted on some to show that the region is misurveyed) occurs when we have found, well hidden by over-lapping islands, the entrance to a great hay, through which we are now steaming at full speed, having spent the day in exploration and surveying. I inclose a sketch which embodies our results, and on it you will find names, as yet in their infancy; for the places have been christened by us within the last forty-eight hours—"Glacier Bay," "Mud Bay," "Sherman Island," "Wiloughly Cove" and others.

ay," 'Mud Bay," 'Sherman lower, ove" and others.

Through this bay we have steamed over thirty miles on through this bay we have steamed over thirty miles on Cove" and others.

Through this bay we have steamed over thirty miles on a northerly course, and found deep blue water; and have not found any hidden dangers which would prevent a steam vessel many times greater than the Favorite from safely traversing it; and when finally deterred from further progress northward by threatening wenther, we reluctantly furned to retrace our joute, we had good reason to believe that we could have added ten or twelve miles to our journey toward the Fole, for the local pilots who were with us—"Dick." Wiloughly and Indians—dampened our ardor for a cance trip to the head of the bay by the assurance, that its distance was fully three hours—the ardor being a natural result from the glowing descriptions they gave of the magnificent seenery which there existed, of mountain peaks, and immense canyons through which, from all directions, tremendous glaeiers converged and pushed their way over precipies into the sea.

We were lobt to leave these wonders unseen, but a dense fog bank, born evidently of the glaciers, hung over the north-

mense caryons inrough which, from all directions, tremendous glaciers converged and pushed their way over precipiezes into the sea.

We were both to leave these wonders unseen, but a dense fog bank, born evidently of the glaciers, lung over the northera horizon, shutting in all peaks and landscape, and possibilities of contact with the floes and bergs which resulted from the glaciers, rendered it imprudent to visit them in the Favorite, and probabilities amounting to certainties of a chilly, uncomfortable trip of perlaps twelve hours in open canoes made us hesitate and give up.

The curtains of ice, which through force of gravity detach themselves from the advacing glaciers, are the icebergs and floes which give to ley Straits its name.

The cutrains of ice, which through force of gravity detach themselves from the advacing glaciers, are the icebergs and floes which give to ley Straits its name.

The cutrains of ice, which through force of gravity detach themselves from the advacing glaciers, are the icebergs and floes which give to ley Straits its name.

The cutrains of ice, which through force of gravity detach themselves from the advacing glaciers, are the icebergs and floes which layed the summer of the layer is apparently a point on the coast; the surface of the bay is apparently a point on the coast; the surface of the bay is apparently a point on the coast; the surface of the bay is sured us that several of them were rich in silver and gelena. Reports and specimens of ore brought by the Indians to Sitka, were the charms which lad drawn him from the more congenial atmosphere of the miner's camps and dance houses at Sitka to thee-remote and lonely regions, and he seemed to feel that his venturescene trip had met with full reward; to use his own language, "Yee struck it rich this time, you bet." I hope he has, but Dick has "struck it "in the same manner very often, yet is still "sparring for a stake."

He was very positive as to the existence of these deposits, and wanted us to land on some of the islands,

tremendous difference in the proportional quantity to saverand gold in a ton of rock as measured by the ideas of the finders, by the result obtained from an "assay ton," and the crushing of a real ton.

We had other things to attend to so we left the islands unexplored and, wishing blick's luck to prove true, kept on to the northward till we reached on the western shore the month of an inlet at the head of which we hoped to find a powerful chief who with his family made here his summer home, and to hold with him some little converse with the object of completing the sowing of good seed which we had begin the day before in interview with Kalt-hoo-doo sak, and other Hoonal chiefs, from which seed we hoped for a larvest in the shape of friendly and harmonious relations between the Indians and white men, and the prevention of a threatened war between the Hoonals and Sim-sims. We failed, however, to find this ranch, for as we turned into the mouth of the inlet the water shouled suddenly, and not over a hundred yards from where the last east of the lead gave sixteen fathoms we struck as many fect. "Stop her," and "Back her," were the orders, but before headway ceased the leadsman's nervous shout "Eleven fect, sir," showed us that the keel of the Favorite was in a very undesirable proximity to a hard bottom. As soon as deepening water showed a safe distance a boat was lowered, and the hydrographer started in search of a channel through the bar to the commodious bay we saw beyond.

He found a channel deep enough for usor a larger steamer, but before it could be examined sufficiently to justify us in attempting its rather tortuous course the dense bank to the northward began to advance toward us, shutting in point after point, and it was thought improduct to delay, so the boat was recalled and we started this search of a channel through and are now running in hopes of reaching a safe harbor for the night, and to-morrow, our business with the Hoonahs in-

We outspeeded the fog-bank, dodged the icebergs and cut through the whirlpools safely, and are now safely ensensed in a sheltered cove just to the eastward of Point Adolphus, which to-night will be our sentry and protect us from the intrusion of icebergs and strong winds.

We have supped royally on the fins of freshly-caught halibut and on the broiled belies of salmon, and we have sat comfortably for two hours, smoking and discussing the events of to-day and the plans for to-morrow.

Upon one thing we are all agreed, and that is that compared with that of the rest of Southeast Alaska the scenery of Glacker Bay is a failure, with but one redeeming point, and that is that in seeing what there is of it we have almost a monopoly.

oly.

There are no high hills or peaks bordering its coast line,

and such hillocks as do exist are bleak and barren stretches of rock and sand.

of rock and sond.

For and there in a gulch, a few stunted hemlocks have spring up and sarvived, through the shelter they have had from the tey blasts, which, starting among the canyons of the Fairweather Alps, have swept over the glaciers and partaken of their temperature. Elsewhere no trees are seen. We saw a few croppings of white stone and hastily pronounced them quantz, but on this point Dick soon undeceived us; the had been there, and the stone was marble—about as useful in Alaska as it might have been to Robinson Crusoe. We did not meet a canoe or see any sign of animal life, except a few shags and white-winged coots and now and then a flock of swimming snips.

cept a tew snags and white-winged coots and now and men a flock of swimming snipe.

It was dull work, and the dullness was intensified by the feeling that perhaps we had made a mistake in abandoning our exploration when we did. The fog bank which had secured us did not look balf so formidable when we found we could outrun it, and when presently it began evidently to recould outful it, and when presently it began evidently to re-cede and hitherto invisible points came again into view, we who had been too prudent were most unmercifully chaffed by our more adventurous—but in no way responsible for the safety of the bost—companions. The advance into a new country had at least excitement; our retreat over our old tracks none

acks none. I think that for the first time in my life I had felt a little I think that for the first time in my life I had felt a little of the sensation which such discoverers as Vancouver, Behrings and others must have felt strongly or they would never, in their old-time ships, have stuck to their work. There is a novel sensation in seeing what others have not seen and in treading where others have not tred.

and in reasing where others have not troot.

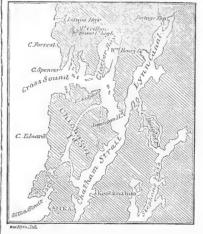

This sensation, though, was to us somewhat reduced when we learned from the Indians that we were not, as we supposed, the first white men who had penetrated the hay.

They told us of two who came before the salmon began to run, and in a canne. They described these men and I gained

They tota us or two who came control these men and I gained no idea as to their identity; they described their habits and I think I can place them. Unless greatly mistaken, the man who "lived on the glaciers" was Professor John Muir, the State Geologist of California, and his companion the Rev. S. Hall Young, a missionary who does not confine his mission work within the houndaries of comfort and civilization.

I have those two made a long cance trip to some hitherto

within the boundaries of comfort and civilization. I know these two made a long cance trip to some hitherto unknown region—Muir in search of his favorite game, the glacier, and Young to spread the Gospel teachings. And in thus recognizing our predecessors I add to the weight of our regret that we did not stay longer, go further and see more, and we feelthat we have lost a grand opportunity by fulling to visit the head of Glacier Bay.

In one of his lectures in San Francisco, Muir describes In one of his lectures in San Francisco, Muir describes vividly certain grand glaciers which he had visited upon a canoe voyage, which having their origin amid the canyons of the Fairweather Alps, found their way to the sea in an unaknown bay. One of them was over three seven wide at the mouth and moved a foot per hour, discharging leckergs over a wall into the sea; this ice river is about one mile deep. In our journey of over seven hunred miles in a canoe, fully one lundred were made by pushing our way through waters litterally crowded with ice. It was a strange sight to see ice rivers flowing through valveys lined with evergreens and bushes loaded with bright berries hanging over the frozen stream." And further: am." And further:
One side of this mighty river was filled with deep chasms

and yawning abysses; on the other there was used a smooth and gentle slope, on which, starring from the sea, five hundred horsenen abreast could, without drawing rein, gallop fifty miles without an obbstacle."

miles without an obbstacle." If his was the party who preceded us, and the above describes what they did and we didn't see, we can but mourn forever over our lost opportunities. If it be ever again my good fortune to visit Glacier Bay, I shall not leave until I have seen the whole of it.

In the same lecture quoted the Professor attributes to glacial action the erosion of the shore line of Southeastern

glacial action the crosion of the shore line of Southeastern Alasia. I yield to his superior knowledge, and accept this view as a substitute for myown, as given'in my last, that this cutting through was due to tides and currents. A glacier a mile deep and seven miles wide, advancing at the rate of a foot an hour, would have power to cut most anything. I am getting very anxious and impatient to see one of these ice-rivers, as are all of my companions, excepting the Doctor, who having been one of the secort to the pioneer party that last spring went up to Chilcat, has, while passing through Lynn Canals, seen so many of them that he now affects to be blase on the subject, and is evidently set up with his superior knowledge, and affects to be an authority.

blase on the subject, and is evidently set up with his superior knowledge, and affects to be an authority.

But while I am thus discoursing on glaciers, of which as yet I know nothing but by hearsay, my log is getting far behind hand. I will bring it up to date, and turn in. To recapitulate, we left Sitka on the 14th, remained at anchor in Peril Straits until 16th, reached Kotcosok on that day; left there on 17th, and arrived at Komtokkom that evening, and the next morning undertook to stand over to a large island

about ten miles distant, on which was encamped the most powerful chief of the Hoo-nahis; but a fresh southeaster got up a little more sea than was healthy for a small boat, and as usand with a southeaster the weather was thick and nasty. So after a fair try, we put back, and about moon again anchored in Kom-tok-kon, and whiled away a day in hallbut fishing, surveying, visiting Indians, and for the first time since starting on the trip, with a little shooting.

Along the edge of the advancing idde, where its blue waters encountered the muddy outset from several streams which flowed into the bay, there was a line of kelp over which the phalaropes (swimming snipe) hovered in myriads, and from these flocks a goodly number stayed with us after each discharge of our breech-loaders, and gave us promise of a delicious breakfast, a promise though to the eye alone, for they proved fishy and tough. And a few ducks rewarded us for a trip to the head of the bay, where the waters were black with them feeding; but as with the snipe, they were fairer to look upon than to eat—all were fishy.

August 19—Bright, clear northwest weather, and at 6 A. m. we started for Tschitch Island, where we were to meet Kahchoo-doo-sak, the "Hyas Ciotche Tyhee" of the Hoonahs. Two hours' run carried us over to the island, which is about seven miles long and three wide, and is reported to contain rich deposits of silver. I cannot souch for that, but do know that it is of the rock in which silver is generally found—mamely, granite. On the eastern side there is a harbor, which we surveyed and named "Willoughby Cove," after the prospector of that name, who is the first white man who has made his home among the Hoo-nah Indians, and who by his conduct among them has done much toward changing their feelings of hestility to friendship.

The island, which is already of considerable importance, it being the summer home of the head chief of the Hoo-nahs, and who has made his home among the Hoo-nah Indians, and who has made his home among the Hoo-nah Indian

long-drawn 'ala-la-la.' His story was a simple one, but was denly true.

For generations the sea-otter hunting grounds, upon which the Sim-sims had this spring and once before intruded, had belonged to his tribe and from it they drew their principal subsistence. They had been told that the White Pather had given the ground to them and they appealed to me, acting for him, to maintain them in their rights. Three cannes of the Sim-sims, carrying thirty men, had, with whisky, corrupted such Hoo-nabs as were at the time on the grounds, and with ritles slaughtered and frightened away the otters. Upon the receipt of my letter he had informed them that the Jamestown would come and drive them away, and they had then left, but with the threat that in he fall they would rotehun with sixty cances and six hundred men and then they would not leave for the Jamestown, which had no power over them. We gave them such assurances as we were able of future protection, and thus as delighted their hearts that the old tellow adopted me as his "father" and Karklee said I was a "warm blanket given to him on a cold day," with many other equally extravaguat expressions. I was a "warm blanket given to him on a many other equally extravagant expressions.

many other equally extravagant expressions.

At this interview we were gratified with the sight of the prettiest Indian woman either of us had ever seen. She was the young wife of Karklee—who is a tremendous big Indian about fifty years old—and she was evidently a great pet of his, for by our permission she sat throughout the allow of the floor by his side and amused herself fundling with his hand, which he raincovished to be Marchael Committee and the state of the sta which he relinquished to her. He seemed proud that we admired her

mired ner.

One of the white Tyhees expressed a willingness to exchange seats with Karklee, but his wish could not be grati-

Change sears with Kararee, but his wish could not be gratified.

This woman was about twenty years old and positively—not comparatively—handsome. Elderly Indian chiefs are somewhat Mormonish in their views, and in addition to the old wife who has grown up with them, and through whom their tribal connections are strengthened, and whom they keep at home, they generally provide themselves with a young one for a traveling companion.

During this interview I rather atomished Kah-hoo-doo-sak. Six months before he had had a dream which he had communicated to the Shamans and other wise men for an interpretation, which they had failed to give.

I had beard of this dream, but this he did not know. It was to this effect: Fishing one morning in the bay he dreamed

I had beard of this dream, but this he did not know. It was to this effect: Pishing one morning in the bay he dreamed that he booked a halibut, which on being drawn to the surface proved to be a very beautiful fish, very different from any he had ever seen. Just as he was about to kill and pull it into his canoe something warned him not to do so, and instead he unbooked and let it go unbarmed.

The next day the bay was full of these fish, which in every respect proved far more valuable than the ordinary halibut, and of which the Indians caught so many and so easily that they all got rich.

and of which the futurals caught so many and so easily that they all got rich.

I had heard of this dream as occurring to a one-eyed old Hoonah chief, and while I was listening to Kah-hoo-doo-sak it struck me that this was the dreamer, so when picturing to It struck he can this was the deather, so when picturing to him the great benefits which would come to them if they admitted and treated kindly the whites, I sprung on him his own parable of the fishes, and wound up my ramarks which I could see were telling, and had attracted attention as coinciding with the dream, by saying, "Dick is your fiew ballbut, by your good treatment of him you will draw the whites to you and together you will get rich."

Mr. Willoughby afterward in speaking of this interview remarked "that the Cap. played it low down on the old Siwash and raked in the pot," whatever that may mean. We had planued for an excursion to the glaciers, but an advance guard of icebergs which were drifting past the nouth of the harbor paused as it reached the western cape, reconsistered us, and whirling began to slowly advance upon us. The leader who was a huge fellow soon paused, for his foot came in contact with the bottom, but several smaller ones were not so considerate, and we came to the conclusion that it was best to respect their pre-emption claims and seek for a better shelter, so hurried up our anchor and started for Mnd Bay, where we passed a confortable night.

Ilaving thus brought the log up to date, I will devote a few lines to the sea after, which in my hast letter I spoke of as a noble animal. To mohe so seems, both from a commercial and sportsman's point of view.

cial and sportsman's point of view.

cial and sportsman's point of view.

The skin of the otter is worth more than that of any other animal excepting the royal ermine it brings in Alaska from fifty to one hundred and fifty dollars.

Unlike all other skins of this country, it needs little assistance from the fur-dresser's arts; the black hairs are not dyed, and the white ones not sewed in the other skins of the country of the coun sewed in, therein differing greatly from the imitation called 'pointed beaver," and from the fur seal, the raw pelt of

sewed in, therein differing greatly from the imitation called 'rpointed beaver,' and from the fur seal, the raw pelt of which has no more beauty than that of a calf.

They are very wary animals and are worthy of being considered game, for none but the most expert hunters are successful in their pursuit. Unlike the fur seal, millions of which return annually in great herds to the Pryboloff Islands which return annually in great herds to the Pryboloff Islands where they are driven and slanghtered by clubbing, the otters go singly or in pairs, and their range is a large one. I believe they are found on the western shores of Behring Straits, and they have been plentiful from our westermosts. possession, the island of Atton, along through the Alled and only the Alled and the Indians of Vancouvers Island kill them on the western coast while in spring certifies the arms conversed.

white it is spring their way north.

Men of all nations join in their pursuit, and even undergo the hardships incident to marriage with native women for

The otter was to a certain extent protected. No white man could kill them, and no firearms could be used in hunting them, but with inadequate force to carry out the law i soon became a dead letter. A number of white men of va soon became a dead letter. A number of white men of various nationalities had settled upon the island of Ounga (near the south point of Aliaska Peninsula), and employed themselves in otter hunting. In 1878 the Treasury Department gave special permission to such whites as were married to native women, and intended to remain in the territory, to hunt them, which permission put otters at a discount and women at a premium. But very little ceremony was needed to give them full rights to both otters and women, which without it they had owned.

had owned. hese squaw-men by their steady bunting, frequently with

they had owned.

These squaw-men by their steady hunting, frequently with guns, are greatly reducing the supply. At Atton, where they were once adundant, but seven were killed last year, and in other resorts they are decreasing. A skin worth \$5 per square foot is worth working for.

The method of hunting the otter, as practiced by the Indians of Southeastern Alacka, and I presume much the same elsewhere, is as follows: The hunters go in companies of three canoes, each carrying ten paddlers, the one in the bow being armed with a spear or bow and arrows. Lately, muskets have been introduced, which are loaded with buck-shot; but this is illegal, and tends to drive the animals from their breeding grounds, which are on rocky islands close to the shore, just to the northward of Cape Spencer.

The animals seek these islets in May, and the hunters rendezvous at them. When an otter is seen approaching they endeavor to form a circle to seaward of it, as quietly as possible, and then close on it. When alarmed the otter dives and endeavors to make its way to sea. Although less able to remain under than the seal, its first dive will sometimes last for half an hour; but if quickly discovered and followed on reappearing, it soon becomes tallied, and falls to the lot of the boat which first wounds it. Great care is taken to hit it in the head, and some of the Indians are expert shots.

Any dispute as to ownership is referred to old Kah-hoodo-sate, who listens to all of the evidence, and gives a decision which is never questioned. Willoughly was present at one such arbitration. The old man gave the skin, worth \$70, to one of the contestants, who was to pay to the other verm blankets, worth \$21.

All capitalns of companies report to this chief the number

at one such arbitration. The old man gave the skin, worth \$70, to one of the contestants, who was to pay to the other seven blankets, worth \$21. All capitains of companies report to this chief the number of their otters, and he keeps a tally. This year 127 have been tallied, worth probably at least \$10,000. The Indians say that they don't kill the female at this spring season, but the skins of unborn sea-outer pups are frequently on sale. I suppose that they do refrain, fully as much as does the ordinary supporter of game have in New York from killing does when in the Adirondacks and out of meat.

In fall there is another short season, during which all adults are killed without distinction. On nearly every one of the Aleutian Islands, in several places in the Alaska peninsula, and in as many or more along the western coast, the Alaska Commercial Company and the Northwest Fur Company have agents stationed who practically monopolize the market in the vicinity.

Hoomath Dick admitted that some of the Alaska hunters used guns. I asked him why they did it, and he said that the English Indians used them, and unless they did also they could not get near enough to kill the otters by other means. He and Kah-hoo-doo-sak have promised to break up the custom.

stom. To-morrow we start for Chilcat and the glacier. Piseco.

#### ----FROM NORTH CAROLINA.

FROM NOITTH CAROLINA.

It has been said that we, like Rip Van Winkle, sleep. I do not write to deny the charge, but to tell you how blue the sky and bright the sun under which we sleep. We do not know much about the excitements and turnoils which disturb a great city, nor do we swelter through a breezeless night among heated brick walls. We do not hear Mr. Beecher or Mr. Talmage on Sunday, or know about the last opera. We see the caricatures of Nast and occasionally read of the mud which your politicians and our own stir up, but happily we, the negro inclusive, no longer disturb our minds about it, but revel in the genial climate harvest fields, summer fruit, shady groves and soft winds, sweetly dreaming of the charms of the heautiful forest, "the mellow horn," "the violation of the heautiful forest, the mellow horn," "the violation of the heautiful forest of the morn" and the russiling wing—at the falling of the leaf. The United States of Notth America is probably by natural endowment the finest country in the world, and North Carolina is as rich in all that goes to make a natural life desirable as it is possible to

bring together in any one State. Why should we not be happy, and, if we wish, sleep? The game prospect is quite good. Most of the early broads are large (nongh to escape the recent heavy rains, so that quall shooting will probably be very fine. I understand there are a great many young turkeys, and no doubt the deer are doing well.

The State is divided that the three belts running northeast and southwest. The first is from one hundred to one hundred and fifty miles wide, and lying on the coast (sea) known as the pine belt, is a level country, and has for game qualt, turkeys, ducks, deer, and in the heavy swamps near the coast black bear. The middle belt is a rolling country and extends about one hundred miles further inland. Being a small grain country it has more quail and squirrels. Turkeys and deer are reasonably plenty. The next, the mountainous portion, has grouse, quall, turkeys, deer and bear. The middle and western portion, especially the middle, affords as fine quali shooting as any reasonable sportsman ought wish. There are an abundance of quall in the pine belt, but there are so many convenient swamps and thickets to which they usually take at the first flight that one need be somewhat expert in thick cover to make a good bag. Indeed, he need by no means be asbamed to bag only half his shots unless he is a poke who takes only open shots.

means be ashamed to bag only half his shots unless he is a poke who takes only open shots.

There is hardly a place in North Carolina where a true sportsman may not enjoy himself. The great trouble with those who come into this State for shooting is that through a long summer they have dreamed of and wished the time to come, until when they do start it is with inflamed imaginacome, until when they do start. It is that the magina-tions, and they are soon disappointed because they don't drop immediately into an Indian's heaven. Let one leave the false glare and glitter, the hollow show of a city life with a view to some weeks with nature and her charming loveliness, and he may be assured that will be find it, with fair sport added, in North Carolina. He can amuse blusself with ignorance as primitive as the most fastidious could desire or test his manners with intelligence and grace as courtly as adorns any home in America. He can see a "little speckled bull" in harness to the plow, and not a mile distant the most perfect modern machinery and implements of agriculture. Altogether we offer both a field of sport and interest. We are a peculiar people, with our "peculiar institution" gone, and although we have gotten used to the loss, we have not all learned the most profitable ways of the "new departure." It is sad to think that many years will come before a clear, round shape will be given to what should be the prosperity of a people so blessed in soil, climate and mind. The saying that it is hard to teach so old dog new tricks is as applicable to men as dogs, and I am inclined to think it especially so of men who live under a Southern sun. No condition, however, of climate, age or poverty seems to duit the senses of sportsmen for the fine points of the "new departure" in guns and dogs. In early autumn the sharp crack of the breech-loader is heard all over the State from the sea to the mountains. Those beautiful October days, when the blue hills seem sleeping in the distance, the faintest misty veil hangs over the gay woodkand, and the eye searches out, here and there, the fields of brown stubble, more beautiful to us than foliage or flower. "Tis blessed to have life on such a day, no matter now how much we "think what might have been." in North Carolina. He can amuse himself with ignorance as primitive as the most fastidious could desire or test his man.

DOMESTICATION OF THE OSTRICH.

BY E. B. BIGGAR.

DOMESTICATION OF THE OSTRICH.

BY E. B. BUGGAL.

T' will perhaps surprise some of the readers of the Forest Nad Stream to learn that most of the ostrich feathers now used in the eivilized countries come from the hands of farmers and are clipped from tamed wings as wool is taken from the sheep. Yet such is the case, and as I have no doubt that all readers of the Forest and Stream would be glad to know something of these "farms," I will take them on an imaginary visit to one in the colony of the Cape of Good Hope. It was here, about twenty years ago, that a Cape farmer, whose sheep had failed him through disease and drought, conceived the idea of domesticating the wild ostrich and breeding them for the sake of his feathers and of making a business of the industry. With much public spirit he advocated this for the benefit of his fellow-colonists as well as himself; but although some farmers had occasionally, from almost the earliest days of settlement, caught some wild chicken and kept it on their frams, no one seems ever to lawe thought of making it a trade or business. The farmer mentioned above, whose name was Kinmar, demonstrated that the sale of the feathers was profitable, but it was not unit about 1805 that other farmers began to adopt the business. In that year there were eighty tame ostriches in the colony in various districts, but so profitable did the business turn out and such a mania did it become that within the succeeding ten years that number has gain been doubled. It is now, therefore, a regularly settled industry, spreading through the other colones of South Africa. It is not the object of this article to tell all about the "trade," but rather to give some idea of the character of the farms and the kind of life the farmer leads. Imagine yourself planted down in an inland district, or as it would be called here, a county of the Cape, say Graaff Reinet. In one quarter of the horizon perhaps some craggy mountain rises high over the surrounding land, but on all other sides is a bare ocean of treeless

injurious dainties of the English "highly civil'zed" table, and he finds his dyspeptic miseries vanishing without medicine. But we have come to see his ostriches not to hear his life. "You hear that noise?" asks the farmer in seemingly irrelevent reply to our statement of the object of our visit. "Yes; it is like the low trill of a policeman's whistle. What is it?" "Here, Nasiwana, says the farmer, "take the cover off that box." Nasilwana, says the farmer, "take the cover off that box." Nasilwana, a stout, well-conditioned, colored girl, born probably in some wild-bash dell in Fingoland, removes a rug from a biscuit box in the corner, and up starts the head of a beautiful bird. You name three or four birds which on after-thought you conclude it isn't, and then you make up your mind it is some wild African bird you have never seen. And it is, for it is a chicken estrich. "And is that the way you hatch them?" you may ask. "No; that is a chick, the last of a whole brood. I suppose the old bird got tired waiting for it to come out, and left it to its fate. But the old birds are generally very careful hatchers, and when a chick is too feeble to pick through the shell, they help it out often by breaking it themselves." "I thought they hatched their eggs in the sand like a turtle." "No in this country. Many of them never leave their nests during the whole time of sitting, not even for an hour; but your life hatched their eggs and walk leath the total and will be table at their corner and will be table at their corner and will be table at their corner and will be table at their corner and we have a work life and while the total and the corner and we have their nests during the whole time of sitting, not even for an hour; but your life the part had been a child and will be table at their corner and we have a walk and we have a work life and the part will be table at their corner and we have a walk and we have a well as their corner and we have the and the and the same and the and the same and the same and the same and t the old bird got treat wanting for a to come an, and rea at to its fate. But the old birds are generally very careful hatchers, and when a clack is too feeble to pick through the shell, they help it out often by breaking it themselves." "I thought they hatched their eggs in the sand like a turtle," "Not in this country. Many of them never leave their nests during the whole time of sitting, not even for an hour; but some birds lay their eggs about, and will not hatch at all. Wild ostriches are often so disposed, they say, and this has been the origin of the notion among hunters that eggs were hatched in the sand. This little chick I brought out yesterday, and am making this box answer the place of a nether till to-day. When I bring the old birds up I will try to snuggle this bird among them, for they sometimes refuse to acknowledge a chick that is not their own, and frequently kill time—perhaps eat them afterward. "The chick is now set out on the floor, and what a beautiful creature it is to be sure. Its sealy legs, very stout, but not ugly, stand upon two toes each—two comical looking members, one large and one small, the large one terminating in a hooked nail that develops into a formidable weapon in the old bird. Its chumpy lody is already as large in appearance as a hen's and is covered with a down, yell-wish on the breast and brownish on the back, while over this down little porcupine-like quills, about an inch long, some dark and some light, stick out in all directions, as if chopped hay had been sprinkled over the creature's back. Its well-shaped neck is covered with a sort of fur like fine seal, prettily mottled and striped in black and brown, and this organ is surmounted by the most heautiful and shapely head possible to imagine in an undeveloped bird, covered with the same fur but darker brown in color. Its intelligent looking crown spreads above a pair of eyes remarkably full and expressive, and a most comely beak completes the picture. When placed upon the floor he gas completes the picture. When pla At this point we conclude that it will be better fun to sit titied and watch. The farmer would

At this point we conclude man it will be better that to sit outside and watch. The farmer smiles a grim and cruel smile and goes in alone with the 'tuck' in one band and the basket in the other. On approaching the great black bird, with his head high above the farmer's, slowly flaps his wings, smile and goes in alone with the "tuck" in one hand and the basket in the other. On approaching the great black bird, with his head high above the farmer's, slowly flaps his wings, like the deliberate swing of a punkal, and begins to his like a serpent. At the signal the chickens flutter, scatter and disappear in a most unaccountable way. The farmer, after an ejaculation of disappointment, edges the bird down toward where we are staying, and going to the spot near where the birds have disappeared, takes advantage of a moment when the old one does not seem to be watching and empties the chick out. Strange to say, the little fellow disappears, too, from my sight in the grass, which his back so much resembles. We now retire to a distance from the camp and await events. By and by, after the old birds seem to be the forgotten that we have not gone away, the cock bird lutters a plaintive sound, a sort of whoop without the p, and in a few moments the chickens, well knowing the sound, are again at his side. Rather to the surprise of the farmer, on counting them there is one more chicken than the original broad consisted of, so that the lately batched chick had come, too, in ready response to a call it had heard for the first time. And the old bird, as it afterward transpired, did not know or did not object to the increase in the family. Now we go to another "krall" or eamp. Here is another pair of birds whose pale legs, sickly beaks and poor-looking figures are pointed out as signs that they have finished their incubation, and their broods being taken away are recuperating their strength for another season. At this time they are quite tame, and there is seidom any need of the "tuck" when going among them. In another camp adjoining are a pair tout are hatching. They have just begun their labors, which take just twice the time of an ordinary hen, and their legs and beaks are crimson red in some parts. The hea is now on the nest and is not easily perceived, although there are so few bushes in the camp, and even those smal

seen. The nest is not a west in the ordinary sense of the term, but a spot of earth scooped out in the form of a saucer, the edge being formed simply by the day by-day work of the bird in scraping up the sand under her with her beak, thus forming a trench which serves the useful purpose of keeping out the water in case of a thunderstorm. These are events much to be dreaded, we are intermed, and in the case of hallstorms, which are not infrequent, birds are sometimes killed on the nest. The female is now sitting, but about four or five o'clock the male will come and relieve her and will occupy the nest all night and until eight or nine in the morning. As the color of the chicken's back evinese the design of a benificent Providence in securing the helpless little things from observation, so this protecting it from dangers. Its black color renders it least likely to be observed and it is braver and stronger in the fight; for we are intorned that it has many nemies, such as the wolf, the tiger and the wildcat. The latter is a most vibilizations plunderer, and comes upon the bird at inght in the most sneaking ways possible, he and the wolf ever seeking to draw the bird off its nest, with the object of springing among the eggs. The farmer and his neighbors are well aware of this multine ways in the most is easier to be a such as a continuous plunter ways in the most such as well aware of this multine ways in the such as a continuous plunter ways and the wolf as well aware of this multine ways in the such as a continuous plunter ways and the wild as a continuous plunter ways and the wild the ways the wolf the most sneaking ways possible, he and the wolf as well aware of this multine ways in each of the same and the wolf and the work of the most sneaking ways possible, the and the wolf as a continuous plunter ways and the wild the wolf and the wolf as a continuous plunter ways and the wolf and the wolf and the wolf and the wolf and the wolf and the wolf and the wolf and the wolf and the wolf and the wolf and the wolf a most sneaking ways possible, he and the wolf ever seeking to draw the bird oil its nest, with the object of springing among the eggs. The farmer and his neighbors are well aware of this and they provide seasonable dishes of meat and stryclinine, deposited at intervals about the nest, with the result that every two or three mornings the bloated careass of a wildcat or wolf is found in the vicinity of the camps. Other birds in pairs are to be found in other camps and in a large camp or field are more than fifty young birds, hereded, if such a term can be properly used, by a Hottentot boy. Here they are running about, each busied to the utmost in snatching up grass and insect food about the veldt. They are of all sizes, some appearing to be fully grown, others to be scarcely larger. are running about, each oussed to the utmost in shatening up grass and insect food about the veldt. They are of all sizes, some appearing to be fully grown, others to be scarcely larger than turkeys. On some of the small ones the bristles on their backs are fewer and on the larger ones they have nearly or altogether disappeared and given place to feathers, more or less downy, and turning gray or black, according to sex. Color in this respect, we are told, is fully shown at a year or two, when the cock is quite black and seems to be about as large as he ever gets, yet complete development, as shown in the rise of the pairing instinct, does not take place till three or four years. In the meantime two or three clippings of feathers have been taken from them, the first at the age of a year. The farmer informs us that if we wait ill morning we will see the young birds waltz, and as we feel sure that an ostrich dance will possess as much interest as the dances of beings gifted with reason, we will wait to see what it is like.

[TO BE CONTINGED.]

#### A PET ARMADILLO.

A SHORT time since the six banded armadillo (Dasypus and in order to muse it properly I took it into my office, where, as it gradually improved, it became a most interesting pet indeed! On its convalescence I had become so accustomed to having it for my sole companion during the long winter evenings that I was losh to transfer it to its old quar-

where, as it gradually improved, it became a most interesting pet indeed! On its convalescence I had become so accused to having it for my sole companion during the long winter evenings that I was loih to transfer it to its old quarters. Piggy "generally passed the day asleep in a shallow wooden box in one corner of the room, but just before durk he would begin to stir about so as to get thoroughly awake when the keeper appeared with his supper. After eating he would scarch the floor for any flies which during the day had been killed and thrown under the chairs and tables. When he became satisfied that he had secured all of them he would tumble over all the boots and shoes in his search for a stray roach. Frequently he would start one and drive it outside into the bright light when I would have afthe exhibition of his wonderful power of seent. The rooch would scarcely cross the sill of the door before Piggy's nose would come into sight following every twist and turn of his prey, sometimes hearly across the room before it was captured. Occasionally it would be a cricket instead of a roach, and then Piggy would generally cone off second best, as there would be a hiatus in the seent whenever he would get so near his game as to cause it to jump. The waste-paper basket was regularly overhanded, and its contents scattered in every direction. One night while investigating it an unfortunate cricket was routed out, and in its hurry to escape sprang against the wall falling back on the floor. Piggy was equal to the occasion, and by a sudden rush secured his quarry before it could recover and attempt a second spring.

One of his favorite foraging places was underneath the seft, and I was anused several evenings at his awkward at tempts to climb up between it and the wall. Finally he succeeded in seconding a short distance when I heard a faint squeek and caught a glimpse of a mouse darting into the closet. Piggy came down "all of a lump," but managed to horing done in his rounds at night the watchman would kill a rat and b

I am surprised that one so correct as Mr. Packard should I am surprised that one so correct as Mr. Packard should have made the following sweeping assertion. In his "Zoolo-gy," p. 580, he says: "By rolling into a ball these singular creatures (Armadillos) become thoroughly protected from their enemies." I believe that it is well authenticated that some of the species are capable of rolling themselves into balls; but certainly not all of them, my little pet, for in-stance, as his structure absolutely forbids any such feat. The most that he can do is to tuck his head down between his front levs, and the moment has does so the investigation of The most that he can do is to tuck his head down between his front legs, and the moment he does so the inhibitation of the plates is so slight, he exposes a series of parallel bands of soft, velvely skin to the attacks of any predatory mammal or bird. With the pangolin it is different, as I know to my cost. One evening, while in the interior of Java, as I was sitting in front of the hotel, in pijamas and stockingless feet thrust One evening, while in the interior of Java, as I was sitting in front of the hotel, in pijamas and stockingless feet thrust into slippers, enjoying a post-praudial cheroot and trying to keep cool, my attention was attracted by the statuesque figure of a Malay, simply clad in the national sarong and enormous umbrella hat, just in front of me. In the twillight I saw a spherical body lying at his feet, which I picked up for the purpose of closer inspection. It proved to be a pangolin (Manis pentadactyla) I think, but I did not finish my examination. In turning it over, it slipped from my grasp, and in attempting to catch it I received from one of its scales a nasty, wire-edged wound, just across the middle joint of my forefinger, producing a sharp, burning sensation, very similar to one experienced years before in my boyish attempts to manufacture a "cornstalk fiddle." I immediately glanced up to see the effect on my native friend, but not a ripple of mirth or a quiver of pity crossed his swarthy features. He quickly stooped down, picked up the animal, and noiselessly strode away in the rapidly-increasing darkness, while I sprang back on the plazza, venting matedaness, nam noisenessy stone away in the happort-increasing dark-ness, while I sprang back on the piazza, venting malodi-tions on my stupidity and the characteristic imperturbability of the entire Malay race. Frank J. Thompson.

#### DOMESTICATION OF QUAIL.

ROCKLAND, Me., Jan. 8

Editor Forest and Stream:

I have read with interest the articles in the Forest and Stream stop of the stream of t

West. I once sent to Connecticut for some Southern quail, and out of three dozen, one-halt or their arrival were dead and the other half were so feeble that they all died. The first point is to have healthy birds. I turned out most of the birds. Four pairs went to the Hon. Moses Webster, on the Island of Vinal Haven and I am informed they bred and I hope will get through the winter with a little help.

But to return to the breeding of quail in confinement. I had made a pen the year before for some migratory quail, which I released, being convinced that they would not breed. The pen was large—about thirty feet long, four wide and mad made a part he year better to some migratory (man, which I released, being convinced that they would not breed. The pen was large—about thirty feet long, four wide and sloping from two feet at the back, which was against a tight board fence, to fifteen inches high in front; sides all solid, top of laths, with some cover in one end for them to retreat to in case of fright. I had holes for observation, and never a day passed that I did not spend more or less time in watching them. I was at length rewarded by seeing them commence their nest-building. And here I will say that I never saw either of the two hens lift a straw toward building the nest; the cock made them all—and there were four or five of them—by sitting back to the nest and seizing bits of roots, straws, etc., and passing them back, first one side, then the other. I also noticed that one of the hens, though always peaceable at other times, would allow of no love-making with her mate; so I made up my mind to put each pair in a separate pen if I tried it again. They built and destroyed a number of nests, but one day! was much pleased to find an ergg in the nest and this was followed up, at intervals of one or two days, by others, until seven were laid.

this was followed up, at intervals of one of two days, by others, until seven were laid.

Now comes the sad part of it. On going to feed them one moning all bad disappeared—three quail and seven or eight eggs. I found where something had dug under the pen and taken them all. I thought at the time it was rats, but it might have been skunks, for in the fall, though I live in the centre of the release of eight thousand people, we are overrun with

have been skunks, for in the fall, though I live in the centre of a place of eight thousand people, we are overrum with skunks; and I lost a heautiful golden pheasant by them, and have caught and shot a number.

Well, I felt very badly about it, but do not consider it a failure. I had no one's experience to help me and I learned two things—to make the pen vermin-proof and keep the pairs separate. Now I am watching the columns of the Forest AND STREAM to learn where I can get some more quail, and if any of your readers who live in the quail country will send me a dozen or two I will be greatly obliged to them and will remit at once.

#### HABITS OF SNAKES.

ZOOLOGICAL GARDEN, PHILADELPHIA, Jan. 13.

Editor Forest and Stream:

Editor Forest and Stream:

Some of the remarkable facts always elicited by a discussion on the habits of animals have been brought to light by the corresp ordence in your "Natural History" columns, on the question of snakes and sharks swallowing their young for purposes of protection. Now, it is always difficult to prove a negative, particularly in the face of avernments from eye-witnesses as to what they believe themselves to have seen, but all analogy, and anatomy itself as well, presents the strongest kind of presumptive evidence on the negative side of this question.

strongest kind of presumptive evidence on the negative side of this question. Almost all of the snakes commonly found in this region are either viviparous or ovoviviparous, the most common of all and those most likely to be observed, as our garter and water snakes—of the genera Entenia and Tropidanotus—belonging to the former class and producing their young alive and fully formed. In these cases if the female is roughly disturbed within a short time previous to parturition, a premature birth will ordinarily take place, and the average individual regards animals belonging to this order with feelings of such nosted aversion that when a dozen or more little squirming reptiles issue forth, he or she, during the search for the nearest stick or stone, is not apt to pause long enough to observe very accurately from which extremity of the

mother the eruption takes place. It is stated further by experienced collectors and observers of animal liabits under nature, that when young snakes are once hatched or born the mother leaves them to their own devices and pays no furth

motive felives them to their own devices and pays no further attention to them.

The austomical relations of the generative organs in the female ophidian are such that in laying a specimen open, a chance cut would readily lead a careless or inexperienced dissector to believe that the ovarium had an outlet toward the female ophidian are such that in laying a special of the chance cut would readily lead a careless or inexperienced dissector to believe that the ovarium had an outlet toward the anterior end of the alimentary canal, and without following the exceedingly contracted oviduel, leading in the opposite direction, the repulsian uterus would, in his eyes, be transformed into "a cavity evidently formed" to serve as a place of refuge for the young in time of danger. The only organ into which the young snakes could go, when swallowed, would be the stomach, and the solvent power of the digestive juices of the screpent is so great that it can hardly be considered possible that they could be exposed to its action, even for a short time, without receiving serious damage. The same reasoning applies in the case of sharks and other viviparous fish. But when we have witnesses who have seen both snakes and sharks in the act of swallowing their young, we can only suppose it to have been an abnormal act of cannibalism on the part of the observed, or a faulty act of perception on the part of the observed, or a faulty act of perception on the part of the observer. People will occasionally see wonderful things, and perhaps a parallel case may have some value in this connection. In many animals which have a double vagina, the penis of the male is bifid at the extremity, and from this fact it has been and is still believed by many of the unculneated (and the writer was recently questioned as to the fact by one of the ordinarily educated), that when the season of love arrives in the opossum in colur in the astonishing manner above indicated. In all nature, we must be permitted to believe, no homologue can be found to an organ specially devoted to the reception of offspring for protective purposes after they have once been produced. The nearest approach to this would appear to be among the pouched marsupials, where the young for a short period before they are finally excluded from the pouch, by the mother, occasionally come out and return

Habits of Snakes—Brooklyn, Jan. 12—Editor Forced and Stream: As to the mooted question of sudies swallowing their young, I am prepared to say most positively that one species—the common garter snake—most certainly does so when surprised by an eneny. Several years ago, while hanting in the Catskill Mountains, I came suddenly upon a garter snake, but without being observed. Mother snake was evidently out for an airing, for around her wriggled nearly a dozen little reptiles, slowly crawling among the rocks. Advancing nearer to get a better view, I was astonished to see the old snake, immediately on seeing me, open her mouth to its fullest extent, into and down which the young ones serambled like mice into a hole. When the last one had disappeared, Mrs Garter made her way to a place of safety, as I had not the heart to kill her. Allow me also to add that the common brownish water snake of the bliddle States, to my own knowledge, catches and eats fish. I once saw a large water snake, nearly four feet long, crawl out of a small lake in the 'catskills with an eight-inch trout in it mouth. On gaining the bank it proceeded to swallow the fish, but upon my approach it dropped its prey and jumped into the lake. Picking ap the fish, which was nearly dead and showing the marks of the snake's fangs upon its sides, I put it into a basin of water, whereupon it eventually recovered. Shortly after I put it back again into the lake, what was my astonishment to Habits of Snakes-Brooklyn, Jan. 12-Editor Forest

the lake, watching it until it swam out of sight. But now comes the strange part of my story. Several hours after, as I again approached the lake, what was my astonishment to see a snake, looking exactly like the first one, lying in the place from whence I had startled the other, and just preparing to swallow a large trout also. This time I was too quick for his snakeship, and with a few blows from a stick dispatched him. On picking up the fish, what was my astonishment to find that it was the identical trout that I had but a short time before rescued and restored to the water, as I knew by its size, shape and the old wounds on its sides, but it was quite dead. I have known this species of reptite to catch and eat small chubs; and I once caught a large one on a line set for eels and baited with a small deaf sh. I am catch and eat small chubs; and I once caught a large once a line set for eels and batted with a small dead dish. I a glad you are inviting attention to this and kindred subject in natural history, as there is a great deal of ignorance diplayed by well-read people upon the habits and nature many of our commonest animals, birds and fishes. Whould the subject of the condition of the chewing his cud they laugh in derision! But then they contail read the Forest and Stream.

PINE GROSBEAKS IN MASSACHUSETTS—Boston, Jan. 17.— I went out in the woods last Saturday to Dedham, Mass., on a gunning trip with my friend H. J., and on our way home, through Jamaica Plains, H. J. came across a flock of pine grosbeaks, and was lucky enough to get two specimens at one shot. Is it not something unusual to find them in this vicinity?

Fred. Lewis.

They are not common, but occur almost every cold winter in Massachusetts and Connecticut.

ABRIVALS AT THE ZOOLOGICAL GABDEN, CINCINNATI, UP TO JAN 1, 1881.—One pumm, Felis concolor; one prong-horn antelope, Aubilo capra americana; two grizzly bears, Urgus horribitis; two lions, Felis leo; one coot, Fulica americana; one black wolf,

ALBINO QUALL—Mr. Frederick Fair, of Cranbury, N. J., has a case of game birds, put up at least forty y ars ago for his father, and still in a perfect state of preservation. He has recently added to the collection a beautiful Albino quail, shot by him a year ago near Dayton, N. J. A hawk, nearly jet black, five feet from tip to tip, was caught on Friday, near Hightstown, by D Oakerson.

# Mish Quiture.

#### THE CENTRAL FISHCULTURAL SOCIETY.

[CONTINUED.]

M. B. MILLER: We would like discussions upon the merits and demerits of this flows fishway law, the plea of this lows mill-owner and on Mr. Shaw's reply to him; also decisions of the different State courts upon this question, with citations of authorities, through the columns of Fonzer.

MRN STEERAM.

MR. SHAW: There is no doubt about the constitutionality of the law; it simply needs enforcing. Men have placed obstructions in streams and prevented the people living upon them from drawing their fish food from the waters where it was placed for man before mills were thought of.

The Secretary then read the following paper:

was placed for mail before mills were thought of.

The Scorberark then read the following paper:

THE GROWTH OF CARP IN AMERICA.

It is a well-known fact that when an animal undergoes a change of climate it seldom remains as it was before the change. It either improves or deteriorates and often quite rapidly. A case which illustrates the latter phase is that of the bulldog, which, taken to India, loses the courage which distinguished it in the British Islands and becomes a complete coward. Other instances are recorded in the pages of natural history where room will now have to be made to note the fact that the carp, after transplanting to America, has grown to three times the size, in the same space of time, which it did in Germany.

I propose in this paper to give the rates of growth in different parts of our own country, compiled from correspondents in different States, and also the ratio of growth in Germany, obtained directly from the most reliable fishculturists of that country, and think that this testimony will bear out my assertion regarding the increased rate of growth of our newly-imported food blas, which thus becomes more valuable than it was thought to be on its first introduction. The first witness I will call is Mr. Volncy Metcalfe. He writes as follows to Prof. S. F. Baird, who thought the latter of importance enough to publish in Forest AND Stream of August 19, 1889:

Kosse, Limestone Country, Texas, June 28.

Kosse, Limestone County, Texas, June 28.
Prof. Spencer F. Bahrd, United States Commissioner Fish and Fisheries:

and Fisheries:

Darr Sir—The German carp, sent Sam Bell and me last fall, are doing as finely as any one could possibly ask. \* \*

We put five of them in the tank (or pond) and fed all of them on corn bread and vegetables that had seed, such as tomatoes, squashes, etc., all of which they ate. They seemed to like the squash best and preferred it baked. Several of them seemed to be sick when they reached us, and died soon afterward; the remainder are now about four inches wide and a foot long. Corn bread is their favorite diet, and by feeding them at the same place every day they become accustomed to look for it. \* \*

A gentleman from Tennessee, who signs himself J. H. D., writes to FOREST AND STREAM of August 20 as follows:

NASHYLLE, Tenn. Ang. 6.

writes to Forest and Stream of August 20 as follows:

Nashyllar, Tenn., Ang. 6.

Colonel Akers, our Fish Commissioner, received last year from Prof. Baird, a quantity of German earp. Mr. Frank Green obtained forty of these little strangers to place in a pond on his farm near the city. He reports them having grown to five or six inches in length, and says that he has noticed an enormous number of small minnows in the pond lately. Can they be the product of the earp so recently placed there? At what age do they begin to spawn? Mr. Green says that there were a few mud-cat in the pond when the curp were put in it. Could it be that the minnows referred to were of that species. It would be a matter of interest to have an answer from the Forest and Stream to these questions.

To this the editor replies :

To this the cantor repnes:

There have been many reports of the spawning of carp
which were distributed last year, and it is possible that yours
may have done so. It is also possible that the young fish referred to are carp. It does not seem possible that they could
be confounded with "und cels." Send specimens to Prof. S.
F. Baird, Washington, D. C., and then you will get positive information.

information.

The rapidity with which this fish has grown in southern waters is something wonderful, and it is to be remembered that all the accounts of extraordinary growth so far have come from the South, proving the assertion that the warmer the water the greater the growth, or perhaps to say that the longer the warm season lasts the greater the growth is, would more nearly express it.

A Florida carp culturist writes Prof. Baird, and his letter was also published in FOREST AND STREAM of September 16, and drew out correspondence from Germany's foremost fish-culturist, Herr von Behr, whose letter is given further on, as follows:

RIXFORD, Fla., Aug. 5.

follows:

PROF. BAIRD:

Dear Sir—It will doubtless be a pleasure to you to learn that the carp you furnished me with last November are doing finely. I ascertained on my return from Savannah with them that my pond was not ready for their reception, owing to the fact that there were many more black bass in it than I had supposed. I accordingly confined the carp in a pen at the side overed with wire netting. A few weeks since I discovered that a portion of the wire had been misplaced and some of them escaped into the pond, and I then concluded to let them all into it, as I had nearly all the bass out. Their growth since that time has been simply marvelous. Many of them are ten or eleven inches long, and I feel certain they will spawn this fall. Will it be too much trouble for you to acquaint me with their habits? Do they bed, like some other varieties, when they spawn? I will add that they seem

quite tame, and come to the place where I feed them as quickly as a drove of pigs would come for corn, whenever they find I am there I am confident they will prove a great addition to the food fish of the South, and I shall take pleasure in distributing them as soon as they propagate.

Very truly yours,

Gro. C. Rixford.

Mr. Rixford also writes to Forest and Stream as follows: Mr. HINDORI also writes to FOREST AND STREAM as follows:
It may interest some of your readers to learn that the
German carp are thriving splendidly in our waters. Last
November I received a lot from Prof. Baird, which I think
were then from three to four inches in length. They are
now from ten to twelve inches, and appear to make a visible
growth from day to day. I think they are the greatest addition to our food fishes that has ever been made.

tion to our food fishes that has ever been made.

That the earp makes rapid growth in the State of New York is attested by the following item from Forest and Streem of October 4: "Mr. Geo W. Hopkins, of Mount Simai, Long Island, N. Y., received some carp last spring from the national carp ponds at Washington, through Mr. E. G. Blackford, Commissioner of Fisheries for New York, which were then about three inches in length, but by October 1 would measure from twelve to fourteen inches.

The care pages governed the following from Taxon.

The same paper contains the following from Texas:

which were then about three inches in length, but by October 1 would measure from twelveto fourteen inches.

The same paper contains the following from Texas:

OFFICE OF THE FISH COMMISSION,
Austin, Texas, Oct. 4, 1880. }

PROF. SPENOER F. BARED, Washington, D. C:

Dear Sir—I saw a day or two ago one of the carp sent me last winter (these fish were the young of 1879 and about three or four inches long when received); it measured twenty inches. I am inclined to think they spawned this last summer, for the reason that the pond is now filled with small fry, unknown before in the pond. Should it prove to be correct I will inform you. Respectfully,
J. H. DINKINS, Fish Commissioner.

An account comes from Georgia, which gives the largest growth attained by this fish in America. It must, however, be remembered that this is the first season in which the fish has had a good trial in the South, and also that these Georgia carp are measured late in the season, having an advantage of several weeks over those before recorded. It appears in Forest any Stream of December 9, headed "Astounding Growth of Carp," and asys: "It is a fact that the carp has grown faster in America than it does in its original home, but the most wonderful story comes from Georgia. A gentleman in Macon sends Professor Baird the following slip from a local paper and vouches for its truth. It says: "Yesterday afternoon Mr. E. Witkowsky, who owns the tanyard on the old Confederate property, concluded to cut the dam and clean out the pond in order that he might introduce his new German earp. The pond contained a largo number of smaller fish, and among them Mr. Witkowsky hoped to find his four carp which had been put into the pond and twenty-five inches in length respectively. The fourth example through the cut in the dam. These carp were but two or three inches long when put in the pond and their growth is remarkable. They are now in the tank in the rear of their owner's store on Cherry street, where we saw them last night and where the public are invited

last night and where the public are invited to see them today."

The correspondence between Mr. Rixford and Herr von
Behr, President of the German Fishery Association, alluded
to above, I take from Fordst And Steran of Nov. 18, and
consider it worthy of a wide circulation as coming from a
gentleman who has devoted his time and money to promote
fishculture as a means of producing food. with no thought of
personal benefit to himself and who had known the cary for
terms. The action markets the correspondence with those as al benefit to himself and who had known the carp for The editor prefaces the correspondence with these re-

Institute its measure or present and who had known the carp for years. The editor prefaces the correspondence with these remarks:

The widespread interest manifested in the culture of this fish since its introduction by the United States Fish Commission is so great that we are certain that our readers will find the following letters from Mr. Rixford and Herr von Behr, the well-known President of the Deutsche Fischerei Verein, who has done so much for fishculture in Germany, of great interest.

Although we have many fish which excel the carp as a table fish, yet we believe that its introduction will prove of the greatest value in those portions of the country where the warm waters produce nothing edible, and that we could with more profit dispense with any other fresh water fish, outside of the whitefish of the lakes, than the carp, speaking from the fishculturists' and an economical point of view, for there is no fish which, in confined waters, will turn out so many pounds of food as the carp, and its food costs little or nothing. Its rate of growth here has exceeded that in its native land and its introduction into American waters will prove to be worth a vast sum within the next ten years to our hogening farmers, who seldom get a fish dinner. With this preface we give the following correspondence:

Rixpon, Suwannee Co., Fla., Nov. 1.

Editor Forest and Stream:

Your favor of the 23d of October, covering a very interesting letter from Baron von Behr, came to me in due season.

Your favor of the 23d of October, covering a very interesting letter from Baron von Behr, came to me in due season. It appears that I am indebted to you for this correspondence, as it was through the medium of the Forest and Stream that the Baron's attention was drawn to my letter to Prof. Baird, which you published, and I cheerfully send you a copy of his latter for your use, as well as a copy of my reply, which you can use or not, as you deem best.

Schmoldow, in Pomerania, Germany, {
October 4, 1880. }

My Dear Mr. Rixford:

My Dear Mr. Rixford:
It is after having read in Forest and Steems of September
16 your letter about carp that I take the liberty of writing

It is after having read in Forest AND STIEAM of September 16 your letter about carp that I take the liberty of writing you some lines.

I have been receiving such manifold assistance from your countrymen in my fishcultural interests that I am glad to be able, perhaps, to assist you, though of course Prof. Baird will have furnished you with the most needed bints.

I dare say carp will de'ight in the climate of Florida. They are a fish liking warmth before all, and therefore retire, in my climate—Northern Germany—from October to May, into the deepest possible mud in the ground of our carp lakes and seem to slumber there in entire apathy. They spawn with us in May, June and July, the special time depending entirely upon the warmth of the water. We are of the opinion that they need for spawning something like 15 degrees Reaumer—about 66 degrees Fabrenheit. All this is rather superfluous for you, but now I may be able to give you good hints.

We put branches of different trees—evergreens or others—in the pond a short time before hatching begins, fixing one end of the branch in the soll, and leaving it swing in the

pond some six Inches below the surface. As soon as the carp begin to spawn, they fix their glutinous—adhesive—eggs in innumerable quantity upon the branches we had put in; but, alas! at the same time Mr. and Mrs. Carp begin to eat eagerly their own eggs. It is only in consequence of the immense quantity of eggs they spawn that the earp is as plentiful as it is. But as for your country, which wishes to get quickly great quantities of young carp, you could make no better arrangement than to take out, after seeing the branches covered with eggs, either these branches—transplanting them in a tub of water, in order that the eggs do not get dry—and bring them to a neighboring pond, quite empty of other fishes, or take out the old carp altogether from your spawning pond, and leave this alone to the young ones, which after a short time, will swarm in re by many thousands, and very soon begin to take food of any kind, say covked potatoes or bread. By giving bread constantly my children got our carp so tame that they would come and eat bread from their hands. They get very tune, indeed.

that they would come and as noted from the that as Mey get very tune, indeed.

The best plan is to have many ponds for the carp, all of them being arranged in such a way that they can be made entirely dry. That gives you the possibility of having the carp divided according to their ages—say of one, two, three

entirely dry. That gives you the possibility of baving the carp divided according to their ages—say of one, two, three or four years.

At four years they will grow in your climate to about ten pounds, easily. You know that in rare cases we have carp of thirty or forty pounds, while it is nothing unusual to have them up to twenty pounds. If you read German, or lave anybody who understands this—my language—I could send you, by care of Prof. Baird, some books about carp, their breeding and nursing. You know that the Greeks (Aristotle) and the old R mans knew this. They came from Italy to Germany in the eleventh century—of course, by the monks, who were the great protectors of fishes.

In the ponds which contain your carp of two, three and four years, you will do wisely to keep with them a few voracious fishes as Book (pike), or similar ones. This seems to prevent their desire to spawn, and therefore assists their quick growing. This principle is generally followed wherever we have large carp culture in Germany or Austria—Bohenia. Beware of having other fishes of a similar family in the same pond with your carp—the crossing gives very bad shee, full of hones and of bad taste.

Now, this, my letter, may go. If it reaches you, I hope you may find it of a little use. I finish as I begun. I got such kind assistance from your countrymen, that I shall be very glad to be useful to you. Newspapers make now in a few weeks letour de monde. Let everybody try to make use of them, and be of use through them to mankind. "Good-will to nations" is a beautiful duty. I subscribe myself,

Vox Bern.

President of the German Fisheries Verein.

President of the German Fisheries Verein.

RIXFORD, Fla., Nov. 1.

President of the German Fisheries Verein.

President of the German Fisheries Verein.

Rixford, Fla., Nov. 1.

My Dear Sir—Your letter under date of the 10th of October was forwarded to me through the courtesy of the Porrest And Stream, and reached me in due season. Allow me at the outset to express my hearly thanks for your kindness in writing me, as well as for the valuable information you have given. My carp, which are of the scale variety, continue to thrive spleadidly and are a marvel to all who see them, especially those who saw them when I first procured them in November last, when they were only about three inches long, and who now compare them. Many of them are from fifteen to seventeen inches in length and six to seven inches in breath. They show no signs as yet of going into winter quarters, coming for their food regularly, and I hope to be successful in carrying them through the cool weather without their resorting to the old habit. If find our natural ponds are not exactly fitted for them, as they are generally deep and not easily drawn off, with no visible outlet or inlet. Small fish, such as minnows and perch, generally inhabit them, which were better destroyed, as they will likely feed upon the eggs. Turtles are also plenty, but we must do the best we can to destroy the posts.

Your information that the carp devour their own eggs was new to me and has suggested the iden to me that possibly at that time they need a different variety of food, and I shall about that time change it to one composed nore of meat. At the same time I can protect the bushes ou which they have deposited their eggs from their depredations by a wire fence. I expect they will spawn in the early spring, say March or April. I will be much obliged to you for any works on their culture that you may send me, as I have friends who will take pleasure in translating them for me, and the publication of them may benefit others who have the fish in other portions of the country. You will, I am sure, pardon me for the liberty I have take

"4" 2 to 5 lbs.

Depending upon temperature and food.

In this connection it must be remembered that Germany has a cookr summer, and as the carp grows, according to our best evidence, in direct proportion to the warmth of the water it is difficult to believe these accounts of its wonderful growth in America with its broiling temperature, most especially in our Southern States. A most convincing proof that it thrives best in warm situations is the fact that in Germany a carp pond received the condensed water from a low pressure steam

engine which frequently raised it to a temperature as high as 100 deg. Fahr., and the carp in it grew with surprising rapidity, astonishing the carp breeders who had ponds in that neighborhood.

ity, astonishing the carp breeders who had ponds in that neighborhood.

The evidence as above given, taken with the fact that at the national carp ponds in Washington, D. C., a carp was taken weighing twelve pounds, which was one of the original lot put in by Mr. Rudolph Hessel, the superintendent, only three years before when it was only four inches long, I think shows that the fish in its new home has exceeded its rate of growth in its native land at least four times, for I have no doubt that in the cooler waters of its former home it would have taken twelve or fourteen years to reach that weight.

From the report of Mr. J. H. Dinkins, the Fish Commissioner of Texas for 1880, I take the following: "Last February out of a shipment of 150 carp from Washington I gave Mr. J. B. Rogers, living about twelve miles north of Austen, ten, averaging not more than four inches in length. While Mr. Ellis was here we rode out to Mr. Rogers for the purpose of getting a specimen to take back to Washington to show the extent of their growth. We caught five out of the pond in which they had been placed the February previous, and they varied from nineteen to twenty-two inches in length, and had increased from about three ounces to about four pounds in weight. The one taken by Mr. Ellis to Prof. Baird at Washington was twenty-two inches long, and I doubt if an example of more rapid growth can be found anywhere."

I am also informed by Mr. E. R. Miller, of the Michigan

where."
I am also informed by Mr. E. R. Miller, of the Michigan Fish Commission, that they received some young carp last year, none of which were over an inch and a half in length, and that when they had occasion to move them this year they found that they had grown up to detober to a length of seventeen inches and a weight of three pounds.

[The remaining papers and discussions will follow as fast as we can publish them. ]

SHIPMENTS OF WHITEHER EGGS. – From the U. S. Hatching Station, at Northville, Mich., in charge of Mr. N. Clark, the following shipments of Coregonals eggs have been made. 250,000 to the Deutsche Fischerei Verein, which, according to a telegram received by their New York agent, Mr. Fred. Mather, arrived safely; 50,000 to Mr. E. M. Stillwell, Bangor, Me.; 250,000 to Mr. Wm. Griffith, Louisville, Ky.; 600,000 to B. F. Shaw, Anamosa, Iowa; 250,000 to R. O. Sweney, St. Paul, Minn., and 250,000 to B. B. Redding, San Francisco, Caul, Minn., and 250,000 to B. B. Redding, San Francisco, Caul.

# Sea and Biver Hishing.

THE TROUT LAW.

THE following letter from one of the game protectors of I the State of New York seems to us so sensible and to the point that we commend it to those having its revision under consideration :

Editor Forest and Stream:

under consideration:

Editor Forest and Stream:

I notice in your edition of this week an article on "The Game Law feerision," and I would say that it is a matter that now needs the closest attention. I am, living in one of the best "speckled trout" regions in this State, and the present law reads, Sec. 19, Laws of 1879, Chap. 534: "No person shall kill or expose for sale, or have in his or her possession after the same has been killed, any speckled trout, save only from the first day of April to the first day of September," and then follows the penalty, etc. Now, you see from that section that unless the trout are killed, the party taking them is not liable. And we have two men near here that have private trout ponds and fish the year around, and put the trout into their ponds, where they sell them out in season for one dollar per pound. And during the past summer I know of one family that caught and sold to one of these men six thousand brook trout, and they were mo-tly caught from a single brook that runs into the West Canada Creek. Those six thousand small trout were sold for \$2.50 per hundred, and by being fed up in a private poud, another season many of them will be large enough to be caught out at \$1 per pound, which looks to me all wrong, as this particular brook, with several others that are tributaries to the West Canada Creek, were stocked with trout from the State Hatchery two years ago, and it left alone would soon make fine tishing in the creek. And this is only one family and one brook out of a dozen that I might quote. You can readily see that it is a large drain on the main stream. And besides these fish ponds men can go and catch them off from the spawning beds, provided they catch them with hook and line, and do not kill them, all of which serves to keep the people living in those localities and who own the land through which the streams run uneasy and discontent d, because these men are "allowed the privilege of cleaning out the stream in or out of season.

I would suggest that that section

Iream in or out of season.

I would suggests that that section be amended so as to read:

"No person shall catch or kill," etc. That one word will
stop the stocking of fish ponds out of season. And I believe
it would be well to amend it still further by prohibiting entirely the catching of trout out of public waters for the purpose of stocking private ponds, for in every number of your
paper I find parties advertising trout and trout spawn for
sale, so that these parties who make a living out of a fish
pond might either hatch their own trout or buy them of parties who make raising them to sell a business, and leave the
public waters, which are stocked by the State, for the sportsmen.

en. This particular flaw in the law has been more trouble to me This particular flaw in the law has been more trouble to me than any other. I have taken pains to supply most of the guides and resident hunters living on the edge of the great North Woods with copies of the game laws and, with few exceptions, they have expressed a willinguess to stop depredations themselves and assist in enforcing the laws if it was going to become general. But the game I was had been a dead letter so long that it has taken some time to convince them that the laws are going to be enforced, and that though parties may sometimes get through without being caught they are liable sooner or later to come to grief.

There is unite a mistaken notion among men calling them-

are liable sooner or later to come to grief.

There is quite a nistaken notion among men calling themselves sportsmen, and who belong to sportsmen's clubs and are members in good standing, that if they are in the woods during the months of June and July on a fishing excursion and want a "little venison to eat while in camp" they have a right to kill it, but it will not do. It works harm to the general enforcement of the law to allow it, as guides and parties living back in these localities claim, with good grounds,

that it is no worse for them to "crust" deer for meat for their winter use than for these sportsmen (?) to kill them out of season for their use.

The season thus far has been quite favorable for deer. We have not had a very deep full of snow as yet and what we have is light and loose, so that deer can room at will, and yet the snow is deep enough to prevent a dog from running with any effect and so light that snow-shoes are worse than nothing for any one disposed to try a "little still-lunnting out of season," and until we have a time to make a crust the deer are compusatively safe from the poachers. There are some other sections of the game laws that I wished to speak of, but as I have already drawn this letter out to considerable length I will make them the subject of another communication.

Since writing the above we have had a terrible fall of snow, but it is so light that the chances for the deer are still in their favor, for a dog cau'r run at all and snow-shoeing is almost impossible, and until there is a crust they are comparaively safe. The season thus for has been quite favorable for deer

#### PICKEREL FISHING THROUGH THE ICE.

THE law has been changed in Chatauqua County, N. Y., and the "snake-eaters" can now be taken in winter. The Countryside complains of it and says that there are 500 fishermen's huts now upon the ice and that the crop is in danger of being over-harvested. Well, there are better fish, and all who are interested in fishculture can well spare the longsnouts, for they kill tons of better fish than themselves. Our private opinion is that they are not catable, although we often hear of localities where they are "excellent." This point we will admit, for other palates than our own; but, as for us, we admire not the flavor of mud and weeds combined in

as oft paste.

A Campbell's, Mass., correspondent writes: "Nippenickett Pond, some four mites from this place, has become noted for its pickerel fishing through the ice, and last month large quantities of them were taken. A party of three from this place caught some eighty or ninety in an afternoon, weighing from one-helf pound to three and a half pounds—not great fishing, surely, but it shows what our ponds might do if protected."

And "Webb" writes from Nashau, N. H.: "Pickerel fishing has not been as good this winter as usual, though some good strings have been taken. The outlook for trout fishing in these parts for the coming summer is poor. Some, if not most, of our best trout brooks were dry all the fall and of course no spawn were cast in them. Many trout were destroyed in pools, where they had congregated, by their enemies, the kingdisher, the heron and mink; others were left to decay in the dry beds of the streams. The Commissioners would, perhaps, furnish young fry fo ro-stock the streams, as far as they could, if parties inferested should apply."

#### THE NORTHERN RANGE OF THE CATFISH.

THE NORTHERN RANGE OF THE CATFISH.

St. Paul, Jan. 1.

YOUR correspondent, Dr. E. Sterling, of Cleveland, O., is "in search of the most Northern range of our catish" He suggests "iperhaps the waters of the Mississippi will be found to carry this fish furthest in that direction." He calls for information as follows: "In case it is found in waters north of the divide, that flow into the Arctic seas, please let us hear from the captor," etc.

The Red River of the north flows into the Arctic seas. In the month of August, in the year 1860, the writer was one of a party of eight or nine persons who made a trip from St. Paul to the mouth of Red Lake River, a place on the Red River, now the site of a flourishing city called Grand Forks, some sixty miles south of the boundary line between the United States and Manitoba. The whole country was then a wilderness. The object of the expedition was to make a treaty with the Red Lake Chippewas, and the Commander-in-Chief was one Goddard Bailey, special commissioner, who soon afterward became somewhat notorious in connection with certain securities misappropriated at Washington belonging to some of the Indian tribes.

Major Wm. J. Cullen, well known to all old settlers in the Northwas as the most genial traveler and companion in the world, then Superintendent of Indian Affairs in this department, was "high joint" with Mr. Bailey and accompanied the expedition. The writer was secretary to the commission. The treaty failed but the caffish question was settled.

At one of our camps, at a point on the Red River near the present crossing of the Northern Pacific Raliroad, our cook set out a look and line properly baited with a pork rind, and in the morning a catifish was found on the hook and secured, the weight of which, in the judgment of the party, (we had no scales), was at least forty pounds. After slicing off concept the party of the commission of the case of the manitor of the case of the Mississippi. The writer is not very familiar with the halist of the Red River catifish, b

CLEVELAND, O.—The inclosed postal card givesyou another tem on the range of the catfish (Pimelodus). Have information from a reliable source that this fish is taken in the Bay of Superior City, and also near the mouth of the St Louis River at the head of Lake Superior; the fish often weighing twenty pounds or more. Taken in such cold, clear water it must prove a very superior fish for the table, especially when cooked according to Dr. Kirtland's way. This fish from Lake Eric when salted brings two dollars more perhared in the Southern market than our much valued white. nss from Lake Eric when safet brings of work that he berrel in the Southern market than our much valued white-fish (Coregonus). The catfish can be easily propagated artificially. Have any of your readers anything to say in favor of this fish?

Dr. E. Sterelling.

FORT OMAHA-Neb. Jan 2.- The Missouri River is full of catfish, to my knowledge, as far west as Fort Buford and the Yellowstone west to Tongue River.

W. L. Carpenter, U. S. A.

WINGHESTER—Va., Jan. 4.—In reply to the inquiry of Dr. Sterling in your last issue I have to state that more than a score of years ago while stationed at Fort Abercrombic on the Red River of the North I was accustomed to capture many of these fish They were of a golden color, rather stenderer than the common catifish. Their flesh was white, firm and of most delicious flavor. As the R. River connects with Lake Winnipeg I think it probable that they may be found as far north as the latter point. Lieut. Asa Wall.

A New Fish Market for New York.—The Times gives over a column to the history of the efforts to abolish the rickety old Fulton Market and build a respectable one on its It has at last been accomplished and \$80,000 granted by the city for this purpose, news which all fish cultarists who tlock there on April 1st to see the trout show will appreciate, although it will not be begun until after the next one. The old building has been condemned by the Health Department several times, but the opposition of the politicians and small stand holders has, until now, proved too strong for them. The new building is thus described by the *Times*:

and small stand holders has, until now, proved too strong for them. The new building is thus described by the Tones:

"The cellars, grog-shops, etc., are all to be filled up. New wills 31 feet high and 34 feet apart are to be erected. The central portion is to be unde perfectly secure, but for the present the internal arrangement will not be disturbed. As the market exists to-day, you have to mount a series of dirty wooden stairs to approach the centre of the market, which you have to descend again. With the new plan there will be a continous ground floor and no stairs. The greatest care will be taken as to drainage, and every possible convenience will be presented for the washing or flushing of the floor. There will be plugs of water at proper distances. There will be taken as to drainage, and every possible convenience will be three entrances on Front street, with one on Beekman and one on Fulton, The South street front, between the two wings of the market, will remain as it is now, open. On each corner of Front street he building will rise above the level of the roof. For ventilation there will be ample provision by means of spacious windows. It is proposed that the demolition will begin some time from the 1st to the 15th of April, and the new building, it is expected, will be entirely finished and ready for market purposes by the middle of August. A number of the leading stand-holders, among them Mr. E. G. Blackford and Mr. William Ottman—their present premises being situated on the site of the proposed improvements—are ready to spend a great deal of money in eubellishing and fitting up he interior of the market in a manner appropriate to their business. Certainly the trout exhibitions made here-tofore by Mr. Blackford, the New York State Fish Commissioner, will be doubly attractive when they have these newer surroundings in 1882. In regard to the central portions, they will in the perhaps not later than 1882, he reconstructed in harmony with the rest of the building.

"New York is to be congratulated at la

"New York is to be congratulated at last in having this offensive nuisance torn down and an appropriate structure erected in its place. The committee are to be lauded for their energy and determination in having the old cyc-sore removed, and most especially the thanks of New Yorkers are due to Mr. E. G. Blackford, who has for the last year devoted his whole time and efforts in this direction."

# Game Bag and Gun.

(Special to Forest and Stream MICHIGAN SPORTSMEN'S ASSOCIATION.

LANSING, Mich., Tuesday, Jan. 25.

THE Michigan Sportsmen's Association met in this city this afternoon. The purport of the organization is the protection of fish, game and birds. It comprehends a large number of local societies and has individual members in all parts of the State.

The present meeting is very largely attended, exceeding in that respect any previously held by the Association. Large delegations are present from Kalamazoo, Saginaw, Battle Creek, Hart, Jackson, Bay City, Grand Rapids, Detroit, Morroe, Hastings, Grand Haven and other points. Dr. E. S. Holmes, of Grand Rapids, is President; Prof. H. B. Ro-ney, of Saginaw, Secretary. Many individuals were elected members, and four new clubs were admitted—the Hastings, Grand Haven, Bay Point and Hart Clubs.

Letters were read from gentlemen from Georgia, Wisconsin, Illinois, Indiana, Ohio and New York, interested in the preservation of the game of the country, and hopeful of the passage of such laws in all the States as will fully protect migratory birds and fishes. At the evening session a paper was read from Seth Green, the noted fishculturist. He regretted that the New York State Association was chiefly given to shooting rather than to conserving of game. He gave as his opinion that the game of the country would soon become extinct. He urged better legislation and spoke of the good effects of having a game constable in the vicinity of Rochester, and hoped that angling with rod and line would be made lawful in streams inhabited by game fish.

A report was read by the Committee on Laws for the pro-

tection of game animals and birds and insectivorous birds. It was accompanied by the draft of a bill. The Committee on Fish Laws, including propagation as well as protection, made a report confining it chiefly to the waters of the great

A letter was received from Professor Spencer F. Baird, of Washington, who doubted the jurisdiction of Congress over the waters of the lakes for the purpose of regulating the fisheries therein. He thought that the object might best be attained by State legislation. Chairman Clark advocated laws making artificial propagation of fish obligatory.

Letters were received from gentlemen at Menominee requesting legislation that would prohibit the digging of pits for entrapping deer and of firelight shorting.

The report of the Committee on Sporting Dogs favored legislation that would protect such animals. The report also took ground against summer shooting, and abounded in suggestions as to the proper season for various birds. A letter was received from Mr. Hyatt, of Fond du Lac, Wis., regretting that peachers had begun to make ruthless raids on the hunting grounds of the Upper Peninsula. He thought that five thousand deer must have been slaughtered there last season, and hoped the open season would be shortened by the Legislature.

Secretary Roney read his annual report, in which the growth and prosperity of the Association were adverted to and certain legislation recommended. The session continues to-morrow, and a large number of papers by distinquished sportsmen will be read.

#### THE GAME OF MAINE.

ROM the advanced sheets which have been furnished to the FOREST AND STREAM through the courtesy of Mr. Everett Smith, we take the following extracts from the report of Messrs. Stillwell and Smith, Commissioners of Pisheries and Game of the State of Maine :

Fisheries and Game of the State of Maine:
All game (Fera nathram) is the property of the State within which it exists. And no person has a legal right to pursue
or take it, except by the means and at such time as may be
permitted by the laws of the State thereunto pertaining.

By an act of the Legislature, approved March 9, 1880, it
became the duty of this department to enforce the game

hecame the duty of this department to enforce the game laws, as well as the laws relating to our fisheries.

Although no appropriation of funds to be applied to the enforcement of the game laws had been made, \*we took such steps as were possible to bring offenders to justice. An offence committed on Murch 12, only three days after the act referred to became a law, we successfully prosecuted, as our first case. This cost the offenders \$71 for their amusement, if it pleases them to regard as sport the running dawn a great date in the now, and butchering it when examusement, if it pleases them to regard as sport the running down a gravid doe in the snow, and butchering it when ex-heuts.ed. The list of prosecutions will show that we have made energiel efforts in the discharge of our new additional duties, and we hope to receive the support and assistance of our citizens and sportsmen in the continuance of this work cach year. Our citizens are awakening from their aparty in regard to our fish and game laws, and the general desire for a vigorous enforcement of them, calls forth the support and assistance needed, and without which we can do but little.

#### GROUSE.

wish to call attention to the work of extermination We wish to call attention to the work of extermination, practiced by partice sepaged in sparing grouse or "partridges." Very few of our citizens are aware of the extent to which saring is practiced, and although the grouse are nearly exterminated by this means in some districts, the public are at a loss for a cause to which it may be ascribed. The practice is carried on so secretly that it is often known only to those engaged; in it, and perhaps those to whom the birds are sold. It often happens that many broods of grouse are observed in some locality during the summer, but when sought for in the mellow days of October but few, if any, can be found. Since summer woodcock shooting has been sought for in the mellow days of October but few, if any, can be found. Since summer woodcock shooting has been prohibited by law the grouse have increased in numbers. When it was legal to shoot woodcock in July and August the young grouse were slaughtered in great numbers before September 1; every one found in the woods with a gun and dog being osiensibly there for woodcock. Fortunately and dog being ostensibly there for woodcock. Fortunately for the preservation of the grouse no woodland game can now be legally killed before September 1, and he who goes to the woods with gun and dog in July and August becomes an object of suspicion, while the sound of a gun is prima finest evidence of a violation of the law. We warn sports men who may take young dogs out for training, to leave the gun at home, if before September 1, lest they incur the odium, at least of being suspected of peaching.

#### WOODCOUK AND SNIPE.

Although the spring was very favorable to the breeding of woodcock, the almost suprecendented drought that extended well into the autumn, and past the usual rainy season of September readered the earth so parched and dry that the customary resorts of these birds yielded no food, and they were thus driven to seek other feeding places. Usually the woodcock remain throughout the summer in the vicinity of their tomary resorts of these birds yielded no food, and they were thus driven to seek other feeding places. Usually the wood-cock remain throughout the summer in the vicinity of their breeding places, and, after moulting, collect in the coverts that are their favorite resorts. But this year these coverts have comparatively been almost descried, the birds having scattered over the country, along the banks of streams and shores of lakes, the edges of meadows, and places where they have not been observed before. Reports from Canada show that woodcock were exceedingly abundant in the nuturn, and places that usually have afforded but little shooting, seem to have been thronged with birds. This has been true, also, of snipe, which were scarce in Maine from the same causes that occasioned the scarcity of woodcock; the meadows and marshes being very dry at the time of the usual appearance of the snipe during the outland. As is usual after a poor season, many of our sportsmen discuss the advisability of restoring the old law, permitting woodcock shooting in summer. We trust that this will nover be done, for it would open the door to a slaughter of young grouse, and, most certainly, four monthly shooting at woodcock, instead of two months, will not serve to increase their mumbers, abeliand summer, should not serve to increase their mumbers, abeliand summer, should not serve to increase their mumbers, abeliand summer, should not serve to increase

their numbers.

Since Maine abolished summer shooting other States have

Since Maine abolished summer shooting other States have done likewise, and with good results; and we hope that all other States will follow the example.

It is true that ten years ago one could show more birds as the result of a day's shooting in Maine; but there are now ten or twenty times as many persons hunting woodcock as then, and all the best coverts are hunted through almost daily during the whole season. Hence the birds are not suffered to collect in numbers, but the aggregate number killed each year far exceeds that of the years before summer shooting was prohibited. each year far excee ing was prohibited

It will be remembered that within ten years the ducks that frequent our lakes and streams gradually become scarce, and

even exterminated in some localities where previously accus-tomed to breed. This scarcity was owing to extensive net-ting, but the perpetrators were driven off for a time, and the ducks increased, until they regained their former abundance

It has recently come to our knowledge that the same causes It has recently come to our knowledge that the same of extermination have been in operation this year, and all especial attention to the fact. We intend to publishe future the names of those who persistently violate. can especial attention to the fact. We intend to publish in the future the names of those who persistently violate the fishery or game laws, and we now brand as a professional poacher and persistent violator of our laws, Daniel Y. McFarland, of Lamoine, Me. This man, with his associates, has been engaged in the business of netting ducks for many years, and we not only call upon all good citizens to aid in forcing him to abandon this illegal parsait. but warn the ditizens and officers of the law in other States, and our Canadian neighbors, that the operations of this man are not confined to Maine alone. He is the leader of a gang of poachers whose operations a few years since bade fair to exterminate all the wood ducks and "black ducks" that bred in the State, and he has been operating again upon an extensive scale in Maine within the present year. He is wanted in Maine to meet the justice that awaits him and the heavy penalties that he and his associates have incurred.

[UMAICS.]

penalties that he and his associates nave incurred.

QUAITS.

It is quite generally known that a large number of qualis were imported from Europe this year, and liberated at various places in the United States and Canada. More than one-half of the total number were distributed in Maine. These builds were purchased by private subscriptions, but as they have now come under the protection of our department we give this mention of them, which may prove of interest to our farmers and sportsmen.

This quali, Coturniz communis, is the common migratory quali of Europe, that for centuries has crossed the Meriter-snean sea from its winter home in Africa to its breeding places throughout Europe, returning again to Africa in the autumn. The bird resembles in outward appearance our American partridge, Orlga virginiumus, that is termed "quail" in New England. The migratory quali is one-third smaller, and the throat of the male bird is marked with dark trown or black, that extends from the bill downward. The note of the quali may be expressed as nearly as is possible to translate into words or syllables, by "valva-de-chetat-chetat," the preliminary crescendo "who" not being heard at a great distance, but the three clear notes may be heard a quarter mile away. Often the notes seem to come from a wheat, the preliminary crescends "who" not being heard at a great distance, but the three clear notes may be heard a quarter mile away. Often the notes seem to come from a bird near by, but really afar off, and perhaps in another field not near the listener.

The quall is strictly a terrestrial bird, and inhabits the fields, where it also msts. Filteen eggs to a nest is not an unusual number, and as each egg, laid by a bird of but three or four ounces weight, is as large as the egg of our robin, we have been frequently asked how so small a bird manages to hover and hatch so many eggs in one nest.

The nest is a depression hollowed in the ground, and lined with grass by the bird. In this nest are faid the eggs in

with grass by the bird. In this nest are laid the egg regular order, upon the bottom and around the sides of laid the eggs in

regular order, upon the bottom and around the sides of the nest, the upper ones supported by the eggs beneath and he sides of the shallow, bowl like nest. While sitting, the body of the bird is surrounded upon breast and sides by the eggs, while its wings are raised to cover the top layer of eggs upon each side. Many nests of fifteen eggs each have been reported as found, and all the eggs were hatched. One nest of eighteen eggs deserves especial mention, as of interest to students of ornithology. The eggs in this nest were laid in tiers or layers most carefully and compactly arranged, one above the other, as if placed by the band of man, the bottom layer most entirely hid from view by the eggs above. But twelve of these eggs were hatched, and evidently the bird was too ambitious. Probably the bottom eggs were so covered by others that not sufficient warmth was imparted to them from the body of the bird.

eggs were so covered by others that not sufficient warmth was imparted to them from the body of the bird.

The eggs of the quail are of a greenish color, profusely blotched with brown. Like other eggs, if deserted and left exposed to the sunlight for days, the color will fade until it becomes almost white. This year the eggs were laid in June and hatched in July. The young birds leave the nest as soon as hatched, and mature very rapidly, being strong of wing in Sentenber. Sentember

Among the noteworthy characteristics of the quail are its Among the noteworthy characteristics of the quail are its gentleness, and the extreme pertinactive with which it adheres to its domestic duties. We found two nests with eggs within a few rods of a farmhouse, where a lot of the birds had been liberated, and close by a traveled highway, as well as near a railroad. The birds were occasionally observed among the chickens shout the house. chickens about the house.

chickens about the house.

Quite a number of quails have been killed by mowing nachines. One might naturally suppose that the clatter of one of these machines approaching would sufficiently alarm any bird, even while sitting upon its eggs, to cause it to leave its nest temporarily. But some have had their heads out off

any ban, and the morarily. But some may a manife was a typical by the knives, and in one instance the machine was a typical by the knives, and in one instance the machine was a typical "Juggernaut," the wheel passing over and completely crushing the quall und its eggs in the nest beneath it.

The qualis have a strong scent, readily detected by setters and pointers, but they often seek to escape by concealment, or without taking flight. They are fast runners, and in a field trial on these birds under the present system of awards and demerits, the dogs possessed of the finest "nose," or and demerits, the dogs possessed of the finest "nose," or neid trial on these birds under the present system of awards and demerits, the dogs possessed of the finest "nose," or scenling powers, would be handleapped, and receive a score of demerits for false "points," as it would not infrequently occur that the bird or birds, would not be flushed betore the dog, although there when the point was first made. Some young quails were captured near St. John, N. B., this year, although none were liberated nearer than at St. Stephen. Several quails were beard and seen near Machine therethere the work of the several quails were nearly at the second of the several quails were the arms of the second of the

Stephen. Several quails were heard and seen near Machias throughout the summer and autumn. None had been liberated nearer than the Penobscot valley on the west, and at Calais, forty miles to the east. This is not remarkable, however, in consideration of the fact that a quail can easily fly fifty miles within an hour. Unlike our American partning, or "quail," it is capable of long sustained flights, without execution to rest.

of quart, it is espacie of rong sustained fights, without stopping to rest.

Qualis live upon the ground in open fields, and feed upon seeds and insects. Farmers should be interested in protecting these birds for propagation, and public attention is called to the special law for their protection.

"No quail shall be killed, or had in possession except alive, any ne provious to September I, 1883, under penalty of \$25 for ery offense, and \$1 additional for each qualt killed or had in sacssion except alive.—Chap. 189, I'ublic Laws 1880." tinte

The general law of the State provides for their protection ter the expiration of this special law.

CATS

We mention cats, not as game, but as the most deadly

enemics to our feathered game and song birds. Many instances have been already reported of qualls caught by cats, and the unsuspicious nature of these birds render them an easy prey to the feline marauders. One cat is reported as having been seen to return home with six qualls in the course of a few weeks during the nesting season. Of course one can only conjecture how many that cat killed and ate without being observed by any one. Another cat was seen to bring home three woodcock.

But although the cats commit this haveo among our game birds, by far the greatest evil caused by them is suffered by the farmers, to whom a cat is a costly pet. All through the spring, summer and autumn the cats venture out from their homes to seek their favorite tid-bits, the birds, and the best of care and food will not keep them from doing this. One

spring, summer and autumn the cata venture out from their homes to seek their favorite tid-bits, the birds, and the best of care and food will not keep them from doing this. One may frequently see them crouching by the readside or skulting along a hedge or dich, seeking not for mice but for birds, destroying the mother bird setting on its nest and the fledgling birds. Now do the farmers realize the evil results to them caused by the death of these birds? We think not and would therefore call their attention to what is really serious evil.

and would therefore call their attention to what is really serious evil.

Excepting the hawks, and other rapacious birds, all our birds are insectivorous in their habits, very many of them subsisting wholly upon insects and their eggs, of which a single bird will consume an immense number daily. But for single bird will consume an immense number daily. But for these birds the face of the earth would be made desolate by a scourge of insects. As the birds about a farm destroy nillions of insects every year, it believes the farmer to afford all possible protection to these birds that render him such valuable service. There is a sufficient number of nature and prevent a too great increase of birds, and the domestic cat has been introduced by man and by him should be removed. The mischief that might be done by all the rats and mice caught by the ordinary cat in the course of the year would be but a triffe as compared to the evil results possibly due to the destruction of the birds. We arge our farmers to kill the cats. You cannot afford to keep them, unless it be in confinement constantly, except while the snow is on the ground

destruction of the brias. We finge our statutes to shir the cats. You cannot afford to keep them, unless it be in confinement constantly, except while the snow is on the ground and nearly all our birds are gone. Every little bird killed by them grants life to many thousands of insects.

MOSSE, DEER AND CAREBOY.

The law prohibiting the killing of moose, at any time for five years, expired October 1, 1850.

Unfortunately, violation of the law deprived the State of the full benefits for which it was enacted, yet the moose has increased in numbers within the period named, and we trust that the examples made of several offenders brought to justice, and the peneslty of \$100, for each moose killed or had in possession, may deter others in the future from so offending. Caribou are much better able to take care of themselves. They can travel rapidly and for long distances in the deepest sow, and owing to their roving habits they are perhaps pleutiful in a given locality one year, and none at all observed there the next year.

There the next year. The violations of the laws protecting deer have gradually become better observed, and deer have increased materially in the eastern portion of the State. Unfortunately the laws of New Hampshire do not conform with those of Maine, and of New Hampshire do not conform with those of Maine, and many deer are killed along the border during the summer mouths. There seems to be an apathy among the people in that portion of our State, and there have been repeated violations of the fish and game laws, without any apparent attempt at concealment, yet no one has been public spirited enough to enter a complaint. We hope for a speedy change in that

region. We are opposed to constant changes in the laws, as experience has shown that they too otten tend to make confusion, and render enforcement more difficult. We therefore recommend but a single change in our game laws, and that change such a one as will, we believe, render the law more simple

a enecuve. We have alluded to the desirability of uniformity in regard or "partridges" opens September 1. We recommend an amendment to the laws for the protection of moose, deer and caribou, that shall make the open season conform with that of grouse—September 1 to December 1.

September is the month when our forests are most fre-September is the month when our forests are most frequented by hunters, or those in quest of health and recruation. It is very difficult to prevent one kind of game being kilded then where it is lawful to kill other game, and deer are then in prime condition, and their young no longer dependent upon the does. In New Hampshire the season opens August 1, but we regard that date as too early for this hattude. Our present law makes the open season from October 1 to January 1. The change recommended gives no longer time for killing deer, but it cuts off the month of December, giving September instead. It sometimes occurs that the snow lies deep in our forests before January 1, and occasions are sometimes offered when the increase of years may be slaughtered in one season during the month of December. be slaughtered in one season during the mouth of December.

be staughtered in one season during the month of December.

Complaints for violations of the fish or game laws may be
made to any warden, whose powers and duties are here given.

All such complaints should be accompanied by evidence, or
such information as will enable an officer to obtain the evidence necessary for prosecution and conviction.

dence necessary for prosecution and conviction,

"An act to enlarge the powers and duties of the Commissioners of fisheries and Wardens.

"State of the commissioners of the commissioners of fisheries, and wardens, shall extend to all matters pertaining to game, and they shall have the same powers to enforce all laws pertaining to game as they now have in enforcing the laws relating to the fisheries. to game as they now have in enforcing the laws relating to the tisheries.

Sec. 2. The Governor is hereby authorized, with the advice and

Sec. 2. The Governor is hereby authorized, with the advice and consent of the Council, to appoint wardens, whose duty I shall be to enforce the provisions of all laws relating to game and fisherizes to enforce the provisions of all laws relating to game and fisherizes against the same that may come to their knowledge; and and shall have the same power as sheriffs and depairly sheriffs, to serve all criminal processes for violations of the provisions of any law pertaining to game and the disheries, and shall be allowed for said services the same fees as are prescribed by law for sheriffs and their deputities for like services; and in the execution of their dutes they shall have the same right to require did that sheriffs and their deputies have in executing the duties of their office; and any person refusing or neglecting to render such aid when required, shall forfeit ten dollars, to be recovered upon complaint before any trial justice or municipal court. Chapter 298, 1880."

#### GAME LAW VIOLATIONS.

The following named cases have been brought up, and there are others in the hands of the officers, but not yet settled:

April 16, 1580. Killing one deer in March, 1880. Penalty \$40. Fines and costs paid.

<sup>&</sup>quot;The appropriation of 1880 was for the "propagation of fish."

June 4, 1880. Killing song birds in June, 1880. Fines and costs

August, 1890. Killing woodcock in close-time. Fines and costs

August, 1930. Killing woodcook in close-time. Fines and costs paid.
September, 1880. Killing four deer in February, 1880. Penalty \$160. Indicted and bound over.
September, 1880. Killing one deer in February, 1880. Penalty \$40. Indicted and bound over.
September, 1880. Killing one caribou in close-time; \$40.00 and costs.
Killing one caribou in close-time. Fined.
November, 1880. Milling one mouse in close-time. Penalty \$100 and costs. Paid.
November, 1880. Hunting deer with dogs. Trial deferred.

November, 1880. Hunting deer with dogs. Trial deferred.

There are cases now in the bands of wardens against various persons for killing moose, deer, caribon and woodcock in close-time; for snaring grouse or "partidges," hunting deer with dogs and netting ducks.

Many past offenders have come forward and acknowledged their guilt thereby saving to themselves costs of a trial.

Two thousand is hundred qualis (Cota nice communities—the common ingratory quali of Europe, purchased by privale subscriptions and imported from Italy, have been liberated throughout the State

One thousand six hundred copies of an "Abstract of the Fish and Game Laws" have been compiled, published and distributed.

Correspondence, to the extent of some 1,500 communica-

Correspondence, to the extent of some 1,500 communications written, has forned one item of our work.

Five hundred placards giving close times, etc., for fish and gatue, have been distributed throughout the State; and we expect to be able to issue in pamphiet from next year a complete copy of all our State laws relating to Fisheries and Game, revised and codition. Hardly a year has passed without some change in our dishery laws. Special laws have been enacted from time to time, and some are still in force while others are not. New laws have been enacted, and old ones remain in force unless repealed by the vague expression, "all laws inconsistent with thus act are hereby tep-aied." We have employed a skillful lawyer to make a revision and confincation of all our laws relating to fish and game, and prepare the same tor publication, with notes, references, etc. codification of all our laws rolating to fish and game, and prepare the same tor publication, with notes, references, etc. The work will cover the period from 1820 to 1880, inclusive, and will be an authentic and valuable publication for the reference of lawyers and future legislators, as well as a work that is needed for the use of justices, wardens, the Commissioners and others in the performance of duties connected with the Department of Fisheries and Game.

#### "THE REFRIGERATOR AMENDMENT."

SYRACUSE, N. Y., Jan., 10. Synacuse, N. V., Jan., 10.

You "invite expressions of opinion on the subject" of an article in your last edition entitled "The Refrigerator Amendment," in which you take strong grounds against the proposition to legalize the sale of venison, quall, wood-cock and partridge all the year round, and also call for such legislation as wil prevent the exportation of game. I want to speak what I know to be the sentiments of every true sportsman, wherever he may be found. All such are sadly aware of the fact that game has come to be a delicacy in this State and many other States. The wanton killing of it has so decreased the supply that it can no longer be considered a luxury abundant to all, and sportsmen everywhere look with so decreased the supply that it can no longer be considered a luxury abundant to all, and sportsmen everywhere look with alarm upon the persistent efforts made by pot-hunters and dedicts to procure the enactment of laws which might probably be entitled "An Act for the Total Destruction of Game." Refrigerators would become the best of mediums for making the shapither as well as the sale of game an occupation lasting through the year. What would there be to prevent

ing the slaughter as well as the same of lasting through the year. What would there be to prevent the packing of game in boxes or barrels bearing a fictitious label of the contents and their shipment to dealers during every month? It is not a very difficult matter to forward a "subject" to a medical college by railroad, if it be securely reached and bearing an appropriate label. How much easier

every month? It is not a very difficult institer to forward a "subject" to a medical college by railroad, if it be securely packed and bearing an appropriate label. How much easier to furnish the New York market with game at all seasons, with the refrigerators to swear that it was killed in season. The exportation of game gives a great many pot-inuters employment, and what can they do for its preservation so long as they can make a seanty living by robbing the plains, the woods and the streams of their attractions to sportsmen, who find health and recreation in killing sparingly while they enjoy the pleasures which such sports afford? Our game does not belong alone to sportsmen, it belongs to all alike, I may say, though I dislike to admit that a pot-hunter should have any right to it. But as the number of sportsmen is vasily larger than the number of those who make shooting and fishing an occupation, it seems clearly properly that the majority should have the most potential voice in legislation, and I am sure the ge eral public would support the sportsman, for the consumer as well as the sportsman sees that unless good game laws are rigidly enforced at once, game will very soon wholly disappear from the markets.

I may afterward to the great wilderness in the norther contents of the propersymments of the consumer as well as the sportsman sees that unless good game laws are rigidly enforced at once, game will very soon wholly disappear from the markets.

forced at once, gaine win very soon, more supposed the markets.

I am a frequent visitor to the great wilderness in the northesstern part of this State, and have been for many years, and have seen the gradual but certain decrease of deer and and have seen the ground.

The same causes which operate there are operating throughout the country, and with the present rate of depletion continued but a shirt time longer, sportsmen may lay their guns and rods aside and thank tardy or deficient legislation for depriving them of the most health-giving of the colormals.

D. H. Bruce.

New York, Jan 17.

LET ME thank you for sounding the alarm against the proposed Refrigerator amendment to the New York Game Law. Your intimation that such an absurd proposition is fathered by a Game Association is surprising. Has that society the word "protection" in its title? If so it is a palpable mismore; "destruction" should be substituted. Every word you print in condemnation of this revolution of our game laws must it seems to me proif and meet the warm approved of

you print in condemnation of this revolution of our gaine laws must, it seems to me, merit and meet the warm approval of all the friends of the deer, quail, grouse and woodcock. If this amendment is pushed do not fail to parade the name of every legislator who gives it his voice or wote.

I notice with disunay what "Wollat" and the volume of every legislator who gives it his voice or wote. The production of the production

named in the enabling act, to revise this whole subject of game preserva iou, and to mature a succinct code to replace the laws and amendments scattered over the statute book.

BRADFORD, Pa., Jan. 15 YOUR editorial ought, I think, to convince the most skep-cal of the evil results which would inevitably follow the assage of such a law, and to arouse to action those sports-en who are in a position to contest the passage of this bill. If the game dealers are so unsound in the head that they

If the game dealers are so unsound in the head that they cannot handle gime in the proper season without suffering a pecuniary loss would it not be a kindness to extend to these sorely tempted men the benefits of a law similar to that framed for the prevention of drunkeness, and forbid altogether the sale of game? It would undoubtedly cause great suffering among certain classes, but the game, and what appears just now a far more important consideration, the game dealer's money, would be saved. Jesting aside, I hope every legitimate means to defeat the bill will be tried, and that the dealers will have common sense enough to spare the goose that lays the golden egg.

J. A. T.

#### OUR ROCHESTER LETTER

NOUR ROCHESTER LETTER.

ROCHESTER, N. Y., Jan, 1891.

YOUR correspondents have recently contributed a numperance of birds on their autumnal and vernal migrations, but if anything on the subject from the editorial pen has graced your columns it has secaped eyes that glance through the pages of Forest AND STREAM as eagerly, or nearly so, as they ever did through the leaves of the "forest primeval" to see a ruffed grouse tumble after a snapshot. This silence should be broken, and hence it is that, assuming the privilege of an "anxious inquiret," I would ask the fishing editor to give some additional information to the world about the full migration of Wilson snipe, by detailing his observations on that pair of our old familiar friends which in the autumn of 1874 became semi-domesticated on the mosses of the spring creek that fed the trout and grayling ponds of Fred Mather at Honeoye Falls.

of 1874 became semi-domestication of the first and frayling ponds of Fred Mather at Honeoye Falls.

You have probably forgotten the young man who, in October or November of that year while assisting in the construction of the Rochester water works, called at your house and was introduced by Beneder. But the incident was impressed on my memory by a variety of circumstances, and is likely to be remembered while memory holds its seat, etc. It hink it was a wet day when the nate's were "knocked up," and the inspector had a chance to see some of the objects of interest in and about that village of the plain—Honeoye. I had a chance of borrowing a gun and going shooting, or visiting the Natural History Museum, hatching ponds, etc., of one whom our friend B. said was a genius. I chose the latter, and have ever since regarded it as a lucky choice. To say nothing of the privilege of forming the acquaintance of the host, the place and all about it were of peculiar interest. The tame mink, the trout, the rare and beautiful gray-stiller. of the host, the place and all about it were of peculiar interest. The tame mink, the trout, the rare and beautiful graylings (at that time recently introduced in Eastern waters), the grotesque specimens of animals set up with rare skill by the amateur taxidermist, and, not least interesting, the snipe aforesaid that had become so tame that the visitor was allowed to approach them without their showing any sign of alarm. Do you remember how late they remained that year,

lowed to approach them without their showing any sign of slarm. Do you remember how late they remained that year, and did they come again?

The eternal tinkering at the game law continues with unabated vigor and with as little prospect of ever arriving at any conclusion that will be satisfactory. I wrote you last year that the Board of Supervisors of this county, Monroe, land passed a law limiting wild-f-wl shooting to Thurday, Friday and Saturday of each week in season, and prohibiting grouse and quali shooting tot-fly for three years. I started the movement for the limitation of duck shooting, for I thought, and still think, it would result in better sport for all. The prohibition of quali and grouss shooting was approved by some and condemned by others. I know that some conscientions men observed the law, but fellows of the baser sort laughed at the law and killed all the birds they could reach. This angreet the fair minded men, and they determined that if the birds are to be exterminated the true men might as well be "in at the death" as the knaves, and they favored the repeal of the prohibition, or making the original law so strong as to protect in fact. A draft of a law was presented to the Board this week to amend that of last year, and as it was rejected, the mover in disgust offered a resolution repealing last year's law, and it was adopted; so now the county is on the same footing as other counties in the State. There is only one man in the Board who knows a shot-gun from a rifle, and most of the grangers have a prejudice against gane law, so no matter how wise a proposition should be presented to

man in the Board who knows a shot-gun from a rifle, and most of the grangers have a prejudice against gane laws, so no matter how wise a proposition should be presented to them it would be treated coldly.

In honest ruth the prospect for sportsmen who love shooting is not bright in this otherwise favored county. Between the clearing away of cover, the improvement of arms, the increase in the number who shoot and other causes, it looks as it birds that were abundant a few years ago would, "ere new-born chins become rough and razorable," be numbered with the dode and other creatures interesting only to the paleontologist. The proposal to make shooters take out licenses won't do. It is undemocratic in the first place, and we are not yet so tired of the Republic that such a law would we are not yet so tired of the Republic that such a law would with the door an extend control of the proposal to make shooters take out licenses won't do. It is undemocratic in the first place, and we are not yet so tired of the Republic that such a law would go through. Furthermore, the Constitution of the United States provides that the "right of the people to have and bear arms shall not be infringed," and I think a license would be a decided infringement of that venerated instrument. None of it for me, game or no game. How would it work if men who shoot for sport and don't want all the game to die with them, were to form a voluntary association, each member of which would pledge himself not to kill more than a certain number of birds in a day? It might put off the exinction of some birds a little longer.

On Wechesday last there was a shooting contest at tame pigeons on the Driving Park in this city. The weather was rather cold, but it did not seem to abate the ardor of the veterans who turned out in force and during the day kept the traps moving briskly. Cash prizes were shot for, but as about half the men entered under assumed names it would not be of much interest to give the scores.

Since my previous letter an event peculiarly sad to sportsen occurred here in the accidentally broke through the ice on Irondequoit Bay within sight of a much respected member of the Mouroe County Sportsmen's Club, Henry Walzer, who, on December 22, accidentally broke through the ice on Irondequoit Bay within sight of his home, and was drowned. He was walking alone down the bay on ice apparently a foot in thickness, and broke through over a spring hole. There was not a man in the town but would risk his

own life to save Henry, who had himself rescued many from drowning; but in the cri-is there was no assistance within call, and one of the nost popular men in the county perished. He had been proprietor of the Newport House, the most popularly conducted pleasure resort in the county for twenty-five years, and was known all over the State as an enthusiastic sportsuan. He must be remembered by most of the men who have attended the conventions of New York State sportsuance's associations during the last, valve years, the sportsum cone's associations during the last, valve years, the sportsum of the second to the men. who have attended the conventions of New 1 ork State sportsmen's associations during the last twenty years, for he was a constant attendant and one of the best shots. An estimate of the regard in which he was held may be formed when the fact is stated that his funeral was a mile long, and was attended by delegation, from the Monroe County and Audubon clubs of this city; Genesee Club, of Irondequoit and Seneca Gun Club, of Seneca Falls.

E. R.

#### ATTRACTIONS OF PRINCE EDWARD'S ISLAND.

ON the first day of August L. and myself left Boston envote for Prince Edward's Island, to devote the entire month to shooting and fishing. We left T wharf at 12 m. on Saturday, and arriving at Charlottetown on the ensuing Tuesday at 2:30 r. m., took the train the next morning on the P. E. I. R. R. for Tignish, the terminus of the road and the most northern town on the island, its chief industries being agricultural pur-uits and fisheries.

ing agricultural put-fuls and fisheries.

We then took up our quarters at the house of a well-to-do farmer, the proprietor of some three hundred acres and sole owner of a grist, saw and woolen mill, all worked by water

Two miles to the eastward and five to the northwest is the

Two miles to the eastward and five to the northwest is the sea coast, with its asudy beaches indented with small bays and salt marshes stretching in places far inland and intersected by sally-winders, which meander through their muddy courses soon to empty into the sea.

The nature of the country generally is undulating, and where intact from the woodman's axe is covered with a low growth of woods, stunted by the rigorous storms and severe winds of winter, which laps well into the month of April. The color of the soil is red, similar to that of New Jersey, but of a deeper hue, a peculiar characteristic of the island, and that it is easily tilled may be inferred from what Farmer Haywood said one day to me. "Why, you can plow a ten-acre lot without meeting a single stone to turn the edge of your plowshare."

plow a ten-acre lot without meeting a single stone to turn the edge of your plowshare." Such was the scene of our halcyon days. Such the ground on which we shot, the waters in which we fished. And now in palliation for this dry description of wood and wold, depicted in such crude but true colors, let my far cy wander and my tale wax merrier as the field is taken as

Wander and by lines wetter here! Get up, you lazy dogs. Her been hitched up in the wagon this half hour, and bregetting cold; and if you don't hurry up the tide 'ill

down a piece."

Roused by this sonorous summons we made haste to don Our shooting clothes, and sitting down to a good breakfast of hot colfee, eggs, fried trout and toast, which was duly dispatched, jumped into the wagon. The two miles of ground is shortly covered, and we rein up at the side of a fence hard by the marsh, where yet the morning sun had failed to dissipate the early mists which still hung heavily over the lowbooks.

usspace the early mists which suit hing nearly over the lowlands.

We now separate, and after choosing suitable situations, where we build the blinds, we set out the decoys, and await in silence the much-desired arrival of some bunch of bay supe of which we are in quest. Soon a small lock of curtlew is descried, and we vie with each other in mirth to see who can alture the birds within gunshot by the deceptive whistle. See! now they poice overhead, and look down upon their companions peacefully feeding on the strand below; and now they partially close their wines to lower their uncertain flight. The gun is now slowly raised, and instantaneous with the lowering motion, which curlew are wont to exhibit just before slighting, the triggers are pressed in quick succession, and the double report invokes the echoes of the silent bills adjacent to the marsh.

mis sujectes to the marss.

Prone to the earth three curlews drop,
Hard riddled by an ounce of shot;
Giving good promise of sport to all.
While startled from their safe retreat,
The golden plovers off repeat
Their clear and timid measured call.

Their clear and tunid measured call.

As soon as the birds are gathered I resume my place at the blind, and again wat patiently until another shot is offered. So the sport continues, and should both wind and tide prove favorable, a bag of a dozen or more of the larger species of bay snipe is often made in a morning's shoot, to say qothing of the hordes of little sand-pipers and plover which could be hot by the bushel if one desired to.

#### TROOT FISHING.

Seated in a light ducking-skiff, a short paddle of some twenty minutes brings me to the margin of a deep and dark-some pool, where silence reigns supreme and all nature seems hushed in a profound quietude; the hithertor ippling surface of the water is still; the sun fast sinking in the western sky throws forth rich tiuts of safron yellow, commingled with that reddish tinge which characterizes a summer sunset, the whole blending in sweet harmony with the colors of the varied landscape. As the last strokes of the paddle are finished, the skiff glides noiselessly beside a log half immersed in the clear water. Anon the leap of some wary trout, as it seized a dainty morsel in the slape of some hapless fly or miller whose fiche flight had brought it too near the surface, breaks the universal stillness; or perhaps the winnowing of a flock of dusky ducks leaving the forest aisles is heard overhead. I grasp the rod; one backward movement of the hand, another forward, and the winged messengers of death are speeding on their course. The line unfolds itself and speedily the the universal shimess; or perhaps the winnowing of a flock of dusky ducks leaving the forest ailes is heard overhead. I grasp the rod; one backward movement of the hand, mother forward, and the winged messengers of death are speeding on their course. The line unfolds itself and speedily the stretcher and bobber alight softly on the tranquil surface and them—ye Naiads and Fluviales! what sport doth lurk within thy limpid waters, as with a mighty rush the spotted quarry cleaves through the yielding liquid. Flip! swash! he breaks, and in his downward plunge captures the seductive hackle which lured him from the depths below, and now he feels the sharpened hook and, piqued by its exquisite pain, redoubles all his frantic efforts to escape the rod.

"But hold! my precious dear; your stratagems are indeed most clever and you would fain double on your hemlock snag; but stay your mad career and to the bending Lconard mould thy stubborn will. Seek not the muddy bottom, there to sulk, but—there! that's right; a little nearer and you will be safe within the meshes." So the net brings him to the creel.

creel.

But now the waning day and gathering gloom warn me to

red up my line, disjoint my rod and ply the paddle homeward; and when the string of "lusty trout" are weighed the very scales grown under the weight of nineteen pounds.

#### DECK SHOOTING.

Still another variety of sport can be enjoyed on the island, that of black and wood-duck shooting. These fowl, though not strictly abundant, can be found in numbers sufficient to warrant a fair day's bag. True, the pursuit of them is productive of both toil and fatigue, but to the indefatigable sportsman who seeks the field with the intent of animating the senses, invigorating the body and communing with nature, it is a matter of secondary importance, and to him alone is due, me judice, the name and honor of a sportsman. And now my tale is finished, and should these lines ever meet the eves of my good friend—who, alsa! is now separ-

And now my inde is finished, and should these lines ever meet the eyes of my good friend—who, alas! is now separated from me by many a mile—I have only to add that his jovial ways and sweet companionship shall always have at least one spot ever fresh and verdant in the momory of his fellow-sportsman.

H. W. A.

#### DUCK SHOOTING AT SHINNECOCK.

Editor Forest and Stream :

DUCK SHOOTING AT SHINNECOCK.

Editor Forest and Stream:

In your number of Jan. 20, 1881, you publish a communication from "Shinnecock," in which he takes exception to the surgestion made by Mr. Pike in his speech hefore the Long Island Sportsnen's Association. He says "that Shinnecock Bay is not adapted for point shooting."

To any one acquainted with the bay, and many of your readers doubtless are, that statement seems unwarrantel, for it has, between Quogue and Southampton, many fine points, notable among which are Pine Neck, East and West Rampasture, Hole-in-the-Wall, and the east and west points of the big bar. I speak of these particularly, because I have shot from or near them all, and have had fine sport in the days gone by. I recall the first time I ever shot on Shinne-cock Bay; it was in the spring of 1876. Batteries were not so numerous then as now, and the shooting was much better. I shot every day for a week, and each day had good sport, securing a fair bag. The birds fed near the shooting has become gradually poorer, until hast lime the shooting has become gradually poorer, until hast lime the shooting has become gradually poorer, until hast lime the shooting has become gradually poorer, until hast lime the shooting has become gradually poorer, until has learned to birds a came very near being "whitewashed."

The open season for fow! Shooting on Shinnecock Bay commence of hast October 20, and for about ten days the birds were pleuty and gentle. That gave five shooting days, which was anuple time to disgust them with batteries and the use to which they were put. I will cite my own case. My gunners were anxious that I should have good sport, but no more so than were other gunners for their sportsuen, consequently there was a great rivalry as to who should secure the batch who had be a subject to the might at he says, on page 312, Vol. 3, "American Ornithology," speaking of the black duck: "In the evening they seek in our behales of their patural feeding-time. If you will allow me the space I would l

same as it was in the days of Wison and Giraud and as they would not remain then on waters where they were disturbed night and day, neither will they now. For my own part, and on behalf of many brother sportsmen with whom I have canvassed the subject, I should like to have batteries abolished from Shiuncock Bay, but as I am willing to give an equal chance to all, I would suggest, as a compromise, the regual chance to ann.

following:

1. Abolish the three-days law.

2. Pass a law that no battery shall be placed more than twenty rods from the nearest shore; and,

3. That no battery shall be rigged or anchored on the shooting-grounds until one hour after sunrise and must be taken up at least thirty minutes before sunset.

If such statutes as the above were passed we would once.

If such statutes as the above were passed we would once.

#### OUR PHILADELPHIA LETTER.

OR the first time in very many years I noticed a quantity of sharp-tailed groups for sale. TioR the first time in very many years I noticed a quantity of sharp-tailed grouse for sale in the street last week. The party who was selling them did not know but that they were prairie chickens, and called them such. The very severe weather we have been having the past three weeks has enabled game dealers in the West to ship many prairie chickens East by cheap freight in a frozen state. I see also numbers of ruffed grouse being offered on our main thoroughfares by peddlers or "street-hawkers." These birds have the appearance of having been snared. You know our Pennsylvania law prohibits the offering of many varieties of game (among which is the pinnated and ruffed grouse and quail) after January 15. This may in a measure account for the great quantity noticed everywhere, dealers being anxious to get it off their hands before the date of the law's taking effect. Some of these peddlers of game on being questioned state that they will offer praitic chickens and birds not native of this State after January 15, stating that the law will not "hold water" if tested, except as relating to our own game. And yet the law distinctly names the several varieties of grouse, and imposes a penalty on their sale after the above mentioned date.

Our enterprising restaurateur, Lauber, had two enormous wild bears hanging before his door this norning. These animals were shipped to him from Germany, advantage be-

ing taken of the cold weather. They are to be served up for

ing taken of the cold weather. They are to be served up for those who will partake.

It must give those interested in the preservation and protection of game much pleasure to note the anxiety shown by sportsmen on the subject, which is now plainly evinced by the numerous articles in your last edition of Forest and Stiera and the form of the sportsmen of the country your journal should champion the cause. To illustrate that the severe weather we have experienced, and which has proved most disastrous to birds of the gallinaceous order, as I sumised early in the winter, has damaged the game of the South, read the following from the Columbus (Ga.) Binquiver.Smr. "A negro, which henting in Perry County, Ala., a few days ago, came upon a covey of twenty-four partridges, which he proceeded to pick up one by one and put in his bag. They were well nigh frozen and unable to fly." This is but a single case. How many just such incidents have occurred in the Eastern and Middle States?

Certainly there should be no trouble in having a ready response to a call by Forest and Stream for a convention of

curred in the Eastern and Middle States?

Certainly there should be no trouble in having a ready response to a call by Forest and Stream for a couvention of sportsmen of the East to take some steps regarding a cessation of the hunting of ruffeed grouse and quail for at least one year, if not two. I know there will be an outery against such a movement on the part of some dog breeders, who depend entirely upon the sale of their animals for a livelihood. This will be seen at once, indeed it is already shown by one or two articles I have read. It was only to-day I heard an inquiry from a gentleman living in Chester County for live quail which he desired to keep in his burn through the winter and liberate in the spring. "For," said he, "in our section of the country we have not one covey left; the birds have all perished." The subject cannot be agitated too much, and an effort on the part of Forest and Stream looking to a call of gentlemen interested in the cause would doubtless meet with success. We have doubts that it will be found difficult to obtain live birds in any great numbers from North Carolina, as reports from that State show the quail has suffered there likewise. Let me repeat, such an undertaking on your part will be as laudable as your expose of the nitro-cellulose Dittmar powder.

The Country of McKleam of Pennsylvania, is now our best region for deer, especially in the Sinnaulahoning section, Our unutnal friend, Capi. A. Clay, who resides in the locality mentioned a portion of the year, could relate interesting hunts participated in by himself and friends.

HEMPALO EXTERNATION.

#### BUFFALO EXTERMINATION.

Editor Forest and Stream .

Editor Forest and Stream:

Let me say a few words on a subject to which attention has been called several times in your paper, namely, the wanton destruction of buffalo. That they are rapidly approaching extermination is abundantly evident. The action of the Game Protective Association of Wyoming testifies to that fact. The letter of W. A. Allen, of Montana, in your issue of December 23, says: "We found parties killing them for the tongues alone, not even taking the hides."

Let me give the results of my own observation. In the spring of 1876 I went from Dodge City, Kansas, across In dian Territory and into the staked plains of Texas. The herds which we saw were very small, none numbering more than four hundred; few were nearly so large. An officer of the expedition, who had passed through the same country a little more than two years before in pursuit of some Indians, told me that so large were the herds there that it was neces. told me that so large were the herds there that it was neces-sary to halt the cavalry and fire into the herds, in order to sary to natt the cavarry and fire into the nerts, in order to break them up and scatter them, so that the column of cavalry might pass through. In 1876 the few remaining ones were s; wild that they fled precipitately before us, and when it was necessary to kill them for the meat we were compelled either to use the utmost caution in approaching them, or

either to use the utmost caution in approaching them, or else ride them down and fire upon them from horseback. The same officer told me be thought that in his first expedi-tion there were ten where one was found in the second. Upon all sides we found hundreds of cureasses blenching in the sun. In one locality, where they were most abundant, the crack of the rifle was heard everywhere. Our nostrils were constantly offended by the stench of decaying bodies that above them have been applied to give the stench of decaying bodies were constantly offended by the stench of decaying bodies that almost literally covered the plains. Of course these were killed for their bides, but the inevitable result, extermination, will surely follow unless some limit is put to the numbers killed. To give some just idea of the enormous numbers killed, it is only necessary to say that in one year three hundred thousand hides were shipped from Dodge

numbers killed, it is only necessary to say that in one year three hundred thousand hides were shipped from Dodge City, Kansas.

When the two railroads that cross Kansas were opened it was not unusual to have to stop the trains till the buffaloes had crossed the track. Now a buffalo is never seen on either one of them. And this is not simply the result of advancing civilization; it is the direct consequence of the merciless war which has been waged ugainst them, and unless something is done to prevent if, the day will soon come when this characteristic American animal will be one of the things of the past. Cannot something be done to put a stop to this wanton destruction? Is there not some action which could he taken on the part of the General Government that would do something toward the preservation of the bison? It will not do to plead that the hunters make a living by their hunting. The same amount of time, labor and energy (and a much less amount of exposure and bardship), expended in nearly any other direction could hardly fail to be as fully remunerative, if not more sa, for the hides delivered at the railway station bring but little more than one dollar each.

Even if legislation should compel some men to seek an other mode of making a living, it would be better than to exterminate the buffalo. But I do not propose to discuss the matter; I want to lay the facts before your readers, and let all draw their own conclusions. It seems to me that the

the matter; I want to lay the facts before your readers, and let all draw their own conclusions. It seems to me that the conclusion must inevitably be drawn that it is desirable to place limits to the slaughter of this animal, and to do some-thing toward its preservation.

The Central New York Sportsmen's Club have elected the following officers for 1881: Charles W. Hutchinson, President; Andrew McMillan, E. T. Manning, Sylvester Dering, Vice-Presidents; John D. Kernan, Prosecuting Attorney; Major D. T. Evers, Treasurer: Frank I. Meyers, Secretary, Dr. John W. Greene, of New York, was unanimously elected an honorary member of the club. The society calls attention to the necessity of incorporating bin the game law sections preventing sportsmen and others from leaving fires burning in the woods, so destructive to our forests, and also to prohibit those parties from leaving carcasses and offal near the camps and springs in the Adirondacks.

#### DUCK SHOOTING AT CORR'S ISLAND

THE brant are more plentiful here this season than for for many years. Laveraged twenty-five a tide during my stay at the Island, but I happened to strike the spot as the right time. Sometimes one will have to wait for a week

my stay at the Island, but I mappened to state, the clip the right time. Sometimes one will have to wait for a week or ten days before he can have a good day's duck shooting. There are three absolute requisites to stool brant; the tide, the wind and the sun. If the tide is right and the wind is wrong it will not be a sportsman's day. Should the wind set strong and it is cloudy, then you might as well remain away from the blinds; but when the flood tide is running, a strong wind blowing and a bright sun is shining, then it is

set strong and it is cloudy, then you might as well remain away from the blinds; but when the flood tide is running, a strong wind blowing and a bright sun is shibing, then it is that the birds fly and come up readily to the decays. In a winter's season there is certainly not an average of over two such days in the week, and the bunter will have many hours of weary waiting, which on this island, unless he has companionable comrades, is almost unendurable.

Never was there such an illustration of killing the goose that haid the golden egg as this place presents. The Cobbs, by their extortion and high prices charged sportsmen, have effectually killed their island; for frey years ago there, were dozens of Northern sportsmen who rendezvoused here for duck shooting, now there are none. I being the sole, solitary visitor, and as the ice prevents any beats from leaving the Island, or from hunting, I feel as desolate as Alexander Selkirk on Juan Fernandez. Even Nathan Cobb is getting siek of his enforced idleness, and wanders disconsolately around his decoys, which he can't use This is the first tice blockade that has isolated the lishand from the mainland since the famous winter of 1887. famous winter of 1857.

 ${
m I}$  s and this squib at a venture, and by strange hands, as we used to do in Richmond during the war, and termed the un-certain mode by a notice on the outside of the envelope, "Via Grapevine Telegraph." Anyway it will reach you

"Yia Grapevine Lenguapin Samura Grapevine Lenguapin Some day, I trust.

The Cobbs have made heavy bags this season, Nathan sending many dozen to Northern markets. I only average some twenty brant on each tide.

To sportsmen coming here I add this advice, don't come alone, but the more the merrier.

Cobb's Island, Jan. 1.

#### CALIFORNIA GAME.

CALIFORNIA GAME.

Cosumnes, Cal., Dec. 23.

Our rainy season, which answers to winter, has set in and for the past four weeks we have had plenty of weather, whether we liked it or not. It has brought us an abundance of ducks, however, and a larger proportion 'of canvas backs than we have ever known before, in fact they were the only duck to be found in the market. Quali are very abundant, and afford fine shooting, when the weather permits. I promised to say a word about quali. There are several varieties on this coast, the best known being generally distinguished as mountain quali and valley quali. The former frequent the mountain only, except as very severe storms drive them lower down, and are much larger than the valley quali. Both varieties are tufted and are much handsomer in plunage than the eastern quali. I send you two skins from the heads of valley quali. The qual here do not frequent open fields as much as those in the East, except corn fields along the river bottoms and hear to villow clumps. They are dilicuit until after the frosts have stripped the trees of foliage: first because their first flight is generally into trece or bushes, where they hide very closely; and second, because they are much more uncertain in their times and places of feeding, pruning thenselves, etc., than the Eastern quali. I notice with them the same mysterious power of withholding their scent that Eastern quali have when first flight is generally into trees or bushes, where they hide very closely; and second, because they are much mild much many the road ahead of a trans sometines for some distance. But alsa for the hopes of the Eastern sportsman who thinks he has a soft thing; after the first shot there is a roar of short wings and the birds have dropped into a dense chaparard composed of thorny bushes and almost impenetrable, except for them and hum up a fresh covey. In spite of such drawbacks, however, there are plenty cough to make fine bags, and I have known three brothers to kill in two months' shooting I,300 dozen. D which unfortunately is exterminating the deer in some parts of the State. I am afraid this letter will trespass on your time and space, if it does use the blue pencil. W. L. W.

#### AN ADIRONDACK TRIP.

Editor Forest and Stream:

Would "Nessmuck," through your columns, inform a friend and myself of a trip through the North Woods that would occupy about three weeks or a month, where one would not meet every few miles with a loss of people and all the attendants of civilization? Hard work not the slightest consideration. I forgot to mention that we reside in Utica, and a radius of fifty miles would suit us. We went in last year from Buerafts above Moorehouseville and a carry of two and one-half milesto Wilmurst Lake, where we intended to stay for our trip, the fishing in the lake being grand. The first morning we were out with two roles we caught seventeen time fellows, full of life, the least of them weighing one and three guntrers pounds and the largest about two and one-half pounds. But things at the house are not a joy forever (there are sharks in the wilderness), so we struck camp, and taking boat to the end of the lake with our camping out out-fit which we had brought with us in case of an emergency, we went to Snag Lake, which is a small lake about two miles from Wilmurst Lake and the roughest and longest I ever wish to carry sixty pounds over. At Snag Lake we had splendid sport, the fish being very plentiful. From there we went to the Metealf River, but it being rather late in the season—the second weeks. A better time or better luck I never struck. The last day we walked down from Moorhouseville to Prospect, a distance of twenty-nine miles without turning bair, a feat that without our two weeks training we should have considered several times about. I mean to send you a full account of our next trip and all particulars. If.

ELIJAH CAMP, an Indian guide, thinks that he has dis-covered two Adirondack lakes never visited by a white man,

#### CENTRAL WISCONSIN

CENTRAL WISCONSIN.

I HAVE happened upon a good many partridges since fall while lunning rabbits, and while I have seen none "tree," my experience is that they un-tree with a good deal of "previousness" on the approach of either man or dog. Until within the past few days I have not raised any from the ground, they being almost invariably found in the trees. It would take an extra good "artist" to kill six out of every twenty, taking them as they here the trees and not picking shots in our tamarac, pophar and alder thickets.

I shot a squirrel the other day in size about midway between a red and gary squirrel. It was colored like a gray, except that it had a red strip about an inch wide along its back, and a red tail like a fox squirrels. What was it?

Our thermometers have marked as low as 40 degrees below zero more than once, and from 20 deg. to 30 deg. has not been uncommon this winter, and yet a few days since a gentleman ridding near a spring creek put up a flock of eleven malards. Do you suppose they were waiting for cold weather to set in before going South?

Rabbits and toxes are our only legitimate game now. The former are usually very plenty here, but this winter have been thinned out by Reynard whose family is largely represented, and affords good sport.

#### SQUIRREL SHOOTING AT GREENWOOD LAKE.

New York, January 14.

I see that the framers of the proposed new law for this State want to deprive me of going up during the months of September and October to my friend Gideon Smith Bradher's, at Greenwood Lake, to shoot squirrels. Start out early from his house, put in your pockets a dozen cartifages, a little lunch and a copy of the Forest and Streem, your gun, but no dogs. Take it easy, roaming along the grand hills, looking down on fair pretty Greenwood Lake, you catch a glinpse of it now and then, the little steamer Montelary putfing away on its bosom. Select a shady spot and an easy seat near some hickories, read your Forest and Streem, eat your lunch, watch the pretty birds near you, and see the ruffed grouse strut on a distant rock or plume himself in some tree. Now you shoot a squirrel, sometimes a hawk; but the main object is to enjoy the beautiful woods, fine scenery, breathe pure fresh air and study nature, getting to Bradner's in time for supper, hungry, happy and fully content if even the bag only contains two or three squirrels. After a good meal, with a bottle of Milwaudkee, stirting on the front porch, the sun is just setting o'er the Warwick Hills—what a contented, happy feeling comes to us. Yot say, Yes, this is worth living for—health, good spirits and at peace with all the world. Yet they want to rob me of this. New York, January 14

MIGHGAN—Cheboggan, Jan. 11—Editor Forestand Streen: At the annual election of the Cheboggan Gun Club the following officers were elected: W. S. Humphrey, President; C. R. Kitchen, Vice-President; H. J. Miner, Treasurer; T. A. Perrin, Secretary. We have a team of four members of the club who are practicing with the rifle. They shot several matches last summer and were successful each time. They propose to challenge a team from any club in the State next summer, to shoot any rifle, open sights, 200 yards; position, standing: friendly matches, not for money. This may be big talk, but that is the way the boys feel, and if they should get badly beaten it may caim their nervous system and get it in a more healthy condition.

I mail you to-night a cut of the Mullet Lake House, at the head of Mullet Lake. This is the house I mentioned in my communication some time ago. -Cheboygan, Jan. 11-Editor Forest and Stream

KENT COUNTY SPORTSMEN'S CLUB—Grand Rapids, Mich., Jan. 19.—The officers of the Kent County Sportsmen's Club (Mich.) for 1881 are: President, Dr. E. S. Holmes; Vice-President, L. D. Follett, Esq.; Secretary, A. B. Richmond; Treasurer, Geo. A. Gould, who are ex-officio members of the Board of Directors. The Directors are: A. J. Halt, Geo. S. Baars, J. C. Parker, Wm. H. Calkins and Ed. M. Barnard. Delegates to the State Association—Hon. L. D. Morris, T. Stewart White, Ed. M. Barnard, Geo. A. Gould and Win. C. Dennis.

Deer in Steuden County—Hornellsville, N. Y., Jan. 9.— Deer have been quite plentiful in Steuden County. Five or six years ago only one or two killed during season. Within fourteen miles toward the Pennsylvania line, in the season of 1879, fourteen deer were killed; in the season of 1889 thirty-six were killed. What was the cause? Was it due to the game laws, or was it natural increase, or were they driven out of Pennsylvania by fire and hounds? J. Oris Fellows.

REMEDY FOR POISON OF TOXICODENDROS (POISON OAK) REMEDY FOR POISON OF TOXICOENDROX (POISON OAK).—
One application of a solution of twenty grains of crystallized nitrate of silver in an ounce of water, applied with camel's-hair pencil, has proved an invariable cure in experience of the undersigned. Avoid getting any of the solution in the eyes and let the discoloration wear off, unless a skilled druggist or physician volunteers to remove it. Keytuckian.

Mill Springs, Ky.

Threw it Overboard—Rockland, Me., Jan. 14.—E. S. McAllister, game warden, seized three carcasses of deer on Tuesday, a fourth carcass was thrown overboard by the crew of the Steamer Lewiston which brought them from Cherryfield, and fhey were being transferred to the Boston boat. Last week a dozen carcasses went over the same route, but the game is up now as Ed. means business. W.

Southern Location .- Perhaps some of your Southern SOUTHERN LOGATION.—Perhaps some of your Southern clintele may be disposed to indicate favorable points from whence to prospect with a view to final location in Virginia, the Carolinas or Georgia. I expect soon to start out on a tour of observation which, as my family is portable and my "carpot lag" not one of those old-time empty ones, will be quite deliberate and amenable to suggestions. H.

Tennessee-Brownscille. - Game plentiful in this part of country, though the recent heavy snows and cold weather are telling on them to a fearful extent, making all kinds of game lean in flesh.

#### SHOOTING MATCHES

DR. CARVER will shoot a match with W Scott of London the champion pigeon shot of England. Feb. 1. The match will be at  $100\,$  pigeons each, £200 a side; five traps, five yards apart, the shooter to stand thirty yards behind the centre trap. The traps to be pulled with a patent pulling apparatus. The boundary to be eighty yards from the trap, if on open ground, but if on inclosed ground the boundary to be of string two yards inside the fence on both sides, in front and in a straight line level with the shooter for the rear. The weight of shot,  $1\frac{1}{4}$  ozs.; no restrictions as to powder; guns not to exceed 8 lbs. Each competitor shall supply 110 birds, English blue rocks, and the two lots of birds shall be put into one hamper and trapped from one hamper. The trapper and putler shall be mutually chosen. If the competitors are unable to agree the referee shall have the power to appoint the above-named officials. In all other respects the match to be under Gun Club

NEW YORK GUN CLUB .- New York, Jan. 8. - The following dates have been decided upon for future competitors for the "Barron trophy: Jan. 22, Feb. 12 and 26, March 12 and 26, April 9 and 23. 14 and 28. Shooting will commence each day at 2 o'clock, Conditions—To be won three times, not necessarily consecutively. before becoming the personal property of the winner; 10 birds, handicap rise, entry \$1; ties to be shot off at three birds. Should the cup be finally won previous to May 28, then another trophy will be offered under similar conditions. The Executive Committee have decided to offer the following prizes:

have decided to offer the following prizes:

The club challenge cup, value \$100. First to be competed for on Saturday, Jan. 22. Shooting will commence at 10:30 o'clock a. M.; entry, \$25; 25 birds, 30 yards rise. The winner will hold the cup subject to challenge to shoot for the cup on each Saturday following at 10:30 o'clock. On January I, 1882, the cup will be finally awarded to the one who has won it the largest number of times. Should there be a tie it will be shot off at 25 birds, 30 yards

The club fund club, value \$100. Entry \$1; 10 birds. To be awarded to that competitor who shall first win it twice con

GULF CITY GUN CLUB.—Mobile, Jan. 17 -For the monthly medal in the December match, Master Willie Voges went to the front and captured the medal with a clean score of 20 balls. The youth is following after his father. For the January shoot our Frenchman came in first with a clean score. It being our busy season there were only four in the shoot :

P Voss..... W Tunstall..... S Alexander, Jr... Sweepstakes match, 10 balls: 'arre....

Carre had broken eight before the shoot commenced, thus making thirty-eight straight balls, all that he shot at.

-Ridgewood Park, L. I .- Monthly shoot Washington Gun Club. for champion badge: 7 birds John Evans 22 yards 1
H Hedeman 23 1
Wm De Nyse 21 0
John Dierking 23 1
Thomas Kellett 21 Theo Obrig...........
John Dunkel.........
Geo Armbruster......

Match for three prizes left from Christmas shoot; 3 birds, 25 vards:

In shooting off the ties Theo. Obrig won the first prize, Jost Moller the second, and George Armbruster the third.

THE LONG ISLAND SHOOTING CLUB .- Dexter's Park, L. I., Jan. 17.—Regular monthly contest for the champion cup, shot for at seven birds each from H and T ground traps, handicapped rise, 80

yards boundary ; L. I. S. C. rules : 

MITCHELL BEATS BOGARDUS-Richmond, Va., Jan. 21-Edito Forest and Stream : W. T. Mitchell, of this city, who is shooting for a place on the American team of pigeou-shooters, defeated Captain Boxardus at our State Fair Grounds on the 19th instant in a match at thirty yards' rise from five g ound traps, under English rules, by the following score :

charged with 5 drs. Dittmar powder and 1½ ozs. No. 8 shot in first barrel and 5 drs. Orange Lightning and 1½ ozs. of No. 7 shot m Mr. Mitchell used a 101/4 lbs. 10 bore Nicholas & Lefever gun, with 11/ ozs, shot in the first, same quality of No. 6 in second parrel, with 5 drs. Dead Shot FFG powder. Both men were in fine form, as the score will attest, which probably would have been better had the cloudy weather not caused the smoke to interfere with the use of the second barrel. Capt. Bogardus expressed himself as greatly pleased with Mr. Mitchell's shooting, and told him he would have no trouble in getting on the team.

#### THE PITTSBURGH DOG SHOW.

THE PITTSBURGH DOG SHOW.

THE third annual bench show of dogs, given by the Western Pennsylvania Poultry Society in the "Tron City," we have already stated in last week's paper, was a complete success, not only as a creditable exhibition, but as financial enterprise. When it is considered that Pittsburgh is one of the largest nanufacturing strongholds in America 1 is encouraging to see the working strongholds in America 1 is encouraging to see the working strongholds in America 1 is encouraging to see the working scalesses turn aside from labor and money-making and expend a little of their energy and enthusiasm in assisting to promote to the highest rank the animal we love so well. Crowds flocked to the old City Hall, where the show was held, and it was almost impossible to move about an hour after the doors were thrown open. To those of our readers who had not the pleasure of bhekening their hands in this smoky of smoky cities, we will say that Pittsburgh is situated at the coefficience of the Allegheny and Monongahela Rivers and is probably the diritiest city in the universe. It glories in having located, for miles along the banks of its river, year furnaces, rolling mills and manufactories, whose tall chimneys belefs forth perpetual clouds of the darkest smoke, which settles down over the city like a shroud, changing day into night. It is said, but we cannot woulf for the assertion, that for many years the sun has not been seen by the inhabitants, and that young children have to be taken several miles out of town in the horse-cars to be taught what the luminous orb really means. A glance at the past reveals that this spot was hallowed by the adventurous steps of the youthful Washington, and here, at the "inecting of the wavery and his apprehension grasped the natural advantages for Inture—canine exhibitions.

It was not, however, until ten years ago that this "happy thought" was substantially put in practice and the inaugural bench show instituct, and even then there were but three dogs exhibited. In 1878 do

was little to mar the pleasure of the meeting and we shall always remember the Pittsburgh show as deserving a red letter.

CHAMPION EXMLISH SETTERS.—In the dog class there were but two entries, but these were such well known favorites that there was much discussion before the judging whether old Leicester or St. Elmo would win the "homie blue ribbon." But Leicester was in the finest show condition we remember ever having seen him, and the prize justly went to him. He tipped the scales at 62 pounds. St. Elmo was not behind as to get up, and considering the long siege he had of it in the field last autumn, he was well feathered and in sound form. In the bitch class Peep o' Day had a walk over, and added another ribbon to the one won at St. Louis hast year. Rosy Moru, the only ofter entry, was unavoidably absent. We regret this, because she is one of the most beautiful bitches in the country. Peep is a rattling good little bitch for her age, and has a much more healthy look than when she was running in the trials, west and east. She weighed 46 pounds on the day of showing.

Involved Exchans SETTERS—A full class of eight entries turned up in the open dog class, and on the whole they were a very good lot. Major Taylor had the dogsled around him, which is the only proper way to Judge the sporting classes.

IMPORTED ENGLISH SETTERS.—A Hull class of eight entries turned up in the open dog class, and on the whole they were a very good lot. Major Taylor had the dogsled around him, which is the only proper way to judge the sporting classes of these days, and each entry in turn fell under his careful scrutiny. We never have seen dogs more thoroughly inspected and handled; mouths, eyes, feet and all examined. To judge in this way takes time, but no owner can leave the ring with the plea that his dog did not receive attention, and this system brings both perfections and imperfections to light. The result was that there was little or no outside criticism, and the awards were considered rightly placed. The light in the hall was very dim, and the dogs had to be looked over near one or other, but of different litters, came together, and the former, who has a year more age, received first and the latter second place. Thunder was in fine lard condition, and is as good on the bench as in the field; he weighed 53 lbs. Duke of Beaufort was looking even better than when in New York last year. Temple Bur and Vandevort's Rock each got three letters, and Mr. E. Moore's Dash deservedly a high commendation. Ten entries marked the bitch class, but as Moore's Livy was absent and Hacke's Dimple (dam im New York last year. Temple Bar and Yandevort's Rock each got three letters, and Mr. E. Moore's Dash deservedly a high commendation. Ten entries marked the bitch class, but as Moore's Livy was absent and Hacke's Dimple (dam of Saoborn's illustrious Nellie) was in fine condition, but on exhibition only, the same quota as in the dog class were led to the ring. As a class they were of much better quality than the dog's. Mr. Wilson, with his recently purchased Spark, whom he entered as a dark horse, came to the front. She is a remarkably fine all-over bitch, her head is like her sire's (Carlowitz) and she has a fine field-like form. Her weight is 51 lbs. Mr. Hartley, with his very handsome and well-proportioned fluby, came in for second; she was looking well for having whelped but three weeks ago. Lass o' Gowrie was marked a v. h. c., but she was evidently a little off. Wanda was in much better condition; she is a charming animal, as we have already said in our report of a previous show. Minerva, whom Mr. Givens bought from Sanborn, and Poeress also, showed to advantage, and they deserved all they got. Major Taylor is not apt to scatter his awards with a lavish hand, and only the pick of the flock came in for his favors.

Natyre Exercise.

favors.

NATIVE ENGLISH SETTERS.—This class, a fair one, was the largest one of the show; it contained twenty entries, out of which only two failed to show up. Messrs. Snellenburg & McConnell's Mack Laverack and Dick Laverack, full brothers McConnel's Mack Laverack and Dick Laverack, Indicatorities but by different litters, secured first and second. The former is a finely developed youngster and weights 40 lbs. Sam II., a powerful young dog with compact body and good legs, was very highly mentioned, and Hennessey's Daniel the Prophet, second at St. Louis last year, and Young Belton also came in for like award. Belton III., who showed himself such a good field dog at the Pennsylvania field trials last year, and his kennel companion King Dash, came in order. In the bitch class fourteen out of the fifteen entries came to hand, and again, as in the imported classes, they were a superior lot comparing them with the dogs. Dr. Speir showed in Lizzie Lee one of the very best bitches in the show. She has always been very handsome, but has improved greatly since we saw her in the field last automs. She has a fine head tull of sweetness and intelligence, and is in our opinion the most valuable animal in her owner's kennel. Her condition was excellent (weight, 51 bs.) and she won on her merits, although in grand company. We have seen a great must er of Druid titches and she compares most favorably with the lost of them. Lady Laverack came in for second, and her little sister Daisy Laverack for well-merited mention. It will be remembered that the latter was the little bitch that performed so creditably at Vincennes. In proper order the rest of the class was placed, as was the young bitch Dip, a well made-up animal with fine legs and the best of feet, a good neck, body and shoulders, but with rather a faulty tail. We heard it said she should have had higher commendation, but consider that she was well taken care of.

Exousts Express Propruss—The dogs were a very fine lot of puppies, and our of the dozen entries only one was missing. Mack Laverack, the winner of first in the native class, came first, and the Baltimore Kennel Club's very handsome eight-months old puppy Dashing Bob took second. Two in the class received very high mention, namely, Prince Lofty and Givera's Dan; the former is to be sent at once to H. M. Short, to be trained for this year's events. The bitch puppies were a fair class, but not equal to the dogs Mr. Moore's Dolly Day, a sprightly and well-made ten months' old bitch, came first, but Minerva H. and Countess Anna pushed her for the place. Of these two we rather fancied the latter, who load a bester head. good field dog at the Pennsylvania field trials last year, and

for the place. Of had a better head.

had a better head.
Champion Imbi Setters.—Mr. Moore's Berkley, so well known as the really beautiful type of the breed, was in his finest bench-show condition and easily won over his only opponent, Derg. Berkley's weight was 54½ lbs. Two bitches were entered in the bitch class and Mr. Moore's Loo II. read-

nnest bench-show condition and easily won over his only opponent, Derg. Berkley's weight was 54½ lbs. Two bitches were entered in the bitch class and Mr. Moore's Loo II. readily secured first. She is a small, well-put-together animal, whose weight is 46 lbs.

IRISH SETTRIES.—Although there were fourteen entries in the dog class, yet the thirteen that were shown would compare with exhibits of the kind seen at our first-class shows. As we have said, the red Irish and red and white dogs were bunched together and were judged under one heading. Mr. McIntosh's 1siz (weight, 55 lbs.), a fine, up-standing, bloot-red dog, good all over, easily secured first. He is a dog of gameness and endurance and is perfectly field-broken; Chubh, of Cleveland, is his breaker. Mr. Moore's Radeigh took second and Mr. Strother's handsome Flint was very highly commended. He is a remarkably well-made dog. The blich class was a full one of eight entries. Taken collectively it did not compare favorably with that of the dogs. Prominently, Mr. Pierce's Gussie came first, most rightly deserved. She is a fine, large, healthy-looking bitch and was shown in her best style (weight, 56 lbs.). Norah came in for second; at St. Louis, last year, she did not receive mention. Abbey W., who rau in the Derby at Vincennes last autumn, was awarded three letters, as was also Dr. Downey's Kathleen. The former is a remarkably rakish-built title, of good color and, when she has attained age, will hold her own with those of her type. The puppy classes contained five entries, three in the dogs and two in the bitches'. The dogs were all good ones. Mr. Dayton's Flash, who received first, was the best-colored of the lot; a very promising youngster of six months in every respect. Mr. Bulley's Ned had the best head in his class and rightly came second. Of the bitches Mr. Dayton's Red Lion, litter sister to Flash, who received first, was the best-colored of the proper and the second. Of the bitches Mr. Dayton's Red Lion, litter sister to Flash, when received first was at least ten points.
Champion Gordon Setters.

-The dog class was composed Chamfon Gordon Setters.—The dog class was composed of two rattling good entries—Mr. Monor's Bob and the Goldsmith Kennel's Rupert. After a somewhat lengthy inspection, the former was declared the winner, a decision that we consider just. Both dogs were shown in fine condition and both are inst-class in every respect. While Bob's caloring is too light, that of Rupert is too dark, so it was a stand-off in too light, that of Rupert is too dark, so it was a stand-off in this respect. But Rupert is getting along in years and is older than the age entered in the catalogue. Bob is about half his age and is a more showy dog. He has a rich, glossy coat; good, long, lean head; long, well-proportioned back, set well on straight legs (weight, 68 lbs.). In the absence of other entries, Mr. Moore's Stella, a litter sister to Bob, secured first (weight, 674 lbs.).

Gordon Skettens.—The open dog class was a very good one; it couldned five cuties. An unamoned son of Rupert's

entries, Mr. Moore's Stella, a litter sister to Bob, secured first (weight, 574] lbs.).

Gordon Skytersus.—The open dog class was a very good one; it contained five entries. An unnamed son of Rupert's out of Queen belonging to Mr. Farrar, of the Goldsmith Kennel Club, carried off first without a fit; he is a very superior young dog, and we presume will take Rupert's place (weight 54½ lbs.) Messys. R. W. Ardary's & Bros. Stubble second; two others mentioned according to rank. The bitch class was a small one of four entries, and as Mr. Moore's Lady Rapid was absent the remaining three fell in in the order on the catalogue. Messys. Ardary & Bros. Jessie, a very fine bitch (weight 66½ lbs.), got first and Mr. Moore's Neil second, and Mr. Wills' very pretty two-year old Grand Duchess a V. h. c. Hennessey's Grouse II and Gypsy II. were alone in their glory in the puppy dog and bitch classes, and carried off the respective prizes.—There was but one entry in the large class, nkmely, Mr. Gillman's Gumbo, and he was conspicuous by his absence. In the small dog class Mr. Orgil's Rush med Mr. Moore's Donald for the first time, and after a nip and tuck race came off the winner. Seldom have two finer dogs been shown in the ring. Donald, it will be remembered, was promoted to the champion class at St. Louis last autumn; he has a better boldy than Rush, but not as good head or forelegs or tail. His conditior, was splendid and his evenly marked coat of liver and white shone like satin. Rush was looking well, as Mr. Orgil's dogs always do; his weight was 53 lbs. In the bitch class Mr. Moore's Lady Romp won with case; she is a much better bitch to our notion than even Donald for the rand white shone like satin. Rush was looking well, as Mr. Ogril's dogs always do; his weight was 53 lbs. In the bitch class Mr. Moore's Lady Romp won with case; she is a nuch better bitch to our notion than even Donald for love and white shone like satin. Rush was looking well, as Mr. Ogrode older dog with inferior head, got highly mentioned. One ent

large bitch class, and consequently Mr. Ealy's Nellie R. (57 lbs.) took first. The small dog class was a good one. Mr. Moore's La Guy was obsent and both Mr. Illig's Ned and Messrs. Maysmith and Williams' Duke—good dogs, especially the former—were ruled out for being of overweight. Mr. Fawcett's lemon and white Duke (45 lbs.), a good-all-over young dog, but deficient in head, came first; Dick, a dog with better body than head, took second, and Rover, fine-headed liver dog, was highly mentioned. A full class of sevene entries was shown for the small bliches. They were a remarkably good lot. Mr. Orgill's little teauty, Rue (38 lbs.), gathered in the laurels for the best. She was shown in good condition and attracted much attention. The Baltimore Kennel Club's Cleo got second. She has a more perfect body than head, and her litter sister Clymont, with an unusually good head, received a v. h. c. Mr. Anderson's Fraud, a very well-made and showy little bitch, received no mention. But for a defective eye she would have deserved second place. Bight entries made up the dog-puppy class. The youngster Garfield was awarded first. The folialit of the show in the sporting cla ses turned up in Mr. Carr's lip, a nine-monthsold puppy of \$0 lbs.! He was well proportioned and free from the awkwardness usually found in manimoths. He stalked around the ring to slow music and accomplished the current, in about four strides. Wee to all of his class who came within reach of his tail. He possessed a dignified expression that brought out shouts of laushter and set the tongrees of the wites awarging. It was suggested that he would be a good dog for a tired man to hunt, for when he got "bushed" he could get on and ridehome. In the bitch puppy class of four entries Mr. Joseph Lewis' Nell and Fan had a close race for first. They were as like as two peas as far as points were concerned, but at last the latter got the ribbon and her litter sister the v. h. c.
IRISH WATER Shankles.—In the Irish water spaniels there were five entries. Only two,

ance of Sussex and cocker blood.

Coeker Syankis.—Pirst went to the liver and white
Nell, belonging to Mr. A. H. Moore, a good-styled bitch, but
too fat to show at her best. Flora, who got second, is a very
fair one, and Flo, highly mentioned, also good, but rather

large.
Fig. Spaniels.—Only one cutry in this class. Lu, a black and white, a very fair bitch, justly received first.
FONDONDE.—This class comprised five entries. First fell to Granger, a capital hound, full of quality. Rover, who received second, is a large hound, but very symmetrical withal. Poodle, a black and tan, got h. c. He is of medium size and is a very nice one, barring his rump, which slopes too much. Lead is of medium quality only, and Ringgold ranks about the same.

ceived second, is a large hound, but very symmetrical withal. Poodle, a black and tan, got h. c. He is of medium size and is a very nice one, barring his rump, which slopes too much. Lead is of medium quality only, and Ringgold ranks about the same.

Beagles.—These merry little dogs were a strong class and of excellent quality throughout. As there were two distinct types on exhibition—one the ordinary English straight-legged beagle on exhibition—one the ordinary English, straight-legged beagle to the other the bench-legged beagle (so maned from the turning out of the fore feet), common in Maryland and Delaware, and as judged by the English standard the bench-legged beagle would be virtually excluded from competition, the committee, at the solicitation of Dr. L. H. Twaddell, the judge, Dr. Maddux and Gen. Bond, two prominent exhibitors, decided to establish a new class with a similar prize list, for the benefit of the breeders of the bench-legged dog. In the straight-legged class the first went to Fly, black, white and tan, a very neat, nice dog. His only competitor, Harry, a mottled black, white and tan, is a close-built cobby dog, whose defect is that he is rather scant of ear, but a good one withal. He was well worthy the second he received. In the straight-legged bitches Lulie was an easy-first; second went to Nancy, a very neat young bitch. Venus, v. h. c., is a very good one, but just a little long in the back. Dot, v. h. c., is well earch, but a little throaty and coarse in tail; in other respects good. Lucy, h. c. we fancied a trilde weedy. In the straight-legged puppies Baker's Belle, a very beautiful four months' old youngster, was clearly the best, and this in a strong class both in numbers and quality. Bench-legged dogs, only two entries turnet up. Major, des-revelly liest, is one of the handsomest dogs of this type we have ever seen. Dyke, winner of second, is a fine dog, full of the character of his race, but lacked the quality. Bench-legged dogs, only two entries turnet up. Major, des-revelly lies

essentially a vermin dog, while the dachshund of the nound type is a dog of the chase.

Fox-Termers.—First went to Bowstring, a little dog with immen-e muscle and good coat. The second went to Shot, a neat dog, good jaw and well-set ear, but rather high on leg and not so good in coat as first. V. h. c. was well carned by Nailor. In bitches Tussle was awarded dirst, closely followed in merit by Vixon. Between them there was little to choose. The rest of the class stood in merit as they were plared. Allamucity Nell was first in puppies and was a very good one. Joker deservedly came next with three letters and Prince we did not like being too leggy. Sally was fair.

Indeed Not was mist in puppies and was a very good one. Joker deservedly came next with three letters and Prince we did not like, being too leggy. Sally was fair. Greynounds, Scotten Dreemounds and Mastiffes.—The former were absent and the two last-named classes contained.

no entries.

Sr. Bernards.—Three entries—one smooth and two rough-coated. They competed in one class. First went to Tiger, a rough-coated dog of imposing appearance, but needs more flew and is deficient in haw; he also lacks dew claws. Snow-hall, the smooth-coated, was navarded second. She is also weak in muzzle and lip and her fore-legs are not of the best. The other entry was a large liver-colored cross-bred, who received no recognition.

NEWPOUNDLANDS.—Only three entries—one a fairly good control of the colored cross-bred when the colored cross-bred with the colored cross-bred, who received no recognition.

NEWPOUNDLANDS.—Only three entries—one a fairly good colored cross-bred when the colored cross-bred with the colored cross-bred with the colored cross-bred with the colored cross-bred with the colored cross-bred with the colored cross-bred with the colored cross-bred with the colored cross-bred with the colored cross-bred with the colored cross-bred with the colored cross-bred with the colored cross-bred with the cross-bred cross-bred with the cross-bred cross-bred with the cross-bred cross-bred with the cross-bred cross-bred cross-bred with the cross-bred cross-bred with the cross-bred

AEWFOUNDLANDS.—Only time entires—one a fairty good Landseer, the others claiming to be the St. John's dog. First went to Mr. Williams' Lion, of the Landseer type. Second to the black dog Pluto, whose coat was rather too curly and whose tail was bad. Jessup's Lion was entirely too curly-coated to win the recognition he received.

Collies.—These were a strong class in numbers and quality. The black and tau Tweed II, went to the front. Close to him in merit was the beautiful Lass o' Gowrie. Tweed II is the dog that distinguished himself in the international collie trials at Philadelphia in September, 1880. Shep was very highly commended and is a very fair collie. Stella, same award, was wrongly entered in the smooth collie class, as were the puppie, Nell h. c. and Bruce. Lucy is also a good-looking bitch.

Bull, Does.—First went to the brindle and white Doctor, a dog of pronounced character. Second to Moore's Turk a brindle and white, rather long in the nose for a high class dog, and scarcely enough undershot, but in other respects excellent.

BULL TERRIERS -Silk II, had an easy race for first place 5. TERRIERS —SIR 11, had an easy race for first place, r handsome young dog good in everything, but his tail, t might be a shade lighter. Rose, who took second, is t way behind in muzzle, which is too short. Bell is off

which might be a stagete nature. According to the high relations a long way behind in muzzle, which is too short. Bell is off color, a dark brindle, in form a very neat looking bitch. Belle only ordinary and off color at that.

Skyr Francisis.—Of the Skyes there was a large entry, but only about five that would pass muster, the others lacking terribly in cost and other breed marks. Mack, a very hand-some dog of steel gray color in magnificent coat, deservedly was placed first. Tuck, a blue gray, a little out of coat, got second. Scottish Queen was very close to Tuck in quality, and both fine specimens, but we funcied. Nip rather short in body though a very muscular little dog. Isla was only ordinary.

body though a very muscual and a good pug at all points.

Pros.—Young Sooty, the first, is a good pug at all points.

May, winner of second, is also a very nice one. Jack is of nice color and even quality, not however equal to the winners, the other competitor Bob is very deficient in carriage.

nees, the other competitor Bob is very deficient in carriage of tail.

Scotch Terriers.—First went to Captain, whom we thought a trifle too soft in coat; second to Sir Walter Scott, an immature puppy too young to have much character.

BLACK AND TAN TERRIERS.—Nell, a very homosome little bitch, good in coat and color, was an easy winner of first; second went to Primie, who was behind her competitor in several points. These were the only entries.

Yorkshire Terriers.—First was awarded to Jinny, who was about the best; second, fairly good; after them Sport we liked best, the other lacked coat.

ITALIAN GERVIONINS.—Mr. A. H. Moore's Cream was in the best form and won by that alone. Pearl looked out of condition, but will be a splendid specimen when in showbench trim, and we think will, all things equal, beat her kennel mate. Crissic is a moderately good bitch; her tail is defective, which mars her chance for high-rating.

MISCELANBOR'D BOOS.—This class was a hotch-potch, made up of all breeds. Among the lot was a foxhound entered as a "buckbound," a dog, Blash H.; called a Bedlington terrier, which he was not; poodles. Cuban lapidogs, ctc., made up the exhibit. None of the dogs showed nunch merit, the best bred animal in the lot being the foxhound. If there is any class at a dog show that "stumps" the noble army of spectators, it is the miscellaneous class, and sometiones the judges are bothered to an extent that borders on uncertainty. The unfortunate "Bedlington" came in as 13, 15, 14 puzzle for the crowd, and was taken in true for a Skye, a poodle and a retriever; he was in fact a dog of many breeds, and was entered in the proper class. retriever; he was in fact tered in the proper class.

Several typographical errors having occurred in our last issue in publishing the list of awards, we reproduce this week a corrected list. Such errors are unfortunate, but will occur when reports come in late.

#### OFFICIAL LIST OF AWARDS.

[v h c, very highly commended; h c, highly commended, and c, commended.]

Class 1 —Champion English Setter Dogs-First, A. H. Moore's

Leicester.
Class 2.—Champion English Setter Bitches—First, D. Bryson's
Peep o' Day. A. H. Moore's Rosy Morn absent.
Class 3.—Imported English Setter Dogs.—First, Suchlenburgh &
McConnel's Thander; second, A. H. Moore's Duke of Beanfort; v h c, A. H. Moore's Temple Bar and R. T. Vandevort's
Rock; h c, E. Moore's Dash.

Class 4.—Inported English Setter Bitches—First, B. F. Wilson Spark; second, Howard Hartley's Ruby; v h c. Suellenlaurg & McConnel's Peeress, A. H. Moore's Lass o' Gowrie, E. A. Given's Minerva; h c, S. Plect Speir's Wanda, A. H. Moore Liya absent.

Livy absent.

Class 5.—Native English Setter Dogs—First, Snellenburgh & McConnel's Mack Laverack: second, Snellenburg & McConnel's Dick Laverack: v h c, Philip Wolfenden's Young Leiton, James Hennessey's Daniel the Prophet, Sammel C. Hunter's Sam II., Henricks & Stayton's Belton III.; h c, Dr T. Clay Maddun's Marquis of Lorne, D. C, Philip's Tonoy, Henricks & Stayton's King Dash. K. Sleeth's Nimrod and J. N. Dodge's Duke, absent.

absent.

(Rass 6.—Native English Setter Bitches—First, S. Fleet Speir's
Lizzie Lee; second, Snellenburg & McConnic's Lady Laverack; v he, Suellenburg & McConnic's Lady Laverack; vihe, Suellenburg & McConnie's Daisy Laverack, Henricks & Stayton's Skip, James Hennessey's Ina, and E. A.

(Givens Munerva; he, Snellenburg & McConnel's May Laverack, Wilson Duff's Dip and Philip Wolfenden's Nettle; c,
Alexant, & Maytons Floss II. Theo. Schwartz, Jr.'s, Pay,
absent.

absent.

W. Stevenson's Toss and J. M. Hunter's Pride of the North. D. D. Evans' Jin, absent.

Class 8.—English Setter Bitch Puppies, Under 12 Months.—First, Geo. W. Moore's Bolly Day; v h c, Smellenburg & McCouncis Lu Laverack, Baltimore Kennel Club's Countess Anna and W. A. Given's Minerval II; h c, James Hennessey's Kitly M.; c, W. L. Carr's Style.

Class 9.—Champion Irish Setter Doorg.—First A. H. Moore's D. G.

9.—Champion Irish Setter Dogs-First, A. H Moore's Berk-

-Champion Irish Setter Bitches-First, A. H. Moore's

Class 11.—Frish Setter Dogs—First, John S. McIntosh's Biz second, A. H. Moore's Raleigh; y b c, W. A. Strother's Fint h c, James Hennessey's Coun; c, Edward Gregg's Lob II. J N. Dodge's Bob, absent.

Class 12.—Irish Setter Bitches—First, Wm. H. Pierco's Gussie; second, James Hennessey's Norah; v h e, John S. McIntosh's Abbey W, Pr. J. W. Dovney's Kathleen; h e, John S. McIn-tosh's Annabel Lee; c, John Fawcett's Juno.

Class 13.—Irish Setter Dog Puppies, under 12 Months —First, C H. Dayton's Flash; v h c, Reginald H. Bulley's Ned; h c, C. Spahr's Red Ranger. Class 14.—Irish Setter Bitch Puppies, Under 12 Months—First, Chas. H. Davton's Red Lion. Class 15.—Champion Gordon Setter Dogs-First, A. H. Moore's

Class 16.—Champion Gordon Setter Bitches—First, A. H. Moore's

Class 17—Gordon Setter Dogs—First, Goldsmith Kennel Chub's
—, Rupert-Queen; second, R. W. Ardary & Bro's Stub-ble; v h c, D, O. C. Patterson's Check; h c, Dr, H. H. Hop-kins' (froms I).

Stins Grouse II.

Class 18.—Gordon Setter Bitches—First, B. W. Ardary & Bro,'s
Jessie; second, A. H. Moore's Nell; v h c. Ed. L. Mills'
Grand Duchess. A. H. Moore's Lady Rapid, absent.

Class 19.—Gordon Setter Dog Puppies, Under 12 Months—First James Hennessey's Groune II.

Class 20—Gradon Setter Bitch Puppies, Under 12 Months—First, James Hennesey's Gypsy II. Class 21.—Champion Pomter Dogs, over 55 lbs.—One ontry; E. H. Gilman's Gumbo, absent.

Clase 22—Champion Pointer Bitches, over 50 lbs.—No entries.

Class 23.—Champion Pointer Dogs, under 55 lbs.—First, Edmund Orgill's Rush.

Class 24.—Champion Pointer Bitches, under 50 lbs.—First, A. H. Moore's Lady Romp. A. H. Moore's Rose, absent.

Class 25.—Pointer Dogs, over 55 lbs.—First, A. H. Moore's Banjo; second, Harry Reynolds' Tom; h.c., J. M. Taylor's Twig.
Class 26.—Pointer Bitches, over 50 lbs.—First, A. J. Ealy's Nolhe R.

Neihe R.

Class 27.—Pointer Dogs, under 55 lbs.—First, John Faweett's
Duke: second, J. C. Hobaugh's Dick; h. c, Dr. C. Spahr's
Rover. A. H. Moore's La Guy, absent.

Class 28.—Pointer Bitches, under 50 lbs.—First, Edmund Orgill's
Rue; second, Battimore Kennel Club's Cloo; v. h. c, Battimore
Kennel Club's Clymont; h. c. W. A. Sleth's Queen.

Class 29.—Pointer Dog Puppies, Under 12 Months—First, John
Faweett's Garfield; v. h. c, John Faweett's Duke: h. c, Joseph
Lewis' Duke.

Lewis Duke.

Class 30.—Pointer Bitch Fuppies, Under 12 Months—First, Joseph
Lewis' Fan; v h c, Joseph Lewis' Nell.

Class 31.—Irist Water Spaniels—First, withheld; second, Samuel
Cowley's Major; v h c, Samuel Cowley's Dan.

Class 32.—Cocker Spaniels—First, A. H. Moore's Nell; second,
Thos. D. Adams' Flor, i h c, Thos. D. Adams' Flo.

Class 33.—Field Spaniels, Other Than Cockers—First, Geo. W.
Moore's Model Spaniels, Other Than Cockers—First, Geo. W.

Moore's Lu.

Class 34.—Pox Hounds—First, Steel Bros.'s Granger; second,
Joseph Lowis' Rover; he, J. D. Williams' Poodlo.

Class 35.—Beagles, Straight-legged—First, J. E. Diehl's Fly;
second, Geo. W. Norcross' Harry, Isane R. Stayton's Rover
and J. N. Dodge's Rattler, absent.

Class 3514—(Special) Beagle Dogs, American Bench-logged—Dirst.

Pottinger Dorsey's Major; second, Dr. T. Clay Maddux and
Gen. Frank A. Bond's Dyko.

Class 36.—Reade Bithe's Straight-logged—First, Dr. T. Class

Gen. Fram A. Bond's Dyke. Class 36—Beaglo Bitches, Straight-legged—First, Dr. T. Clay Maddux and Gen. Frank A. Bond's Lulie; second, J. A. Stovell's Naney; v h. 6, Jobet M. Baker's Dot and Petlinger Dorsey's Venus; h c, John E. Dichi's Lucy. J. N. Dodge's Spider, absent.

Spider, absent.

Class 36½—(Snecial) Boaglo Bitches, American Bonch-legged—
First, Dr. T. Clay Maddux and Gen. Frank A. Bond's Dell; second, Chas. Illig's Jennie,

Class 37.—Beagle Puppies, Straight-legged—First, Robert M. Baker's Belle; vire, John Bittner and Bro's Beulah; Chas, Illig's Nancy; c. Pottinger Dorsey's Cleopatra. J. N. Dodge's Roxy II., absent.

Rovy II., absent.

Class 373-C, (Special) Beagle Puppies, American Bench-legged—
First, Dr. T. Clay Maddux and Gen Frank A. Bond's Date; second, Pottinger Dorese's Luow II.; b e, Dr. T. Clay Maddux and Gen. Frank A. Bond's Smart II.

Class 38—Danshiunds—First, J. A. Stovell's Marguerite; second, J. A. Stovell's Gretchen; v b e, John Faweett's Jim.

Class 34%—(Special) Saarsbruck Dachshun &-Jabob Wieiskn-cher's Max and Fan divided first.

cher's Max and Fan divided first.

(Lass 39.—Eox Terrier Dogs—First, L. and W. Rutherford's Bowstring; second, James Mortimer's Shot; v h e, L. and W. Rutherford's Shalor. James Mortimer's Sandal, absent.

Class 40.—Fox Terrier Bitches—First, L. and W. Rutherford's Tussle; second, James Hennossey's Vixen; v h e, Fred. W. Fleck's Gipp; h e, L. and W. Rutherford's Chance; e, J., and W. Rutherford's Active.

Class 41.—Fox Terrier Puppies, Under 12 Months—First, L. and W. Rutherford's Albanuchy Nell; v h c, L. and W. Ruther-ford's Joher; h c, Fred. W. Fleck's Prince, and L. and W. Rutherford's Sally; c, Dar Gardner's Susse G.

Class 42. - Greyhounds - Entries absent.

Class 43,-Scotch Deerhounds-No entries

Class 44. - Mastiffs - No entries.

Class 34.—St. Bernards—First, Fred. George's Tiger; second, Wil-liam I., Jone's Snowball.

Class 46.—Newfoundlands—First, J. D. Williams' Lion; second.

W. C. Meyer's Pluto; h. c, Alfred Jessup's Lion.

Class F.—For best English Setter dog—Laffin & Rand's Powder, value \$15. Prize, A. H. Moore's Leicester.

Class G.—For largest collection of non-sporting dogs exhibited be one person—The Bear Greek Co., barrel Water White Oi Prize, A. H. Moore, Philadelphia, 10 dogs.

oue person—The Bear Creek Co., barrel Water White Uil. Prize, A. H. Moore, Philadelphia, 16 dogs.

Prinsylvania Firida Thiadelphia, 16 dogs.

Henricks, J. J. Saellenburg, Dr. Graham, William A. Melntosh, Issae R. Stayton, C. B. Whitford and F. Satterthwaite, of the Forenser and Stream, Mr. A. H. Moore, of Philadelphia, was umanimously elected a member of the association. Mr. Melntesh referred to the clause in the minutes censuring Captain William Rochm, of Quarry-wille, Pa., for breaking faith with the Lancaster County Game Protective association, and shooting and allowing to be shot the qualithat he had promesed to preserve for the Pennsylvania field trials of last year. Mr. McIntosh went on to say that as he had seen in Fouers and Stream a notice of a meeting in December last of the Lancaster Game Association, at which Captain William Rochm had been expected to the charges preferred against him, he desired that the secretary be instructed to communicate with Mr. P. A. Diffendorffer, of Lancaster, a member of said Lancaster Game Association and request that the association be informed the Association and request that the association be informed the Association and request that the association be informed the reasons for such action. Carried Association, and request that the association be informed the reasons for such action Carried

reasons for such action. Carried.

Mr. J. R. Henricks moved that the association purchase at once one hundred dozen quali, for the purpose of stocking the grounds on which this year's trials are to be run, the price not to exceed \$2 per dozen.

Mr. McIntosh offered an amendment to the above, by sug-

gesting that \$200 be expended for the purchase of quail.

Carried.

Mr. Snellenburg moved that a committee of three be appointed by the Chair to revise the field trials' rules of the Association. Carried.

Mr. Stayton asked the expression of the meeting to substitute a field trials Derby in place of the puppy stakes at the next trials, and after lengthy discussion it was decided to do set.

so.

Mr. McIntosh, in this connection, moved that puppies whelped on or after January 1 of the previous year to the running of the trials be eligible for entry. Carried.

Mr. Snellenburg moved that the association open its trials to the world, and that a special meeting be called to consider the advisability of so doing. Carried.

The Chair then named February 2, 2 r. M., as the date and hour when the special meeting would be held, and the meeting the additurned

ing then adjourned.

ing then adjourned.

The Syrring Dog-Show.—The first annual exhibition of the Rock River Valley Poultry and Kennel Club is to be beld in Farwell Hall at Sterling, Illinois, on the 10th, 11th and 12th of February. The dog show will have classes for all the strains of setters, for pointers over and under 50 lbs., and for setter and pointer pupples. Also for collies, Newfoundlands, St. Bernards, English mastiffs, bloodhounds, buildogs, all dogs that have paid full rates to the show.

all dogs that have pild full rates to the show.

The Next National Treals—Memphis, Team, Jan, 15—Editor Forest and Strem: Grand Junction, Tenn., 6ty, miles cast of Memphis (crossing of the Memphis and Charleston and the Mississippi Central Railroads) has been selected for holding the N. A. K. C. trials for 1881. After personal inspection, I am of the opinion that no place yet selected will equal Grand Junction for extent and adaptibility of the grounds, the number of birds, accessibility of grounds from hotel and hotel accommodations. In drawing a field between the two railroads we found forty coveys of qual, averaging ten hirds to a covey; this in less than three miles of the hotel. These grounds have been placed at the disposal of the N. A. K. C. for the trials this year by Mr. Gaither, representing 5,000 acres. Others will give the same privilege if necessary. Mr. Gaither will post and protect his lands from shooters. In the day's inspection I did not see five acres that would be objectionable to any man running dogs. From any cause should the now large stock of birds be diminished trapped birds will be tuned down in March—ample time for raising birds this year.

P. H. Buyeox, Prest N. A. K. C.

Dr. Strottier's Kennel.—A nicer little kennel than that belonging to Dr. W. A. Strother, of Lynchburg, Ya, can scarcely be met with anywhere. To begin with, there is his prize bitch Frost, noted for her great beauty and the nose. Then comes a brace of lemon and white (Gladstone II and Leath), the former especially taking after their sire (Champion Gladstone) in speed and dash. It is quite a treat to see these dogs at work, they have so much pace and style about them, and though under perfect command are quite free from that frightened, cringing way that bespeaks harsh training. Frost has at present another beautiful litter by Gladstone, about two months old, a brace of which are, I believe, for Mr. Bryson, a dog for Capt. McMurdo, and most of the balance will be retained by the Doctor. I must not forget to mention his fine red Irish setter dog Flint, who was awarded third prize at the last New York bench show. He is a remarkably intelligent dog and much resembles his sire, Eleko.

MOHAWE KENNEL—Chatham, Ont., Jan. 18.—Editor For-st and Stream: I have entered into partnership with Mr.

Joseph Kime, V. S., of this place, and we have organized a kennel to be known as the "Mohawk Kennel" We are starting under very favorable anspices, with the very best stock procurable, and as there is an abundance of game here of all kinds, we are very hopeful of the results. My partner is a thorough sportsman, an excellent shot, and has been accustomed to the handling of setters and pointers for many years. We have this day added to our kennels the imported setter bitch Princess Belle by Rufus out of Blinkhorn's (now Dodg'es) "Rose." She is a hands-me lemon Belten, and shows the best of field qualities. A. B. Clayton, M. D.

English Hare Beaches—In a late issue of the Forest and Stream I notice the announcement of (to me) a new breed of bengies, the English hare beagle owned by Mr. N. Elmore, of Granby, Conn. Will Mr. Elmore, through the medium of your paper, kindly inform us as to their appearance, size, hunting qualities, etc., as compared with the ordinary English beagle, and also in what part of England they originated?

Leyus.

Countess Bear -- In the absence of our Kennel Editor of Pitts urgh last week an absurd error found its way but our columns, the celebrated Lewellin setter bitch, Countess Bear, being referred to as a pointer. Such a mistake, though much to be regretted, would fortunately not mislead many of our readers, to most of whom this celebrated bitch is so well

Nova Scotia Kennel Club Dog-Snow—Halifux, N. S., Jan. 13.—Editor Forest and Stream: At a meeting of the Nova Scotia Kennel Club, held on January 11, in this city, it was decided to postpone the dog-show in view of the fact that the Domuion Exhibition is to be held in Halifax next autumn, and we think it better to throw all our energies into making a dog-show in connection therewith.

John Navlor, Hon. Secretary.

Removal of Capt. McMurdo's Kennel.—Capt. McMurdo has removed his kennel from Evington to Shadwell Depot (on the C. and O. R. R.), five miles from Charlottesville, Albemarle County, Va. His kennel is a small but select one, chiefy composed of Liewellin setters.

Lost.—A very handsome pure black setter dog, of medium size, who strayed away on January 20 from No. 9 East Thir-ty fourth street. Twenty-five dollars will be paid for his re-turn to his owner, Mr. Gilbert M. Speir, Jr. The dog's eyes are clouded.

Philadelphia Dog Show.—Nothing definite as yet has been determined upon regarding the time for holding this show, but in all probability the Quaker City will be the next dog centre early in April.

Lost.—A pug dog of large size and good type, strayed from 50 East Thirty-first street, this city, on January 18. He was without a collar. Any information regarding him will be thankfully received by the Kennel editor of his paper, who will liberally reward the finder for his return.

#### KENNEL MANAGEMENT.

47 A Constant Reader. -1. My dog, that had the distomper so badly, does not cat much. I think his stomach is out of order, 2. He has had a sort of tumor under his cloow joint of foreleg, 3. He has still a little canker in his cars. 4. What is the bost book on dog breshing that you know of? 5. What do you think of Vero Shaw's book? 6. Who gives good information how to condition a dog for the bench? Ans. Want of space will oblige us to answer as briefly as possible your queries in their successive order, but a treatise might be written on each. The old saving that "it is much more easy to ask questions than to answer them holds good here and in all cases where the description of the dog's ills are not clearly diagnosed. 1. Try a little sulphur from time to time in your dog's food, and, if not successful, give two grains of quinine three times a day for several weeks. Feed good wholesome food, and avoid giving meat until you have mastered the canker, 2. It is simply impossible to recommend a treatment for the tumor until its character is known. Either a seton or rubbing it with compound iodine ointment should be adopted. 3. For the canker continue to use the lead water, and by feeding no meat, and attending to the dog's general health, you will soon end this trouble. 4. Hutchinson's "Dog Breaking;" we can furnish it. 5. Excellent: it is the best compilation of the kind ever produced. Its value is It is the nest computation of the Annu ever produced. It is value is in its being a compilation of articles written by the most aminent authorities of the day. No one man can write understandingly upon all the different breeds of dogs, and it is about one man's work to understand three or four breeds intelligently. Although Mr. Shaw kindly furnishes us exclusively with the advance sheets of his serial, which we publish from week to week, yet the itself should be in the hands of every sportsman. Its colored plates add greatly to its charm. 6. "Book of the Dog," Parts I. and II , price 40 cents each.

48 V. S. L., Asheville, N. C.—The inflammation between the toes of your dog's feet is one of the different varieties of mange.
Use Glover's Mange Cure and give five drops of Fowler's solution of arsenic twice a day with food. Avoid feeding meat. His diet should consist of cooling food mixed with vegetable matter.

49 A. J. N., Anna, Ill .- I have a Gordon setter who is continuscratching himself in the sides and near the forelegs. Ans. You should have given more particulars, such as age of dog, habits and manner of feeding. He probably has mange. Stop feeding meat. Give him a few doses of sulphur and a mild purge of sulphate of magnesia with plenty of exercise. If the mange is promounced some external application will also be necessary. Read the Kennel Management column.

50 Arsenic for Dogs .- Editor Forest and Stream : Seeing in a late copy of a sporting journal an article highly commending the use of arsenic in cases of dog distemper induced me to give my own experience with it in the same way. I had been an industrious reader of the papers advising as to the treatment of distemper, and was inclined to place great confidence in aconitie given persist-ently and in small doses. Perhaps I had more faith in it from knowing that, it was much and successfully used in the same way as a febrifuge on the human subject. Previous to the past spring I relied on aconite with varying results. When it seemed to fail I placed the blame on some other unfavorable circumstance, as too

much confinement or something else wrong. But last year I had much confinements of something else wrong. Durings year I have
a young dog taken with distemper and used acoust for about a
week without any perceptible improvement, when suddenly I remembered seeing arsenic placed by a high authority as next in reliability to quinine in the treatment of fever and ague. At once I gave a small dose of Fowler's solution of arsene, and within five minutes the dog brightened up and began to eat, and went on steadily improving until entirely well. I afterward learned that quite a number in Wilkosharro had used arsenic and with the best A Goodway

[The Forest and Stream has repeatedly put itself on record as to the value of Fowler's solution of arsenic in the treatment of dogs, and also as pertaining to aconite. Both agents are violent poisons and should be given with great caution and good judgment. We deprecate the use of aconite except by experienced persons, because paralysis and other evil results of its poisoning power are apt to ensue if carelessly given. The ancients considered it the most deadly thing in nature, and modern experience almost justifies this opinion. Acting directly through the nervous system, it has great power in diminishing excessive beart, and is thus of use in some fevers : but great care is required at the same time that loss of vital power does not also follow. Again we say that there is no specific for distemper; the disease must be treated in the various stages rationally in accordance with the symptoms. }

51 G. D. P., Baltimore, Md.-My setter bitch has had all the hair and skin on the end of her tall worn off by whipping it against the briars, and now that the skin has healed it looks as if the hair the briars, and now that the skin has healed it looks would never grow again. Ans. If worn off for the first time the hair will probably grow again, but when the hair follicles are de-stroyed by repeated whippings the hair will not grow and there is no Give the dog's tail a rest. Many pointer's tails are docked for this reason.

52 Trp, New York City.-My pug dog, about six months old, is sick. She suffers from loss of appetite, depression and very often throws up violently. I notice also a twitching of the limbs when The rug is carefully fed on milk, etc., and well cared for asleep. will you kindly prescribe for her? Ans. At her age it is quite possible she is about to have distemper, A mild purgative, such as castor oil, or sulphur followed by sulphate of magnesia will be of use to her in any case.

53 H. D. C., Laconia, N. H.-I have a Gordon setter puppy, nine months old, that I would like you to prescribe for in your next issue. Her nose has always been hot and dry and she now runs at the eyes very badly. Has a good appetite and is in good spirits—appears well, with these exceptions. The discharge from her eyes is thick and yellow, and a quantity of it. Please answer in next issue. Ans. The symptoms are those of the first stage of distempor. Give an emetic of salt and then sulphur, a few hours followed by sulphate of magnesia; then two grains of quinine three times a day will probably do good. Keep the eyes and nose cleansed with tepid water.

54 C. O. U., Utica, N. Y.-I have a friend who wishes me to get some remedy for his puppy who has, as near as I can find out from the description given in "Hallock's Gazetteer," the splenic fever. His symptoms serve the description exactly. Ans. As you fever. His symptoms serve the description exactly. Ans, As you fail to mention the breed of dog it is impossible to give exact treatment. Give every few hours castor oil and injections of warm oapsuds and oil, and from two to five grains of iodide of potash three times a day.

55 J. C. R., Salem, Mass.-I have a Newfoundland dog about four years old which last summer had the mange and now it has left him. He is very stiff in his hind-quarters and seems after running to be unable to get up when he has kind down to sleep. Can you tell me what I can do for him? Aus. The dog is suffering from patial paralysis of the hind-quarters. The following treatment will probably be beneficial: Administer infusion of digitalis, one teaspoonful combined with fluid extract of nux vonice; one drop doses, to be gradually increased until followed by bene ficial results.

56 T. A. S., Etna Green, Ind.—The duration of estrum is usually from ten to twenty days.

#### KENNEL NOTES.

\*\*\* Breeders and owners of sporting dogs are invited to send memoranda of names claimed, bred, whelps, sales, etc., for insertion in this column. We make no charge for the publication of such notes.

#### NAMES CLAIMED.

Dan—Mr. Austen Mann, of Brownsville, Tenn., claims the name of Dan for orange and white setter puppy, seven months old, out of Nellie by Flash.

Elcho—Mr. Austen Mann, of Brownsville, Tenn., claims the name of Elcho for black and white setter ont of Nellie by Flash.

Guy—Mr. S. McKnight, of Taylovville, Ill., claims the name of Guy for dog puppy out of Nell by Prince purchased from Mr. O. F. Cromwell.

Ressir—Mr. O. F. Cromwell of Taylovville Ill., claims the name of the properties of the prop

Guy for dog puppy out of Nell by Prince purchased from Mr. O. F. Cromwell,

Bessie—Mr. O. F. Cromwell, of Taylorville, Ill., claims the name of Bessie for bitch puppy out of Nell by Prince.

Jack and Judy—Mr. J. C. Jordan, of Portland, Maine, claims the names of Jack and Judy (Rake-Hose whelps)) for Chesapeake Bay puppies, whelped June 4, 1880, purchased from Mr. G. G. Hammond, New London, Conn.

Nancy—Mr. William Alleson, of West Scituate, Mass., claims the name of Nancy for Irish setter bitch puppy out of May by champion Berkley purchased of Mr. J. A. Rockwood, Boston, Mass Count Noser—Mr. Jannes H. Goodeell, New York, claims the name of Count Noser for his black and white pure Laverack setter by Carlowitz out of Princess Nellic (Pride of the Border-Petrel, whelped July, 1879. The dog was formerly known as Bine Ruin, and in the judgment of Mr. Yon Culin by whom he was bred he is the handsomest pure Laverack ever sired by the renowned Carlowitz.

the handsomest pure Laverack ever sired by the renowned Carlo-witz,

\*Planet—Mr. C. M. Goodsell, New York, claims the name of

Planet for his pure Laverack setter dog (color, blue Belton) by

Carlowitz out of Petrel. He was whelped November, 1879, and

bred by Mr. John C. Higgins, of Delaware City, and is in the hands

of Mr. T. D. Gladstone, who is now in Virginia giving his attention

exclusively to the field dogs belonging to the extensive kennel

owned by the Mesers. Goodsell.

\*Pocahoutas—Mr. Wm. B. Banks, of New York city, claims the

name of Pocahoutas for his fox terrier bitch, whelped August,

1880, out of imported Tip by imported Viper.

\*Joker, Jr.—Mr. John M. Forbes, of Virginia, claims the name of

Joher, Jr. for liver and white ticked pointer puppy, whelped September,

1880, 1880

name of Lucy for liver and white cocker bitch puppy out of Mr. Robt. Walker's Nellie by Rex.

Frank Foster—Mr. J. N. Carpenter, Washington, D. C., claims the name of Frank Poster for setter dog puppy, whelped September, 30, 1870, out of Mr. C. W. Foster's Kirby by Druid.

Bellie's Frids—Dr Allen B. Clayton, of Chatham, Ont., claims the name of Bellie's Fride for his blue Belton bitch puppy by Paris (Leicester-Dart) out of Mr. Harrison's Belle (Pride of the Border-Kirby).

(Leicester-Dart) out of Mr. Harrison's Belle (Pride of the Border-Kirby).

Märshall Duroe-Dr. T. B. Legare, of Camden, S. C., claims the name of Marshall Duroe for lemenand white setter dog puppy, whelped October 27 by Scout (Rock-Kirby) out of Mr. F. H. Andrew's Vashik (Rake-Famy).

Nixie for lemon and white pointer bifeth puppy, whelped September 10, 1869, by Beaufort (Bow-Beaulah) out of Nymph (Viscount-Marshall Ney-Dur. F. H. Andrews, of Charlotte, N. C., claims the name of Marshall Ney for liver and white ticked pointer dog puppy, whelped September 10, 1860, by Beaufort (Bow-Beaulah) out of Nymph (Viscount-Marshall Ney-Dur. F. H. Andrews, of Charlotte, N. C., claims the name of Marshall Ney for liver and white ticked pointer dog puppy, whelped September 10, 1860, by Beaufort (Bow-Beaulah) out of Nymph (Viscount-Skidmore's Dolly.)

Talluth'n-Mr. F. H. Andrews, of Charlotte, N. C., clsims the name of Tallulah for lemon and white pointer bitch puppy, whelped October 20, 1880, by Judge Legare's Rab (Rush-Romp) out of his Bellona (Bow-Beaulah).

#### BRED.

Moll S.-Blue Drake—Mr. Sherwood's (Skneatles, N. Y.,) setch Moll S. to Mr. J. H. Whitman's three-quarter Laverack

Moll 8.—Blue Drake.—Mr. Sherwood's (Skineatles, N. Y.,) setter bitch Moll 8. to Mr. J. H. Whitman's three-quarter Lavrack setter dog Blue Drake.

Flow-Carlo-—Mr. J. H. Whitman's (Chicago, Ill.,) cocker spanish bitch Flora to same owner's Carlo.

Lady-Blue Dash.—Mr. Stafford's setter bitch Lady (Royal Duke-Gift) to Blue Dash.

Kornh-Hike.—Mr. E. B. Hall's Norah to the Excelsior Irish Water Spanish Kennel Club's champion Mike. The club to have one-half the progeny.

WHELFS.

#### WHELPS,

WHELPS,

Ruby—Mr. Howard Hartley's (Pittsburgh, Pa.,) black and white
imported English setter bitch Ruby, whelped January I, 1881,
nine pup pies, six dogs and three bitches, by owner's Ruke.

Lady Transline—Mr. R. G. Sylvester's (Carbondale, Ill.,) Irish
setter butch Lady Trunsline, whelped January IS, 1881, eight puppies, four dogs and four bitches, to Dr. Januell's Elebo H.

pres, four dogs and four bitches, to Dr. Jannell's Eleho H.

Sales.

Joe, Jr.-Famie Whelps—Mr. G. W. Campbell, of Carter's
Creek Station, Manyr Co., Tenn., has sold a red bitch puppy with
provide to the control of th

Miss.

Pat—Mr G. W. Campbell, of Carter's Creek, Tenn., has sold to Mr. Albin Omberg, of Rome, Georgia, red Irish setter dog Pat out of Ida by imported Erin.

Erin IIII-Insis Wielp—Mr. H. W. Cory, of St. Paul, Minn., has sold to Mr. J. J. O'Leary. Jr., a red Irish setter gyp out of Hush

of Ida by imported Erin.

Erin III.—Hussh Whelp—Mr. H. W. Cory, of St. Paul, Minn., has sold to Mr. J. J. O'Leary. Jr., a red Irish sotter gyp out of Hush by Erin III.

Mack: Lacerack—Mr. J. J. Snellenburg, of New Brighton, Pa., has sold his ten-months-old pure Lacerack setter Mack Laverack (Thunder-Peercess) to Mr. D. McKay Lloyd, of Pittsburgh, Pa. Mack Laverack won first prize in native setter and puppy class at Pittsburgh, 1881, and will be sent to H M. Short to be broken for the N. A. K. O. Derby.

Carlowitz-Messes. Von Culin have sold to Mr. James H. Goodsell, New York city, the celebrated pure Laverack setter of Gorioutz favorably known as a prize-winner in England before he was indeed to the control of the co

MANMOTH RIFLE GALLERY-Boston, Jan. 21.—The third week in the New Year rifle match at the Mammoth Gallery has been a busy one and the shooting has been of high standing. Mr. J. H. williams was successful in getting aclean score of eight consecutive bullseyes and received the extra prize of \$15 for this splendid holding. He has also added a fine 39 and 38, which places him well to the front. Mr. J. Merrill is still in the lead, with possible 200. Mr. J. H. Williams is second with 191, outranking Mr. E. F. Richardson, who also has 191. Mr. N. W. Arnold is fourth with 190; Mr. J. Ames is fifth, with 181, outranking Mr. Elihu Wilden, who is sixth, with 184. Next month will commence a new set of rifle matches. The first on the list will be the Everybody's Rifle Match, open to all comers, with six cash prizes, as follows: 57, 56, 55, 54, 52, 51, also an extra prize of \$15 to any one making a clean score of eight consecutive bullseyes. Conditions are: Any 22 calibre rifle; rounds, 8; possible 40; five scores to win, or possible 200; position, off-hand; distance, fifty yards; the rifle to be three pounds pull. Match No. 2 will be called the Silverware Rifle Match. This match is gotten up as an incentive to stimulate practice and is open to all who have never won a prize in the gallery The first prize will consist of an elegant suver picner and salver, the second prize will be \$2 in cash and the third prize \$1 in cash; also, an extra prize of \$15 to any one making a clean score to the constant of The first prize will consist of an elegant silver pitcher and of eight consecutive bullseyes. Conditions are: Any 22 calibre rifle, three pounds pull; position, off-hand; rounds, 8; possible  $40\ ;$  five scores to win, or possible  $200\ ;$  distance, fifty yards. In addition to the above matches, the Forest and Stream Rille Match, for the elegant meerschaum pipe, which continues until May 1, making in all three rifle matches. Following are the leading competitors, with their scores to date, in the New Year Rifle Match—fifty vards; rounds, 8; possible 40; five scores to win, or possible 200 Forest and Stream Ritle Match -The Forest and Stream Rifle

Match, began January 1, to continue until April 30, inclusive, the prize being an elegant meerschaum pipe, has had few entries, it being early in the match, although an increasing interest is sh from week to week. Mr. D. N Sherburne leads this week with a good 38, but the conditions are the best aggregate of five scores made during the match. Following are the leading scores to date—

made during the match. Following are severally stated at the fifty yards; younds, S; possible 40.

Pistol Practice.-Practice with this arm this last week has been ively and some of the finest shooting ever done in the gallery has been recorded. Mr. Etihu Wilder has increased his score two points over last week, when he had surpassed all provious efforts, and he now leads with tee fine record of 115 out of a possible 120 Mr. S. Souther follows very close in Mr. Wilder's steps with 114 and Mr. J. J. Dunne and Mr. F. J. Rabbeth are tie for the third place with 112. In shooting off the tie for the third prize in last month's match Mr. Wilder defeated Mr. Ames. Following are the leading scores to date-fifty feet; rounds, 8; possible 40; three

N. R. A. PRESIDENCY .- The Executive Committee of the Board of Directors of the National Rifle Association on the afternoon o January 20, at No. 35 Park row to elect a president, Mr. E. A. Buck, who was chosen to the position, being obliged by business engagement to decline. There were present General George W. engagement to decline. There were present General George Wingate, Colonel J. H. Cowperthwarte, Captain W. Murphy, F. H. Holton, Mr. David W. Judd, Mr. Frank J. Donaldson. Donaldson nominated General Hancock and was seconded by Captain Murphy and Mr. Judd. The latter referred to the condition of the association and said he hoped that those who are now understood from hearsay to be unfriendly to rifle practice would be less stood from nearsay to to unfriendly to fine practice would be less so when they had held their offices a longer time. General Han-cock was then elected unanimously. General Wingate said that General Hancock had already rendered many services to the association : it was through his personal solicitation that the Hilton Shield for the international matches was given, and it was on his application that the Federal Government sent teams from the army to compete at Creedmoor. He has also given advice to the di-rectors on many occasions. The board before nominating him had received a letter from him in which he promised to accept the office. After the election the board adjourned,

CONLIN'S GALLERY.—The second week's contest of the pistol shooting tournament for the championship of bullet shooting, and-

ing January 22, 1881, the distance shot at being 4, 10 and 15 vards: 30 shots: 10 shots at each range. The prize was captured by W. Daniel A. Davis, making one of the finest scores on record—viz., suspended ball, 7 yds., 7½ in. bullets in 10 shots; 10 yds. 534 in. bullets in 10 shots; 15 yds. 334 in. bullets; total 15. Mr. Davis has proved himself to be one of the most expert pistol shots as well as a ritte shot, having made some of the finest scores with the ritle of any amateur of this city. Mr. Davis' shooting is remarkable when you take in consideration the smallness of the bullet The shooting is all done with a .22 cal. pistol, 10 of the marks sho at being really the same size as the bullet used to shoot at them The next week's shooting will be at the word of command, 10 shots at 10 Pone's ready measurement target, as this is one of the oldest styles of shooting, and will decide who has the right to claim the championship for rapidity and accuracy. The shots must be fired inside the space of 3 seconds. The time will be announced by the inside the space of 3 seconds. The time will be announced by the metronome, the same as is used in all the great pistol tournaments of Paris. This will be undoubtedly one of the most closely contested weeks of the fournament. There were some most skillful feats by several crack shots during the week. That of Mr. W. M. Chase's of hitting 9 bullets in 10 shots at 7 yds., the bullets only being 2-8 of an inch in diameter, has never been equalled before in this gallery I. Meadhurst, of Salt Lake, hit 7 swinging bullets in 10 shots, which is very fine shooting, and places him on record as s a skillful marksman.

ZETTLER'S RIFLE GALLERY, New York, Jan. 15 .- Monthly shoot, open to all comers. Mr. P. Fenning leads the score with 188 out of a possible 200, which is fine holding. Conditions—Rifle, .22 cal.; 10 shots: four best aggregate scores to take first prize and so on: for a full single score, \$10 premium; for six consecutive bulls, \$1; five prizes. Shooting closes January 31, 1881:

SAN FRANCISCO, CAL., Jan. 1, -Col. Kollogg and Sergeant Williams settled an old difference between themselves by 100 shots over the 200-yard range. The shooting took place at the Shell Mound Park, each man loading his own ammunition. The ritles used were respectively the Hotchkiss and Borelard. The scores

Tierer Schwarks's Rieles-Governor's Island, N. V., Jan. 3-Messrs, E. Remington & Sons, New York City, N. Y.—Dear Sirs: In justice to yourselves as generous contributors to my late expe dition in search of the relics of Sir John Franklin from 1878 to 18 I would state that the two rifles furnished by you exceeded my expectations. They were frequently used during temperature rang ing from 50 to 68 degrees and at distances from 200 to 600 yards with perfect working of their parts and with deadly effect. I sider that on my expedition the arms used were subjected to the severest practical test to which guns have ever been exposed. Compelled to be kept out of doors constantly to avoid the moisture of the igloos, lashed in convenient places for immediate use on con stantly overturning sledges, used at a moment's notice under all variations of temperature and weather, the "Remington" never an average of thirty draft animals depended for over ten months Yours very respectfully, upon the efficacy of our firearms. FRED'R SCHWATKA

Lieut, U. S. Army, late commanding Franklin search party, 1878-179-180

- C. O. B., Easton, Md.—See Game columns for address of dealer in live quail. J. M. H.-The law was compiled by the President of the State
- Association, and was, we believe, correct. C. G. M., New Haven, Conn.-At Melrose, Fla., you will find
- quail, turkey and deer eight miles from Waldo. A. D. W.-We would recommend you to read Begardus' book " Field Cover and Trap Shooting." We can send it to you ; price

REPEATER, Buffalo, N. Y.—The style of rifle you describe would be an improvement on existing models, provided it had no serious

W. J. D., New Orleans, La. -We cannot give you the name of the best farmer's paper in America. There are between two and three hundred published.

Tirador.-My glass ball shooting last year gives an average of 22] per cent. Is that a good record? Different traps, some screened, some rotary; all good swift balls; 18 yards rise; 10-gauge gun; 4½ drs. powder, 1½ ozs. No. 9 chilled shot. Ans. The record is one with which you ought to be satisfied.

A. W. M.—The Hudson's Bay Company still use the thint lock guns in trade with the Indians at their most remote posts, because of the difficulty of procuring suitable ammunition for percussioncap arms. At the nearer posts the Indians are armed with a better class of weapons, many of them using breech-loading rifles and re

- G. O. G .- You will find the Racine Shadow, Rushton's sailing canoe (new model) and Steven's sailing canoes of American styles all of excellent qualities, as they are the outcome of experience combined with familiarity with the whole subject of canoeing. If you want a semi-portable canoe verging into a yacht Stevens can build you a centre board on Baden Powell's lines.
- C. E. T., New York.-You should liberate four quail at a time two males and two females. Do not put the whole twelve down in the same place, but scatter them over a considerable area. If all are put down in the same field they may not separate next spring to breed. The birds should not be turned out much before May, and should be fed for a few days after their liberation.
- R. T. M.—The local papers speak of taking striped bass under the ice, near Poughkeepsic, with bait. It should be noticed in FOREST AND STREAM, as it is a rare occurrence. Ans We have mentioned the capture of unusual numbers of this fish in the Hudson, but they are taken in nots pushed under the ice We doubt their taking bait in winter, as those which come to market have empty stomachs.
- H. L. G., Brookfield, N. Y .-- 1, Where can I sell a petrified turtle? It is about eight inches across, ten inches long and is in a good state of preservation; shows all the ridges and creases of the shell as natural as life. 2. What would it bring as a natural history specimen? 3. Would you sell the same for me if I send it to Ans. 1. Some dealer in natural history specimens might buy it. 2. Two or three dellars. 3. No.
- A. W. G. -What is the size of a stream or pond necessary for the successful introduction of carp, and what is the manner in which to proceed to get them? Ans. Carp will thrive in mill ponds, but to proceed to get them? Ans. Carp will thrive in mill ponds, but are not adapted to small streams. Any warm pond with muddy bottom will do, provided it does not freeze solid to the bottom in winter. Apply to S. F. Baird, U. S. Fish Commissioner, Washington, D. C., and mention Forest and Stream and you will get sor of next summer's crop in August or September ; last year's fish have been distributed
- J. E. D., Worcester, Mass.—How is the fishing in Florida in Feb ruary, March and April? What I want to know particularly about is rod and fly fishing. Ans. The fishing is good at most all seasons, as there are plenty of local fishes which do not migrate. Black bass (trout in the vulgate) grow to a large size. Take a stout trolling rod of ten feet, with reel holding 150 feet of braided line, heavy gut leader and bright flies. If you fish for other fish in salt water do not use silk line. It is hard to say just what you want from your brief questions,
- C. E. C., Phila.-If you were asked, as I was the other evening by half a dozen friends in chorus, which is considered the mo intelligent breed of dogs, what would be your answer? Ans. is claimed by many writers of experience that the collie, or sheep dog, is naturally the most intelligent. Close interbreeding for five generations will, however, produce an idiot. The collie, as a general thing, is self-taught to a great extent, and he has been singled out and stories of his wonderful performances narrated, more often ooks of natural history than of any other breed.
- W. W., Spencerport, N. Y .- Is not the correct name of the bird sually called quail, Virginia partridge? and is not the proper name of what is usually called partridge, ruffed grouse? Ans. It is diffi-cult to give a catagorical reply to this question. The bird usually called quail in the North is called partridge in the Southern States Andubon speaks of it as the Virginia partridge; Wilson, as the Oneil, or Partridge; other authors as Virginia Quail; Maryland Quail and American Partridge. Structurally it is more closely al-lied to the true partridge than to the true quail. The correct name of what is called partridge in New York and New England, and pheasant in Pennsylvania, the South and some sections of the West, is ruffed grouse. T. W. McA .- Will you please describe in your next issue the tar
- get used in Mammoth Gallery? size of target, size of bullseve and distance between circles? Aus. The distance of the gallery is 50 yards and there is in use an iron Creedmoor target reduced from 200 vards. The bullseve is a two-inch hole in the iron plate, and two inches back of this target is a steel plate painted black sitting on a lever supported by weights. When this steel plate is struck bullet it knocks down this lever and the weights pull the wire which is connected to a large bell which rings at the firing point. The pistol target is a large iron target with a two-inch bullseye, and the arrangements about it are the same as our rifle target, with the exception that the pistol target bullseye is run with electricity. An electric bell rings at the firing point when a bullseye is made nippers which count on a paper target. As bullseyes only count four a shot must go, through the hole clean or it will not ring the bell, so that the shooter really has to put his eight shot inside a one inch and a half ring-for the rille, 50 yards, and the pistol 50 feet, which requires better holding than it would on a paper target. They use a Frank Wesson 12 inch barrel and a Stevens 10 inch harrel, open sights, 22 calibre, one pound pull.

GEO. T. C., Buffalo, N. Y.-Our correspondent, "Au Sable," supplies the information as follows :

Hudson's Bay Company's overcoats are made of young buffalo skins or deer skin tanned with the hair on. Also of buffalo skin with the hair off, which closely resembles thick buckskin. These last, however, require to be used with good woolen underclothes, last, nowever, require to be used with good worden innecreations, as, although they keep out all wind, they do not possess any great amount of warmth in themselves. The first-named kind cost from \$8 to \$15, and the last from \$4 to \$12, according to quality and finish. They can only be procured, as far as I know, from the Hudson's Bay Company's stores in Montreal or in Winnipeg. I have a suit I brought from there last summer, which cost me about \$8 in trade, plain, well made and strong. They would not be suita-ble for a hunting trip in Canada, as they are too hot and heavy when walking or hunting. The best coat your correspondent can use in this country for a winter hunting coat is a blanket coat that can be bought at Henderson's fur store in Montreal, G. R. Renfrew's in Quebec, or Jas. Patterson, furrier, Baude street, Quebec price \$7 to \$15 without duty or express charges. They can be got blue or white, according to taste, and are light, strong and warm, and stand any amount of hard usage; things indispensable in clothes to be used in the woods."

The Nuttal Bulletin.—One of the most pleasantly written articles that we have read for a long time is Mr. E. W. Nelson's sketch in the January Bulletin on Door-yard Birds of the Far North. Treating as it does of far-away Alaska, and mentioning so many species that most collectors are entirely unfandiar with, it is a very interesting contibution. Mr. Jeffries article 0.0 the Fingers of Birds is also a valuable paper, and we are glad to see that some ornithologists are at last getting below the skin of the bird. Certainly there is more to be made from the sandomy of this class than has yet been done, and the austomical characters are unquestionably of far higher value than the external ones. Mr. De L. Berier contributes to the present number of the Bulletin some Notes on a Few Birds observed at Fort-Hamilton, Long Island, and Mr. W. E. D. Scott a paper on the Birds observed in Summer, Levy and Hillsborn Counties, Florida. Mr. Allon's paper on Insectivorous Birds in Their Relation to Manis is according written and thoughtful review of Professor Forbes' paper on the "Food of Birds." The Birds on a Florida River contains a number of notes by Mr. Win. Browster, written in his unstal charming style, on some of our Southern birds, and he very intercenting in the Ruletin's by Selector. Bulletin's December 2015.

ter, written in his usual charming style, on some of our Southern birds, and is very interesting.

The most important paper in the Bulletin is Dr. Selator's Remarks on the Present State of the Systema Arima, reprinted from the Ibis of July 1889. Only a portion of it appears in this number, and ornithologists who do not see the Ibis will auxiously await the appearance of the remainder.

The department of Recent Literature contains notices of the Third and Fourth Installments of Dr. Coues' Ornithological Bibliography of Harvie-Brown's paper on the Capercallie in Scolland, of Mr. Steere's List of the Birds of Ann Arbor, Mich., and of Minor Ornithological Papers.

General Notes are very full and interesting.

General Notes are very full and interesting.

"Fairnnes Womer Knownson" is the fille of a little book published by the Harpers. It consists of a series of articles on a number of familiar animals contributed by Mr. Ernest Ingersoll to the pages of several of our magazines. The articles are representative of the ordinary magazine natural history literature and, although they contain nothing new, are written in rather a pleasing style, which will no doubt commend them to many readers. The different papers, however, contain, many of them, inaccuracies which should be a support of the contain the contain the contains and the property of the contains a support of the contains t To say that "the bird's arm ends in only one long, is certainly a loose statement and sure to mislead.

not appear. To say that "the brd's arm ends in only one long, sender inger" is certainly a lones etatement and stire to mislead. The book does not, of course, purport to be in any way scientific, the book does not, of course, purport to be in any way scientific, and through it might, it would seem, by a little more care in collecting materials, have been avoided.

Mr. Ingersol's little work, however, with its sky blue binding, golden lettering and golden birds with their scarlet breasts will, no doubt, be popular with a certain class of readers—people who do not care so much for scientific facts and knowledge as for something which will pass away an hour pleasantly and at the same time allow them to labor under the pleasing delusion that they are learning something. The essays, if such they can be called, being in no way connected, but might have been at different times, are in no way connected, but might have been at different times, are in so way connected, but might have been at different times, are in sit and the same are, however, interesting and entertaining, and he is is said that one may learn from a child, so from this book to many readers some information may be conveyed. The style of the articles is vary simple and rather better adapted to the youthful mind than for those who are thirsting for knowledge concerning the subjects discussed.

A Liberal, Offers.—Having arranged club terms with the North

A LIBERAL OFFER.—Having arranged club terms with the North A LIBERAL OFFER.—Having arranged club terms with the North American Review we are enabled to offer that forement of American periodicals, together with the Forest and Struggle of American periodicals, together with the Forest and Struggle of American hearty every writer of any note in the country bring of American hearty every writer of any note in the country bring the contributor to it. It discusses the subjects that are most promiment in the public thought at the time, and presents both sides of all important questions. It combines to a considerable extent the thoroughness of the Cyclopwdia with the timeliness of the daily paper. It should be read by the professional man, the student, the merchant, the manufacturer, the farmer; in fact, by everyone who wishes to form intelligent opinions on the events of the day. The regular subscription price of the Review is \$5.

good excuse for sickness of yourself and family is that you don't use Hop Bitters.

# Dachting and Canoeing.

VACHTING NEWS

THE CUTTER FLEET.—The number of cutters is rapidly increasing, faster than the most enthinsiastic lover of sea cruising could have hoped for. Besides the three designs furnished by Mr. And the lines of three more—two line thirty-top per similar to the water of the lines of three more—two line thirty-top per similar of all sizes will be launched this season for American waters, while deep sloops and modified cutter rigs are in a fair way of running out the old-fashioned light draft mant-traps with their lubber's rig. In Boston, the re-action in favor of depth and keel already threatens to go beyond reason. Xachts muder 30ft, water-line draw secen feet and over, while a late design of 33ft, w. I. has seeza feet of depth, and the smart little 6cm and others are to come out with practically micerosement of 've action the control of the state of the state of the state of the state of the state of the state of the state of the state of the state of the water, and a change for the better none appreciate more than ourselves and the few who, with us, have championed the came of the honest boat and legitimate yachting against the halleniantons of vast odds of 'machine athetes'. These words may be given more force when we add that one of the naw "thirties' is being got out for a genuleman who owned one of the fastest and need successful light drafts in America. Cutters are booming!

QUAKER CUTT XACHT CLUB—The THE CUTTER FLEET.—The number of cutters is rapidly in-

nost successful light drafts in America. Cutters are booming! QUAKER CITY YACHF OLUB—The following oliliers have een elected for 1881: Commodore, R. P. Thompsou ; Vico Com, S. S. Austin; Rear Com, B. F. Murphy; Treasurer, R. Baird; eerretary, Chaa, S. Salin; Asst. Soc., W. E. Wise; Measurer, Cap, C. Vandersliee. Regatts Committee—A. F. Bancroft, W. J. Lorman and L. Coleman, Annual Spring Regatts has been fixed activated by the committee of the for Monday, June 6.

YACHTING CIRCULAR.—Mr. Geo. Wilson, 157 Leadenhall st., London, has seit in his circular for January, 1881, containing an interesting article on the "Cracks of 1880," and a long list of yachts of all tomage on the market in England, which gives a very fair insight into the current value of yacht tonnage across the water.

#### WINNING YACHTS FOR 1880.

THE following abreviations are used: Y. C., Yacht Club; A., Atlantic; B. Beverly; Bos., Boston; D., Dorchester; E., Eastern; N. Y., New York; S., Seawanhaka; Emp., Empire; S. F., Sau Franckeo; Ph., Philadelphia; South, Southwark; Chi., Chicago; Osh., Oshkosh; Q. C., Quakor City; Q., Quincy; W. V., Washington Villago; S. B., South Boston; S. Bay, Salem Bay; Barf, Buhaio; R. C., Royal Canadian; Sal., Salisbury; C. A., Cape Ann; J. C., Jersey Cliy; N. B., New becker; New, Newburpyort; D. Dubbary; C., Ocomowove; N. J., New Jersey; Nat., National; L., Lynn; B. Q., Bay of Quinto; E. R., East River; Yon., Youlters; E. B., East Boston; Nan, Nanitlus; H. R., Hudson River; C. P., Cooper's Point; Ind., Independent; R. N. S. Y., S., Royal Nova Scotia Yacht Squadron; J.C., Jeffries Club; P.Y. Ass., Portland (O.) Yachting Association; Clev. Y. Ass., Clevcland Yachting Association; S. B. M. F., South Boston Musquito Fleet.

In column of riga Cut, stands for cutter, Cata, for catamaran, D. E. for double end and T. U. for tuck up. 4th in column of third prizes signifies fourth prize.

Lengths, where known, are given on water line; S. L. in this column signifies sailing length; Lons; U. or, under or over the figure following it and two figures connected by a line, signifies that the length is somewhere between the two.

This list does not purport to be complete, as the published reports of races this season have not been as full and accurate as usual.

Deen as the and at	ccurate as usual.

There YAWL RIG.—We notice by our Eastern contemporaries that several yawls are being built for use on waters of the Eastern coast. We have in our local thest seven yachts of this rig, and another will soon be launched. Those who have tried the yawls do not care to try other rigs, which speaks well for their handness and convenionce.—Scan Francisco Olympian.

KIRK'S STEAM YAOHTS.—As will be seen by our advertising columns, Mr. John P. Kirk is prepared to entertain propositions for the construction of yachts of all classes. Mr. Kirk has a large yard and ample facilities, and goes into the design of a vessel in detail, so that he is not working blindly trusting to "I reckon she'll about go down so far," but builds upon tangible data. Among other work Mr. Kirk has now in frame a steam yacht, 45 ft, long, 6 ft. in. Leaun and 4 ft, deep for the Yale College crew. She is to be this shed handsomely in hard woods, engines of 95 H. P. designed by Air W. H. Derbyshire, grandant of the Philadelphia Polytechinic College. Great speed has been aimed at, and official trials of the measured mile will be made about 4 pril 1, of which we hope to give results in detail.

WANDERIER.—Itas been sold to Mr. Morgan, and after being

WANDERER.—Has been sold to Mr. Morgan, and after being converted into a topsail schooner will clear for the West Indies on a prolonged cruise. Sea cruising bids fair to become a fashion; so

much the better.

POUGHKEEPSIE I. Y. C.—The ice on the river was not in good condition January 15, not with standing which a regatta was suited by the Poughkeepsic for Yacht Club for the silk pennant presented by Mr. Rousevelt. The prize has to be won twice out of three times, and is to be raced for by boats carrying less than 350 sq. ft. of canvas. Three boats entered, the Gypsic, Pairy and Tip. The currie was four miles and the Gypsic won. The Fairy parted her shrouds and hauled out of the race.

parties her shrouds and halled out of the race.

NEW YAWL.—Geo. Farmer, or Oakland, the race and the race and the race and the race are recognitive to the race and the race and the race and the race and the race and the race and the race and race are race and race and race and race are race and race and race and race are race and race and race are race and race and race and race and race are race and race and race and race are race and race and race and race are race and race and race and race and race and race and race are race and race

BROOKLYN YACHT CLUB.—At the annual meeting the club failed to elect flag officers owing to the want of a fleet. It is probable that the club will resolve itself into a social union with Mr. W. R. Wadsworth as Seretary, Mr. W. T. Lee declining to serve any longer. Sie transit gloria mundi.

Onger. Sic transit gloria mundi.

VIKING — Another big one for the lakes. Mr. F. H. Scott has sold his schooner Viking to Mr. John M. Loomis, of Chicago. She will be overhauled at Greenport, and sailed around to her new hailing port in spring. Viking was built from a model by Yan Duson for Mr. Mahlon Sands, of New York, in 1852 by the Poillons of Brooklya. She is 10 ft. 9 in. over all: 56 ft. 4 in. on load line; 23 ft. 5 in. beam: 8 ft. 2 in. in depth of hold; 6 ft. 5 in. draft and 18 ft. 4 in. The state of the same of the state of the same
